# PUBLIC COLLECTIONS OF NASA DOCUMENTS

## DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

**CALIFORNIA**
University of California, Berkeley
**COLORADO**
University of Colorado, Boulder
**DISTRICT OF COLUMBIA**
Library of Congress
**GEORGIA**
Georgia Institute of Technology, Atlanta
**ILLINOIS**
The John Crerar Library, Chicago

**MASSACHUSETTS**
Massachusetts Institute of Technology, Cambridge
**MISSOURI**
Linda Hall Library, Kansas City
**NEW YORK**
Columbia University, New York
**OKLAHOMA**
University of Oklahoma, Bizzell Library
**PENNSYLVANIA**
Carnegie Library of Pittsburgh
**WASHINGTON**
University of Washington, Seattle

NASA publications (those indicated by an "*" following the accession number) are also received by the following public and free libraries:

**CALIFORNIA**
Los Angeles Public Library
San Diego Public Library
**COLORADO**
Denver Public Library
**CONNECTICUT**
Hartford Public Library
**MARYLAND**
Enoch Pratt Free Library, Baltimore
**MASSACHUSETTS**
Boston Public Library
**MICHIGAN**
Detroit Public Library
**MINNESOTA**
Minneapolis Public Library and Information Center
**NEW JERSEY**
Trenton Public Library

**NEW YORK**
Brooklyn Public Library
Buffalo and Erie County Public Library
Rochester Public Library
New York Public Library
**OHIO**
Akron Public Library
Cincinnati and Hamilton County Public Library
Cleveland Public Library
Dayton Public Library
Toledo and Lucas County Public Library
**TEXAS**
Dallas Public Library
Fort Worth Public Library
**WASHINGTON**
Seattle Public Library
**WISCONSIN**
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

## EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

## A CONTINUING BIBLIOGRAPHY WITH INDEXES

## (Supplement 237)

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in September 1982 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

NASA Scientific and Technical Information Branch 1982
National Aeronautics and Space Administration
Washington, DC

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS). Questions on the availability of the predecessor publications, Aerospace Medicine and Biology (Volumes I - XI) should be directed to NTIS.

This supplement is available as NTISUB/123/093 from the National Technical Information Service (NTIS), Springfield, Virginia 22161 at the price of $7.00 domestic; $14.00 foreign.

# INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* lists 224 reports, articles and other documents announced during September 1982 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the Earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections: *IAA Entries* and *STAR Entries*, in that order. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Two indexes -- subject and personal author -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1982 Supplements.

# AVAILABILITY OF CITED PUBLICATIONS

## IAA ENTRIES (A82-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at $8.00 per document. Microfiche(1) of documents announced in *IAA* are available at the rate of $4.00 per microfiche on demand, and at the rate of $1.35 per microfiche for standing orders for all *IAA* microfiche.

Minimum air-mail postage to foreign countries is $2.50 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

## STAR ENTRIES (N82-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $4.00 price, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Document Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26.1 reduction).

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts.* Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

A82-11697 † **The significance of the respiratory minute volume index in the evaluation of vestibular stability (Znachenie pokazatelei minutnogo ob'ema dykhaniia pri otsenke vestibuliarnoi ustoichivosti).** A. S. Gusarov. *Voenno-Meditsinskii Zhurnal*, Aug. 1981, p. 48-50. In Russian.

The respiratory dynamics of persons of various vestibular stabilities undergoing Coriolis acceleration is investigated in order to assess the possibility of using respiratory minute volume in the evaluation of vestibular function. Respiratory rate, respiratory minute volume, heart rate and electrocardiography were monitored continuously in 100 men with healthy vestibular analyzers in a 5-min test of tolerance to cumulative Coriolis forces. Changes in respiratory parameters are observed to be correlated with levels of vestibular reaction to Coriolis acceleration. Rotational and especially post-rotational vestibulospirometry and vestibulospirography are found to be the objective means of determining vestibular condition. It is concluded that the determination of respiratory minute volume taking into account other vegetative reactions appears to be a useful means of evaluating subject vestibular stability. A.L.W.

*A Continuing Bibliography (Suppl. 237)*

OCTOBER 1982

## IAA ENTRIES

**A82-34965** **Simulation of two forms of eye motion and its possible implication for the automatic recognition of three-dimensional objects.** A. Roy (Zaragoza, Universidad, Saragossa, Spain) and L. L. Sutro. *IEEE Transactions on Systems, Man, and Cybernetics*, vol. SMC-12, May-June 198, p. 276-288. 30 refs.

Simulation of two forms of eye motion has been carried out with a view to developing automated means of recognizing regular three-dimensional objects from any direction. The visual system includes a binocular graded-resolution video camera assembly, a planner, and a self-command computer. The discussion covers the following topics: simulation of eye movement in tracking, design of a scan path generating algorithm, simulation of the generation of a scan path, detection and display of edges, design of adjustment-of-fixation algorithm, and simulation of adjustment of fixation. V.L.

**A82-34968** **Linguistic decision structures for hierarchical systems.** J. H. Graham and G. N. Saridis (Rensselaer Polytechnic Institute, Troy, NY). *IEEE Transactions on Systems, Man, and Cybernetics*, vol. SMC-12, May-June 1982, p. 325-333. 13 refs. NSF Grant No. ECS-79-16882.

The development of a new hierarchical linguistic-based learning control structure for complex systems is described. The complete system will be able to interact with a human operator in a high-level language at the highest level of the hierarchy and will be able to control detailed motions of a complex physical system at the lowest level of the hierarchy. Each level of the hierarchy is defined by a formal grammar which can generate exactly the class of admissible control actions at that level. A new linguistic structure, the linguistic decision schema, is proposed to specify the mapping between linguistic elements in adjacent levels. In the most general form, the decision schema incorporates a learning algorithm to obtain asymptotically optimal mappings for control under stochastic environments. (Author)

**A82-34970** **Analysis and classification of human errors in troubleshooting live aircraft power plants.** W. B. Johnson (Illinois, University, Urbana, IL) and W. B. Rouse (Georgia Institute of Technology, Atlanta, GA). *IEEE Transactions on Systems, Man, and Cybernetics*, vol. SMC-12, May-June 1982, p. 389-393. 12 refs. Contract No. MDA903-79-C-0421.

Two experimental studies were employed to develop and evaluate a scheme for classifying human errors in troubleshooting tasks. Both experiments involved trainees in a Federal Aviation Administration (FAA) certificate program in power plant maintenance. Each trainee received one of three training methods, two of which were computer-based, and then transferred to troubleshooting live aircraft power plants. The transfer data from the first experiment (N = 36) were used to develop the error analysis and classification procedures. In addition results of this analysis led to modifications of the training methods. The transfer data from the second experiment (N = 22) were employed to evaluate the effects of the changes in training methods. Results indicated a decrease in errors due to these changes. The development of the methodology is discussed and the resulting behavioral interpretations are presented. (Author)

**A82-34971** **A study on human tracking performance in a complex G field experiment.** D. W. Repperger, D. B. Rogers, J. W. Frazier, and R. E. Van Patten (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, OH). *IEEE Transactions on Systems, Man, and Cybernetics*, vol. SMC-12, May-June 1982, p. 393-401. 30 refs.

Various aspects of analyzing closed-loop tracking error within a phase plane context for a man-machine experiment are investigated. A study is conducted on candidate density functions that could characterize such boundaries. Using a cumulative distribution function (CDF), a definition of such a boundary is obtained. Kolmogorov-Smirnov (K-S) tests are performed on empirical data from an acceleration stress experiment to investigate certain assumptions concerning normality of the distributions of these boundaries. (Author)

**A82-35248** **Signal analysis at the periphery of the auditory system (Analiz signalov na periferii slukhovoi sistemy).** Edited by Ia. A. Al'tman. Leningrad, Izdatel'stvo Nauka, 1981. 136 p. In Russian.

Papers are presented on mechanisms of information processing at the peripheral parts of the auditory system. Particular consideration is given to the oscillatory properties of cochlea structures, digital simulation of the frequency selectivity of the basilar membrane, statistical methods of signal analysis in the processing of neuroelectrical data, and two-tone inhibition in the peripheral auditory system. B.J.

**A82-35272** **Human visual orientation.** I. P. Howard (York University, Toronto, Canada). Chichester, Sussex, England and New York, John Wiley and Sons, 1982. 704 p. 2184 refs. $66.50.

It is shown how information relevant to judgements about direction and orientation is dealt with in the visual system, starting at the most peripheral level and proceeding to higher levels in the nervous system. General concepts and terms are introduced, and theories and terminology are critically appraised. Topics discussed include visual acuity and associated optical and retinal mechanisms; neurophysiology of orientation detectors in the visual system; coding of spatial information; the relationship between vision and the vestibular, auditory, and kinaesthetic systems; visual motor coordination; and the judgement of orientation of shapes. Suggestions for future research are made. C.D.

**A82-35638** * # **United States and Soviet Life Sciences factors in long-duration space flights.** J. C. Sharp (NASA, Ames Research Center, Moffett Field, CA). In: Space manufacturing 4; Proceedings of the Fifth Conference, Princeton, NJ, May 18-21, 1981. New York, American Institute of Aeronautics and Astronautics, 1981, p. 403-405.

A general review of the Life Sciences issues affecting long-duration manned missions is presented. Descriptions and examples of the similarities and differences between the Soviet and U.S. life sciences programs are discussed. (Author)

**A82-35639** * # **Behavioral and biological interactions with confined microsocieties in a programmed environment.** H. H. Emurian, J. V. Brady (Johns Hopkins University, Baltimore, MD), J. L. Meyerhoff, and E. H. Mougey (U.S. Army, Walter Reed Army Institute of Research, Washington, DC). In: Space manufacturing 4; Proceedings of the Fifth Conference, Princeton, NJ, May 18-21, 1981. New York, American Institute of Aeronautics and Astronautics, 1981, p. 407-421. 22 refs. Grants No. NGR-21-001-111; No. PHS-DA-00018; Contract No. N00014-80-C-0467.

This paper presents a summary of the background, objectives, and methodological approach of an ongoing research project devoted to the analysis of individual and small group performance effectiveness under conditions of isolation and confinement during extended residences in a continuously programmed environment. A more detailed description is provided of the results of a recent series of experiments designed and conducted to assess hormonal and behavioral effects of a change in group membership and size. (Author)

**A82-35641** # **Influential factors of negative effects in the isolated and confined environment.** S. R. McNeal and B. J. Bluth (California State University, Northridge, CA). In: Space manufacturing 4; Proceedings of the Fifth Conference, Princeton, NJ, May 18-21, 1981. New York, American Institute of Aeronautics and Astronautics, 1981, p. 435-442. 28 refs.

Studies have been conducted on the isolated and confined environment (ICE) in order to identify potential problems for the space traveler. Maladaptive characteristics, both physical and psychological in nature, as well as individual and group behavior changes have been identified and it has been shown that the ICE symptomology is very similar to that of stress. It is suggested that the ICE acts as a catalyst to other factors of greater influence in the development of negative effects observed in an ICE. Stress management is discussed with reference to training, coping strategies, preparedness for social and psychological problems, and alterations of the social and physical environment. V.L.

**A82-35651 † Structural changes of the thymus of irradiated animals that were also subjected to heat trauma (Strukturnye izmeneniia timusa obluchennykh zhivotnykh, dopolnitel'no podvergshikhsia termicheskoi travme).** R. S. Budagov (Akademiia Meditsinskikh Nauk SSSR, Obninsk, USSR). *Radiobiologiia*, vol. 22, Mar.-Apr. 1982, p. 278, 279. 5 refs. In Russian.

**A82-35652 † Investigation of the general fitness of the progeny of irradiated animals. III - The resistance of mice to irradiation, hypoxia, endotoxin, and physical stress (Issledovanie obshchei prisposoblennosti potomstva obluchennykh zhivotnykh. III - Ustoichivost' myshei k oblucheniiu, gipoksii, deistviiu endotoksina, fizicheskim nagruzkam).** I. E. Vorobtsova and K. L. Gol'zberg (Ministerstvo Zdravookhraneniia SSSR, Tsentral'nyi Nauchno-Issledovatel'skii Rentgeno-Radiologicheskii Institut, Leningrad, USSR). *Radiobiologiia*, vol. 22, Mar.-Apr. 1982, p. 261-264. 11 refs. In Russian.

**A82-35653 † Protective effect of a gaseous hypoxic mixture under the combined effect on the organism of radiation and physical stress (Zashchitnyi effekt gazovoi gipoksicheskoi smesi pri sochetannom vozdeistvii na organizm radiatsii i fizicheskoi nagruzki).** A. I. Britun, R. B. Strelkov, N. G. Kucherenko, and O. I. Kurochkina (Akademiia Meditsinskikh Nauk SSSR, Obninsk, USSR). *Radiobiologiia*, vol. 22, Mar.-Apr. 1982, p. 250-252. 13 refs. In Russian.

**A82-35654 † The effect of several pharmacologically active substances on the transformation of cystamine in mouse tissues (Vliianie nekotorykh farmakologicheski aktivnykh veshchestv na prevrashchenie tsistamina v tkaniakh myshei).** L. G. Tarnopol'skaia. *Radiobiologiia*, vol. 22, Mar.-Apr. 1982, p. 246-250. 12 refs. In Russian.

The effect of mexamine, ethirone, and gutimine on the rate of cystamine transformation in the liver and spleen of white mice was studied. It is shown that, administered in combination with cystamine, these preparations decrease the rate of the sulfur-containing radio-protector metabolism. It is suggested that radio-protective drugs be produced on the basis of cystamine and include substances that have an effect on the pharmacokinetics of the sulfur-containing component. B.J.

**A82-35655 † Possibility of evaluating radiation injury to skin on the basis of changes in its functional state (Vozmozhnost' otsenki luchevogo porazheniia kozhi po izmeneniiu ee funktsional'nogo sostoianiia).** V. O. Sudakova and I. A. Rappoport. *Radiobiologiia*, vol. 22, Mar.-Apr. 1982, p. 226-229. 14 refs. In Russian.

Experiments on male rats have shown that the evaluation of the neutralizing capacity of the skin can be used as a quantitative method to study the functional status of the skin; this is the case because this evaluation makes possible an early disclosure of the impairment of the protective function of beta-irradiated skin. The neutralizing capacity of the skin is a direct function of the beta-radiation dose and may be a criterion for the prediction and assessment of the severity of radiation dermatitis. B.J.

**A82-35656 † Bone-marrow haemopoiesis in dogs exposed to various repeated total-body nonuniform irradiations (Kostnomozgovoe krovetvorenie u sobak pri razlichnykh variantakh povtornykh obshchikh neravnomernykh obluchenii).** M. P. Kalandarova and V. G. Gorlov. *Radiobiologiia*, vol. 22, Mar.-Apr. 1982, p. 215-219. 9 refs. In Russian.

Dogs were exposed to total-body nonuniform irradiation, the absorbed doses varying by 2.8 to 8 times and doses on the dog's back amounting to 0.0774 C/kg and 0.01290 C/kg. It is shown that, after a three-fold exposure at 90-day intervals between the fractions, a haemopoiesis affection develops which is analogous to that observed in the case of a typical form of radiation sickness induced by a single exposure. Long-term hypoplasia and aplasia of the bone marrow and the impairment of postirradiation recovery are indicative of the exhaustion of the haemopoietic resources upon repeated exposure to iunizing radiation. B.J.

**A82-35657 † Modeling of the recovery of cells from radiation damage and the principle of effective-dose reduction. I - Models of the recovery of cells after acute irradiation (Modelirovanie protsessov vosstanovleniia kletok ot luchevykh povrezhdenii i printsip umen'sheniia effektivnoi dozy. I - Modeli vosstanovleniia kletok pri ostrom obluchenii).** A. D. Andreev and Iu. A. Kutlakhmedov (Akademiia Nauk Ukrainskoi SSR, Institut Fiziologii Rastenii, Kiev, Ukrainian SSR). *Radiobiologiia*, vol. 22, Mar.-Apr. 1982, p. 187-193. 12 refs. In Russian.

**A82-35658 † Comparative evaluation of the efficiency of radio-protectors on the basis of criteria of the protection of bone marrow and the gastrointestinal tract (Sravnitel'naia otsenka effektivnosti radioprotektorov po kriteriiam zashchity kostnogo mozga i zheludochno-kishechnogo trakta).** N. N. Piatovskaia and I. E. Brumberg (Voenno-Meditsinskaia Akademiia, Leningrad, USSR). *Radiobiologiia*, vol. 22, Mar.-Apr. 1982, p. 183-186. 14 refs. In Russian.

Gamma-ray experiments on mice have shown that, unlike cystamine, 4-aminobenzo-2,1,3-thiadiazol has a radio-protective effect on the haemopoietic tissue and fails to protect the gastrointestinal tract. In the bone marrow, this preparation is effective only in regard to stem cells. B.J.

**A82-35659 † Investigation of the radio-protective effect of cystamine on a model of thermally induced prophage lambda (Izuchenie radiozashchitnogo deistviia tsisteamina na modeli termoindutsiruemogo profaga lambda).** S. E. Bresler, V. L. Kalinin, and I. N. Suslova (Akademiia Nauk SSSR, Leningradskii Institut Iadernoi Fiziki, Gatchina, USSR). *Radiobiologiia*, vol. 22, Mar.-Apr. 1982, p. 176-182. 12 refs. In Russian.

Lethal and mutagenic effects of Co-60 gamma rays on the prophage lambda c 1857 in lysogenic E. coli cells AB1186 uvrA6 and AB2463 recA13 after irradiation in the absence or in the presence of cystamine (0.05 M) were investigated. Cystamine was found to produce a marked radio-sensitizing effect, with the prophage thermally induced immediately after irradiation (DMF = 1.5). In this case, the yield of gamma-radiation-induced c-mutations was significantly higher in the presence of cystamine than in its absence in AB1186 but not in AB2463 (which was deficient in SOS repair). When the prophage was thermally induced after 90 minutes of postirradiation incubation in broth neither the survival nor the yield of c-mutations depended on the presence of cystamine at the time of exposure or on the presence of the recA+ gene product. B.J.

**A82-35660 † Investigation by means of a fluorescent probe of changes in cellular membranes of fibroblasts of the Chinese hamster under laser and X-ray irradiation (Issledovanie izmenenii kletochnykh membran fibroblastov kitaiskogo khomiachka pri lazernom i rentgenovskom oblucheniiakh s pomoshch'iu fluorestsentnogo zonda).** A. **A82-35662 † Kainic acid as a tool in brain research (Kainovaia kislota - sredstvo issledovaniia golovnogo mozga).** I. A. Sytinskii (Leningradskii Gosudarstvennyi Universitet, Leningrad, USSR) and V. S. Turovskii (Akademiia Meditsinskikh Nauk SSSR, Leningrad, USSR). *Uspekhi Sovremennoi Biologii*, vol. 93, Mar.-Apr. 1982, p. 253-269. 123 refs. In Russian.

Data are presented on the neurotoxicity of L-kainic acid, a structural analog of L-glutaminic acid, and the use of kainic acid as a specific tool in neurobiological research is discussed. Kainic acid destroys nerve cells in the injection zone without any damage to axons having endings in this particular part of the brain or extending across it. The specific effect of kainic acid is used for determining neuroanatomical connections and neurochemical indices of functional systems located in specific portions of the brain as well as for identifying changes in animal behavior due to nerve damage. V.L.

**A82-35663 † Evolutionary significance of the adaptation of animals to heat (Evoliutsionnoe znachenie temperaturnykh adaptatsii zhivotnykh).** B. P. Ushakov (Akademiia Nauk SSSR, Institut Tsitologii, Leningrad, USSR). *Uspekhi Sovremennoi Biologii*, vol. 93, Mar.-Apr. 1982, p. 302-319. 36 refs. In Russian.

The ability of a population as a whole to achieve physiological homeostasis aimed at preserving the population size and genetic structure in the case of a rise in temperature to a dangerous level is discussed. Physiological homeostasis of a population is realized through a reactive increase in the thermal stability of individual animals in response to an increase in ambient temperature. While the reactive increase in thermal stability results in reduced elimination of individuals, it also leads to reduced efficiency of selection due to heat. This may result in insufficiently selective or completely nonselective death of individuals. V.L.

Blistanova (I Moskovskii Meditsinskii Institut; Tsentral'nyi Institut Fizicheskoi Kul'tury, Moscow, USSR). *Sovetskaia Meditsina*, no. 4, 1982, p. 18-21. 20 refs. In Russian.

The effects of a beta blocker on values of the general work capacity, gas exchange, acid-alkali balance, lactic acid level, and central body temperature were studied in 74 athletes subjected to a bicycle-ergometer exercise until fully tired. A vegetative-provision tension (VPT) manifested itself in a marked economizing effect of the drug on these parameters. It is shown that negative EKG changes in response to this effect are associated with the VPT syndrome. The elevated VPT which is accompanied by energy losses in the form of heat may lead to the development of dystrophic changes in the myocardium. B.J.

Dzhogan (Ministerstvo Zdravookhraneniia SSSR, Vsesoiuznyi Nauchno-Issledovatel'skii Institut Gigieny i Toksikologii Pestitsidov, Polimernykh i Plasticheskikh Mass, Kiev, Ukrainian SSR). *Vrachebnoe Delo,* Apr. 1982, p. 64-66. 8 refs. In Russian.

An objective method for studying the durability and permeability of capillaries in the skin is presented. The method is based on electrical pumping and a vacuum manometer to create a negative pressure of a known magnitude over an area of skin in the lower third of the forearm; computation of the quantity of petechiae produced allows the estimation of capillary resistance. Use of the present method in the evaluation of workers in forestry and the woodworking industry exposed to formaldehyde and styrene has demonstrated its usefulness in monitoring the course of treatment for contact dermatitis. A.L.W.

**A82-35668 † Investigation of the functional state of the central nervous system and the motor apparatus for various regimes of rest and physical exercise (Issledovanie funktsional'nogo sostoianiia ts. n. s. i dvigatel'nogo apparata v usloviiakh razlichnykh rezhimov otdykha i fizicheskoi nagruzki).** P. L. Levakovskii (Lutskii Gosudarstvennyi Pedagogicheskii Institut, Lutsk, Ukrainian SSR). *Teoriia i Praktika Fizicheskoi Kul'tury,* Apr. 1982, p. 31. In Russian.

**A82-35669 † Dynamics of blood flow rate in athletes upon changes in environmental conditions (Dinamika skorosti krovotoka u sportsmenov pri izmenenii uslovii uneshnei sredy).** P. K. Prusov, N. G. Kartashov, and N. K. Snesarev (Vitebskii Oblastnoi Vrachebno-Fizkul'turnyi Dispanser, Vitebsk, Belorussian SSR). *Teoriia i Praktika Fizicheskoi Kul'tury,* Apr. 1982, p. 29-31. 7 refs. In Russian.

The response of the blood flow rate of athletes and its daily and seasonal variation to changes in environmental and geographical conditions is investigated. The method of oxyhemometry was used to assess blood flow rates in the pulmonary-aural circulatory branch in adult track and field athletes under lowland conditions and in the 23 days following ascent to 1600 m altitude, and in swimmers aged 11 to 12 having relocated from their homes in the European part of the Soviet Union to Sakhalin Island. Blood flow is observed to accelerate in the initial period of altitude acclimatization, in geographically acclimatized persons in the winter and spring-summer periods, and following exercise training conducted for several days in a row. Blood flow slows during the period of reacclimatization to lowland conditions, and in the morning hours as compared with the evening. The demonstrated variability of blood flow rate is thus concluded to be a factor which must be taken into account in the evaluation of the state of training of an athlete. S.C.S.

**A82-35670 † Characteristics of hemapoiesis in athletes undergoing endurance-training (Osobennosti krovetvoreniia u sportsmenov, treniruiushchikhsia na vynoslivost').** L. A. Matvienko (Gomel'skii Politekhnicheskii Institut, Gomel, Belorussian SSR). *Teoriia i Praktika Fizicheskoi Kul'tury,* Apr. 1982, p. 27-29. 5 refs. In Russian.

**A82-35672 † Discriminative biomechanical characteristics in middle-distance running (Diskriminativnye biomekhanicheskie kharakteristiki pri bege na srednie distantsii).** V. M. Zatsiorskii, N. A. Iakunin, and N. G. Mikhailov (Gosudarstvennyi Tsentral'nyi Institut Fizicheskoi Kul'tury, Moscow, USSR). *Teoriia i Praktika Fizicheskoi Kul'tury,* Apr. 1982, p. 14-17. 19 refs. In Russian.

The mechanical energy expended by middle-distance runners of varying ability is determined. The way in which the biomechanical characteristics (in particular, of vertical, horizontal, and total external mechanical work) change during middle-distance running is described. It is found that when long strides are taken and high speeds are involved, runners of great ability expend considerably less energy in displacing 1 kg of weight through 1 m than runners of lesser ability. Running 1,000 m entails an insignificant increase in the vertical work and moderate changes in the horizontal work performed. C.R.

**A82-35673 † Specialized laboratory for the educational and research activity of students and the psychodiagnostic study of athletes (Spetsializirovannaia laboratoriia dlia uchebno-issledovatel'skoi raboty studentov i psikhodiagnosticheskogo obsledovaniia sportsmenov).** A. An approach based on the black box method is used to obtain an empirical equation describing the motion of man. The approach involves experimental determination of the temporal characteristics of the repeated motion of man; selection, with the aid of an analog computer, of a simple model with the same temporal characteristics; mathematical description of the model, i.e., derivation of an empirical equation; and validation of the equation. The study has yielded a model described by a second-order linear differential equation with a delay term. The model can be used in simulators and for complex motion synthesis. V.L.

**A82-35676 † The diagnosis and treatment of heart-rhythm disorders - The role of intracardial electrophysiological investigation (Diagnostika i lechenie narushenii ritma serdtsa - Rol' metoda vnutriserdechnogo elektrofizicheskogo issledovaniia).** A. V. Zemtsovskii and A. A. Uderman (Institut Fizicheskoi Kul'tury, Leningrad, USSR). *Kardiologiia*, vol. 22, Apr. 1982, p. 20-23. 9 refs. In Russian.

It is noted that the diagnosis of myocardial dystrophy in athletes is at present based exclusively on electrocardiographic criteria, that is, on detecting irregularities in the repolarization of heart ventricles. It is pointed out, however, that athletes subjected to extremely demanding regimens can develop heart rhythm disorders, the most common of which are extrasystole and arrhythmia of the 'suppressed sinoatrial node'. Since studies have shown that repolarization irregularities are often accompanied by heart rhythm disorders, it is thought that the latter may indicate myocardial dystrophy. The various types of dystrophy, which differ from one another in the changes that occur in the function and shape of the myocardium, are discussed. Attention is also given to the similarity in the changes that occur in indicators of myocardial shape and heart rhythms during ventricle repolarization irregularities and extrasystole and migration of the rhythm leader. The possibility of interpreting these irregularities in rhythm as symptoms of myocardial dystrophy is considered. C.R.

B. Malkin and V. I. Plakhatniuk. *Kardiologiia*, vol. 22, Apr. 1982, p. 92-95. 23 refs. In Russian.

Cases of reversible heart stoppage in persons undergoing hypoxia at simulated altitude to measure cardiovascular adaptive capabilities are presented. Tests were performed on apparently healthy men breathing a hypoxic gas mixture at a simulated altitude of 5000 m while EKGs, arterial pressure, EEGs, respiratory rate and general condition were monitored. In about 6% of the subjects examined, physiological changes characteristic of unstable, ineffective adaptation were found, which were marked in about 3% by a pronounced bradycardia and disturbances in heart rhythm. In rare cases, sinus bradycardia was accompanied by ventricular asystole lasting from 3 to 34 sec. Sinus rhythm was restored by oxygen breathing in all but one case, where fibrillation developed. Sinus bundle arrest was also observed following sinus arhythmia at a normal heart rate. The disturbances are attributed to a breakdown in neurohumoral regulation under conditions of reduced hypoxia tolerance. The occurrence of the serious instances in apparently healthy subjects is argued to require the presence of a specially trained physician to stop the test and provide immediate aid in such situations. **A82-35691 † Classification of vestibular disorders as a function of the phase of the disease and the degree of vestibular compensation (Klassifikatsiia vestibuliarnykh narushenii v zavisimosti ot fazy bolezni i stepenii kompensatsii vestibuliarnoi funktsii).** N. S. Blagoveshchenskaia (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Zhurnal Ushnykh, Nosovykh i Gorlovykh Boleznei*, Mar.-Apr. 1982, p. 57-63. 7 refs. In Russian.

Consideration is given to factors other than the site of the lesion affecting the symptomology of vestibular disorders. On the basis of clinical evidence, it is shown that the severity of vestibular symptoms depends to a significant extent on the phase of the disease; whether acute, subacute, chronic or residual, and on the degree of compensation. Vestibular disorders are then divided into three groups as a function of these factors: (1) the decompensated stage with the predominance of whole brain stem vestibular symptoms, found in coma and the recovery from coma: (2) the decompensated state with the predominance of vestibular symptoms, in which an asymmetry is noted in vestibular tests and vestibulo-autonomic and vestibulo-sensory reactions are elevated; and (3) the compensated state, where vestibular reactions are symmetrical, experimental nystagmus is inhibited or normalized, and vestibulo-autonomic and vestibulo-sensory reactions are reduced. It is noted that whereas central vestibular syndromes may fall into any of the above classifications, peripheral vestibular syndromes are restricted to the latter two. S.C.S.

**A82-35692 † The use of nondamping sinusoidal rotation in the study of vestibular function (O primenenii nezatukhaiushchego sinusoidal'nogo vrashcheniia dlia issledovaniia vestibuliarnoi funktsii).** E. V. Lapaev and O. A. Vorob'ev. *Zhurnal Ushnykh, Nosovykh i Gorlovykh Boleznei*, Mar.-Apr. 1982, p. 11-17. 25 refs. In Russian.

The qualitative and quantitative characteristics of nystagmus induced in healthy persons by nondamping sinusoidal rotation are examined. Horizontal nystagmus was measured by electronystagmometry in 49 subjects aged 25 to 45 experiencing sinusoidal rotation in a rotating chair programmed for various angular velocities and accelerations. At rotation periods greater than 10 sec, the change in nystagmus direction is observed to occur before the pause between rotation in opposite directions, with the magnitude of the phase advance proportional to the rotational period. A definite asymmetry in the phase advance is observed in normal subjects, and a more marked asymmetry in persons with certain disorders. It is concluded that tests with nondamping sinusoidal rotation provide an additional means for characterizing the phase relation between the nystagmus reaction and the stimulus, allowing the study of vestibular function. S.C.S.

**A82-35693 † Characteristics of brain electric activity in different otoneurologic syndromes with vestibular asymmetry (Kharakteristika mozgovoi elektricheskoi aktivnosti pri razlichnykh otonevrologicheskikh sindromakh, protekaiushchikh s vestibuliarnoi assimmetriei).** Kh. **A82-35694 † Some questions open to discussion in clinical labyrinthology (Nekotorye diskussionnye voprosy klinicheskoi labirintologii).** V. S. Olisov (Leningradskii Sanitarno-Gigienicheskii Meditsinskii Institut, Leningrad, USSR). *Zhurnal Ushnykh, Nosovykh i Gorlovykh Boleznei*, Jan.-Feb. 1982, p. 53-59. 45 refs. In Russian.

Various aspects of the clinical characteristics and course of dysfunctions of the labyrinth organs of the inner ear are discussed. Four principle classes of labyrinthine disturbances - acute, primarily nonrecurring labyrinthine attacks; recurring episodes of vertigo termed Meniere's disease or syndrome; short-duration episodes of vertigo triggered by specific circumstances; and positional vertigo are distinguished, and questions as to the nature, existence and etiology of Meniere's disease and Meniere's syndrome are considered. Attention is then given to cochleo-vestibular disturbances of peripheral origin, and the merits of the two sets of terms used to describe such conditions, i.e. labyrinthopathy and vestibular or cochleo-vestibular syndrome, are discussed. Further efforts necessary to achieve an acceptable classification system for labyrinthine disorders are then indicated. S.C.S.

**A82-35695 † Synchronized nystagmus calibrator (Sinkhronizirovannyi kalibrator nistagma).** I. B. Soldatov, L. N. As'kova, and R. M. Shaimardanov

(Kuibyshevskii Meditsinskii Institut, Kuibyshev, USSR). *Zhurnal Ushnykh, Nosovykh i Gorlovykh Boleznei*, Jan.-Feb. 1982, p. 76, 77. 5 refs. In Russian.

A synchronized nystagmus calibrator is proposed in which neon lamps light up intermittently at intervals continuously adjustable from 1 to 4 sec, the calibrator can also be used with the central lamp remaining lit. High precision in the operation of the instrument, essentially a symmetric long-pulse multivibrator, is achieved by using a stabilized power source. The continuous adjustment feature makes it possible to synchronize the lighting of the lamps with periodic changes in the corneoretinal potential by adjusting the lamp switching period in accordance with the chart recorder motion. The ways in which cosmonauts arrange their personal time off from space tasks aboard the Salyut space stations are described. Attention is given to the frequent disruptions of rest time that characterize space flight, the choice of some cosmonauts to perform space tasks during their personal time, and housekeeping activities. B.J.

**A82-35700** † **Blood circulation in weightlessness (Krovoobrashchenie v nevesomosti).** O. G. Gazenko and A. M. Genin. *Zdorov'e*, no. 4, 1982, p. 10, 11. In Russian.

The characteristics of blood circulation under conditions of weightlessness are discussed. The effects of normal gravity on the circulatory system are first considered, with particular attention given to the gravitational distention of vascular walls and the necessary increase in blood volume to fill the expanded vessels. The absence of gravity is then shown to be accompanied by a contraction of the distended vessels in the lower extremities, the loss of the hydrostatic blood store and the shift of blood and intercellular fluids to the upper part of the body, resulting in an impairment in cerebral circulation, increased load on the right ventricle and an increased risk of pulmonary insufficiency. Mechanisms of decreasing circulating blood volume under weightless conditions are then examined, and it is noted that disturbances of hemodynamics have not posed any serious dangers to space flights. Finally, adaptations in hemodynamics necessary upon return to earth following an extended-duration space flight are discussed along with methods used in flight to prevent hemodynamic disturbances. A.L.W.

**A82-35768** **Conditioned tilt naming - A modified absolute judgment method is used to measure the oblique effect.** E. Matin, A. Drivas, and V. Valle (Long Island University, Greenvale, NY). *Perception and Psychophysics*, vol. 31, no. 5, May 1982, p. 421-428. 25 refs. Grant No. NIH-R01-EY-02951.

Two naive human observers were conditioned to report on the slant of a 3.8-cpd sinusoidal grating viewed monocularly with a light-adapted eye and presented at various orientations extending from -45 to +135 deg. The procedures used yielded a baseline measure of performance and measures obtained during conditioning, extinction, and reconditioning of the tilt-naming response. Both subjects learned rapidly, achieving a level of performance that permits efficient measurement of meridional differences in perceived orientation (the oblique effect) at a large number of angles. **A82-35769** * **Mass estimation and discrimination during brief periods of zero gravity.** H. E. Ross (Stirling, University, Stirling, Scotland) and M. F. Reschke (NASA, Johnson Space Center, Neuroscience and Behavior Laboratory, Houston, TX). *Perception and Psychophysics*, vol. 31, no. 5, May 1982, p. 429-436. 30 refs. Research supported by the Medical Research Council of England.

Under zero gravity, the gravitational cues to mass are removed, but the inertial cues remain. A sensation of heaviness is generated if objects are shaken, and hence given a changing acceleration. A magnitude estimation experiment was conducted during the 0-G phase of parabolic flight and on the ground, and the results suggested that objects felt lighter under 0 G than under 1 G. Mass discrimination was also measured in flight, and yielded Weber fractions of .18 under 0 G, .16 under 1.8 G, and .09 under 1 G. Poor performance under microgravity and macrogravity was probably due mainly to lack of time for adaptation to changed G levels. It is predicted that discrimination should improve during the course of prolonged spaceflight, and that there should be an aftereffect of poor discrimination on return to earth. (Author)

**A82-35809** **The measurement of heart rate variability spectra with the help of a personal computer.** O. Rompelman, C. J. Van Spronsen (Delft, Technische Hogeschool, Delft, Netherlands), and J. B. I. M. Snijders (Staatsbedrijf der Posterijen, Telegrafie en Telefonie, Leidschendam, Netherlands). *IEEE Transactions on Biomedical Engineering*, vol. BME-29, July 1982, p. 503-510. 14 refs.

The analysis of fluctuations in heart rate or heart rate variability (HRV) has found applications in, among others, the study of the neural cardiovascular system and ergonomic psychology. In particular, the study of the frequency components of HRV is becoming increasingly important. A method for the computation of HRV spectra directly from the heart beat event series as derived from the electrocardiogram has been developed. Because of the computational efficiency achieved, this method is implemented on a personal computer. Apart from an external QRS detector, a completely stand-alone system is realized. User interaction takes place on a menu card display basis. The system can operate at both real time and up to eightfold increased speed. The resultant spectra are displayed as histograms. Different ways of smoothing and segment averaging are possible. (Author)

**A82-35810** **Measurement of eye movement with a ferromagnetic contact ring.** Y. Y. Zeevi and J. Ish-Shalom (MIT, Cambridge, MA). *IEEE Transactions on Biomedical Engineering*, vol. BME-29, July 1982, p. 511-522. 14 refs. Research supported by the United States-Israel Binational Science Foundation; Technion - Israel Institute of Technology, and Massachusetts Institute of Technology.

A new magnetic method for measurement of eye movement is presented. It is based on measurement of differential inductance variations of two C-shaped coils due to the movement of a conical ferromagnetic ring which fits on the sclera. High sensitivity over a wide dynamic range is obtained by using a tuned bridge and synchronous detector. Separation of the detector coils from the magnetic field source improves the resolution and stability, and enables a two-dimensional measurement with one pair of C-coils. (Author)

**A82-35811** **Auditory perception of radio-frequency electromagnetic fields.** C.-K. Chou, A. W. Guy (Washington, University, Seattle, WA), and R. Galambos (California, University, La Jolla, CA). *Acoustical Society of America, Journal*, vol. 71, June 1982, p. 1321-1334. 55 refs. U.S. Department of Education Grant No. G0080003029; Contract No. N00014-80-C-0354.

Absorption of pulsed microwave energy can produce an auditory sensation in human beings with normal hearing. The phenomenon manifests itself as a clicking, buzzing, or hissing sound depending on the modulatory characteristics of the microwaves. While the energy absorbed and the resulting increment of temperature per pulse at the threshold of perception are small, most investigators of the phenomenon believe that it is caused by thermoelastic expansion. In this paper, literature that describes psychological, behavioral, and physiological observations as well as physical measurements pertinent to the microwave-hearing phenomenon is reviewed. (Author)

**A82-35826** † **Physiological adaptations and maintenance of vegetative homeostasis (Fiziologicheskie adaptatsii i podderzhanie vegetativnogo gomeostaza).** A. D. Slonim (Akademiia Nauk Kirgizskoi SSR, Institut Fiziologii i Eksperimental'noi Patologii Vysokogor'ia, Frunze, Kirgiz SSR). *Fiziologiia Cheloveka*, vol. 8, May-June 1982, p. 355-361. 41 refs. In Russian.

The current status of the theory of physiological adaptations is reviewed, and the basic premises underlying the study of such adaptations are examined. Attention is given to two fundamental mechanisms for the formation of stability: nonspecific, associated with the appearance of stress reaction; and specific, characterized by an increase and mutual substitution of functions maintaining homeostasis at all levels of physiological integration. Energy sources for adaptation and the involvement of systems of the organism in individual increases of stability are examined. A global energy factor of adaptation, applicable to the main physicogeographical regions, is developed. B.J.

**A82-35827** † **A classification of behavioral adaptation (Klassifikatsiia povedencheskoi adaptatsii).** V. I. Medvedev (Voenno-Meditsinskaia Akademiia, Leningrad, USSR). *Fiziologiia Cheloveka*, vol. 8, May-June 1982, p. 362-374. 10 refs. In Russian.

A classification of the types of the behavioral adaptation of man is presented and briefly explained. Four main classes of such adaptation are delineated: (1) preventive (including overall change of activity, avoidance reaction, and active search for a preferendum); (2) stabilizational (including the conservation of the general structure of behavior and changes of the structure of behavior); (3) socially conditioned forms of behavior; and (4) psychologically conditioned forms of behavior (individual and group). B.J.

**A82-35828** † **Human adaptation in arid regions (Adaptatsiia cheloveka v aridnoi zone).** F. F. Sultanov and A. I. Freink (Akademiia Nauk

Turkmenskoi SSR, Ashkhabad, Turkmen SSR). *Fiziologiia Cheloveka*, vol. 8, May-June 1982, p. 375-388. 35 refs. In Russian.

Mechanisms of human adaptation to desert conditions are examined on the basis of a systems analysis of the complex of reactions developing under the effect of the natural climatic factors of the arid region on the organism. Groups of specific and nonspecific elements of urgent protection against overheating in desert conditions are delineated, and the interaction of these groups of elements is considered. The separation of factors into primary (directed at protection against overheating) and secondary (directed at the compensation of the effect of primary factors) makes possible a more adequate evaluation of the degree of adaptability of physiological processes in arid regions. A classification is presented of methods of acclimatization in arid regions, with allowance for the underlying physiological mechanisms. B.J.

**A82-35829** † **Stages of the adaptation of human lungs in conditions of the Far North (Stadii adaptatsii legkikh cheloveka v usloviiakh Krainego Severa).** A. P. Avtsyn and A. P. Milovanov (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Fiziologiia Cheloveka*, vol. 8, May-June 1982, p. 389-398. 51 refs. In Russian.

A survey is presented of studies of respiratory adaptation to Arctic conditions. Several stages of adaptation are delineated which depend on various levels of bronchial permeability, ventilation, ventilation-perfusion relationships, and systolic pressure of the lung artery system: the stage of adaptive strain of the lungs (the first three to six months of living in the Far North); the stage of stabilization (after one-and-one-half to three years); the stage of adaptedness (three to ten or fifteen years); and the stage of deadaptation (which can occur during any of the aforementioned stages). Problems of developing a terminology for describing respiratory adaptation to Arctic conditions are considered, and possible future directions of Arctic pulmonology are discussed. B.J.

**A82-35830** † **Regional changes of pulmonary functions in inhabitants of the North (Regionarnye izmeneniia funktsii legkikh u zhitelei Severa).** L. N. Matveev, A. G. Marachev, and S. N. Medvedev (Moskovskii Meditsinskii Stomatologicheskii Institut; Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Fiziologiia Cheloveka*, vol. 8, May-June 1982, p. 399-406. 36 refs. In Russian.

Tetrapolar rheopneumopulmonography was used to study ventilation and pulmonary circulation in 249 healthy persons: 162 from the northeastern USSR and 87 from Moscow. It is found that northerners, compared to Muscovites, have increased perfusion and ventilation of the middle zones constituting the functional reserve of the lungs, along with a decrease in the ventilation volume of the lower zones. Morphometric studies have shown a hypertrophy of the muscle layer at various bronchial levels. It is suggested that an increase in the volume of bronchial blood circulation is directed at the maintenance of the temperature-control effect of the respiratory tract. B.J.

**A82-35831** † **The bioenergetics of erythrocytes in inhabitants of the North (Bioenergetika eritrotsitov u zhitelei Severa).** A. G. Marachev, V. I. Sorokovoi, A. V. Kornev, L. N. Matveev, E. P. Brusovanik, and L. N. Khromov (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Fiziologiia Cheloveka*, vol. 8, May-June 1982, p. 407-415. 48 refs. In Russian.

Tests were performed on 210 inhabitants of the Magadan region of the USSR in order to study the bioenergetics of erythrocytes under Arctic conditions. It is shown that the erythrocytes of the peripheral circulation of Arctic inhabitants have lower levels of ATF, common and reduced glutathione, and catalase and glutathione peroxidase activity than those of inhabitants of temperate regions. The lipids of erthrocyte membranes of Arctic inhabitants are characterized by an increased quantity of unsaturated fatty acids and a considerable increase in the rate of nonenzymatic peroxidation. Here the erythrocyte morphology is characterized by an increased cell size, a marked polymorphism, and increased echinocyte population. These results are discussed in the light of possible reasons for the premature aging of erythrocytes. B.J.

**A82-35832** † **The hemostasis system in man in high-altitude conditions (Sistema gemostaza u cheloveka v usloviiakh vysokogor'ia).** V. A. Isabaeva and T. A. Ponomareva (Akademiia Nauk Kirgizskoi SSR, Institut Fiziologii i Eksperimental'noi Patologii Vysokogor'ia, Frunze, Kirgiz SSR). *Fiziologiia Cheloveka*, vol. 8, May-June 1982, p. 416-430. 68 refs. In Russian.

The literature of functional changes of the human hemostasis system in high-altitude conditions is reviewed. A detailed analysis is presented of variations of blood coagulation in cases of individual adaptation to various high-altitude regions (Tien Shan, Pamir, the Caucasus, and the Himalayas). It is shown that the adaptive reaction of hemostasis is a phase process of hyper/hypocoagulational character. A systematic review is presented of data on the role of separate components of the hemostasis system (procoagulants, anticoagulants, thrombocytes, and fibrinolysis), and their interrelationships in the case of chronic high-altitude hypoxia. The role of hemostasis as an important homeostatic system in adaptation to high-altitude conditions is emphasized. B.J.

**A82-35833** † **Psychophysiological analysis of periodic oscillations of performance quality within the limits of a work cycle (Psikhofiziologicheskii analiz periodicheskikh kolebanii kachestva deiatel'nosti v predelakh trudovogo tsikla).** G. M. Zarakovskii, A. M. Karpukhina, and V. A. Salamatov (Ministerstvo Prosveshcheniia Ukrainskoi SSR, Nauchno-Issledovatel'skii Institut Psikhologii, Kiev, Ukrainian SSR). *Fiziologiia Cheloveka*, vol. 8, May-June 1982, p. 431-444. 31 refs. In Russian.

The paper examines the theoretical principles underlying experimental results on periodic oscillations of various quality indices of work performance and the level of the nonspecific activation of the central nervous system. It is suggested that oscillatory processes within the limits of a work cycle have a compensatory-adaptive character, providing for the maintenance of the necessary working level of the functioning of various physiological and psychic systems by the alternation of the degree of their activation. A practical result of the present study may be an increase in the reliability of the monitoring of the vigilance level of human operators. B.J.

**A82-35834** † **Omega potential: Quantitative index of states of brain and organism structures. Likhacheva, and L. P. Stepanova (Goskomtrud SSSR, Nauchno-Issledovatel'skii Institut Truda, Moscow, USSR). *Fiziologiia Cheloveka*, vol. 8, May-June 1982, p. 457-462. 13 refs. In Russian.

Experimental results are presented concerning the adaptation of the human body to various elements of a work environment. Physiological and psychological studies relating to work-related fatigue were made on beginning workers and experienced workers. It is found that the incidence of fatigue among the former is more marked than among the latter. Particular attention is given to those types of work wherein only moderate fatigue arises, and workers become physiologically and psychologically adapted to the conditions of their work, developing a general nonspecific resistance. B.J.

**A82-35836** † **Evaluation of the functional state existing in the adaptation to high-altitude conditions (Otsenka funktsional'nogo sostoianiia pri adaptatsii k usloviiam vysokogor'ia).** A. D. Aidaraliev, V. M. Iakovlev, and D. M. Imanaliev (Akademiia Nauk Kirgizskoi SSR, Institut Fiziologii i Eksperimental'noi Patologii Vysokogor'ia, Frunze, Kirgiz SSR). *Fiziologiia Cheloveka*, vol. 8, May-June 1982, p. 463-468. 16 refs. In Russian.

Tests were conducted on marathon runners during 1979-1980 as they were training on flat land and in medium- and high-altitude conditions (1700 and 2800 meters above sea level) in order to study their adaptation to high-altitude conditions. The adaptive responses were analyzed on the basis of Baevskii's index, characterizing strain placed on the bioregulation systems; the Arinchin-Sytin indices concerning the degree of stress on the heart and blood vessels; and the Mirrakhimov-Aidaraliev index concerning the quality of the adaptive response in high-altitude conditions. It is shown that these indices complement the general-physiological criteria for human adaptability to extreme physical stress in high-altitude conditions and make it possible to obtain information necessary for the compensation of individual loads. B.J.

**A82-35837** † **Strain on the regulation systems as a condition of successful adaptation to heat (Napriazhenie sistem reguliatsii kak uslovie uspeshnoi teplovoi adaptatsii).** A. T. Mar'ianovich (Voenno-Meditsinskaia Akademiia, Leningrad, USSR). *Fiziologiia Cheloveka*, vol. 8, May-June 1982, p. 477-480. 11 refs. In Russian.

Experimental results are presented on the acclimatization of 14 healthy persons to a hot, dry environment. It is shown that the necessary conditions of successful adaptation to heat under discontinuous heat stress is a relationship between the time of exposure to the hot environment and periods between exposures that provides for a marked disruption of thermal homeostasis towards the end of the last exposure. It is also shown that the total duration of the series of discontinuous exposures, leading to a heightened tolerance to heat, is roughly equal to the time of adaptation in the case of continuous daily exposures lasting several hours. B.J.

**A82-35838** † **Seasonal variations of human cardiorespiratory indices in the North (Sezonnye izmeneniia kardiorespiratornykh pokazatelei u cheloveka na Severe).** V. G. Evdokimov and A. T. Ketkin (Akademiia Nauk SSSR, Institut Biologii, Syktyvkar, USSR). *Fiziologiia Cheloveka*, vol. 8, May-June 1982, p. 481-488. 36 refs. In Russian.

**A82-35839** † **Dependence of reactions of the organism to extremal factors on initial state (Zavisimost' reaktsii organizma na ekstremal'nye**

**faktory ot iskhodnogo sostoianiia).** V. P. Zagriadskii and Z. K. Sulimo-Samuillo (Akademiia Nauk SSSR, Institut Evoliutsionnoi Fiziologii i Biokhimii, Leningrad, USSR). *Fiziologiia Cheloveka,* vol. 8, May-June 1982, p. 496-498. In Russian.

Reactions to physical stress, hypoxemia, and high environment-temperature were tested on two groups of subjects with different levels of initial indices of external respiration and of the cardiovascular system. It is shown that the initial value of the above indices in a state of relative rest determines the character of subsequent reactions. Thus, persons with initial indices at the upper limit of the physiological norm showed less marked reactions to the extremal factors and a longer period for their recovery than subjects whose indices were below this limit. It is suggested that the initial values of certain indices can be used to predict the reaction of the organism to various extremal factors. B.J.

**A82-35840** † **Rate of change of physiological functions as an index of the degree of adaptation (Skorost' izmeneniia fiziologicheskikh funktsii kak pokazatel' vyrazhennosti adaptatsii).** N. V. Zgoda (Voenno-Meditsinskaia Akademiia, Leningrad, USSR). *Fiziologiia Cheloveka,* vol. 8, May-June 1982, p. 504-506. In Russian.

The possibility of using the rate of change of physiological functions as an index of the degree of human adaptation to some extremal condition is examined. It is shown that the rate of change of physiological parameters varies in a regular manner in the adaptation of hypoxia (which is used here as an example of an extremal factor) in the transition period as well as in the stabilization regime. It is therefore concluded that the rate of change of physiological functions can serve as an index of the degree of adaptation. B.J.

**A82-35901** **Head-temperature effects on physiology, comfort, and performance during hyperthermia.** S. A. Nunneley, D. C. Reader, and R. J. Maldonado (USAF, School of Aerospace Medicine, Brooks AFB, TX). *Aviation, Space, and Environmental Medicine,* vol. 53, July 1982, p. 623-628. 23 refs.

The effects of head temperature on comfort, cognitive performance and reaction time, and body temperature are evaluated under hyperthermic conditions in subjects whose head and body temperatures were controlled separately by the use of liquid-conditioned garments. Subject performance on a manikin task, and skin, esophogeal and rectal temperatures were measured during two heating and cooling cycles incorporating all four possible combinations of head and body heating and cooling. The temperature of the cap covering the subject's head, which varied from 8 to 43 C, is found not to affect rectal temperature, however significantly altered the rate of change of the esophageal temperature. Head temperature is also observed to be a major determinant of subjective comfort as the temperature of the garment covering the body varied between 30 and 43 deg. Body heating tended to shorten reaction time and decrease accuracy, while head cooling reversed these trends. It is concluded that head cooling deserves serious consideration as a means for optimizing operator performance in hot environments. A.L.W.

**A82-35902** **Effect of dietary fat on pulmonary enzymes and toxicity during normobaric hyperoxia.** C. L. Schatte and M. M. Mathias (Colorado State University, Fort Collins, CO). *Aviation, Space, and Environmental Medicine,* vol. 53, July 1982, p. 629-632. 25 refs. Contract No. N00014-76-C-0437.

Weanling male rats were fed a semipurified diet containing 10, 20, 40 or 60% of calories as fat having a constant polyunsaturated/saturated fatty acid ratio of 0.7. After 21-28 days of feeding, animals from each treatment group were exposed to pure oxygen at one atmosphere absolute for up to 72 h. Some animals were sacrificed after 0 or 48 h of oxygen exposure and lung tissue analyzed for the activities of the hexose monophosphate shunt and prostaglandin dehydrogenase/reductase. Other animals were exposed to hyperoxia until death. With increasing dietary fat content, the pre-exposure activities of the two enzymes decreased and oxygen-induced mortality increased. There was no dietary effect on enzyme activities after 48 h of hyperoxia. It was concluded that both dietary fat content and the pre-exposure activity of prostaglandin dehydrogenase/reductase influenced the relative susceptibility to pulmonary oxygen poisoning. (Author)

**A82-35903** **Radiogenic changes in the behavior and physiology of the spontaneously hypertensive rat - Evidence for a dissociation between acute hypotension and incapacitation.** G. A. Mickley, H. Teitelbaum, G. A. Parker, F. Vieras, B. A. Dennison, and C. H. Bonney (U.S. Armed Forces Radiobiology Research Institute, Bethesda, MD). *Aviation, Space, and Environmental Medicine,* vol. 53, July 1982, p. 633-638. 31 refs.

The Armed Forces Radiobiology Research Institute's linear accelerator was used to expose rats to high-energy electron radiation. The purpose of the study was to investigate both radiogenic blood pressure and performance changes in a strain of rat bred for hypertension (spontaneously hypertensive rat: SHR) in order to determine if high blood pressure might attenuate early transient incapacitation (ETI). Although male SHRs experienced a severe drop in blood pressure, much of the data is inconsistent with the hypothesis that hypotension causes performance decrements. In an additional series of studies, blood volume and serum chemistry data were examined. Male SHRs were significantly higher than normotensive controls on several blood chemistry determinations. Exposure to ionizing radiation tended to enhance these differences. These results could not be explained on the basis of radiogenic blood volume fluctuations. B.J.

**A82-35904** * **Measurement of cardiopulmonary performance during acute exposure to a 2440-m equivalent atmosphere.** B. M. Levitan (NASA, Johnson Space Center, Physiological Performance Laboratory; Technology, Inc., Houston, TX) and M. W. Bungo (NASA, Johnson Space Center, Physiological Performance Laboratory, Houston, TX). *Aviation, Space, and Environmental Medicine,* vol. 53, July 1982, p. 639-642. 17 refs. Contract No. NAS9-14880.

Each of 20 subjects (ranging in age from 18 to 38 years, 15 being male, five female) was given two Bruce Protocol symptom-limited maximum treadmill stress tests, breathing sea-level compressed air (20.9% O2) for one test and a 2440-m equivalent (15.5% O2) for the other. A significant difference was found to exist between measured VO2 max (p less than 0.0002) and exercise time (p less than 0.0004) for the two conditions. No significant differences were observed in heart rate or the recovery time to a respiratory quotient of less than 1. Hemoglobin saturation, as measured by an ear oximeter, averaged 95% for sea-level and 91% for the 2440-m equivalent gases. These results support a 2440-m equivalent contingency atmosphere in the Space Shuttle prior to donning a low-pressure suit for the purpose reducing nitrogen washout times. B.J.

**A82-35905** * **Investigation of the combined effects of bedrest and mild hypoxia.** J. M. Waligora, D. J. Horrigan, Jr., Michael W. Bungo, and J. Conkin (NASA, Johnson Space Center, Environmental Physiology Laboratory, Houston, TX). *Aviation, Space, and Environmental Medicine,* vol. 53, July 1982, p. 643-646. 11 refs.

Subjects were exposed to an 8-h mild hypoxia exposure (8000 ft. equivalent, 2438 m) with and without a 28-h period of 6 deg headdown bedrest. Anticipated responses to the bedrest and the hypoxia were observed. There was no indication that bedrest affected the arterial oxygenation or the oxygen gradient across the lungs of the subjects undergoing mild hypoxia. It is concluded that there is no evidence that would preclude an alveolar O2 pressure as low as 69 torr during contingency spacecraft operation. (Author)

**A82-35906** **Postural stability during slow-onset and rapid-onset hypoxia.** D. E. Holness, W. D. Fraser, D. E. Eastman, J. A. G. Porlier, and M. A. Paul (Defence and Civil Institute of Environmental Medicine, Downsview, Ontario, Canada). *Aviation, Space, and Environmental Medicine,* vol. 53, July 1982, p. 647-651. 21 refs.

The standing steadiness and postural tremor of seven male volunteers were examined during slow and rapid induction of hypoxia. Spectrum analysis of position coordinates and tremor data generated from a quartz multicomponent force measuring platform and a tremor transducer showed that postural tremor and anteroposterior sway increased significantly during hypoxia. Rate of onset of hypoxia, however, did not affect the development of the increased tremor, whereas rapid-onset hypoxia consistently induced a greater anteroposterior sway than slow-onset hypoxia. Lateral sway was not affected by either slow- or rapid-onset hypoxia; however, it was significantly greater when eyes were closed compared to when they were opened. Anteroposterior sway was also significantly greater when visual cues were eliminated during both slow- and rapid-onset hypoxia. Heart rate and cardiac index of subjects increased significantly during both conditions of hypoxia. (Author)

**A82-35907** * **Effect of orthostatic stress on exercise performance after bedrest.** V. A. Convertino, D. J. Goldwater, and H. Sandler (NASA, Ames Research Center, Biomedical Research Div., Moffett Field, CA). *Aviation, Space, and Environmental Medicine,* vol. 53, July 1982, p. 652-657. 34 refs.

The cardiorespiratory responses to supine against upright exercise were compared to determine the orthostatic effects of gravity on exercise performance following bedrest. Five healthy male subjects underwent seven days of continuous bedrest. A deconditioning effect was manifested by significant increases in ventilation volume, carbon dioxide production, respiratory exchange ratio, heart rate, heart rate-pressure product, and diastolic blood pressure during submaximal exercise following bedrest. The major finding from this study was that bedrest resulted in a general decrease in exercise tolerance, which was more stressful in the upright posture compared to the supine position, judging from specific submaximal cardiorespiratory responses to cycle ergometry. The data support the hypothesis that there is an orthostatic factor to the reduction in work tolerance following bedrest deconditioning, in addition to the effects caused by increased physical activity. B.J.

**A82-35908** **Pulmonary oxygen toxicity - Possible role of ammonia in desorbing lung surfactant.** B. A. Hills (Texas, University, Houston, TX). *Aviation, Space, and Environmental Medicine,* vol. 53, July 1982, p. 658-662. 27 refs.

A porous membrane has been synthesized from a fine-weave cotton fabric carboxylated to simulate the fixed negative charges in the alveolar wall. When this membrane is treated with pulmonary surfactant in physiological concentrations, especially dipalmitoyl lecithin, it loses its fluid permeability and can support a pressure of physiological saline of over 272 torr without bursting through. When the saline is replaced by isotonic ammonium chloride solution, the average penetration pressure is reduced to 187 torr. These data are examined in regard to the known production of ammonia upon hyperbaric exposure and the competition of the resulting positive ammonium ions for the negative sites on the alveolar wall previously occupied by the positive quaternary ammonium ions of the effectively cationic lung surfactant. Successful replacement must then promote edema formation. This is proposed as a possible mechanism for the indirect (blood-borne) effect of oxygen upon the lung. Thus, it is suggested that the indirect route for pulmonary oxygen toxicity could be mediated through the ammonia produced in significant quantities in many organs when the body is exposed to excessive oxygen and that one possible mechanism is competitive desorption of surfactant at the alveolar wall. B.J.

**A82-35909** **Regional blood flow in the domestic fowl immediately following chronic acceleration.** W. J. Weidner, L. F. Hoffman, and S. D. Clark (California, University, Davis, CA). *Aviation, Space, and Environmental Medicine*, vol. 53, July 1982, p. 666-669. 18 refs. Research supported by the American Heart Association.

Chickens were centrifuged at +2Gz for 30-61 d in order to examine the effects of chronic low-G acceleration on blood flow distribution and cardiac output. The chickens were anesthetized after removal from the centrifuge and surgically prepared in order to measure cardiac output and regional blood flows by the reference sample method with Sr-85 labeled microspheres. Regional blood flows to the kidney, eyes, and skeletal muscle were significantly increased in animals subjected to chronic +2Gz as compared with noncentrifuged control animals. While the mechanism by which these increases in blood flow occurred is not known, results indicate that chronic exposure to hyperdynamic gravitational fields can alter circulatory dynamics. It is concluded that the cardiovascular system is directly involved in the process of adaptation to chronic positive acceleration. B.J.

**A82-35910** **The landing signal officer - Auditory aspects.** R. M. Robertson, D. W. Maxwell, and C. E. Williams (U.S. Naval Aerospace Medical Center, Naval Aerospace Medical Research Laboratory, Pensacola, FL). *Aviation, Space, and Environmental Medicine*, vol. 53, July 1982, p. 670-675. Navy-supported research.

Landing signal officers (LSOs), exposed to high noise levels during carrier operations, do not routinely wear hearing protectors. Noise exposure data obtained during carrier qualifications on the USS Lexington and the USS Forrestal suggested a clear risk for hearing damage. Moreover, a comparison of the hearing of LSO and non-LSO pilots matched for age and number of flight hours, indicated a trend for LSOs to have poorer hearing. Questionnaire data from 225 LSOs indicate they need full access to aircraft auditory cues, which is not attainable with current off-the-shelf hearing protectors. It is recommended that a hearing protector be developed for the LSO which would permit passage of critical auditory cues and, at the same time, provide hearing protection. There should be a redesign or elimination of the UHF handset. If eliminated, a boom-type noise-cancelling microphone in conjunction with earphones integral to the hearing protector should be considered. Additional hearing studies of LSO and non-LSO pilots should be undertaken. (Author)

**A82-35911** **A procedure for the analysis of nystagmus and other eye movements.** G. R. Barnes (RAF, Institute of Aviation Medicine, Farnborough, Hants., England). *Aviation, Space, and Environmental Medicine*, vol. 53, July 1982, p. 676-682. 15 refs.

A simple procedure has been developed for the computer analysis of nystagmus and other eye movements using the superior pattern recognition capabilities of the human operator to distinguish between fast- and slow-phase eye movements. The basis of the procedure is that the operator can set up threshold limits around an expected slow-phase eye velocity waveform through the use of cursor facilities. Points lying outside the threshold limits are recognised as fast-phase eye movements and discarded. Various least-squares curve-fitting procedures are then used to establish the relationship between the occulomotor response and the stimulus waveform. Examples are given of analysis procedures for both periodic and transient responses of the vestibulo-ocular reflex. The method is particularly useful for the analysis of responses to voluntary head movement in which slow-phase velocity frequently approaches that of the fast-phase components. (Author)

**A82-35912** **Change in plasma cAMP and catecholamines in men subjected to the same relative amount of physical work stress.** P. C. Painter, E. T. Howley, and J. N. Liles (Tennessee, University; Memorial Hospital, Knoxville, TN). *Aviation, Space, and Environmental Medicine*, vol. 53, July 1982, p. 683-686. 19 refs.

This study has shown, for the first time, that the change in plasma adenosine 3',5'-cyclic monophosphate (cAMP), from accommodation or trough levels, correlates highly in both progressive and continuous work stress experiments with epinephrine at 0.990 and 0.898, and norepinephrine at 0.954 and 0.927, respectively, in men subjected to the same relative, rather than absolute, stress levels. All three analytes increased significantly by the time each subject had reached 80% of his maximal oxygen uptake in the progressive experiments and after working at 80% of his maximal oxygen uptake continuously for 10 min. In no case did plasma cAMP rise before the catecholamines. The possible significance of these observations to net perceived relative physiological stress is discussed. (Author)

**A82-35914** **Inflight medical facilities.** G. R. W. Davies and P. R. Degotardi. *Aviation, Space, and Environmental Medicine*, vol. 53, July 1982, p. 694-700. 34 refs.

The need and facilities currently provided for emergency medical care aboard airliners are reviewed, with particular emphasis on the Australian situation. Available evidence suggests that there is no requirement for revising the first-aid equipment and practices of Australian domestic airlines. For long-haul services, there does appear to be a justification for a higher level of medical facility because of the duration of separation and at least a hypothetical increase in risk due to factors such as mild hypoxia, immobility, and dehydration. However, the contents of the present Quantas physicians' kit has proved adequate to cover most contingencies and any extra effort toward improvement of inflight emergency care should first be directed toward an improved working area. B.J.

**A82-35915** **Health advice for aircrew on refugee flights.** J. S. Keystone and L. McIntyre (Toronto General Hospital, Toronto, Canada). *Aviation, Space, and Environmental Medicine*, vol. 53, July 1982, p. 701-703. 16 refs.

Airlines involved in transporting Indochinese refugees from Southeast Asia were surveyed in order to assess measures to protect the health of crews on refugee flights. Five of the 20 airlines surveyed provided sufficient data for analysis; combined, the five airlines transported approximately 2500 refugees on more than 100 flights, involving at least one crew change per flight. It is found that the aircrew on the flights surveyed were improperly advised regarding immunizations and were overly protected against enteric infections where hand washing to prevent the transmission of disease would have been sufficient. Malaria chemoprophylaxis was inappropriate for some aircrew who were not exposed to malaria and unsuitable for personnel venturing into drug-resistant malarious areas. Disinfection of aircraft upon leaving Southeast Asia was not performed by most of the airlines surveyed, resulting in a potential public-health risk. Recommendations are made for future refugee flights. B.J.

**A82-35916** **Familial intermittent diplopia - A report of two cases.** S. F. Flynn, K. W. Welsh, and J. R. Dille (FAA, Civil Aeromedical Institute, Oklahoma City, OK). *Aviation, Space, and Environmental Medicine*, vol. 53, July 1982, p. 704-707. 16 refs.

The presence of sufficient muscle balance and bifovial fixation to prevent a break in fusion resulting in diplopia, even under conditions of hypoxia, fatigue, stress, and peripheral gaze, has been of concern in aviation medicine since 1917. Few breaks in fusion in flight have ever been reported, and most known cases of diplopia are from the history, not from test results. This paper describes a recent examination of a 54-year old subject (a civil-aviation employee, but not a pilot) with a five-year history of several daily episodes of incapacitating diplopia; in addition, there is information about his 48-year-old brother who has a similar history. When asymptomatic, both have normal vision test results. It is emphasized that detection was from the histories; the diagnosis remains uncertain. It is concluded that the ease of concealment, rare test value, and prevalent examiner skills are of concern; the importance of the history is reaffirmed. B.J.

**A82-36026** **Man at extreme altitude.** J. B. West (California, University, La Jolla, CA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, June 1982, p. 1393-1399. 22 refs. Grants No. NIH-N01-HR-62915; No. NIH-R01-HL-24335.

The advance of knowledge of the effects of high altitudes on human life are traced through incidents and tests performed during hot-air balloon ascents and mountain climbing. Early balloon flights to heights exceeding 8000 m caused some fatalities, and 19th century discoveries included the importance of oxygen in low barometric environments. Blood samples were taken in mountain climbing expeditions in the 1920s, showing an alveolar CO2 partial pressure of 8 torr at 7010 m, which was later found to be half the actual value. The summit of Mt. Everest was reached for the first time by climbers without oxygen supplies in 1978. A different expedition up the slopes of Mt. Everest in 1973 resulted in the discovery that subjects who are acclimatized to heights do not return to sea level oxygen intake when supplementary oxygen is available. M.S.K.

**A82-36027** **Mechanical properties of the lungs during acclimatization to altitude.** H. Gautier, R. Peslin, A. Grassino, J. Milic-Emili, B. Hannhart, E.

Powell, G. Miserocchi, M. Bonora, and J. T. Fischer (Paris VI, Université, Paris; Nancy I, Université, Vandoeuvre-les-Nancy, Meurthe-et-Moselle, France; Meakins-Christie Laboratories, Montreal, Canada; Milano, Università, Milan, Italy). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, June 1982, p. 1407-1415. 36 refs. Research supported by the Institut National de la Santé et de la Recherche Médicale.

Lung volumes and mechanics were examined in nine subjects at sea level and then on each day for six days at 3457 m altitude. Volume was recorded using a flow type plethysmograph, which was found to be insensitive to gas density variations. Chest spirograms were made, thoracic gas volume was measured, air way resistance was gaged with a pneumotachograph, and forced expiratory and inspiratory maneuvers were performed on or by each subject. Esophogeal pressure was also examined with a latex balloon-catheter system introduced through the nose for inflation in the stomach. A significant loss of the lung static recoil pressure was observed over the lung volume range of 60-90 percent, while the mean inspiratory flow increased from days 1-4 at altitude. The dynamic lung compliance was unaffected by altitude. Pulmonary flow resistance, however, decreased continuously to a value of 25 percent of day 1 on day 6. Further studies to detect if the time course of neural drive is altered at high altitudes are indicated. M.S.K.

**A82-36029** **Effects of endogenous glucagon on glucose kinetics in shivering dogs.** Y. Minaire, J. Forichon, and A. Fréminet (Lyon I, Université, CNRS, Lyons, France). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, June 1982, p. 1458-1463. 43 refs.

Seven female dogs were equipped with catheters for blood sampling, insulin injection, and somatostatin infusion, then sheared and tested in 25 and -21 C conditions. Doses of either the somatostatin, insulin, or normal saline with glucose were fed intravenously to the shivering dogs. Measurements included packed cell volumes, plasma glucose concentration, immunoreactive insulin and glucagon levels, and hepatic glycogen content. Plasma glucagon levels remained relatively constant in both temperature ranges, while glucose production doubled in the shivering canines, implying that glucagon is not the stimulus for increased glucose production. M.S.K.

**A82-36030** **An automated, indirect assessment of cardiac output during rest and exercise.** J. H. Wilmore, P. A. Farrell, A. C. Norton, R. W. Coté, III, E. F. Coyle, G. A. Ewy, L. P. Temkin, and J. E. Billing (Arizona, University, Tucson, AZ). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, June 1982, p. 1493-1497. 28 refs.

A partial automation of the measurement of cardiac output through modification of the equilibration CO2 rebreathing technique was accomplished by using the Beckmann Metabolic Measurement Cart (MMC). The three variables, CO2 production, end-tidal CO2 pressure, and CO2 pressure in a rebreathing bag during the equilibration stage of the rebreathing procedure, were measured in breath-by-breath gas sampling in a sequence which repeated every 30 sec. Operator judgment was involved in deciding when the subject was in the same steady-state when each of the three variables was sampled. Six healthy subjects were examined to validate the procedure in comparisons of rest and cycle ergometer trials, and additional tests were run on eleven subjects with coronary artery disease using a thermodilution procedure with arterial catheterization. The thermodilution method was found to yield values 16.6 percent higher than the CO2 rebreathing technique. It is concluded that the method is viable for detecting suspected coronary disease when measurements are made in the supine position. M.S.K.

**A82-36031** **Parameters of ventilatory and gas exchange dynamics during exercise.** B. J. Whipp, S. A. Ward, N. Lamarra, J. A. Davis, and K. Wasserman (California, University, Medical Center, Torrance, CA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, June 1982, p. 1506-1513. 45 refs. Grant No. NIH-HL-11907.

The pulmonary gas-exchange and ventilatory response patterns during steady-state muscular exercise were examined in six subjects during cycle ergometer trials to establish characteristic exponential functions. Expiratory air was analyzed on a pneumatograph while O2 and CO2 partial pressures were assessed by mass spectrometry. The subjects performed six minutes of work and six minutes of rest in alternation after individual maximal workloads were determined. An early phase of response in terms of ventilation, O2 uptake, and CO2 output were detected which were different from patterns during steady-state conditions. The initial phase of rest to work exhibited higher cardiac output and pulmonary flow than the transition to steady state. A model was developed which fit the data once the steady-state plateau was reached. M.S.K.

**A82-36032** **Bohr effect and slope of the oxygen dissociation curve after physical training.** K. M. Braumann, D. Böning, and F. Trost (Hannover, Medizinische Hochschule, Hanover, West Germany). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, June 1982, p. 1524-1529. 30 refs.

The influence of intensive training over a period of 6 mos on the hemoglobin-oxygen (Hb-O2) affinity in athletes was examined in terms of factors which alter the O2 dissociation curve. Eight athletes were tested during the off-season and the season, with Hb samples determined photometrically, and levels of 2,3 diphosphoglycerate, adenosine triphosphate (ATP), lactic acid, and the hematocrit value also assayed. Before and after comparisons for different levels of conditioning were examined statistically with the Student's test for paired samples. An increased Bohr coefficient was detected after physical training. No alteration of the Hb molecule was observed, while dissociation curves of young erythrocytes have a steeper slope than those of older red cells. An increase of Hb-O2 affinity was concluded to occur, implying greater O2 extraction from the blood in physically trained subjects. M.S.K.

**A82-36033 *** **Effects of horizontal body casting on the baroreceptor reflex control of heart rate.** G. E. Billman, D. T. Dickey, H. Sandler, and H. L. Stone (Oklahoma, University, Oklahoma City, OK). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, June 1982, p. 1552-1556. 24 refs. Grant No. NsG-2262.

The purpose of this study was to investigate the effects of long-term horizontal body position on baroreceptor reflex control of heart rate. Six male rhesus monkeys (6.2-9.4 kg) were given bolus injections of 4.0 microgram/kg, phenylephrine during each of the following conditions: awake, anesthetized (10 mg/kg ketamine HCl), and after beta-blockade (1 mg/kg propranolol HCl) before, 7, 14, and 28 days after being placed in a horizontal body cast. R-R interval vs. systolic arterial pressure was plotted, and the slope was determined by least-squares-fit linear regression. Baroreceptor slope was significantly reduced by 7 days of horizontal body position and remained attenuated throughout the 28-day restraint period both before and after beta-receptor blockade. These data are consistent with the thesis that prolonged exposure to a zero-gravity environment impairs autonomic reflex regulation of the cardiovascular system. (Author)

**A82-36034** **Superficial shell insulation in resting and exercising men in cold water.** A. Veicsteinas, G. Ferretti, and D. W. Rennie (New York, State University, Buffalo, NY; Milano, Università, Milan, Italy). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, June 1982, p. 1557-1564. 37 refs. Grant No. NIH-P01-HL-14414.

The results of studies of the insulation value of skin and subcutaneous fat layers in men at rest and during mild exercise while immersed in cold water are reported, together with data for whole-body insulation. Nine sedentary medical students of varying levels of measured subcutaneous fat experienced 3 hr in cool water while carrying a thermistor inserted beneath the skin and into the rectum. Heat flow was recorded, while the overall body insulation was calculated numerically by indirect calorimetry. Further trials examined the effects of exercise while immersed. Increasing fat thickness was found to provide higher overall body insulation, while exercise in cold water decreased the insular value of subcutaneous skin tissue. The unperfused skin and subcutaneous fat were concluded to furnish 10-15 percent of the whole-body insulation during immersion at rest, and up to 40 percent during exercise. M.S.K.

**A82-36035** **Evidence for diminished sensitivity of the hamster pulmonary vasculature to hypoxia.** B. R. Walker, N. F. Voelkel, I. F. McMurtry, and E. M. Adams (Colorado, University, Denver, CO). *Journal of Applied Physiology - Respiratory, Environmental and Exercise Physiology*, vol. 52, June 1982, p. 1571-1574. 26 refs. Grant No. NIH-HL-14985.

**A82-36036** **Intrapulmonary blood flow redistribution during hypoxia increases gas exchange surface area.** R. L. Capen (Colorado, University, Denver, CO) and W. W. Wagner, Jr. (Colorado College, Colorado Springs, CO). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, June 1982, p. 1575-1580. 23 refs. Research supported by the Carnegie-Mellon Foundation; Grants No. NIH-HL-14985; No. NIH-HL-07171.

It was previously shown that airway hypoxia causes pulmonary capillary recruitment and raises diffusing capacity for carbon monoxide. This study was designed to determine whether these events were caused by an increase in pulmonary vascular resistance, which redistributed blood flow toward the top of the lung, or by an increase in cardiac output. Capillary recruitment at the top of the dog lung was measured by in vivo microscopy, gas exchange surface area of the whole lung by diffusing capacity for carbon monoxide, and blood flow distribution by radioactive microspheres. During airway hypoxia recruitment occurred, diffusing capacity increased, and blood flow was redistributed upward. When a vasodilator was infused while holding hypoxia constant, these effects were reversed; i.e., capillary 'derecruitment' occurred, diffusing capacity decreased, and blood flow was redistributed back toward the bottom of the lung. The vasodilator was infused at a rate that left hypoxic cardiac output unchanged.

These data show that widespread capillary recruitment during hypoxia is caused by increased vascular resistance and the resulting upward blood flow redistribution. (Author)

**A82-36037** **Exercise performance after ventilatory work.** B. Martin, M. Heintzelman, and H.-I. Chen (Indiana University, Bloomington, IN). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, June 1982, p. 1581-1585. 30 refs. Grant No. NIH-HL-26351.

The strength reserve of ventilatory muscles was tested by having subjects perform hyperpnea before spirometric tests on a treadmill. Instrumentation included channeling the subjects' breath through a chamber which allowed measurement of O2 uptake and CO2 levels in expirated air. Hyperpnea was maintained for 150 min, followed by running to exhaustion on a treadmill. Control trials were run before introduction of the pre-exercise hyperpnea to establish exhaustion levels on the treadmill. The exhaustion state was subsequently reached in a shorter time period once the deep breathing preceded the treadmill tests, occurring at lower levels of heart rate, ventilation, and O2 uptake than without the deep breathing. It is suggested that glycogen depletion occurs in the ventilatory muscles, a behavior similar to that of the skeletal muscles in exhaustive exercise conditions. M.S.K.

**A82-36038** **Effects of glycogen depletion and pedaling speed on 'anaerobic threshold'.** E. F. Hughes, S. C. Turner, and G. A. Brooks (California, University, Berkeley, CA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, June 1982, p. 1598-1607. 34 refs. Grant No. NIH-AM-19577.

Efforts to determine whether the divergence between lactate and ventilatory inflection points are due to different gradients of pedaling speed and glycogen depletion in the muscles are reported. Nine subjects performed incremental work rate tests on a bicycle ergometer until maximal work rates were reached. Additional trials were run involving periodic pedaling at 50 rpm at levels just below the lactate inflection point. Inspired air volumes were measured on a potentiometer and blood samples were taken before the tests and within 2 minutes of the start of any load cycle. The decoupling of the ventilatory and lactate level inflection points occurred without any correlation to alterations in the pedaling frequency or body glycogen levels. An increase in ventilation was observed in the glycogen depletion tests, and correlations between the blood lactate and plasma bicarbonate indicate that lactate was the primary cause of exercise-induced acidosis. M.S.K.

**A82-36039** **Attenuation of blood pressure increases in Dahl salt-sensitive rats by exercise.** R. E. Shepherd, M. L. Kuehne, K. A. Kenno, J. L. Durstine, T. W. Balon, and J. P. Rapp (Toledo, University; Ohio, Medical College, Toledo, OH). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, June 1982, p. 1608-1613. 33 refs. Research supported by the University of Toledo and American Heart Association; Grants No. NIH-AM-21912; No. NIH-HL-20176.

Female Dahl S and R rats were exposed to running training and salt augmentation in diet to determine the effect that chronically practiced physical activity has on blood pressure. The rats were divided into groups which either ran 27 m/min, 60 min/day, 5 days/week, for 8 wk on a treadmill, or did not run, or were trained for 12-24 wks, or began training 6 wks after the controlled diet was introduced and trained for 6 wks. Measurements were made of blood pressure by use of the microphonic tail-cuff method. S rats which ran exhibited lower blood pressures than all other groups of rats, while R rats displayed no differences in either sedentary or active groups. Hypertension was also lowered in the active S rats compared to the sedentary rats after salt was introduced to the diet, although rats with salt in the diet before exercise training never fully compensated for the addition of salt and concomitant onset of hypertension. M.S.K.

**A82-36040** **Effect of habitual exercise on left ventricular response to exercise.** J. D. Anholm, C. Foster, J. Carpenter, M. L. Pollock, C. K. Hellman, and D. H. Schmidt (Wisconsin, University; Mount Sinai Medical Center, Milwaukee, WI). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, June 1982, p. 1648-1651. 30 refs.

Forty-five males in three levels of physical training were examined at rest and after maximal exercise by means of radionuclide angiography to assess the effect of regular exercise on left ventricular function. The subjects included groups which trained more than 7 hr/wk, 2-4 hr/wk, and less than 1 hr/wk in aerobic activity. The tests were performed to exhaustion on a bicycle ergometer while data was gathered by electrocardiogram and blood pressure measurements. Radionuclide angiograms were made at rest and after the trials. A high correlation was found between the left ventricle ejection rate (LVER) and work capacity. Resting values of left ventricular function were found to not depend on conditioning, while significant differences were observed for both LVER and ejection fraction. An expansion in the left ventricular dimensions was indicated in the well-trained group. M.S.K.

**A82-36041** **Sympathetic and parasympathetic cardiac control in athletes and nonathletes at rest.** P. G. Katona, M. McLean, D. H. Dighton, and A. Guz (Charing Cross Hospital Medical School, London, England; Case Western Reserve University, Cleveland, OH). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, June 1982, p. 1652-1657. 32 refs. Grant No. NIH-HL-20328.

The relative roles of intrinsic heart rate and neural factors which cause observed bradycardia in physically conditioned humans were examined in comparison with a control group of nonathletes. The relative shifts or increase of control activity by the parasympathetic and sympathetic nervous systems as a result of beta blocker introduction are discussed in terms of a numerical model weighted by contributions from the two neural systems. The subjects were injected with either propranolol or atropine sulfate to block the effects of one of the two systems to a degree which could be detected. Monitoring was carried out for heart rate, blood pressure, and respiration. No significant differences were detected in heart rate changes between the athletes and nonathletes. Evidence for a specific agent which causes reduced resting heart rates in athletes is discussed. M.S.K.

**A82-36172** † **The effect of acute hypoxia on the EEG and unit impulse activity of neurons of different brain structures in rats (Vliianie ostroi gipoksii na EEG i impul'snuiu aktivnost' neironov razlichnykh struktur mozga u krys).** N. S. Akopian, O. G. Baklavadzhian, and M. A. Karapetian (Erevanskii Gosudarstvennyi Universitet, Yerevan, Armenian SSR). *Fiziologicheskii Zhurnal SSSR*, vol. 68, May 1982, p. 576-582. 22 refs. In Russian.

The dynamics of the effect of acute hypoxia on the EEG and unit impulse activity of different brain structures in rats was experimentally investigated. The initial phase of hypoxia (2000-6000 m) involved the activation of the EEG and unit pulse activity, the EEG activity arising earlier and being more marked. In the second phase of hypoxia (7500-10,000 m), the EEG changed towards a predominant slow rhythm of delta type, while the unit impulse activity gradually diminished, the cortical neurons displaying a higher sensitivity to hypoxia and an earlier suppression than the cells of the hypothalamus and medulla. In all phases, the EEG waves showed a greater sensitivity to the rapid peripheral signals than the unit impulse activity of the cortex and other brain structures. B.J.

**A82-36229** **Cell-mediated immune reactions in ground squirrels in winter lethargy - Two-way transplantation reaction.** T. M. Shivacheva (B'lgarska Akademiia na Naukite, institut po Morpologiia, Sofia, Bulgaria). *Bolgarskaia Akademiia Nauk, Doklady*, vol. 35, no. 2, 1982, p. 245-248. 12 refs.

The immunocompetency of the lymphoid cells of hibernating ground squirrels is investigated in experiments involving both graft-versus-host and host-versus-graft reactions. Immune reactions were evaluated according to the popliteal lymph node assay in nonhibernating ground squirrels injected with spleen cells from hibernating and nonhibernating ground squirrels and in hibernating animals injected with spleen cells from nonhibernating animals at various times of the year. The local transplantation reaction in nonhibernating squirrels immunized with cells from nonhibernating squirrels is observed to exhibit seasonal variations in intensity, while that for nonhiberating squirrels immunized with cells from hibernating animals is constant throughout the winter months at an intensity corresponding to the lowest intensity observed for nonhibernating squirrel spleen cells. Ground squirrels in deep hibernation did not develop the immune reaction. Results may be linked with the seasonal involution and involutive changes in the thymus, lymph nodes and spleen of ground squirrels. A.L.W.

**A82-36260** † **Superconducting magnetocardiograph (Sverkhprovodiashchii magnitokardiograf).** V. Fodel'. *Priroda*, June 1982, p. 107, 108. In Russian.

The first SQUID magnetocardiograph developed in the Soviet Union (at the Neutron Physics Laboratory of the Dubna Nuclear Research Institute) is briefly described, and its advantages in relation to conventional cardiographs are discussed. The magnetocardiogram, obtained using this instrument, of a healthy 35-year-old man is presented, and is found to clearly delineate the QRS complex and the T-wave. B.J.

**A82-36307** * **A specific radioimmunoassay for osteocalcin with advantageous species crossreactivity.** P. Patterson-Allen, C. E. Brautigam, C. W. Asling (California, University, San Francisco, CA), R. E. Grindeland, and P. X. Callahan (NASA, Ames Research Center, Moffett Field, CA). *Analytical Biochemistry*, vol. 120, 1982, p. 1-7. 17 refs. Grant No. NCA2-OR-665-004.

The specificities of immunoassays to rat and bovine osteocalcin are examined. Extracts of noncalcified tissues and tissue fractions are unreactive to the antibody, with the exception of the kidney, in which the reactive component appears to be identical with osteocalcin by gel filtration and dose dilution analysis. The assays, developed against protein isolated from bone, are also demonstrated to be reactive to the native protein (bone in situ) and to osteocalcin in serum. The assays are sensitive to less than 50 pg osteocalcin. Intra- and interassay coefficients of variation are less than 6.8%. The bovine antibody crossreacts with human, horse, monkey, baboon, and cat osteocalcin, while the rat antibody crossreacts with dog and mouse. (Author)

**A82-36319** **Gravity, and metabolic scale effects in mammals.** N. Pace (California, University, Berkeley, CA) and A. H. Smith (California, University, Davis, CA). *Physiologist*, vol. 24, no. 6, 1981, p. S-37 to S-40. 23 refs.

Scaling effects which occur in the increase of body size of mammals since the early Tertiary Period and which may be affected by interaction with a gravity field are discussed. The influence of gravitational loading is considered in terms of an allometric relationship between metabolic heat production rate and total body mass. It is noted that no explanation has been found for an observed 3/4 power low relationship between the rate and mass, although the body surface is known to increase as a 2/3 power of the body mass in mammals. Attention is given to properties of thermal conductance, metabolic intensity, and thermoregulation which requires a 1/2 power scaling with size. A compromise is asserted to have possibly occurred with the gravitational 1.0 power requirements. The design of experiments to place animals in a 2.5 g environment to find if the 1.0 power ratio can be induced are described. A shift in the power to a 1/2 value is indicated in a weightless environment. M.S.K.

**A82-36320 *** **An electron-microscopic study of the brain of the fruit fly, Drosophila melanogaster, exposed to high-LET krypton /Kr-84/ particle radiation.** F. E. D'Amelio, E. V. Benton (San Francisco, University, San Francisco, CA), L. M. Kraft, and J. Miquel (NASA, Ames Research Center, Biomedical Research Div., Moffett Field, CA). *Acta Neuropathologica*, vol. 57, 1982, p. 37-44. 14 refs. Grant No. NsG-2063.

**A82-36688** **Studies on the interaction of pemoline and centrophenoxine with some flight factors (Badania nad oddzialywaniem pemoliny i centrofenoksyny z niektorymi czynnikami lotu).** E. Marks and W. Swiecicki (Wojskowy Instytut Medycyny Lotniczej, Warsaw, Poland). *Postepy Astronautyki*, vol. 14, no. 4, 1981, p. 19-26. 7 refs. In Polish.

Two sets of experiments were performed on 160 male Wistar rats, weighing 180-200 g. The first set involved the effect of pemoline and two flight factors, i.e. hypobaric conditions and vibration, on the level of biogenic amines in the blood and brain tissue. The second set of experiments involved the effects of hypobaric conditions and vibration on the level of pemoline and centrophenoxine in the blood and brain tissue. Changes were found in the levels of these drugs under the effect of the flight factors, which suggested a change in the drug metabolism. B.J.

**A82-36689** **Electrophysical and hemodynamic factors conditioning cardiac arrhythmias during centrifuging (Elektrofizjologiczne i hemodynamiczne przeslanki do zaburzen rytmu serca podczas badania na wirowce przeciazeniowej).** L. Kopka, R. Dabrowa, and S. Bojenko (Wojskowy Instytut Medycyny Lotniczej, Warsaw, Poland). *Postepy Astronautyki*, vol. 14, no. 4, 1981, p. 27-35. 26 refs. In Polish.

Various factors affecting the functioning of the human cardiovascular system during centrifuging under positive Gz acceleration are discussed. Particular attention is given to factors conditioning the occurrence of cardiac arrhythmias. Difficulties in interpreting such data are discussed with reference to aerospace medical studies. The necessity of making electrophysiological studies (using intracardial stimulation and His Bundle electrography) in some cases is pointed out. B.J.

**A82-36690** **The effect of positive and negative ions of air on the content of catecholamines in the brain and adrenal glands (Wplyw dodatnich i ujemnych jonow powietrza na zachowanie sie katecholamin w mozgowiu i nadnerczach).** R. Bernat, W. Banaszkiewicz, and G. Straburzynski (Akademia Medyczna, Poznan, Poland). *Postepy Astronautyki*, vol. 14, no. 4, 1981, p. 37-49. 27 refs. In Polish.

The content of adrenaline (A), noradrenaline (NA), and dopamine (DA) in the brain and adrenal glands of Wistar rats exposed to positive and negative air ions during 3.6 or 9 weeks was experimentally studied. Exposure to negative ions was found to produce a decreased NA content and an increased DA content in the brain. Positive ions produced an increase in the content of NA and DA in the brain. The content of A decreased in the adrenal glands of rats exposed to positive ions. B.J.

**A82-36691** **The effect of threat on psychomotor and intellectual performance depending on characteristics of temperament (Wplyw zagrozenia na efektywnosc funkcjonowania psychomotorycznego i intelektualnego w zaleznosci od charakterystyki temperamentalnej).** J. Maciejczyk (Wojskowy Instytut Medycyny Lotniczej, Warsaw, Poland). *Postepy Astronautyki*, vol. 14, no. 4, 1981, p. 51-63. 10 refs. In Polish.

Studies were carried out to evaluate the performance of pilot candidates, both differentiated and nondifferentiated in traits of temperament, in regard to psychomotor and intellectual skills in threat situations. Threatful stress was produced by testing candidates on a centrifuge for the first time in their lives. The anxiety level was measured before and after centrifuging. It is shown that stress associated with the anticipatory danger situation significantly reduces the level of performances of psychomotor and intellectual tasks. No differences in psychomotor and intellectual performance was found in subjects differentiated according to traits of temperament. B.J.

**A82-36951** **Manned systems design: Methods, equipment, and applications; Proceedings of the Conference, Freiburg im Breisgau, West Germany, September 22-25, 1980.** Conference sponsored by NATO. Edited by J. Moraal (Centrale Organisatie voor Toegepast-Natuurwetenschappelijk Onderzoek, Instituut voor Zintuigfysiologie, TNO, Soesterberg, Netherlands) and K.-F. Kraiss (Forschungsgesellschaft für angewandte Naturwissenschaften, Forschungsinstitut für Anthropotechnik, Wachtberg-Werthhoven, West Germany). New York, Plenum Press (NATO Conference Series III: Human Factors. Volume 17), 1981. 496 p. $35.

Papers are presented in the areas of conceptual and analytical approaches, performance measurement and simulator design and evaluation in the design of manned systems. Specific topics include the proper incorporation of human factors in the design process, simulation languages used in manned systems design, eye movement measurements used in the evaluation of visual performance, techniques for electophysiological measurements, human movement analysis in workplace design, and the design of a programmable multiple flight simulator facility. A.L.W.

**A82-36952** **Methods - Past approaches, current trends and future requirements.** D. A. Topmiller (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, OH). In: Manned systems design: Methods, equipment, and applications; Proceedings of the Conference, Freiburg im Breisgau, West Germany, September 22-25, 1980. New York, Plenum Press, 1981, p. 3-31. 8 refs.

The historical development, current technologies and practices and projected future directions of the discipline of human factors engineering are reviewed. The origins of the field in the United States in response to the increasing complexity of weapon systems in World War II and its initial development using the tools of experimental psychology are outlined, and limitations to the early design handbook approach and the improvements brought by the introduction of an interdisciplinary approach with influences from computer and information science are considered. Current trends in reference data source, experimental design, human-machine integration performance measurement, modelling, engineering design simulation and procedural technologies are then assessed based on responses to a questionnaire survey. Future requirements for methods, technologies and data bases for man-machine interface design and overall systems design are then discussed as derived from evaluations of human factors needs and projected shortfalls in computer technology. A.L.W.

**A82-36956** **The human operator simulator - An overview.** N. E. Lane (U.S. Naval Material Command, Naval Air Development Center, Warminster, PA), M. I. Strieb (Analytics, Inc., Willow Grove, PA), F. A. Glenn, and R. J. Wherry. In: Manned systems design: Methods, equipment, and applications; Proceedings of the Conference, Freiburg im Breisgau, West Germany, September 22-25, 1980. New York, Plenum Press, 1981, p. 121-152. 39 refs.

The structure and operational characteristics of the Human Operator Simulator (HOS), a model which combines evaluations of overall man-machine system performance with detailed simulations of operator functioning within the system, are reviewed. HOS is a collection of digital computer programs which allows for the simulation of a total system, including operator, hardware and software, and external data sources, performing a complex mission. Definitions of equipment characteristics and operator procedures are communicated to HOS through the Human Operator Procedures (HOPROC) language. The HOS model converts the generalized system defined by the HOPROC procedures into a simulation of a specific simulation event resulting in a time history of the event which is built up from the times required to execute detailed micromodels of information absorption, information recall, mental computation, decision making, anatomy movement, control manipulation and relaxation. The HOS system has been validated on levels corresponding to the descriptive capabilities of HOPROC language, the validity of the micromodels, part-task simulations and full-scale simulations. A.L.W.

**A82-36957** **SAINT, a digital simulation language for the study of manned systems.** G. P. Chubb (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, OH). In: Manned systems design: Methods, equipment, and applications; Proceedings of the Conference, Freiburg im Breisgau, West Germany, September 22-25, 1980. New York, Plenum Press, 1981, p. 153-179. 21 refs.

The basic features of the SAINT (Systems Analysis of Integrated Networks of Tasks) simulation language for the digital modeling of manned systems are presented. Following a brief survey of the evolution of SAINT based on experience gained from the use of the Siegel-Wolf two-man operator simulation model, which viewed system performance in terms of operator activities over time, the character of SAINT is discussed, noting its capability of modeling the man, machine or both as discrete events, continuous events or both, and the three levels of SAINT constructs. Examples of five applications of SAINT to simple cases are presented which demonstrate the range of modeling issues that may be approached, and a more complex model which includes the effects of man on machine and vice versa is formulated for the example of aircraft position fix updating using radar imagery. Possible improvements which would facilitate SAINT applications are noted. A.L.W.

**A82-36959** **Statistical techniques for instrument panel arrangement.** W. W. Wierwille (Virginia Polytechnic Institute and State University, Blacksburg, VA). In: Manned systems design: Methods, equipment, and applications; Proceedings of the Conference, Freiburg im Breisgau, West Germany, September 22-25, 1980. New York, Plenum Press, 1981, p. 201-218. 28 refs.

Four important aspects of the problem of the proper arrangement of instruments on a panel are discussed. The first involves the relationships that exist among the various statistical factors associated with instrument panel arrangement. A definition of link values, which express the magnitude of direct eye transitions between two instruments, is presented which allows them to be derived from both the joint probability of transition from one instrument to another or the probability of fixation on a given instrument. The problem of record length estimation in the collection of eye fixation data is then addressed, and the double sampling and work sampling approaches are outlined. Consideration is then given to the subclasses of criteria that may be used for optimization and to the execution of the optimization process itself, which in all but the most complex cases may be performed by exhaustive search methods. Important problems remaining in the areas of control and control/display arrangement and in arrangement and formatting with CRT displays are indicated. A.L.W.

**A82-36960 A method for semi-automatic analysis of eye movements.** F. V. Schick and H. Radke (Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt, Brunswick, West Germany). In: Manned systems design: Methods, equipment, and applications; Proceedings of the Conference, Freiburg im Breisgau, West Germany, September 22-25, 1980. New York, Plenum Press, 1981, p. 221-234, 5 refs.

A semiautomatic method for the analysis of eye mark recording data obtained in studies of the eye-fixation points when the observer's head is allowed to move freely is presented. The method is used with videotape recordings of subject eye motions as determined from the reflection of a V-shaped spot of light off the cornea, and head movements as determined using a lens attached to the center of a face mask. In constrast to time-consuming manual methods for the analysis of the analog methods, and fully automatic analysis, both of which are not applicable in cases where individual visual targets are changing their positions, the semiautomatic method works with categories of visual targets rather than their exact locations. Information, corresponding to the dwell times and motion sequences of the eye point of regard in the target areas, is entered into a digital computer from the analog record by an observer depressing a switch corresponding to each visual area for the duration of the fixation. The semiautomatic method has been proven practicable in studies of the visual behavior of airline pilots performing flight tasks in a simulator. A.L.W.

**A82-36961 Narrowing of the visual field as an indicator of mental workload.** M. Voss (Fraunhofer-Institut für Informations- und Datenverarbeitung, Karlsruhe, West Germany). In: Manned systems design: Methods, equipment, and applications; Proceedings of the Conference, Freiburg im Breisgau, West Germany, September 22-25, 1980. New York, Plenum Press, 1981, p. 235-250. 14 refs. Research supported by the Forschungsvereinigung Automobiltechnik and Bundesanstalt für Strassenwesen.

A method has been developed which uses peripheral visual performance as an indicator of mental workload due to the processing of central visual information. Peripheral vision is measured according to the detectability of a set of lights mounted in a special spectacle frame while the subject is performing the main visual task. Detection rate is measured as a function of presentation angle in the horizontal meridian, with the functional field defined by the presentation angle where 50% of the stimuli are detected, so that a narrowing of the functional field, or tunnel vision, may be observed. Experiments involving subject responses to eight streams of binary signals, performance in a driving simulator and automobile driving in an actual situation have demonstrated a decrease in the detectability of peripheral visual stimuli in the presence of increased visual workloads. A.L.W.

**A82-36962 Eye movement measurement in the assessment and training of visual performance.** H. Widdel and J. Kaster (Forschungsgesellschaft für angewandte Naturwissenschaften, Forschungsinstitut für Anthropotechnik, Wachtberg-Werthhoven, West Germany). In: Manned systems design: Methods, equipment, and applications; Proceedings of the Conference, Freiburg im Breisgau, West Germany, September 22-25, 1980. New York, Plenum Press, 1981, p. 251-270. 41 refs.

Measurements of eye movements during a series of search tasks are presented which were used to evaluate the influences of training in a specific search pattern on search performance. Oculometer measurements were performed during searches for a target symbol among neutral symbols of various densities spread randomly over a screen before visual training, in the course of training sessions in exhaustive search with and without a visual aid, and following training. Search times are found to show a learning effect in subjects trained with the scan aid, and to increase with symbol density. No significant differences in fixation duration are found between the pre- and post-test situations, although individuals with a high performance level generally exhibited a shorter fixation duration than those with lower performances. Estimations of the visual lobe area according to the probability of successful fixations in a given area show a more efficient visual lobe area for subjects with higher search performance than those with lower performance. Finally, measurements of eye movement patterns show a qualitative difference between the groups trained with and without a scan pattern, reflecting search performance. A.L.W.

**A82-36963 Physiological monitoring and the concept of adaptive systems.** F. E. Gomer (McDonnell Douglas Astronautics Co., Engineering Psychology Dept., St. Louis, MO). In: Manned systems design: Methods, equipment, and applications; Proceedings of the Conference, Freiburg im Breisgau, West Germany, September 22-25, 1980. New York, Plenum Press, 1981, p. 271-287. 35 refs. Contract No. MDA903-78-C-0181.

Current trends in the development of manned systems for aerospace applications are reviewed particularly as they relate to provisions for the use of the adaptive capabilities of computer-based systems based on the results of physiological monitoring. The replacement of dedicated, single-purpose instruments and controls with multipurpose displays and keyboards brought about by increasing task demand and space limitations is discussed for the example of the instrument panel of a fighter-bomber aircraft, and it is noted that despite these improvements, there is concern that pilot mental workload problems will remain significant. Possible adaptive procedures that may be implemented to alleviate the workload are indicated, and the various physiological methods that may be used to detect momentary changes in mental function are examined, including electroencephalographic event-related potentials and contingent negative variation, and eye movement measurements. The current status of electrophysiological measurements during flight simulations is indicated. A.L.W.

**A82-36964 Electrophysiological measurement techniques.** G. Rau (Helmholtz Institute for Biomedical Engineering, Aachen, West Germany). In: Manned systems design: Methods, equipment, and applications; Proceedings of the Conference, Freiburg im Breisgau, West Germany, September 22-25, 1980. New York, Plenum Press, 1981, p. 289-304. 12 refs.

Technical aspects of the utilization of electrophysiological techniques are discussed. The frequency range and amplitude distribution of the signals commonly detected by surface electrodes are summarized, and problems in measurement accuracy associated with the complex resistance of the skin, the electrode and the electrode-electrolyte transition, and the cable connecting the electrodes to the amplifier are examined. Factors in amplifier design which may then be used to reduce these difficulties are considered, and improvements to the signal to noise ratio represented by the techniques of optical coupling, digital filtering and artifact detection and suppression are indicated. Results of the application of these improvements are presented for the case of a technique for the measurement of visual evoked potentials, and a microcomputer system which may be used for the acquisition and processing of electrophysiological signals in a laboratory environment is described. A.L.W.

**A82-36965 Electromyography and applications.** K.-P. Gärtner (Forschungsgesellschaft für angewandte Naturwissenschaften, Forschungsinstitut für Anthropotechnik, Wachtberg-Werthhoven, West Germany). In: Manned systems design: Methods, equipment, and applications; Proceedings of the Conference, Freiburg im Breisgau, West Germany, September 22-25, 1980 New York, Plenum Press, 1981, p. 305-321. 20 refs.

Electromyography is discussed as a reliable objective method for the measurement of muscular activity and its relation with factors that influence work performance. The physiological basis of electromyography, which shows the summed activity of single muscle fibers, single motor units or several motor units, is explained, and techniques for the use of surface electromyography, which is preferred in ergonomics due to its noninvasive character, are presented. Techniques for the analysis of electromyographic signals are then examined, with attention given to rectifying, integrating and averaging by digital or analog methods and frequency analysis. Finally, applications of electromyography in man-machine systems as an indicator of muscular strain, as biofeedback and as a tool in ergonomic evaluations are discussed. A.L.W.

**A82-36966 Analysis of human movements for workplace design.** K.-P. Holzhausen (Forschungsgesellschaft für angewandte Naturwissenschaften, Forschungsinstitut für Anthropotechnik, Wachtberg-Werthhoven, West Germany). In: Manned systems design: Methods, equipment, and applications; Proceedings of the Conference, Freiburg im Breisgau, West Germany, September 22-25, 1980. New York, Plenum Press, 1981, p. 337-362. 37 refs.

Experimental design, tools, and analytical techniques for establishing an anthropometric data base for movement and distance parameters for human functions in the workplace are reviewed. Specific attention is given to the range of human actions in a seated position, a position relevant to control consoles and cockpits, with data being accumulated on human stature, reach, and range of motions, as well as on the patterns of movement. Technical approaches to cataloging the motions are examined, including mechanical, photographic, optoelectronic, and fully electronic monitoring and recording. Stereophotographic methods allow the investigation of movements with three-dimensional trajectories by use of two cameras. Attention is given to static models such as BOEMAN, linkman, COMBIMAN, and the Crewstation Geometry Evaluator systems for computer aided design of cockpit interiors. Applications of the techniques to solving workplace inefficiencies are illustrated with examples. M.S.K.

**A82-36967 * Evaluation of synthesized voice approach callouts /SYNCALL/.** C. A. Simpson (Psycho-Linguistic Research Associates, Menlo Park, CA). In: Manned systems design: Methods, equipment, and applications; Proceedings of the Conference, Freiburg im Breisgau, West Germany, September 22-25, 1980. New York, Plenum Press, 1981, p. 375-393. 42 refs. Research supported by the National Research Council; Grants No. NGL-05-046-002; No. NGR-45-003-108.

The two basic approaches to the generation of 'synthesized' speech include a utilization of analog recorded human speech and a construction of speech entirely from algorithms applied to constants describing speech sounds. Given the availability of synthesized speech displays for man-machine systems, research is needed to study suggested applications for speech and design principles for speech displays. The present investigation is concerned with a study for which new performance measures were developed. A number of air carrier approach and landing accidents during low or impaired visibility have been associated with the absence of approach callouts. The study had the purpose to compare a pilot-not-flying (PNF) approach callout system to a system composed of PNF callouts augmented by an automatic synthesized voice callout system (SYNCALL). Pilots were found to favor the use of a SYNCALL system containing certain modifications. G.R.

**A82-36968 Evaluating simulator validity.** J. Moraal (Centrale Organisatie voor Toegepast-Natuurwetenschappelijk Onderzoek, Instituut voor Zintuigfysiologie TNO, Soesterberg, Netherlands). In: Manned systems design: Methods, equipment, and applications; Proceedings of the Conference, Freiburg im Breisgau, West Germany, September 22-25, 1980. New York, Plenum Press, 1981, p. 411-426. 13 refs.

Problems associated with the use of simulator validation criteria are discussed with reference to three studies concerning a ship navigator simulator, a driving simulator for research purposes, and a tank driver training simulator. It is emphasized that the functional correspondence or validity should be defined in relation to the purpose of the simulator. Thus, a training simulator is valid as long as transfer-of-training to the real system is achieved, while a research simulator is valid when experimental results of the simulator and the real system are congruent, so that performance predictions can be made from one to the other. It is also pointed out that the functional correspondence can be improved by increasing the physical correspondence. V.L.

**A82-36971 † Motion sickness, its prevention and treatment (Ukachivanie, ego profilaktika i lechenie).** M. P. Efremenko. Moscow, Izdatel'stvo DOSAAF SSSR, 1981. 72 p. In Russian.

The causes and symptoms of motion sickness are discussed on the basis of a survey of the literature. Methods of preventing and treating the malaise are suggested. The various forms of motion sickness are delineated, and a chart containing 20 symptoms is included. It is shown that training programs can lower the incidence of motion sickness among sailors and aircrew members. C.R.

**A82-36976 † Hormonal mechanisms of adaptation and training (Gormonal'nye mekhanizmy adaptatsii i trenirovki).** A. A. Viru. Leningrad, Izdatel'stvo Nauka, 1981. 156 p. 639 refs. In Russian.

The role of hormones in the adaptation response in general and in the mechanism of general adaptation and the transfer of short-term adaptations to the long term in particular is discussed with particular emphasis on the glucocorticoid hormones. The historical development of the concept of general, nonspecific adaptation starting from the work of Selye (1936), which showed the importance of the hypophyseal-adrenocortical system, is reviewed, and the adaptive functions of this system are examined in detail, with attention given to the control of the stress reaction and the mechanism of action of the glucocorticoids. Interactions of various systems, including the endocrine systems and the central nervous system, in the mechanism of the general adaptation syndrome are also considered. Finally, the problem of the development of long-term adaptation is examined for the model of physical training. A.L.W.

**A82-37182 Training maintenance technicians for troubleshooting - Two experiments with computer simulations.** W. B. Johnson and W. B. Rouse (Illinois, University, Urbana, IL). *Human Factors*, vol. 24, June 1982, p. 271-276. 13 refs. Contract No. MDA903-79-C-0421.

Aviation maintenance trainees participated in two experiments designed to assess the relative effectiveness of traditional instruction versus two types of computer simulation in the context of aircraft power-plant troubleshooting. Simulations ranged in nature from abstract, context-free problems to those involving specific aircraft power plants. Traditional instruction included reading assignments, television programs tailored to aircraft power-plant troubleshooting, and on-line quizzes. The first experiment compared the three training methods, and the second considered a mixture of the two computer simulations versus traditional instruction. The primary conclusion was that an appropriate combination of low- and moderate-fidelity computer simulations can provide sufficient problem-solving experience to be competitive with the more traditional lecture/demonstration form of instruction. (Author)

**A82-37183 Screening designs used to estimate the relative effects of display factors on dial reading.** H. O. Whitehurst (California State University, Northridge, CA). *Human Factors*, vol. 24, June 1982, p. 301-310. 6 refs.

Two experiments were conducted to determine if screening designs could be used to obtain reliable estimates of the relative strength of effect of several independent variables. Specifically, the effects of eight independent variables on the speed and accuracy of reading moving-pointer, fixed-scale dials were tested. Additional objectives were to determine if the black-white relationship of the scale markers and dial background affects dial-reading performance or subject preferences. The percentage of the variance accounted for by each main effect was very similar across screening designs. The progression of the numbers on the scale had by far the strongest effect. Interpolation and scale unit length also had relatively strong effects, while scale orientation, marker width, pointer design, clutter, and scale number location had weak to trivial effects. Black-on-white and white-on-black dials were read at about the same speed, but more errors were made while subjects read the black-on-white, even though they preferred the black-on-white dials. (Author)

**A82-37184 Locus of the stimulus to visual accommodation - Where in the world, or where in the eye.** J. C. Hull, S. N. Roscoe (New Mexico State University, Las Cruces, NM), and R. T. Gill (Wright State University, Dayton, OH). *Human Factors*, vol. 24, June 1982, p. 311-319. 15 refs. Contract No. F49620-77-C-0117; Grant No. AF-AFOSR-80-0024.

Eight observers judged the apparent size of a 'moon' simulated by projecting a collimated disk of light just above the horizon in real scenes and virtual images. In each of three viewing conditions, Back-lighted Screen (collimated), Back-projected Photograph (collimated), and Natural Campus Scene, masks inserted in the viewing aperture of the 'moon machine' obscured various horizontal bands of the lower half of the visual field. With each experimental manipulation, both the perceived size of the moon and the observer's visual accommodation distance (measured with a laser optometer) covaried systematically. From the combined results of two experiments, it appears that (1) viewing a collimated image of a natural vista does not have the same effects as viewing the actual scene, (2) the retinal locus of visible texture is the primary determinant of perceived size of objects of constant visual angle embedded in natural scenes, and it has a strong effect on accommodation to virtual images, and (3) the overall correlation between apparent, or perceived, size and accommodation shift from the individual's dark focus, averaged across observers, approaches unity. (Author)

**A82-37185 Using realistic sensor, target, and scene characteristics to develop a target acquisition model.** B. L. Sibernagel (Allen Corporation of America, Orlando, FL). *Human Factors*, vol. 24, June 1982, p. 321-328.

This paper provides a model of target acquisition that will aid in the design of electro-optical detection devices. Twelve subjects, highly skilled in target detection, located targets in 32 terrain scenes taken from a realistic terrain board. Independent variables included display resolution, field of view, target contrast, target range, number of targets, and scene complexity. All experimental variables had a significant effect on target detection performance. A regression equation is presented, which can be used to predict detection time given the various sensor, target, and scene characteristics. (Author)

**A82-37186 Perceptual discriminability as a basis for selecting graphic symbols.** R. E. Geiselman (California, University, Los Angeles, CA), B. M. Landee, and F. G. Christen (Perceptronics, Inc., Woodland Hills, CA). *Human Factors*, vol. 24, June 1982, p. 329-337. 6 refs. Army-supported research.

The purpose of this research was to develop a performance-based criterion for selecting among alternative symbols to be used in graphic displays. The specific criterion developed was an index of perceptual discriminability. Through regression analyses of an intersymbol similarity-rating matrix, it was concluded that symbols are judged more or less similar on the basis of the number of shared versus unique configural attributes (an X, a triangle, etc.), as opposed to primitive attributes (number of lines, arcs, etc.). An easy-to-use discriminability-index formula was derived from the regression analysis involving the configural attributes, and this formula was used to predict the results of an experiment involving a search for specific symbols embedded in an array. Indices obtained from a formula such as the one developed here could be used as part of the basis for choosing among alternative candidate symbols for inclusion in an existing symbol domain. (Author)

**A82-37187 Noise and annoyance - A new methodology.** G. M. Corso and M. E. Moomaw (Georgia Institute of Technology, Atlanta, GA). *Human Factors*, vol. 24, June 1982, p. 339-345. 5 refs.

The effects of noise intensity on annoyance are investigated in two experiments involving the use of a visual signal to designate the impending occurrence of a 1000 Hz pure tone. The noise was timed to occur only if response time was greater than 250 msec, and to terminate with the response. The first experiment's results indicate that the no-noise condition and 50 dBA values differed significantly from the 90 dBA value in terms both of number of avoidance responses and response latencies, implying that avoidance and latency are indicators of annoyance. The second experiment investigated range effects on the number of avoidance responses and their latencies. Significant differences are noted between a group exposed to 50, 60 and 70 dBA and another exposed to 70, 80 and 90 dBA, suggesting that avoidances and latencies are a function of both absolute intensity value and the range of intensities used. Attention is given to the advantages and disadvantages of the avoidance procedure. O.C.

**A82-37372** † **The effect of space flight factors on quiescent nuclei of certain plant and animal test objects (Vliianie faktorov kosmicheskogo poleta na pokoiashchiesia iadra nekotorykh rastitel'nykh i zhivotnykh model'nykh ob'ektov).** N. L. Delone, V. V. Antipov, and B. I. Davydov. *Kosmicheskie Issledovaniia*, vol. 20, May-June 1982, p. 489-492. 10 refs. In Russian.

The phenomenon of quiescent or silent cell nuclei was examined in tests performed on plant and animal test objects on a variety of spacecraft (Vostok-3, Soyuz-4, Cosmos-690, Cosmos-110, etc.). the effect of space flight factors on: (1) the 'reanimation' of seeds of higher plants that had lost their germinating ability; (2) the liver cells of turtles (Testudo horsfieldi Gray); and (3) the generative nuclei of the binuclear pollen Tradescantia paludosa were examined. The phenomenon of quiescent or silent cell nuclei, where no reading of genetic information occurs, was observed in all three types of organisms under space flight conditions. It is suggested that this silent state is associated with a loss of feedback between the nucleus and the cytoplasm. B.J.

**A82-37420** * **Beta decay and the origins of biological chirality - Experimental results.** D. W. Gidley, A. Rich, J. Van House (Michigan, University, Ann Arbor, MI), and P. W. Zitzewitz (Michigan, University, Dearborn, MI). *Nature*, vol. 297, June 24, 1982, p. 639-643. 25 refs. NSF-NASA-supported research.

Preliminary experimental results are presented of an investigation of the possible role of preferential radiolysis by electrons emitted in the beta decay of radionuclides, a parity-nonconserving process, in the universal causation of the optical activity of biological compounds. Experiments were designed to measure the asymmetry in the production of triplet positronium upon the bombardment of an amino acid powder target by a collimated beam of positrons as positron helicity or target chirality is reversed. No asymmetry down to a level of 0.0007 is found in experiments on the D and L forms of cystine and tryptophan, indicating an asymmetry in positronium formation cross section of less than 0.01, while an asymmetry of 0.0031 is found for leucine, corresponding to a formation cross section asymmetry of about 0.04. A.L.W.

**A82-37421** **Beta decay and the origins of biological chirality - Theoretical results.** R. A. Hegstrom (Wake Forest University, Winston-Salem, NC). *Nature*, vol. 297, June 24, 1982, p. 643-647. 13 refs.

A dynamical mechanism is found whereby a dissymmetric molecule and its mirror image are ionized at different rates by longitudinally polarized electrons such as produced by nuclear beta decay. An enhancement is predicted for molecules containing heavy atoms. Order-of-magnitude estimates indicate that the asymmetric effect of this mechanism may be detectable by current experiments on positronium formation. (Author)

**A82-37423** * **Methane flux in the Great Dismal Swamp.** R. C. Harriss, D. I. Sebacher (NASA, Langley Research Center, Hampton, VA), and F. P. Day, Jr. (Old Dominion University, Norfolk, VA). *Nature*, vol. 297, June 24, 1982, p. 673, 674. 33 refs. NASA-supported research; NSF Grant No. DEB-77-08609.

The paper reports measurements made over a 17-month period of the methane flux in the Great Dismal Swamp of Virginia in light of the potential implications of variations in atmospheric methane concentrations. Gas flux measurements were made by a technique combining a gas filter correlation IR absorption analyzer with improved sampling chambers that enclose a soil area under conditions ranging from totally flooded soils to dry soils resulting from drought conditions. Methane emissions are found to range from 0.0013 g CH4/sq m per day to 0.019 g CH4/sq m per day, depending on temperature and season, when the soil is in a waterlogged state. During drought conditions, the peat soils in the swamp were a sink for atmospheric methane, with fluxes from less than 0.001 to 0.005 g CH4/sq m per day and decreasing with decreasing temperature. Results illustrate the potential complexity of the processes which regulate the net flux of methane between wetland soils and the atmosphere. A.L.W.

**A82-37926** **Fibrinopeptide A after strenuous physical exercise at high altitude.** P. Bärtsch, E. K. Schmidt, and P. W. Straub (Bern, Universität, Berne, Switzerland). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, July 1982, p. 40-43. 33 refs.

Alterations in blood coagulation following exhaustive exercise at high altitude are studied in view of the possible role of thrombosis in the pathology of acute mountain sickness. Subjects resident at an altitude of 600 m were transported by railroad to an altitude of 3457 m, where half of them underwent bicycle ergometer exercise to exhaustion while the other half served as controls. Pre-exercise blood samples taken 1 hour after arrival at altitude showed no significant alterations in coagulation parameters as compared with samples taken at 600 m. Both immediately after and 1 hour after exercise, the clotting times and euglobin lysis times were shortened and factor VII activity was elevated in the exercise group but not the controls, although there was no significant difference in fibrinopeptide A levels and the ethanol gelation test remained negative. No rise in fibrin(ogen) degradation products or fibrin(ogen) fragment E was found. It is therefore concluded that strenuous exercise at altitude does not lead to a rise in thrombin-mediated fibrin formation in young healthy males. A.L.W.

**A82-37927** **Comparison of human vocal cord movements during isocapnic hypoxia and hypercapnia.** S. J. England, D. Bartlett, Jr., and S. L. Knuth (Dartmouth College, Hanover, NH). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, July 1982, p. 81-86. 25 refs. Grant No. NIH-HL-19827.

Respiratory vocal cord movements were analyzed in healthy human subjects during air breathing and in isocapnic hypoxia and hypercapnia. In the majority of experiments, expiratory glottic narrowing was substantially greater during hypoxia than during hypercapnia. Because ventilations were carefully matched under these two conditions, it is concluded that hypoxic stimulation of peripheral chemoreceptors favors expiratory glottic narrowing and leads to a relatively high laryngeal airflow resistance. In contrast, hypercapnia is accompanied by low expiratory laryngeal resistance. Similar rates of expiratory airflow with these two stimuli must be achieved by different balances of the factors that determine this flow. (Author)

**A82-37928** **Brain hypoxia and control of breathing - Role of the vagi.** R. W. Chapman, T. V. Santiago, and N. H. Edelman (Rutgers University, Piscataway, NJ). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, July 1982, p. 212-217. 27 refs. Grants No. NIH-HL-16022; No. NIH-HL-07647.

The role of vagally mediated reflexes in the ventilatory response to progressive brain hypoxia secondary to carboxyhemoglobinemia is investigated. Measurements of ventilatory parameters were made at different levels of carboxyhemoglobinemia before and after vagotomy in unanaesthetized goats. Vagotomy is found to change the breathing pattern to a slower, deeper pattern, while increasing resting heart rate and arterial pressure under normoxia. Carboxyhemoglobin levels greater than 45% initiate a large increase in respiratory rate and a lesser increase in inspiratory minute volume, the magnitudes of which are reduced somewhat after vagotomy. Whereas carboxyhemoglobinemia had a biphasic effect on the lung inflation reflex prior to vagotomy, increasing the ratio of the inspiratory duration of a fully occluded breath to that of a spontaneous breath at low carboxyhemoglobin levels and reducing the ratio to unity at high levels, vagotomy led to the constancy of the ratio at unity for all levels of carboxyhemoglobin, indicating the abolition of the lung inflation reflex. Results indicate that contributions from vagally mediated mechanisms to the overall ventilatory response to brain hypoxia are small in magnitude. A.L.W.

**A82-37929** **Muscle weakness following dynamic exercise in humans.** C. T. M. Davies and M. J. White (Queen's Medical Centre, Nottingham, England). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, July 1982, p. 236-241. 19 refs.

The effects of dynamic exercise on muscular force generation in response to electrical stimulation are investigated in subjects performing 1 hour of level running and uphill walking at a gradient of 25% on a treadmill, and box stepping on and off a 0.5-m platform. Tension development was measured during both submaximal and supramaximal twitch and tetanic stimulation of the triceps surae before and after exercise. At submaximal stimulation voltages, running and walking are found to enhance twitch and tetanic responses, however the supramaximal time to peak tension, twitch tension and tetanic tensions were reduced, with the reduction in tetanus at 100 Hz associated with a decrease in maximal voluntary contraction. Muscular functions were found to return to normal 2 hours after running and walking, in contrast to box-stepping, which produced a more pronounced weakening which lasted at least 22 hours. Results illustrate the difficulties in using submaximal stimulation voltages and tetanic response ratios in studies of muscle function, and suggest that long-lasting muscle weakness is not associated with recovery from prolonged running or walking. A.L.W.

**A82-37930** **Brain extracellular fluid pH and blood flow during isocapnic and hypocapnic hypoxia.** W. F. Nolan and D. G. Davies (Texas Tech University, Lubbock, TX). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, July 1982, p. 247-252. 35 refs. Research supported by the Tarbox Research Institute; Grant No. NIH-HL-25984.

The role of brain extracellular fluid pH in the regulation of the cerebrovascular response to hypoxia is studied by means of simultaneous measurements of extracellular fluid pH and blood flow during isocapnic and hypocapnic hypoxia. Measurements of diencephalon and total brain blood flows were made by the radioactive microsphere technique concurrently with microelectrode determinations of extracellular fluid pH in the diencephalon in anaesthetized, paralyzed rabbits artificially ventilated with gas mixtures containing 11-12% O2 or 3.3%

$CO_2$ and 9-10% $O_2$. Diencephalon and total brain blood flow rates are observed to increase and vascular resistances to decrease after 4-6 minutes of isocapnic hypoxia, while extracellular fluid pH increased after the first minute and remained elevated for 20 min. During hypocapnia, blood flow and vascular resistance remained constant as extracellular pH was elevated, while hypocapnic hypoxia led to a decrease in vascular resistance with no change in blood flow rate. Results indicate that some factor other than H(+) concentration must mediate early hypoxic vasodilation. A.L.W.

**A82-37968** **Operator indoctrination during introduction of new or modified aviation life support systems /ALSS/.** D. W. Call (U.S. Navy, Pacific Missile Test Center, Point Mugu, CA). *SAFE Journal*, vol. 12, Summer 1982, p. 6-9. 8 refs. Air Task A53153/054-4/2531100.

Methods of effective operator indoctrination on the proper use of new or modified items of ALSS are presented. Carefully prepared and used operator indoctrination packages in various formats (slides with narratives, video tapes, demonstrators, etc.) can be a significant factor in helping aircrewmen understand why ALSS are being introduced as well as how to use them, thus increasing the chances for proper use during an emergency. The operator indoctrination package for the 'Personal Parachute Four-Line Release System', developed by the Pacific Missile Test Center, is used as a model to show the application of this training concept. Finite difference calculations describing the impact mechanics associated with a 10 to 30 km diameter silicate or water object impacting a 5 km deep ocean overlying a silicate solid planet demonstrate that from 12 to 15% of the bolide energy resides in the water. It is speculated that minimal global tsunami run-up heights on the continents would be 300-400 meters, and that such waves would inundate all low altitude continental areas, and strip and silt-over virtually all vegetation. As a result the terrestrial animal food chain would be seriously perturbed. This could in turn cause extinction of large terrestrial animals. L.F.M.

In this study mice and rats were repeatedly exposed to concentrations of either 100 mg/cu. m or 1000 mg/cu. m of PEG 200 aerosol for 6 hours a day, 5 days a week, for up to 13 weeks. The mice and rats did not appear to have any lesions related to the experimental procedure. No biologically consistent significant alterations in blood chemistry, hematology, or pulmonary resistance were found. No mutations or pathological abnormalities could be attributed to exposure to PEG 200. The data resulting from these studies may be useful in the derivation of airborne control limits for protection of personnel. Author (GRA)

The study of freeze-thaw damage to endothelial cells necessitated the development of a suitable in vitro system. After investigating various substrates, Leighton tubes containing a plastic coverslip proved to be the most versatile method for studying alterations to endothelial cells following thaw. The polymethylpentene coverslip was the key to its versatility. It was easily cut which allowed portions of the same monolayer to be processed for examination by phase contrast, brightfield, and both scanning and transmission electron microscopy. At the same time, the attached handle allowed easy manipulation without disturbing the monolayer. Also, following a freeze-thaw insult, endothelial cells remained better attached to the plastic substrate than to glass coverslips. The Leighton tube itself was ideal for temperature studies because it was water tight which allowed submersion in refrigerated water baths. The media covering the cells can be assayed for cellular enzymes released into the media. In this manner, biochemical markers from the same cells may be correlated with cellular structure. Adult, male rats were exercised (level treadmill, 9.14 m/min) in the heat (35 C, 30-35% rh) until hyperthermic exhaustion (T sub re = 42.5 - 43 C) ensued. Blood samples (0.3 ml) were taken immediately prior to exercise in the heat (time 0), when T sub re reached 40 C (8.25 min treadmill time), when hyperthermic exhaustion occurred, and again when T sub re decreased to 40 C. Plasma was separated and assayed for aldosterone, angiotensin I (plasma renin activity), and antidiuretic hormone (arginine-vasopressin). Plasma aldosterone levels were significantly ($p < .001$) elevated after 8 min of exercise and remained increased throughout the exercise and recovery periods. Alternatively, plasma angiotensin I levels were unaffected during exercise, but increased significantly ($p < .001$) during the recovery period. Arginine-vasopressin concentrations were likewise significantly ($p<.05$) elevated by completion of the exhaustive run and continued to increase during the recovery period. We attributed these elevations in levels of the fluid and electrolyte regulatory hormones to part of an adaptational response to maintain or increase plasma volume during exercise in the heat. Significant ($p<.001$) decrements in hematocrit ratio occurred during the exercise interval. However, we were unable to relate the ultimate ability of the animal to survive the heat/exercise-induced injury to the intensity of its hormonal response pattern to exercise in the heat. GRA

In the mouse, Mus musculus, local (ultradian) serial correlation (LSC) within the sleep and wakefulness states varies significantly as a function of circadian phase. The amplitude of the correlation function is greatest during the active phase of the mouse's diurnal cycle. Additionally, mean LSC (averaged across circadian phase) is significantly positive and monotonically decreasing for a broad range of short lags (1-23 minutes). Thus there is no evidence of positive, periodically occurring peaks in the correlation function separated by patches of small or negative correlations that is characteristic of a rhythmic process of fixed period. These findings challenge the concept that an ultradian oscillator plays a significant role in the temporal control of sleep-wake state. Author (GRA)

A mechanical system for disintegrating urinary calculi, particularly an ultrasonic apparatus for fragmenting urinary calculi in situ is described. The useful life of the wire probe in an ultrasonic kidney stone disintegration instrument is enhanced and prolonged by attaching the wire of the wire probe to the tip of an ultrasonic transducer by means of a clamping arrangement. Additionally, damping material is applied to the wire probe in the form of a damper tube through which the wire probe passes in the region adjacent the transducer tip. Novelty is believed to reside in the combination of a grooved adjustable anvil in the transducer tip at the clamping point of the wire probe to lessen concentrated stresses in the wire and a vibrational damper system which minimizes lateral wire motion at the transducer tip while nevertheless transmitting linear motion which acts to prolong the useful life of the wire probe. A prosthetic device for occluding an internal passageway of the human body, for example, for closing the urinary canal, is described. The device includes a cuff having a backing collar and two isolated cuff chambers. The fluid pressure of one chamber is regulated by a pump/value reservoir unit. The other chamber is unregulated in pressure but its fluid volume is adjusted by removing or adding fluid to a septum/reservoir by means of a hypodermic needle. Pressure changes are transmitted between the two cuff chambers via faying surfaces which are sufficiently large in contact area and thin as to transmit pressure generally without attenuation. By adjusting the fluid volume of the septum, the operating pressure of the device may be adjusted to accommodate tubular organs of different diameter sizes as well as to compensate for changes in the organ following implant without re-operation. The effects of sleep deprivation on the ability of humans to tolerate standard forms of endurance exercise were investigated. Standard techniques in human exercise physiology were utilized. The results indicate that acute sleep loss of 30 to 36 hours (1) does not alter the maximal oxygen uptake, while it does reduce maximal heart rate; (2) leaves metabolic rate during exercise at a constant external work load unchanged, while heart rate is reduced and ratings of perceived exertion are elevated; (3) reduces tolerance of prolonged heavy exercise at three-fourths of the maximal oxygen uptake by about 10%, with wide variation noted among individuals, and (4) to significantly change work loads selected for equal effort during short term heavy exercise. It is concluded that acute sleep loss of 30 to 36 hours has relatively minor deleterious effects on endurance exercise performance. Author

The development of new weapons systems, high energy fuels, and aerospace materials presents a challenge to the health professional. To avoid health hazards to Air Force personnel these hazards must be identified early in the research phase of development before acquisition decisions are made. This is only possible if the health professional works closely with the design engineers and scientists. The Air Force program to develop high energy cruise missile fuels is a good example of close cooperation between scientists developing these fuels and toxicologists and environmental engineers responsible for research to assess the health and environmental consequences of their deployment throughout the Air Force. A status report is given on the extensive toxicology data base research effort on these fuels. Included are data on acute, chronic and oncogenic exposures; mutagenic screening tests and emergency exposure limits. Author (GRA)

### DIFFERENTIATED RATINGS OF PERCEIVED EXERTION ARE INFLUENCED BY HIGH ALTITUDE EXPOSURE

Andrew J. Young, Allen Cymerman, and Kent B. Pandolf 23 Mar. 1981 25 p refs
(AD-A111075; USARIEM-M-1/81) Avail: NTIS
HC A02/MF A01 CSCL 06/19

Differentiated ratings of perceived exertion (RPE) were obtained from 8 low-altitude residents during cycle exercise at sea level (SL) and after acute (< 2 hours) and chronic (18 days) exposure to high altitude (4,300m; HA). Mean VO2 max was 27% lower than at SL with acute HA exposure and was not significantly changed with chronic exposure. Subjects cycled for 30 min at an exercise intensity requiring 85% of VO2 max. Respiratory exchange measurements and differentiated RPE were obtained at the fifth, fifteenth, and twenty-fifth min of exercise and pre- and post-exercise blood samples were collected. Differentiated RPE included a local muscular rating, a central or cardiopulmonary rating, and an overall rating. Despite reduced absolute exercise intensity during acute HA exercise, local RPE were unchanged from SL values. Chronic HA exercise, however, was associated with a significant reduction in local RPE. Blood lactate accumulation during SL exercise was not significantly different from acute HA exercise but was significantly less during chronic HA exercise. At SL, local ratings were significantly greater than central ratings while neither differed significantly from the overall ratings. During acute and chronic HA exercise, none of the differentiated ratings significantly differed, and central RPE were highest of the ratings during chronic HA exercise. Ventilatory equivalent for oxygen during HA exercise (both acute and chronic) was significantly higher than at SL. GRA

(DA Proj. 3E1-62777-A-878)
(AD-A111064; USARIEM-M-13/81) Avail: NTIS
HC A03/MF A01 CSCL 06/19

Fifteen unconditioned young men, who were similar in maximal aerobic power (VO2 max), were divided into three groups (n = 5 each) and physically trained for one month on a bicycle ergometer either on land (I) on immersed to the neck in water of either 32 C (II) or 20 C (III) to determine how physical training (PT) in water differs from training in air. PT considered of one-hour daily exercise bouts, 5 times/wk, with exercise intensity readjusted each week to maintain a constant training stimulus of approx. 75% VO2 max (determined on land). Throughout the training period, heart rates (HR) of III averaged 20 and 10 beats/min less thn I and II, respectively, despite working at the same VO2 an % VO2 max. Following PT, plasma volume was not increased over the pretraining values ($p > 0.05$) in any group. Hemoglobin concentration and hematocrit significantly increased in all three groups. Training elicited a 16% increase in VO2 max in I compared to increases of 13 and 15% for II and III, respectively. It was conducted that PT in water produces similar physiological adaptations as does training on land. In cold water, VO2 max is improved despite training with HR's significantly lower than those on land. Author (GRA)

### SPARING EFFECT OF CHRONIC HIGH-ALTITUDE EXPOSURE ON MUSCLE GLYCOGEN UTILIZATION DURING EXERCISE

A. J. Young, W. J. Evans, A. Cymerman, K. B. Pandolf, and J. J. Knapik 16 Jun. 1981 23 p refs
(DA Proj. 3E1-61102-BS10)
(AD-A111063; USARIEM-M-12/81) Avail: NTIS
HC A02/MF A01 CSCL 06/19

Substrate utilization during heavy (approx. 85% VO2 max) bicycle exercise was examined in eight low-altitude residents at sea level (SL) and after acute (2 hours) and chronic (18 days) exposure to 4,300 m, (HA). Mean VO2 max was approx. 27% lower with acute HA than at SL and did not change significantly with continued HA exposure. Biopsies from the vastus lateralis muscle and venous blood samples were obtained before and after 30 min of exercise, while determinations of the respiratory exchange ratio (R) were made at 10 min intervals during each of the submaximal bouts. Resting serum levels of free fatty acids, unchanged with exercise, were 2X and 3X higher than SL with acute and chronic HA, respectively. Exercise did not alter resting serum glycerol levels at SL or during acute HA, but caused an 11-fold increase during chronic HA. Mean blood lactate concentrations were similar following exercise at SL and acute HA but were 87% lower after chronic HA. During exercise at SL and acute HA, the rate of muscle glycogen utilization and R were similar but were 41% and 15% lower, respectively, with chronic HA. These data suggest that after chronic high-altitude exposure, increased mobilization and use of free fatty acids during exercise resulted in sparing of muscle glycogen. Author (GRA)

Of the numerous medical problems associated with acute exposure to high terrestrial elevations, the Army's research efforts have focused principally, though not exclusively, on the most common of the disorders, acute mountain sickness (AMS) or soroche. This self-limiting syndrome of unacclimatized individuals is characterized by headache, lassitude, insomnia, gastrointestinal symptoms and general malaise which usually become manifest within 4 to 8 hours after arrival, peak between 24 and 48 hours and gradually remit over 4 to 8 days. Experience at our Pikes Peak Laboratory (4,300 meters) indicates that approximately 60 percent of the soldiers so exposed experience symptoms severe enough to functionally incapacitate them as efficient combat troops. At altitudes higher than 4,300 meters one can expect a disproportionate increase in both the severity of symptoms and the number of individuals in whom they will occur. Research efforts at our laboratory to prevent this illness have met with some success; we are now able to reduce symptom intensity at 4,300 meters by 85% through a combination of residence for 4 days at 1,600 meters plus the administration of 500 mg of acetazolamide b.i.d. for the last 2 days at 1,600 meters and the first 2 days at 4,300 meters. ### AN ERGOMETER FOR CONCENTRIC AND ECCENTRIC MUSCULAR CONTRACTION

Howard G. Knuttgen, John F. Patton, and James A. Vogel 18 Aug. 1981 16 p refs Submitted for publication
(AD-A111061; USARIEM-M-20/81) Avail: NTIS
HC A02/MF A01 CSCL 06/16

An ergometer for human subjects is described which can be used for leg cycling exercise at low to very high intensities involving concentric or eccentric muscle contractions. Dependent upon the mode of exercise (concentric or eccentric) and rpm chosen, the upper limit of power production approximates 1,500 W. The ergometer permits the study of full ranges of exercise intensities for both types of exercise which, for the concentric condition, includes a high component of anaerobic energy release. ### ISOKINETIC, ISOMETRIC, AND ISOTONIC STRENGTH RELATIONSHIPS

Joseph J. Knapik, James E. Wright, Roberta H. Mawdsley, and Joanne M. Braun 14 Aug. 1981 21 p refs Submitted for publication

(AD-A111039; USARIEM-M-18/81) Avail: NTIS HC A02/MF A01 CSCL 06/5

The relationships among isokinetic, isometric and isotonic strength measurements in knee and elbow extension and flexion were examined in 16 young, healthy males. Isokinetic (36 deg/sec, 108 deg/sec, 180 deg/sec) and isometric torque measurements were obtained from a modified Cybex II apparatus. An elecrogoniometer was used to monitor the joint angle. A modified N-K device was employed to determine maximal isotonic capabilities using a one repetition maximum procedure. Correlations among the three testing modes at the joint angles of peak isometric torque were generally high (bar x = 0.78, range = 0.97 to 0.47) for all four muscle groups. The amounts of common variance suggested that all three strength testing modes were measuring a similar phenomemon which could be termed maximal voluntary strength. Within a particular muscle group, correlations decreased both as the isokinetic velocities and as the joint angles became more widely separated. Author

**INFLUENCE OF FIBER TYPE COMPOSITION AND CAPILLARY DENSITY ON ONSET OF BLOOD LACTATE ACCUMULATION**

P. A. Tesch (Karolinska Hospital, Stockholm), D. S. Sharp, and W. L. Daniels 25 Mar. 1981 20 p refs Submitted for publication

(AD-A111038; USARIEM-M-8/81) Avail: NTIS HC A02/MF A01 CSCL 06/16

Onset of blood lactate accumulation (OBLA) was determined in sixteen healthy and physically active men (23-33 yrs) during cycling using a continuous step-wise increased exercise intensity protocol. OBLA was defined as the exercise intensity corresponding to a lactate concentration of 4 mmol per liter of blood. Oxygen consumption, pulmonary ventilation, respiratory quotient (R), heart rate and lactate concentration were monitored during each exercise intensity. Muscle biopsies were obtained from m-vastus lateralis at rest for determination of fiber type composition and capillary density. Calculated values (mean + or - SD) for exercise intensity, oxygen consumption and ventilation at OBLA were 159 (+ or - 37)W, 2.43(+ or 0.47) liters per min and 49.8(+ or - 10.5) liters per min or 65(+ or - 10) percent of V sub O sub 2 max OBLA (percent V sub O 2 max) was found to correlate significantly (r = 0.75, p less than 0.001) to the relative muscle area occupied by ST (Type I) fibers. Furthermore, 92% of the variance in OBLA could be explained by percent ST area + capillary density. It is suggested that both inherent and adaptative qualities of the exercising muscle are of significance for the onset of blood lactate accumulation. GRA

**EFFECTS OF ACUTE PLASMA VOLUME EXPANSION ON ALTERING EXERCISE HEAT PERFORMANCE**

Michael N. Sawka, Roger W. Hubbard, Ralph Francesconi, and Donald H. Horstman 16 Dec. 1981 33 p refs

(DA Proj. 3E1-61102-BS-10)

(AD-A110558; USARIEM-M-11/82) Avail: NTIS HC A03/MF A01 CSCL 06/19

To determine the effect an acute plasma volume expansion has upon exercise performance in the heat, seven male volunteers attempted to complete two 90 min walks (40% of VO2 max) in a hot/dry (45 C/20% rh) environment. These walks were preceded by an infusion of either human albumin (50 g in a 200 ml solution) or isotonic saline (200 ml). The albumin infusion was found to significantly ($P < 0.01$) increase plasma volume by about 13%. In comparison to preexercise levels, plasma volume did not change during the duration of both prolonged walks. No significant differences were found for performance time, final heart rate or final rectal temperature values between the two walks. In general, significant differences were not found for systolic blood pressure, rectal temperature, mean skin temperature, heat storage, sweat rate, plasma lactate, plasma osmolality or plasma protein content values between the two walks. However, heart rate responses were found to be signficantly lower ($P < 0.05$; about 13 bpm) during the 25 min and 40 min measurements of the albumin walk. These data suggest that plasma volume expansion may be a supportive adaptation to enhance cardiovascular stability, but does not improve thermoregulatory function or exercise performance in the heat. **EFFECTS ON HEAT TOLERANCE OF PHYSICAL TRAINING IN WATER AND ON LAND**

Barbara A. Avellini, Yair Shapiro, S. M. Fortney, and Kent B. Pandolf 19 Nov. 1981 33 p refs

(DA Proj. 3E1-62777-A-878)

(AD-A110556; USARIEM-M-6/82) Avail: NTIS HC A03/MF A01 CSCL 06/19

A 4-week training program was undertaken by 15 untrained, unacclimated males who were divided into 3 groups matched on maximal aerobic capacity (VO2 max) and trained either in water or on land to determine how physical training (PT) in these different media affects heat tolerance. Subjects trained on a bicycle ergometer for 1 h/day, 5 days/week at 75% VO2 max, with the exercise intensity progressively increased to maintain a constant training stimulus. Group I exercised on land, while II and III exercised while immersed to the neck in water of either 32 C (II) or 20 C (III). Daily exercise increased core temperature (Tc) in I and II, but not in III. Training elicited similar increases (approx. 15%) in VO2 max in the 3 groups. Before and after PT, all subjects exercised at approx. 30% VO2 max for 3 h at 49 C, 20% rh. Compared to before training, I and II showed a decrease in final Tc and heart rate (HR) in the post-training heat exposure. Seat rate (SR) increased 25% in II, but remained the same in I. Group III demonstrated a decrease in final HR but final Tc was higher than before training. SR did not increase in III and was lower than the other groups. It was concluded that PT can improve the cardiovascular response to dry heat without affecting thermoregulatory capacity. PT appears to enhance heat tolerance only if Tc is permitted to rise during exercise, thus stimulating the temperature-regulating center for heat dissipation. GRA

**DOES HEAT ACCLIMATION LOWER THE RATE OF METABOLISM ELICITED BY MUSCULAR EXERCISE**

Michael N. Sawka, Kent B. Pandolf, Barbara A. Avellini, and Yair Shapiro 19 Aug. 1981 25 p refs

(DA Proj. 3E1-62777-A-878)

(AD-A110555; USARIEM-M-5/82) Avail: NTIS HC A02/MF A01 CSCL 06/19

Investigations were evaluated to determine if season (summer or winter) of year and subject gender further influence the effect heat acclimation has on metabolism (M) during exercise. Volunteers completed standardized treadmill walks in hot (40 C, 30% rh or 49 C, 20% rh) and cool (20 C, 40% rh) environments immediately before and after heat acclimation. After heat acclimation, a lower M was observed in the hot environments and in the cool environment. Season of year and subject gender did not have a significant effect on these results. These ata indicate that heat acclimation does lower the M elicited by exercise. The observed percent decrease was lower in the hot (-3%) than cool (-5%) test environments. Physiological mechanisms which could have contributed to this decreased M were an improved muscular efficiency and altered motor unit recruitment patterns. T.M.

(AD-A111048; NADC-81281-60) Avail: NTIS HC A05/MF A01 CSCL 06/19

In the early twenties, when structural strength, maneuverability and power of aircraft had increased sufficiently, grey-out and black-out made their first undesirable appearance during flight. Temporary loss of vision was first observed in test flights conducted by the National Advisory Committee for Aeronautics (NACA) with the 'novel' aircraft Fokker PW-7 and also in air races during and/or after the pilots rounded the pylons. At first only a small sector of the aeromedical community was attracted to do research into this new field. The early contributions of Garsaux (1919), Doolittle (1924), Bauer (1926), Dobrotvorski (1930), Flamme (1931), and von Diringshofen (1932), are reviewed and discussed. Several misquotations, partly caused by faulty translations, are clarified. It becomes apparent that the exchange of information between the aeromedical investigators, as well as between engineering and aeromedical community, was far from satisfactory. This may be the reason that more than one decade passed before the mechanism of visual impairment was understood and the hemostatical theory by von Diringshofen was established, experimentally proven and generally accepted. **MODELS FOR THE ESTIMATION OF INCAPACITATION TIMES FOLLOWING EXPOSURES TO TOXIC GASES OR VAPORS**

G. J. Smith 1981 20 p
(Contract DE-AC04-76DP-00789)
(DE82-000619; SAND-81-2197C) Avail: NTIS HC A02/MF A01

Based on the various physiological and toxicological effects that can occur, a set of four models was developed to predict the time to incapacitation from exposure to toxic gases. The four models encompass the range of effects which can lead to immediate incapacitation. These models use historical accident data from incapacitating human exposures or experimentally determined incapacitation data for animals. An alternate model was developed for use when direct incapacitation data are not available. The time to incapacitation is predicted using mortality dose data for animals. DOE

This is the second report of a series describing the design, implementation, and tests of the use of computer speech recognition technology in the tactical training area. The technical issues in psychology, training, and speech recognition will require a highly complex integration effort in order to be successful. This report provides the details required in order to develop a syllabus. Objectives are arranged in hierarchies to depict their interrelationships. An alternate numbers table indicates objectives required on more than one higher level objective. It will be the task of the syllabus development effort to teach these objectives in a sequence which provides training cost effectiveness and efficient skill acquisition. More tasks are included here than are taught now, but none of these tasks are irrelevant to the AIC. The prototype system developed from these objectives will serve as a test vehicle for incorporation of advanced technologies into the specifications of follow-on trainers. Fleet personnel will play a major role in the design and evaluation of the prototype, and thereby play a major role in the selection of the advanced technologies. The training enhancements evolving from this process will maintain the Navy's image as a leader in training systems. GRA

**PROJECT STEAMER: 6. ADVANCED COMPUTER-AIDED INSTRUCTION IN PROPULSION ENGINEERING Interim Report, Mar. 1980 - Feb. 1981**

Albert Stevens, Bruce Roberts, Larry Stead, Kenneth Forbus, Cindy Steinberg, and Brian Smith Jan. 1982 27 p refs
(Contract N00123-81-D-0794)
(AD-A110797; NPRDC-TR-82-28) Avail: NTIS HC A03/MF A01 CSCL 05/9

At present, propulsion engineering training is a major problem for the Navy. NAVPERSRANDCEN's goal is to build an intelligent computer-aided instruction (ICAI) training system to enhance Navy training in this area and evaluate the potential of new computer-based technology to provide a qualitatively different form of training. The STEAMER project is concerned with the design and implementation of a training system to instruct personnel in the principles of propulsion engineering. Operational personnel need to understand these principles of plant operation in order to remember the multitude of procedures required for safe plant operation and to be able to respond to a myriad of potential casualty conditions. **APTITUDE REQUIREMENTS BASED ON TASK DIFFICULTY: METHODOLOGY FOR EVALUATION Interim Report, 1975 - 1980**

Lloyd D. Burtch, M. Suzanne Lipscomb, and Dale J. Wissman Jan. 1982 38 p refs
(AF Proj. 7719)
(AD-A110568; AFHRL-TR-81-34) Avail: NTIS HC A03/MF A01 CSCL 05/9

The development and application of a technology designed for the evaluation of the difficulty of Air Force jobs in conjunction with the aptitude level required for the job is described. The technology developed makes use of computed variables and task factor data collected by the Air Force Occupational Measurement Center as well as benchmark difficulty data collected by contract personnel experts for the specialties under study. The application of this technology provides a unique method of determining and comparing the learning difficulty of Air Force tasks and jobs, both within and across career specialties. Analyses have indicated high interrater reliabilities for both supervisory and benchmark ratings. A two-variable multiple regression equation was developed for each of the specialties studied. Relatively high correlations were obtained between the two ratings indicating that independent raters tend to agree with supervisors. These questions resulted in estimates of average task difficulty per unit time (ATDPUT) values for each job in each specialty. The value of these estimates and implications for their use are discussed. Author (GRA)

(AD-A107134; RR-81-5) Avail: NTIS HC A05/MF A01 CSCL 12/1

One of the major assumptions of latent trait theory is that the items in a test measure a single dimension. This report describes an investigation of procedures for forming a set of items that meet this assumption. Factor analysis, nonmetric multidimensional scaling, cluster analysis and latent trait analysis were applied to simulated and real test data to determine which technique could best form an unidimensional set of items. Theoretical and empirical evaluations were also made of the effects of guessing on the dimensionality of test data. The results indicated that guessing affected highly discriminating items more so than poorly discriminating items. However, the effect of guessing on the dimensionality of tests with common distributions of difficulty and discrimination indices was found to be minimal. Of the procedures evaluated for sorting items into unidimensional item sets, principal factor analysis of phi coefficients gave the best results overall. Nonmetric multidimensional scaling also showed promise when used with Yule's Y, phi, or tetrachoric similarity coefficients, but it did not perform as well as the factor analytic techniques on the real test data. In summary, guessing does have an effect on test data, but the effect is not very large unless items of extreme difficulty are present in the test. Of the procedures evaluated, traditional factor analytic techniques gave the most useful information for sorting test items into homogeneous sets. Author (GRA)

A measurement system for simultaneously measuring torque and angular flexure in a pressure suit joint is described. One end of a joint under test is held rigid. A torque transducer is pivotably supported on the other movable end of a joint. A potentiometer is attached to the transducer by an arm. The wiper shaft of the potentiometer is gripped by a reference arm that rotates the wiper shaft the same angle as the flexure of joint. A signal is generated by the potentiometer which is representative of the joint flexure. A compensation circuit converts the output of the transducer to a signal representative of joint torque. This report documents a study which applied an analytic method known as the Controls and Display Evaluation Model, or CODEM, to the flight deck avionics improvements identified in the Flight Control Division's (AFWAL/FIGR) Tanker Avionics and Aircrew Complement Evaluation (TAACE) program. TAACE, in support of the USAF KC-135 Avionics Modernization Program, sought to establish design criteria for the controls and displays of improved avionics, in the event the crew of the KC-135 is reduced by eliminating the navigator. The objective of this study was to apply CODEM to a previously evaluated design, so that the resulting data could be used to evaluate the validity of CODEM by comparing the two sets of data. CODEM, which is still in the developmental stage, embodies a 'limit design' approach to the problem of controls and displays engineering and integration. Absolute design limits and progressive tests are used to test the emerging design in terms of task complexity. CODEM output consists of plots of task complexity vs. time and a printout of associated equipment-related tasks which allows the designer to diagnose the source of any undersirable crew loading. CODEM's application to the TAACE flight deck design concluded that the air-refueling mission could be performed without excessive workload on the crew. GRA

Women's sports did not begin to grow and gain public recognition until the early 1970's. Since then, the number of women participating in intercollegiate sports has doubled and the number of girls participating in interscholastic sports programs has increased almost threefold. As women flood the sports arena, many questions arise regarding the female athlete. Their performance capabilities are constantly compared with male athletic records and standards, and explanations for the difference in their level of performance are being sought. GRA

**EFFECTIVENESS OF FIVE WATER-COOLED UNDERGARMENTS IN REDUCING HEAT STRESS OF VEHICLE OPERATING IN A HOT WET OR HOT DRY ENVIRONMENT**

George F. Fonseca Mar. 1981 50 p refs

(DA Proj. 3E1-62777-A-878)

(AD-A107105; USARIEM-T-2/81) Avail: NTIS HC A03/MF A01 CSCL 06/17

The auxiliary cooling provided by five water cooled undergarments was directly measured on a life size, sectional manikin. Each water cooled undergarment was worn with a combat vehicle crewman ensemble, with or without a complete chemical protective suit. Cooling rates (watts) were determined for both dry (nonsweating) and completely wet (maximal sweating) skin conditions. The watts of heat removed from either the dry of the completely wet skin surface were almost directly proportional to the temperature difference between the manikin skin temperature and the cooling water inlet temperature; the cooling represents the absorption of heat directly from the body, plus any heat that is received by the body from a hot environment. The cooling density, expressed in watts of cooling per square meter of cooling tube array, differed with the size of the array and with the location of the skin surface it covered. GRA

Current literature was reviewed in detail. Temperature and day length are the primary factors which program H. spp. larve for possible diapause. Mortality during diapause is reported as highly variable. The factors causing mortality are identified. Sufficient data was collected to allow the development of mathematical models which predict the timing of emergence. Timing predictions compare favorably to observed field data; however, prediction of actual numbers of emerging moths was not possible. The potential for use of spring emergence predictions in pest management applications, as an early warning of potential crop damage, are excellent. Research requirements to develop such an early warning system are discussed. T.M.

Medical studies were undertaken on the stress experience by the cockpit crew working the short routes in Europe and a special attempt was made to discover whether signs of a summation of stress due to flight work become visible during a circuit of several days. For this purpose the pulse and respiratory rates were determined for 22 crew members as an indication of the acute stress occurring during the flight and the amount of stress hormone in the urine as an indication of the extent of total stress in an extended study period. Three polymeric materials were evaluated for relative toxicity of their pyrolysis products to rats by inhalation: Y-7683 (LS 200), Y-7684 (Vonar 3 on Fiberglass), and Y-7685 (Vonar 3 on N W Polyester). Criteria employed for assessing relative toxicity were (1) lethality from in-chamber pyrolysis, (2) lethality from an outside-of-chamber pyrolysis MSTL Procedure, and (3) disruption of trained rats' shock-avoidance performance during sub-lethal exposures to in-chamber pyrolysis of the materials. An analysis of the actuator kinematics and the load generation capabilities was performed. The kinematic behavior of the Planar Motion Material Testing (PMMTA) actuators was analyzed using a computational algorithm written for a MINC-11-03 computer and a TK4010 plotting terminal. The analysis addressed: (1) the range of motion of the test stage considering various angular

orientations of the test stage for the most acceptable design, and (2) the calculation of max loads in the vertical, horizontal and rotational directions for each position of the test stage.

**PREVALENCE OF ASTIGMATISM AMONG AVIATORS AND ITS LIMITING EFFECT UPON VISUAL PERFORMANCE WITH THE AN/PVS-5 FLIGHT VISION GOGGLES**
Hanson J. Kim 2 Mar. 1982 7 p
(AD-A112836) Avail: NTIS HC A02/MF A01 CSCL 06/5

Emphasis on sustained operations during periods of darkness is steadily increasing. Presently, the AN/PVS-5 Night Vision Goggles (NVG) are utilized for night operations. The primary concern with these goggles is the astigmatism criterion since this, unlike spherical refractive errors, is not compensated by the NVG. The NVG have only an adjustable range of +2.00 to -6.00 diopters to correct for spherical error. No provisions were incorporated into the design of the NVG to allow correction of astigmatic error. Consequently, an aviator with a significant amount of astigmatism will have reduced visual acuity which will affect his operational performance. A study was undertaken to identify the number of rated aviators at the Army Aviation Center with detected astigmatism in order to assess the magnitude of this particular problem and to determine whether or not the current standards for astigmatism are sufficient for the aviators who are using the AN/PVS-5 Night Vision Goggles. Eye movements determine the location and velocity of the retinal image. Thus, to understand how we see it is necessary to understand both how eye movements are controlled and how they affect visual information processing. The proposed research is concerned with both problems, specifically: (1) the effect of expectations on smooth eye movements; (2) the effect of saccades and saccade-like stimulus perturbations on visual information processing; and (3) programming sequences of saccades. **AN EVALUATION OF LOCALIZED SWEATING RATES FOR PREDICTING TOTAL BODY SWEATING RATES Final Scientific Report**
James A. Gessaman Dec. 1981 31 p refs
(Grant AF-AFOSR-0276-80; AF Proj. 2312)
(AD-A111902; AFOSR-82-0109TR) Avail: NTIS HC A03/MF A01 CSCL 06/19

This project accessed the accuracy of estimating whole body sweating rates (WBSR) from local sweating rates (LSR) measured with sweat collection capsules containing filter paper. Sweat was collected in capsules strapped on five locations of the body: (1) midforehead, (2) superiorflexor side of the right forearm, (3) left pectoralis major, (4) medial midsection of the left thigh, and (5) upper medial side of the left calf. Sweating rates of 10 male subjects were measured while they rested at an air temperature of 39.4 C and 58.4% RH, and while they ran on a treadmill at a work output of 60% VO2 max with an air temperature of 35.5 C and 33.2% RH. Among all subjects the WBSR averaged 4.3147 g/min sq m during rest and 7.6062 g/min sq m during exercise. The LSR from any one of the five locations was a poor predictor of WBSR. Multiple regression equations which included LSRs from all five locations gave an r squared > 90 for 5 subjects during rest and exercise. The multiple regression equations derived from the data combined from all subjects was not as good a predictor of WBSR as some of the equations derived for individual subjects, i.e., r squared = 70.3 for data during rest and r squared = 46.1 for data during exercise. Four equations which weighted the LSRs with the corresponding skin area factors provide a poor estimate of WBSR (r squared = 53.9). Author (GRA)

The research program presented in this report is concerned with collection of active muscle force and moment response data of the human upper and lower extremities when the extremities are subjected to various external forces. The major components of the specially designed and built experimental apparatus are a subject restraint system, a force application device which employs three sonic emitters, and an upper arm (or upper leg) cuff with four sonic emitters. The sonic emitters are utilized to determine the three dimensional direction and the location of the force application on the limbs and the orientation of the limbs with respect to the torso. Kinematics of relative motion between two body segments is presented in a format suitable for utilization of four sonic emitters on the moving body segment. The numerical results are presented from a set of experiments conducted on three male and three female subjects to determine their active muscle resistance against the external forces to dislodge their limbs from the initial or so-called stowed position. It is concluded that although there are intra- and inter-subject variations for the maximum values of the resistive muscle force and moment data for the limbs, there are some trends one can establish for the behavior of their magnitudes.

**THE BIOLOGICAL EFFECTS OF NONIONIZING RADIATION**
J. B. Bateman 29 Dec. 1981 23 p refs Presented at the 10th L. H. Grey Memorial Conf., Oxford, 13-16 Jul. 1981
(AD-A111898; ONRL-C-12-81) Avail: NTIS HC A02/MF A01 CSCL 06/18

This is a critical report on the L.H. Grey Memorial Conference held in Oxford, 13-16 July 1981. The Conference was entitled 'Biological Action of Radiofrequency, Microwave and Ultrasonic Radiations.' The report provides a background identifying the field of interest in broader terms, intended for the general reader. It is then pointed out that the conference was mainly directed toward research and practice related to the possible value of nonionizing radiations in cancer therapy. There were, however, tutorial lectures of a fairly general character and some discussion of biological effects not necessarily arising from production of heat in irradiated tissues. Author (GRA)

(AD-A111161; AFIT/GAE/AA/81D-1) Avail: NTIS HC A05/MF A01 CSCL 06/16

An understanding of the mechanical properties and behavior of the intervertebral disc is critical to several current areas of research. Among these are the study of the effects of extreme gravitational forces on the air crews of high performance aircraft and the related problem of spinal injuries due to aircraft ejection. This study was undertaken in order to construct a realistic analytical model of the intervertebral joint using the finite element approach. Experiments have shown that healthy intervertebral joints exhibit creep when subjected to axial load. The focus of this investigation is the behavior and interaction of the nucleus and annulus under loading. An axisymmetric finite element model is employed which incorporates a linear visco-elastic constitutive relation for the annulus and nucleus, based upon a three-parameter Kelvin solid. The visco-elastic constants are found by matching one-dimensional axial experimental data with this two dimensional model. The nucleus, which is composed of a series of concentric lamellae of collagen fibers, has been modelled as a 12ply structure of orthotropic material. GRA

The influences of probe geometry were analyzed and quantified for the very small dimensions and high magnetic fields required to examine individual cells and to explore the fundamental differences between normal and abnormal cells for both research and diagnostics. The possibility of sharpening the resonance frequency and improving resolution by simulating the nuclei with appropriate time dependent radio frequency pulses were studied. Analysis shows that the theoretically obtainable resolution in an NMF microscope is limited by Brownian motion of the resonating nuclei along the field gradient that defines surfaces of constant magnetic field. To opitimize resolution, it is necessary to shorten the time duration during which the gradient is applied. Consideration of signal to noise characteristics shows that the best practically obtainable resolution is about 2 pi times greater than the theoretical limit. GRA

**PERFORMANCE TEST OBJECTIVITY: A COMPARISON OF RATER ACCURACY AND RELIABILITY USING THREE OBSERVATION FORMS Technical Report, Dec. 1979 - Apr. 1980**
William A. Nugent, Gerald J. Laabs, and Robert C. Panell Feb. 1982 31 p refs
(ZF63522001)
(AD-A111077; NPRDC-TR-82-30) Avail: NTIS
HC A03/MF A01 CSCL 05/9

The study examined two variables that may influence the consistency and accuracy of rater's judgments in evaluating job performance: (1) the precision with which behaviors to be observed and evaluated are specified on a performance observation form; and (2) the level of proficiency of the rater at the task being evaluated. Videotapes were prepared that depicted both passing and failing performances in the use of two types of electronic test equipments. The videotapes were observed in two experiments by raters who used a structured, semistructured, or unstructured performance observation form. Rater skill level was determined by the score the rater obtained on a performance test that consisted of the same types of electrical measurement problems as shown on the videotape. For both experiments, the presence of at least some structure in a performance observation form produced more accurate and reliable evaluations of job task performance than did a form with no structure. Within the range of rater skill tested, results showed that the level of skill proficiency that raters have with a particular type of electronic test equipment is largely independent of their ability to judge accurately and consistently the performance of others in using the same equipment. This report represents the results of several extensive empirical studies. A group of 925 students who were in the process of learning subtraction were tested using highly diagnostic tests developed by DEBUGGY. Some students were retested two days later to measure the short-term stability of bugs, and others were retested several months later to study long-term stability. All tests were analyzed by DEBUGGY and by several expert diagnosticians in order to assess DEBUGGY'S diagnostic abilities. It was found that DEBUGGY was as good as or better than human diagnosticians at discovering bugs that explain a student's errors. However, a third of the students who committed errors could not be modelled with bugs and slips. Moreover, bugs were found in general to be unstable rather than stable, both in the short term and the long term. These findings challenged the belief that bugs and slips alone could account for procedural error data. Repair Theory was orginally developed as a generative theory of bugs, one that predicted which bugs would exist for a given procedural skill. However, it also predicted that certain kinds of non-bug, non-slip performance would exist, both in the static analyses and the stability data. GRA

**ORGANIZATIONAL CLIMATE: ANOTHER LOOK AT A POTENTIALLY IMPORTANT CONSTANT**
Lawrence R. James 7 Apr. 1982 35 p refs
(Contract N00014-80-C-0315; NR Proj. 170-904)
(AD-A113953; IBR-82-4) Avail: NTIS HC A03/MF A01 CSCL 05/10

Organizational climate is examined from the standpoint of the need to demonstrate interrater reliability (agreement) among individuals' perceptions of psychological climate. It is shown that if prior estimates of interrater reliability are accurate, then organizational climate is a moot issue. It is then demonstrated that at least some prior estimating procedures likely provided underestimates of interrater/perceptual agreement. A new procedure for estimating interrater reliability is suggested and illustrated. The new procedure provided substantially higher estimates of interrater reliability than prior methods. It is concluded that the concept of organizational climate is potentially salvageable, although more attention needs to be given to the appropriate level of explanation for climate variables. This project has dealt with tutorial systems for computer programming languages, particularly, systems in which a student is trying to write a computer program and can, upon request, receive hints about errors in his program and ways he can correct these errors. This research had two phases: an experimental investigation of the interaction between a student and a hint-giving tutor, and the construction of a tutorial system that identifies the plan underlying a student's program and gives hints that address errors in this plan. In the experimental work, an existing programming language tutor (BIP) was modified to allow students to request and receive hints from a human tutor. These experiments suggested that: (1) Programs are typically written in two stages: layout of the basic design of the program and (2) correction of the statements that instantiate this design. Systems that rely on 'canned' hints do not provide adequate assistance for the complex problems faced by students. Although BIP was able to give reasonable help on the syntactic form of language statements, it has no facilities for identifying and offering advice on problems with a program's design; in these experiments, students recognized this shortcoming and relied upon assistance from the human tutors. GRA

**THE CONSTANCY OF STEREOSCOPIC DEPTH PERCEPTION**
Robert H. Cormack 12 Jan. 1982 39 p refs
(Contract N00014-81-C-0001)
(AD-A111484) Avail: NTIS HC A03/MF A01 CSCL 05/10

Depth constancy is said to occur when the apparent depth in a scene remains the same as viewing distance changes. Studies of depth constancy have left unanswered questions regarding the range of viewing distances over which depth constancy can operate and the role of retinal disparity in preserving apparently constant depth. In this study, stereoscopic after images were exploited to confront these questions. After images containing depth information in the form of retinal disparity were produced and viewed at various fixation distances. Apparent depth in the afterimage was measured by asking observers to set a depth probe equidistant to the after image. This technique permitted holding retinal disparity constant as viewing distance changed. It allowed testing at very large viewing distances in the presence of multiple depth cues. The results indicate that stereoscopic depth constancy can be preserved at viewing distances at least as great as 27 meters (the largest used). These changes were veridical and demonstrate that the relationship between perceived depth and retinal disparity is consistent with the geometry describing stereopsis. These findings set requirements for theories of depth constancy. Specifically, they demand that such theories show how retinal disparity can be correctly recalibrated on the basis of distance information available in the visual array. Author (GRA)

**DESIGN AND VALIDATION OF A TRACKING TEST FOR FORMING MATCHED GROUPS FOR CONTINUOUS TRACKING EXPERIMENTS**
F. D. Pitrella and W. Krueger Aug. 1981 29 p refs In ENGLISH; GERMANY summary
(FB-49) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 10

A tracking performance test was developed and used in forming matched groups. The need for such a matching test and the advantages of matched groups over randomized groups of subjects in experimental designs are discussed as well as the preference for between-subjects over within-subjects designs. Matching test reliability was measured (0.99) and predictive and matching validities were determined in a validation experiment. Validation coefficients of 0.79 were obtained which are considerably higher than necessary to prefer matched groups to randomized groups. The strategy used in developing this matching test is explained and may be useful to those who wish to develop their own matching tests for specific research purposes. Author (ESA)

**STUDY OF EVA OPERATIONS ASSOCIATED WITH SATELLITE SERVICES Final Report, Aug. 1981 - Jan. 1982**
Jack O. Nash and Richard D. Wilde Apr. 1982 176 p refs
(Contract NAS9-16120)
(NASA-CR-167614; NAS 1.26:167614) Avail: NTIS HC A09/MF A01 CSCL 05H

Extravehicular mobility unit (EMU) factors associated with satellite servicing activities are identified and the EMU improvements necessary to enhance satellite servicing operations are outlined. Areas of EMU capabilities, equipment and structural interfaces, time lines, EMU modifications for satellite servicing, environmental hazards, and crew training are vital to manned

Eva/satellite services and as such are detailed. Evaluation of EMU capabilities indicates that the EMU can be used in performing near term, basic satellite servicing tasks; however, satellite servicing is greatly enhanced by incorporating key modifications into the EMU. The servicing missions involved in contamination sensitive payload repair are illustrated. EVA procedures and equipment can be standardized, reducing both crew training time and in orbit operations time. By standardizing and coordinating procedures, mission cumulative time lines fall well within the EMU capability. S.L.

(NASA-TM-82482; NAS 1.15:82482) Avail: NTIS
HC A03/MF A01 CSCL 05H

Requirements for the future human role in space are considered. Human tasks were divided into normal scheduled activities, unscheduled activities, and contingency activities. A strawman mission model was developed. Projections were made of crew size, mission duration, pressurized spacecraft volume, and power requirements. Trends of human roles were likewise projected. N.W.

This report describes a study conducted at Yuma Proving Ground, Arizona. Trained acclimated soldiers conducted simulated combat missions in a stationary M-1 tank, while wearing Chemical Biological (CB) clothing. Physiological measurements, skin temperature, rectal temperature, heart beat rate and sweat production were continuously monitored. In addition, the environmental parameters of wet bulb, dry bulb, and wet bulb globe temperature and wind velocity and relative humidity were recorded. GRA

Materials and equipment used in the production of nitric and of nitrogen fertilizers are discussed. The physical chemical properties of ammonium nitrate, calcium nitrate, potassium nitrate, sodium nitrate, sodium nitrite, ammonium sulfate, and carbamide are examined as well as of ammonia water, ammoniates, and liquid complex fertilizers. Attention is given to the metals and alloys, and corrosion resistant and thermal insulating materials. Compressors, pumps, and high pressure vessels are treated. Heat and electrical engineering in the plant are considered. Basic information on accident prevention in the nitrogen industry is provided in the form of tables. A.R.H.

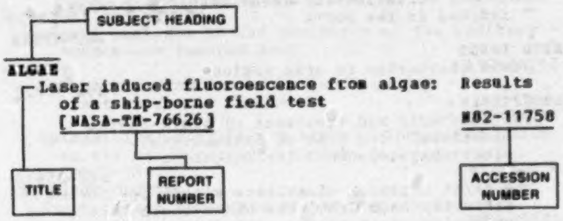
# SUBJECT INDEX

## Typical Subject Index Listing



The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

## A

**ABSORBENTS**
Absorbent product and articles made therefrom
[NASA-CASE-MSC-18223-2] N82-26960

**ABSORBERS (MATERIALS)**
Carbon dioxide absorption characteristics of high performance Sodasorb at 1 atmosphere
[AD-A107488] N82-26989

**ACCELERATION (PHYSICS)**
Mass estimation and discrimination during brief periods of zero gravity A82-35769

**ACCELERATION STRESSES (PHYSIOLOGY)**
A study on human tracking performance in a complex G field experiment A82-34971

**ACCELERATION TOLERANCE**
The beginnings of aeromedical acceleration research
[AD-A111048] N82-26978

**ACIDITY**
Brain extracellular fluid pH and blood flow during isocapnic and hypocapnic hypoxia A82-37930

**ACIDOSIS**
Effects of glycogen depletion and pedaling speed on 'anaerobic threshold' A82-36038

**ACTUATORS**
Fracture and viscoelastic characteristics of the human cervical spine kinematics of the 3 actuator system
[AD-A110980] N82-27965

**ADAPTATION**
Physiological adaptations and maintenance of vegetative homeostasis A82-35826

A classification of behavioral adaptation A82-35827

Omega potential: Quantitative index of states of brain and organism structures. I - The physiological significance of the omega potential when it is recorded from deep structures and from the scalp A82-35834

Fatigue and the adaptive possibilities of the organism during work A82-35835

Dependence of reactions of the organism to extremal factors on initial state A82-35839

Hormonal mechanisms of adaptation and training --- Russian book A82-36976

**ADAPTIVE CONTROL**
Physiological monitoring and the concept of adaptive systems A82-36963

**ADENOSINES**
Change in plasma cAMP and catecholamines in men subjected to the same relative amount of physical work stress A82-35912

**ADRENAL GLAND**
The effect of positive and negative ions of air on the content of catecholamines in the brain and adrenal glands A82-36690

**AEROBIOLOGY**
USSR Space Life Sciences Digest, volume 2, no. 3
[NASA-CR-168582] N82-26952
USSR Space Life Sciences Digest, volume 2, no. 4
[NASA-CR-168691] N82-26953

**AEROSPACE MEDICINE**
Blood circulation in weightlessness A82-35700

Investigation of the combined effects of bedrest and mild hypoxia A82-35905

Health advice for aircrew on refugee flights A82-35915

Familial intermittent diplopia - A report of two cases A82-35916

Studies on the interaction of pemoline and centrophenoxine with some flight factors A82-36688

USSR Space Life Sciences Digest, volume 2, no. 3
[NASA-CR-168582] N82-26952
USSR Space Life Sciences Digest, volume 2, no. 4
[NASA-CR-168691] N82-26953
The beginnings of aeromedical acceleration research
[AD-A111048] N82-26978

**AFTERIMAGES**
The constancy of stereoscopic depth perception
[AD-A111484] N82-27984

**AGE FACTOR**
State of the hearing function in diesel locomotive crewmen A82-35688

**AGRICULTURE**
Predicting the timing and potential of the spring emergence of overwintered populations of Heliothis spp
[NASA-CR-167444] N82-27962

**AIRCRAFT CARRIERS**
The landing signal officer - Auditory aspects --- of aircraft carrier flight operations A82-35910

**AIRCRAFT ENGINES**
Analysis and classification of human errors in troubleshooting live aircraft power plants A82-34970

**AIRCRAFT MAINTENANCE**
Training maintenance technicians for troubleshooting - Two experiments with computer simulations A82-37162

**AIRLINE OPERATIONS**
Inflight medical facilities A82-35914

**ALTITUDE ACCLIMATIZATION**
Dynamics of blood flow rate in athletes upon changes in environmental conditions A82-35669

The hemostasis system in man in high-altitude conditions
A82-35832

Evaluation of the functional state existing in the adaptation to high-altitude conditions
A82-35836

Rate of change of physiological functions as an index of the degree of adaptation
A82-35840

Mechanical properties of the lungs during acclimatization to altitude
A82-36027

Medical and performance problems of acute high altitude-exposure
[AD-A111062] N82-26970

ALTITUDE SIMULATION

Rare cases of serious disturbances in cardiac rhythm during a hypoxic functional test
A82-35684

Measurement of cardiopulmonary performance during acute exposure to a 2440-m equivalent atmosphere
A82-35904

ALTITUDE TOLERANCE

Differentiated ratings of perceived exertion are influenced by high altitude exposure
[AD-A111075] N82-26967

AMINO ACIDS

Kainic acid as a tool in brain research
A82-35662

Contents of protein and amino acids in methanobacterial biomass
A82-36011

A specific radioimmunoassay for osteocalcin with advantageous species crossreactivity
A82-36307

Beta decay and the origins of biological chirality - Experimental results
A82-37420

AMMONIA

Pulmonary oxygen toxicity - Possible role of ammonia in desorbing lung surfactant
A82-35908

ANESTHETICS

The pharmacokinetic characteristics of trimecain as compared to lidocain in patients with myocardial infarction
A82-35682

ANGULAR VELOCITY

The use of nondamping sinusoidal rotation in the study of vestibular function
A82-35692

ANIMALS

The effect of space flight factors on quiescent nuclei of certain plant and animal test objects
A82-37372

ANNUAL VARIATIONS

Seasonal variations of human cardiorespiratory indices in the North
A82-35838

ANTHROPOMETRY

Analysis of human movements for workplace design
A82-36966

ANTIBODIES

A specific radioimmunoassay for osteocalcin with advantageous species crossreactivity
A82-36307

ANTIINFECTIVES AND ANTIBACTERIALS

The use of trenthalum in acute vestibulocochlear disorders in patients with meningococcal infection
A82-35689

ANTIRADIATION DRUGS

The effect of several pharmacologically active substances on the transformation of cystamine in mouse tissues --- and sulfur-containing antiradiation drug metabolism
A82-35654

Comparative evaluation of the efficiency of radio-protectors on the basis of criteria of the protection of bone marrow and the gastrointestinal tract
A82-35658

Investigation of the radio-protective effect of cystamine on a model of thermally induced prophage lambda
A82-35659

APTITUDE

Aptitude requirements based on task difficulty: Methodology for evaluation
[AD-A110568] N82-26983

The formation of homogeneous item sets when guessing is a factor in item responses
[AD-A107134] N82-26986

ARCTIC REGIONS

Stages of the adaptation of human lungs in conditions of the Far North
A82-35829

Regional changes of pulmonary functions in inhabitants of the North
A82-35830

The bioenergetics of erythrocytes in inhabitants of the North
A82-35831

Seasonal variations of human cardiorespiratory indices in the North
A82-35838

ARID LANDS

Human adaptation in arid regions
A82-35828

ARRHYTHMIA

The diagnosis and treatment of heart-rhythm disorders - The role of intracardial electrophysiological investigation
A82-35676

The first clinical experience with a new Soviet antiarrhythmic drug, the diethylamine analog of ethmosine, in patients with different disorders of the heart rhythm
A82-35678

Rare cases of serious disturbances in cardiac rhythm during a hypoxic functional test
A82-35684

Electrophysical and hemodynamic factors conditioning cardiac arrhythmias during centrifuging
A82-36689

ASTEROIDS

Impact of an asteroid or comet in the ocean and extinction of terrestrial life
[NASA-CR-169086] N82-26955

ASTIGMATISM

Prevalence of astigmatism among aviators and its limiting effect upon visual performance with the AN/PVS-5 flight vision goggles
[AD-A112836] N82-27966

ASTRONAUT PERFORMANCE

A day off in space
A82-35698

ATHLETES

Dynamics of blood flow rate in athletes upon changes in environmental conditions
A82-35669

Characteristics of hemapoiesis in athletes undergoing endurance-training
A82-35670

Discriminative biomechanical characteristics in middle-distance running
A82-35672

Specialized laboratory for the educational and research activity of students and the psychodiagnostic study of athletes
A82-35673

Evaluation of the functional state existing in the adaptation to high-altitude conditions
A82-35836

Sympathetic and parasympathetic cardiac control in athletes and nonathletes at rest
A82-36041

Anatomic perspective of the female athlete: An approach to musculoskeletal profiling of women in sports
[AD-A110630] N82-26992

ATMOSPHERIC COMPOSITION

The effect of positive and negative ions of air on the content of catecholamines in the brain and adrenal glands
A82-36690

Methane flux in the Great Dismal Swamp
A82-37423

Zoological effects of variations in atmospheric oxygen levels
[NASA-CR-169020] N82-26954

ATTITUDE (INCLINATION)

Conditioned tilt naming - A modified absolute judgment method is used to measure the oblique effect
A82-35768

**AUDIOLOGY**
Signal analysis at the periphery of the auditory system --- Russian book A82-35248

**AUDITORY DEFECTS**
State of the hearing function in diesel locomotive crewmen A82-35688
The use of trenthalum in acute vestibulocochlear disorders in patients with meningococcal infection A82-35689
The landing signal officer - Auditory aspects --- of aircraft carrier flight operations A82-35910

**AUDITORY PERCEPTION**
Signal analysis at the periphery of the auditory system --- Russian book A82-35248
Auditory perception of radio-frequency electromagnetic fields A82-35811
Epidemiology feasibility study: Effects of noise on the cardiovascular system [PB82-147752] N82-27974

**AUTOMATIC CONTROL**
Synchronized nystagmus calibrator A82-35695

**AUTOMATIC TEST EQUIPMENT**
A method for semi-automatic analysis of eye movements A82-36960
Pressure suit joint analyzer [NASA-CASE-ARC-11314-1] N82-26987

**AUTONOMIC NERVOUS SYSTEM**
Physiological adaptations and maintenance of vegetative homeostasis A82-35826

**AVIONICS**
Crew workload prediction study [AD-A111948] N82-26991

## B

**BACTERIA**
Cultivation of the luminescent bacterium Photobacterium leiognathi with control by luminescence A82-35687
Contents of protein and amino acids in methanobacterial biomass A82-36011

**BACTERIOPHAGES**
Investigation of the radio-protective effect of cystamine on a model of thermally induced prophage lambda A82-35659

**BARORECEPTORS**
Effects of horizontal body casting on the baroreceptor reflex control of heart rate A82-36033

**BED REST**
Investigation of the combined effects of bedrest and mild hypoxia A82-35905
Effect of orthostatic stress on exercise performance after bedrest A82-35907

**BETA PARTICLES**
Beta decay and the origins of biological chirality - Theoretical results A82-37421

**BIAS**
Performance test objectivity: A comparison of rater accuracy and reliability using three observation forms [AD-A111077] N82-27977

Dynamics of blood flow rate in athletes upon changes in environmental conditions
A82-35669
Regional blood flow in the domestic fowl immediately following chronic acceleration
A82-35909
Splanchnic vasoconstriction in heat-stressed men - Role of renin-angiotensin system
A82-36028
An automated, indirect assessment of cardiac output during rest and exercise
A82-36030
Intrapulmonary blood flow redistribution during hypoxia increases gas exchange surface area
A82-36036
Brain extracellular fluid pH and blood flow during isocapnic and hypocapnic hypoxia
A82-37930

**BLOOD PLASMA**
Structural changes of the plasmatic membrane under the effect of ionizing radiation
A82-35661
Change in plasma cAMP and catecholamines in men subjected to the same relative amount of physical work stress
A82-35912
Effects of acute plasma volume expansion on altering exercise heat performance
[AD-A110558] N82-26975

**BLOOD PRESSURE**
Attenuation of blood pressure increases in Dahl salt-sensitive rats by exercise
A82-36039
Perception of effort during isometric contractions as related to heart rate and blood pressure responses
[AD-A111033] N82-26974

**BODY FLUIDS**
Brain extracellular fluid pH and blood flow during isocapnic and hypocapnic hypoxia
A82-37930
An evaluation of localized sweating rates for predicting total body sweating rates
[AD-A111902] N82-27968

**BODY KINEMATICS**
Isokinetic, isometric, and isotonic strength relationships
[AD-A111039] N82-26972

**BODY TEMPERATURE**
Head-temperature effects on physiology, comfort, and performance during hyperthermia
A82-35901
Effects of acute plasma volume expansion on altering exercise heat performance
[AD-A110558] N82-26975
Effects on heat tolerance of physical training in water and on land
[AD-A110556] N82-26976

**BODY WEIGHT**
Gravity, and metabolic scale effects in mammals
A82-36319

**BONE MARROW**
Bone-marrow haemopoiesis in dogs exposed to various repeated total-body nonuniform irradiations
A82-35656
Comparative evaluation of the efficiency of radio-protectors on the basis of criteria of the protection of bone marrow and the gastrointestinal tract
A82-35658

**BONES**
A specific radioimmunoassay for osteocalcin with advantageous species crossreactivity
A82-36307
Long bone and joint response to mechanical loading
[AD-A111551] N82-27969

**BRADYCARDIA**
Sympathetic and parasympathetic cardiac control in athletes and nonathletes at rest
A82-36041

**BRAIN**
Kainic acid as a tool in brain research
A82-35662
Characteristics of brain electric activity in different otoneurologic syndromes with vestibular asymmetry
A82-35693
Omega potential: Quantitative index of states of brain and organism structures. I - The physiological significance of the omega potential when it is recorded from deep structures and from the scalp
A82-35834
An electron-microscopic study of the brain of the fruit fly, Drosophila melanogaster, exposed to high-LET krypton /Kr-84/ particle radiation
A82-36320
Studies on the interaction of pemoline and centrophenoxine with some flight factors
A82-36688
The effect of positive and negative ions of air on the content of catecholamines in the brain and adrenal glands
A82-36690
Brain hypoxia and control of breathing - Role of the vagi
A82-37928
Brain extracellular fluid pH and blood flow during isocapnic and hypocapnic hypoxia
A82-37930

**BREATHING APPARATUS**
Carbon dioxide absorption characteristics of high performance Sodasorb at 1 atmosphere
[AD-A107488] N82-26989

BURNS (INJURIES)
Structural changes of the thymus of irradiated animals that were also subjected to heat trauma A82-35651

C

CALCIFICATION
A specific radioimmunoassay for osteocalcin with advantageous species crossreactivity A82-36307
CALCULI
Apparatus for disintegrating kidney stones [NASA-CASE-GSC-12652-1] N82-26961
CALORIC STIMULI
Caloric methods for stimulation of the vestibular apparatus /Survey of the literature/ A82-35697
CAPILLARIES (ANATOMY)
The determination of capillary resistance A82-35667
Influence of fiber type composition and capillary density on onset of blood lactate accumulation [AD-A111038] N82-26973
CAPILLARY FLOW
Intrapulmonary blood flow redistribution during hypoxia increases gas exchange surface area A82-36036
CARBON DIOXIDE
Carbon dioxide absorption characteristics of high performance Sodasorb at 1 atmosphere [AD-A107488] N82-26989
CARBON DIOXIDE CONCENTRATION
An automated, indirect assessment of cardiac output during rest and exercise A82-36030
CARBON MONOXIDE POISONING
Brain hypoxia and control of breathing - Role of the vagi A82-37928
CARDIAC VENTRICLES
The effect of nitroglycerine on the functional state of the left ventricle in patients with acute myocardial infarction according to ultrasonic studies of the heart A82-35679
Effect of habitual exercise on left ventricular response to exercise A82-36040
CARDIOLOGY
Cardio-respiratory physical training in water and on land [AD-A111064] N82-26968
CARDIOVASCULAR SYSTEM
Early diagnosis of overstrain of the cardiovascular system in athletes engaging in cyclic forms of sport A82-35664
Seasonal variations of human cardiorespiratory indices in the North A82-35838
Measurement of cardiopulmonary performance during acute exposure to a 2440-m equivalent atmosphere A82-35904
Epidemiology feasibility study: Effects of noise on the cardiovascular system [PB82-147752] N82-27974
Epidemiology feasibility study: Effects of noise on the cardiovascular system: Appendix B: Annotated bibliography. Literature. The effects of noise on the cardiovascular system [PB82-147760] N82-27975
Epidemiology feasibility study: Effects of noise on the cardiovascular system. Appendix C: Review of non-noise related research of cardiovascular disease [PB82-147778] N82-27976
CATECHOLAMINE
Early diagnosis of overstrain of the cardiovascular system in athletes engaging in cyclic forms of sport A82-35664
Change in plasma cAMP and catecholamines in men subjected to the same relative amount of physical work stress A82-35912
The effect of positive and negative ions of air on the content of catecholamines in the brain and adrenal glands A82-36690
CELLS (BIOLOGY)
Structural changes of the thymus of irradiated animals that were also subjected to heat trauma A82-35651
Modeling of the recovery of cells from radiation damage and the principle of effective-dose reduction. I - Models of the recovery of cells after acute irradiation A82-35657
Omega potential: Quantitative index of states of brain and organism structures. I - The physiological significance of the omega potential when it is recorded from deep structures and from the scalp A82-35834
Cell-mediated immune reactions in ground squirrels in winter lethargy - Two-way transplantation reaction A82-36229
The effect of space flight factors on quiescent nuclei of certain plant and animal test objects A82-37372
Feasibility study: NMR imaging microscope [PB82-125915] N82-27973
CENTRAL NERVOUS SYSTEM
Investigation of the functional state of the central nervous system and the motor apparatus for various regimes of rest and physical exercise A82-35668
Classification of vestibular disorders as a function of the phase of the disease and the degree of vestibular compensation A82-35691
CENTRIFUGING STRESS
Regional blood flow in the domestic fowl immediately following chronic acceleration A82-35909
Electrophysical and hemodynamic factors conditioning cardiac arrhythmias during centrifuging A82-36689
CEREBRAL CORTEX
The effect of acute hypoxia on the EEG and unit impulse activity of neurons of different brain structures in rats A82-36172
The production of specified electrocortical activity as a measurable task [AD-A111422] N82-26965
CHEMICAL EVOLUTION
Beta decay and the origins of biological chirality - Theoretical results A82-37421
Publications of the exobiology program for 1981: A special bibliography [NASA-TM-84895] N82-26995
CHEMICAL REACTIONS
Reference book for the Nitrogen Industry Worker, volume 2 --- producing nitric acid and fertilizers [AD-A113749] N82-27991
CHEMOTHERAPY
The combined effect of medicines A82-35665
CHIRAL DYNAMICS
Beta decay and the origins of biological chirality - Experimental results A82-37420
Beta decay and the origins of biological chirality - Theoretical results A82-37421
CHROMOSOMES
Zoological effects of variations in atmospheric oxygen levels [NASA-CR-169020] N82-26954
CHRONIC CONDITIONS
Recent developments in assessing the myocardial dystrophy encountered in athletes as a consequence of chronic physical overexertion A82-35680
Electrocardiographic diagnosis of the chronic pulmonary heart A82-35681

CIRCADIAN RHYTHMS
- Local serial correlation in behavioral states in the mouse [AD-A111021] N82-26959
- Sleep and wakefulness handbook for flight medical officers [AGARD-AG-270(E)] N82-27972

CIVIL AVIATION
- Inflight medical facilities A82-35914

CLAMPS
- Prosthetic occlusive device for an internal passageway [NASA-CASE-MFS-25640-1] N82-26962

CLASSIFICATIONS
- A classification of behavioral adaptation A82-35827

CLINICAL MEDICINE
- The first clinical experience with a new Soviet antiarrhythmic drug, the diethylamine analog of ethmosine, in patients with different disorders of the heart rhythm A82-35678
- Mechanisms of the development of hypersensitivity to strophanthin in experimental myocardial infarction and its pharmacological correction A82-35683
- Postural vertigo as a specific symptom of Meniere's disease A82-35690
- Classification of vestibular disorders as a function of the phase of the disease and the degree of vestibular compensation A82-35691
- Some questions open to discussion in clinical labyrinthology A82-35694

COCHLEA
- The use of trenthalum in acute vestibulocochlear disorders in patients with meningococcal infection A82-35689

COLD ACCLIMATIZATION
- Stages of the adaptation of human lungs in conditions of the Far North A82-35829
- The bioenergetics of erythrocytes in inhabitants of the North A82-35831

COLD TOLERANCE
- Effects of endogenous glucagon on glucose kinetics in shivering dogs A82-36029

COLD WATER
- Superficial shell insulation in resting and exercising men in cold water A82-36034

COMETS
- Impact of an asteroid or comet in the ocean and extinction of terrestrial life [NASA-CR-169086] N82-26955

COMPENSATORY TRACKING
- A study on human tracking performance in a complex G field experiment A82-34971

COMPLEX SYSTEMS
- Linguistic decision structures for hierarchical systems A82-34968

COMPUTER ASSISTED INSTRUCTION
- Objectives hierarchy for air intercept controller prototype training system [AD-A110847] N82-26981
- Project STEAMER: 6. Advanced computer-aided instruction in propulsion engineering [AD-A110797] N82-26982
- Intelligent tutoring for programming tasks: Using plan analysis to generate better hints [AD-A114020] N82-27983

COMPUTER GRAPHICS
- Emission computed tomography: The single photon approach [PB82-131285] N82-26980

COMPUTER TECHNIQUES
- The measurement of heart rate variability spectra with the help of a personal computer A82-35809
- A procedure for the analysis of nystagmus and other eye movements A82-35911

COMPUTERIZED SIMULATION
- Simulation of two forms of eye motion and its possible implication for the automatic recognition of three-dimensional objects A82-34965
- Training maintenance technicians for troubleshooting - Two experiments with computer simulations A82-37182

CONCENTRICITY
- An ergometer for concentric and eccentric muscular contraction [AD-A111061] N82-26971

CONDITIONING (LEARNING)
- Conditioned tilt naming - A modified absolute judgment method is used to measure the oblique effect A82-35768

CONFERENCES
- Manned systems design: Methods, equipment, and applications; Proceedings of the Conference, Freiburg im Breisgau, West Germany, September 22-25, 1980 A82-36951
- The biological effects of nonionizing radiation [AD-A111898] N82-27970

CONFINEMENT
- Behavioral and biological interactions with confined microsocieties in a programmed environment A82-35639

CONTAMINANTS
- Advanced design linear noise-attenuating earphone-earcup system [AD-A110820] N82-26990

CONTRACTION
- An ergometer for concentric and eccentric muscular contraction [AD-A111061] N82-26971

COOLING SYSTEMS
- Development of a microclimate cooling system for combat vehicles [AD-A112017] N82-27989

CORRECTION
- Intelligent tutoring for programming tasks: Using plan analysis to generate better hints [AD-A114020] N82-27983

COSMONAUTS
- A day off in space A82-35698

CREWS
- State of the hearing function in diesel locomotive crewmen A82-35688

CRUISE MISSILES
- Toxicology of high energy fuels [AD-A111686] N82-26966

CUFFS
- Prosthetic occlusive device for an internal passageway [NASA-CASE-MFS-25640-1] N82-26962

CULTIVATION
- Cultivation of the luminescent bacterium Photobacterium leiognathi with control by luminescence A82-35687

CYSTEAMINE
- The effect of several pharmacologically active substances on the transformation of cystamine in mouse tissues --- and sulfur-containing antiradiation drug metabolism A82-35654
- Comparative evaluation of the efficiency of radio-protectors on the basis of criteria of the protection of bone marrow and the gastrointestinal tract A82-35658
- Investigation of the radio-protective effect of cystamine on a model of thermally induced prophage lambda A82-35659

D

DAMAGE
- Freeze-thaw induced damage to endothelial cells in vitro. 1. Development of a suitable system [AD-A111074] N82-26957

**DARK ADAPTATION**
Direct and neighboring sensitivity changes produced by red and blue-white adapting fields
[AD-A111880] N82-26993

**DATA BASE MANAGEMENT SYSTEMS**
The Clinical Practice Library of Medicine (CPLM): An on-line biomedical computer library. System documentation
[NASA-CR-169018] N82-26964

**DATA BASES**
The Clinical Practice Library of Medicine (CPLM): An on-line biomedical computer library. System documentation
[NASA-CR-169018] N82-26964

**DATA PROCESSING**
Signal analysis at the periphery of the auditory system --- Russian book
A82-35248

**DECISION MAKING**
Linguistic decision structures for hierarchical systems
A82-34568

**DEOXYRIBONUCLEIC ACID**
Investigation of the radio-protective effect of cystamine on a model of thermally induced prophage lambda
A82-35659

**DESERT ADAPTATION**
Human adaptation in arid regions
A82-35828

**DESORPTION**
Pulmonary oxygen toxicity - Possible role of ammonia in desorbing lung surfactant
A82-35908

**DIAGNOSIS**
Early diagnosis of overstrain of the cardiovascular system in athletes engaging in cyclic forms of sport
A82-35664

Specialized laboratory for the educational and research activity of students and the psychodiagnostic study of athletes
A82-35673

The diagnosis and treatment of heart-rhythm disorders - The role of intracardial electrophysiological investigation
A82-35676

Electrocardiographic diagnosis of the chronic pulmonary heart
A82-35681

**DIALS**
Screening designs used to estimate the relative effects of display factors on dial reading
A82-37183

**DIETS**
Plant diversity to support humans in a CELSS ground-based demonstrator
[NASA-CR-166357] N82-27988

**DIFFERENTIAL EQUATIONS**
An empirical equation of elementary motion --- of human body
A82-35674

**DIGITAL SIMULATION**
SAINT, a digital simulation language for the study of manned systems
A82-36957

**DISEASES**
Postural vertigo as a specific symptom of Meniere's disease
A82-35690

Classification of vestibular disorders as a function of the phase of the disease and the degree of vestibular compensation
A82-35691

Medical and performance problems of acute high altitude-exposure
[AD-A111062] N82-26970

**DISINTEGRATION**
Apparatus for disintegrating kidney stones
[NASA-CASE-GSC-12652-1] N82-26961

**DISPLAY DEVICES**
Statistical techniques for instrument panel arrangement
A82-36959

Screening designs used to estimate the relative effects of display factors on dial reading
A82-37183

The constancy of stereoscopic depth perception
[AD-A111484] N82-27984

**DOSAGE**
Epidemiology feasibility study: Effects of noise on the cardiovascular system
[PB82-147752] N82-27974

**DROSOPHILA**
An electron-microscopic study of the brain of the fruit fly, Drosophila melanogaster, exposed to high-LET krypton /Kr-84/ particle radiation
A82-36320

**DRUGS**
The combined effect of medicines
A82-35665

Effects of horizontal body casting on the baroreceptor reflex control of heart rate
A82-36033

**DRY HEAT**
Effectiveness of five water-cooled undergarments in reducing heat stress of vehicle operating in a hot wet or hot dry environment
[AD-A107105] N82-26994

**E**

**EAR PROTECTORS**
The landing signal officer - Auditory aspects --- of aircraft carrier flight operations
A82-35910

Advanced design linear noise-attenuating earphone-earcup system
[AD-A110820] N82-26990

**ECCENTRICITY**
An ergometer for concentric and eccentric muscular contraction
[AD-A111061] N82-26971

**EDUCATION**
Specialized laboratory for the educational and research activity of students and the psychodiagnostic study of athletes
A82-35673

Intelligent tutoring for programming tasks: Using plan analysis to generate better hints
[AD-A114020] N82-27983

**EFFORT**
Perception of effort during isometric contractions as related to heart rate and blood pressure responses
[AD-A111033] N82-26974

**EJECTION INJURIES**
Long bone and joint response to mechanical loading
[AD-A111551] N82-27969

**EJECTION TRAINING**
Operator indoctrination during introduction of new or modified aviation life support systems /ALSS/
A82-37968

**ELBOW (ANATOMY)**
Isokinetic, isometric, and isotonic strength relationships
[AD-A111039] N82-26972

**ELECTRIC POTENTIAL**
Omega potential: Quantitative index of states of brain and organism structures. I - The physiological significance of the omega potential when it is recorded from deep structures and from the scalp
A82-35834

**ELECTRIC PULSES**
The effect of acute hypoxia on the EEG and unit impulse activity of neurons of different brain structures in rats
A82-36172

**ELECTRIC STIMULI**
Muscle weakness following dynamic exercise in humans
A82-37929

**ELECTRO-OPTICS**
Using realistic sensor, target, and scene characteristics to develop a target acquisition model
A82-37185

**ELECTROCARDIOGRAPHY**
Electrocardiographic diagnosis of the chronic pulmonary heart
A82-35681

The measurement of heart rate variability spectra with the help of a personal computer
A82-35809

**ELECTROENCEPHALOGRAPHY**
Characteristics of brain electric activity in different otoneurologic syndromes with vestibular asymmetry A82-35693
The effect of acute hypoxia on the EEG and unit impulse activity of neurons of different brain structures in rats A82-36172
The production of specified electrocortical activity as a measurable task [AD-A111422] N82-26965

**ELECTROLYTE METABOLISM**
Changes of the oxygen transport function of the blood and some metabolic values in patients with hypertension and chronic ischemic heart diseases during ergometric exercise A82-35666

**ELECTROLYTES**
Acute heat/exercise stress in rats: Effects on fluid and electrolyte regulatory hormones [AD-A110559] N82-26958

**ELECTROMAGNETIC FIELDS**
Auditory perception of radio-frequency electromagnetic fields A82-35811

**ELECTROMYOGRAPHY**
Electromyography and applications A82-36965

**ELECTRON IRRADIATION**
Radiogenic changes in the behavior and physiology of the spontaneously hypertensive rat - Evidence for a dissociation between acute hypotension and incapacitation A82-35903

**ELECTRON MICROSCOPY**
An electron-microscopic study of the brain of the fruit fly, Drosophila melanogaster, exposed to high-LET krypton /Kr-84/ particle radiation A82-36320

**ELECTRONYSTAGMOGRAPHY**
The use of nondamping sinusoidal rotation in the study of vestibular function A82-35692

**ELECTROPHORESIS**
Zoological effects of variations in atmospheric oxygen levels [NASA-CR-169020] N82-26954

**ELECTROPHYSIOLOGY**
The diagnosis and treatment of heart-rhythm disorders - The role of intracardial electrophysiological investigation A82-35676
Electrophysical and hemodynamic factors conditioning cardiac arrhythmias during centrifuging A82-36689
Electrophysiological measurement techniques A82-36964
Electromyography and applications A82-36965

**EMERGENCIES**
Inflight medical facilities A82-35914

**EMISSION SPECTRA**
Emission computed tomography: The single photon approach [PB82-131285] N82-26980

**ENDOTHELIUM**
Freeze-thaw induced damage to endothelial cells in vitro. 1. Development of a suitable system [AD-A111074] N82-26957

**ENDOTOXINS**
Investigation of the general fitness of the progeny of irradiated animals. III - The resistance of mice to irradiation, hypoxia, endotoxin, and physical stress A82-35652

**ENERGY ABSORPTION**
Auditory perception of radio-frequency electromagnetic fields A82-35811

**ENGINE NOISE**
The landing signal officer - Auditory aspects --- of aircraft carrier flight operations A82-35910

**ENGINE PARTS**
Analysis and classification of human errors in troubleshooting live aircraft power plants A82-34970

**ENZYME ACTIVITY**
Effect of dietary fat on pulmonary enzymes and toxicity during normobaric hyperoxia A82-35902
Zoological effects of variations in atmospheric oxygen levels [NASA-CR-169020] N82-26954

**EPIDEMIOLOGY**
Epidemiology feasibility study: Effects of noise on the cardiovascular system [PB82-147752] N82-27974
Epidemiology feasibility study: Effects of noise on the cardiovascular system. Appendix C: Review of non-noise related research of cardiovascular disease [PB82-147778] N82-27976

**ERGOMETERS**
An ergometer for concentric and eccentric muscular contraction [AD-A111061] N82-26971

**ERROR ANALYSIS**
A study on human tracking performance in a complex G field experiment A82-34971
Empirical studies of procedural flaws, impasses, and repairs in procedural skills [AD-A113791] N82-27981

**ERRORS**
Intelligent tutoring for programming tasks: Using plan analysis to generate better hints [AD-A114020] N82-27983

**ERYTHROCYTES**
Structural changes of the plasmatic membrane under the effect of ionizing radiation A82-35661
The bioenergetics of erythrocytes in inhabitants of the North A82-35831

**ESTIMATING**
Mass estimation and discrimination during brief periods of zero gravity A82-35769
Models for the estimation of incapacitation times following exposures to toxic gases or vapors [DE82-000619] N82-26979

**EXERCISE PHYSIOLOGY**
Early diagnosis of overstrain of the cardiovascular system in athletes engaging in cyclic forms of sport A82-35664
Dynamics of blood flow rate in athletes upon changes in environmental conditions A82-35669
Characteristics of hemapoiesis in athletes undergoing endurance-training A82-35670
Variation of the biomechanical characteristics of an 800-m run under the influence of fatigue A82-35671
Specialized laboratory for the educational and research activity of students and the psychodiagnostic study of athletes A82-35673
Evaluation of the functional state existing in the adaptation to high-altitude conditions A82-35836
Hormonal mechanisms of adaptation and training --- Russian book A82-36976
Acute heat/exercise stress in rats: Effects on fluid and electrolyte regulatory hormones [AD-A110559] N82-26958
Sleep deprivation and exercise tolerance [AD-A113043] N82-26963
Differentiated ratings of perceived exertion are influenced by high altitude exposure [AD-A111075] N82-26967
Cardio-respiratory physical training in water and on land [AD-A111064] N82-26968
Influence of fiber type composition and capillary density on onset of blood lactate accumulation [AD-A111038] N82-26973

Effects of acute plasma volume expansion on altering exercise heat performance
[AD-A110558] N82-26975
Effects on heat tolerance of physical training in water and on land
[AD-A110556] N82-26976

**EXOBIOLOGY**
Publications of the exobiology program for 1981: A special bibliography
[NASA-TM-84895] N82-26995

**EXPOSURE**
Models for the estimation of incapacitation times following exposures to toxic gases or vapors
[DE82-000619] N82-26979

**EXTRAVEHICULAR ACTIVITY**
Absorbent product and articles made therefrom
[NASA-CASE-MSC-18223-2] N82-26960
Study of EVA operations associated with satellite services
[NASA-CR-167614] N82-27986

**EXTRAVEHICULAR MOBILITY UNITS**
Study of EVA operations associated with satellite services
[NASA-CR-167614] N82-27986

**EYE EXAMINATIONS**
Familial intermittent diplopia - A report of two cases
A82-35916

**EYE MOVEMENTS**
Simulation of two forms of eye motion and its possible implication for the automatic recognition of three-dimensional objects
A82-34965
Human visual orientation --- Book
A82-35272
Measurement of eye movement with a ferromagnetic contact ring
A82-35810
A procedure for the analysis of nystagmus and other eye movements
A82-35911
Statistical techniques for instrument panel arrangement
A82-36959
A method for semi-automatic analysis of eye movements
A82-36960
Eye movement measurement in the assessment and training of visual performance
A82-36962
Eye movements and visual information processing
[AD-A112399] N82-27967

**EYE PROTECTION**
Holographic laser visor mock-up
[AD-A112422] N82-27990

## F

**FACTOR ANALYSIS**
The formation of homogeneous item sets when guessing is a factor in item responses
[AD-A107134] N82-26986

**FACTORIAL DESIGN**
Screening designs used to estimate the relative effects of display factors on dial reading
A82-37183

**FAILURE ANALYSIS**
Analysis and classification of human errors in troubleshooting live aircraft power plants
A82-34970

**FATIGUE (BIOLOGY)**
Variation of the biomechanical characteristics of an 800-m run under the influence of fatigue
A82-35671
Fatigue and the adaptive possibilities of the organism during work
A82-35835

**FATS**
Superficial shell insulation in resting and exercising men in cold water
A82-36034

**FATTY ACIDS**
Effect of dietary fat on pulmonary enzymes and toxicity during normobaric hyperoxia
A82-35902

**FEASIBILITY ANALYSIS**
Evaluation of synthesized voice approach callouts /SYNCALL/
A82-36967

**FEEDBACK**
The production of specified electrocortical activity as a measurable task
[AD-A111822] N82-26965

**FEMALES**
Anatomic perspective of the female athlete: An approach to musculockeletal profiling of women in sports
[AD-A110630] N82-26992

**FERROMAGNETIC MATERIALS**
Measurement of eye movement with a ferromagnetic contact ring
A82-35810

**FERTILIZERS**
Reference book for the Nitrogen Industry Worker, volume 2 --- producing nitric acid and fertilizers
[AD-A113749] N82-27991

**FIBRIN**
Fibrinopeptide A after strenuous physical exercise at high altitude
A82-37926

**FIBROBLASTS**
Investigation by means of a fluorescent probe of changes in cellular membranes of fibroblasts of the Chinese hamster under laser and X-ray irradiation
A82-35660

**FINITE DIFFERENCE THEORY**
Impact of an asteroid or comet in the ocean and extinction of terrestrial life
[NASA-CR-169086] N82-26955

**FINITE ELEMENT METHOD**
Finite element analysis of the visco-elastic interaction of the annulus fibrosis and nucleus pulposis within the human intervertegral joint
[AD-A111161] N82-27971

**FLEXING**
Pressure suit joint analyzer
[NASA-CASE-ARC-11314-1] N82-26987

**FLIGHT CLOTHING**
Absorbent product and articles made therefrom
[NASA-CASE-MSC-18223-2] N82-26960

**FLIGHT CREWS**
Health advice for aircrew on refugee flights
A82-35915
Operator indoctrination during introduction of new or modified aviation life support systems /ALSS/
A82-37968
The evaluation of studies of flight personnel of the German Lufthansa on the question of stress during flights on the short European routes
[NASA-TM-76660] N82-27963
Training improvements for the Tactical Aircrew Training System (TACTS): Project summary report
[AD-A107003] N82-27978

**FLIGHT SIMULATION**
Studies on the interaction of pemoline and centrophenoxine with some flight factors
A82-36688
Effects of whole-body motion simulation on flight skill development
[AD-A111115] N82-26984

**FLIGHT STRESS (BIOLOGY)**
Studies on the interaction of pemoline and centrophenoxine with some flight factors
A82-36688
The evaluation of studies of flight personnel of the German Lufthansa on the question of stress during flights on the short European routes
[NASA-TM-76660] N82-27963
Sleep and wakefulness handbook for flight medical officers
[AGARD-AG-270(E)] N82-27972

**FLIGHT TRAINING**
Operator indoctrination during introduction of new or modified aviation life support systems /ALSS/
A82-37968
Effects of whole-body motion simulation on flight skill development
[AD-A111115] N82-26984
Training improvements for the Tactical Aircrew Training System (TACTS): Project summary report
[AD-A107003] N82-27978

**FLOUR (FOOD)**
Contents of protein and amino acids in methanobacterial biomass
A82-36011

**FLOW VELOCITY**
Carbon dioxide absorption characteristics of high performance Sodasorb at 1 atmosphere
[AD-A107488] N82-26989
**FLUORESCENCE**
Investigation by means of a fluorescent probe of changes in cellular membranes of fibroblasts of the Chinese hamster under laser and X-ray irradiation
A82-35660
**FREQUENCY MEASUREMENT**
The measurement of heart rate variability spectra with the help of a personal computer
A82-35809
**FROSTBITE**
Freeze-thaw induced damage to endothelial cells in vitro. 1. Development of a suitable system
[AD-A111074] N82-26957

## G

**GAMMA RAYS**
Emission computed tomography: The single photon approach
[PB82-131285] N82-26980
**GAS DISSOCIATION**
Bohr effect and slope of the oxygen dissociation curve after physical training
A82-36032
**GAS EXCHANGE**
Parameters of ventilatory and gas exchange dynamics during exercise
A82-36031
Intrapulmonary blood flow redistribution during hypoxia increases gas exchange surface area
A82-36036
**GAS MIXTURES**
Protective effect of a gaseous hypoxic mixture under the combined effect on the organism of radiation and physical stress
A82-35653
**GAS TRANSPORT**
Changes of the oxygen transport function of the blood and some metabolic values in patients with hypertension and chronic ischemic heart diseases during ergometric exercise
A82-35666
**GASTROINTESTINAL SYSTEM**
Comparative evaluation of the efficiency of radio-protectors on the basis of criteria of the protection of bone marrow and the gastrointestinal tract
A82-35658
**GEOCHEMISTRY**
Publications of the exobiology program for 1981: A special bibliography
[NASA-TM-84895] N82-26995
**GLUCOSE**
Effects of endogenous glucagon on glucose kinetics in shivering dogs
A82-36029
**GLYCOGENS**
Effects of glycogen depletion and pedaling speed on 'anaerobic threshold'
A82-36038
Sparing effect of chronic high-altitude exposure on muscle glycogen utilization during exercise
[AD-A111063] N82-26969
**GLYCOLS**
The subchronic inhalation toxicity of polyethylene glycol 200 in the rat and mouse
[AD-A110668] N82-26956
**GOGGLES**
Prevalence of astigmatism among aviators and its limiting effect upon visual performance with the AN/PVS-5 flight vision goggles
[AD-A112836] N82-27966
**GRAVITATIONAL EFFECTS**
Gravity, and metabolic scale effects in mammals
A82-36319
**GROUP DYNAMICS**
Organizational climate: Another look at a potentially important constant
[AD-A113953] N82-27982

## H

**HAZARDS**
Holographic laser visor mock-up
[AD-A112422] N82-27990
**HEAD (ANATOMY)**
Head-temperature effects on physiology, comfort, and performance during hyperthermia
A82-35901
**HEARING**
The landing signal officer - Auditory aspects --- of aircraft carrier flight operations
A82-35910
**HEART DISEASES**
The role of stress in the pathogenesis of ischemic heart disease
A82-35677
Recent developments in assessing the myocardial dystrophy encountered in athletes as a consequence of chronic physical overexertion
A82-35680
Electrocardiographic diagnosis of the chronic pulmonary heart
A82-35681
**HEART FUNCTION**
The first clinical experience with a new Soviet antiarrhythmic drug, the diethylamine analog of ethmosine, in patients with different disorders of the heart rhythm
A82-35678
The effect of nitroglycerine on the functional state of the left ventricle in patients with acute myocardial infarction according to ultrasonic studies of the heart
A82-35679
Effect of habitual exercise on left ventricular response to exercise
A82-36040
**HEART RATE**
The diagnosis and treatment of heart-rhythm disorders - The role of intracardial electrophysiological investigation
A82-35676
The measurement of heart rate variability spectra with the help of a personal computer
A82-35809
Rate of change of physiological functions as an index of the degree of adaptation
A82-35840
Postural stability during slow-onset and rapid-onset hypoxia
A82-35906
An automated, indirect assessment of cardiac output during rest and exercise
A82-36030
Effects of horizontal body casting on the baroreceptor reflex control of heart rate
A82-36033
Sympathetic and parasympathetic cardiac control in athletes and nonathletes at rest
A82-36041
Perception of effort during isometric contractions as related to heart rate and blood pressure responses
[AD-A111033] N82-26974
**HEAT**
The biological effects of nonionizing radiation
[AD-A111898] N82-27970
**HEAT ACCLIMATIZATION**
Evolutionary significance of the adaptation of animals to heat
A82-35663
Human adaptation in arid regions
A82-35828
Strain on the regulation systems as a condition of successful adaptation to heat
A82-35837
Effects on heat tolerance of physical training in water and on land
[AD-A110556] N82-26976
Does heat acclimation lower the rate of metabolism elicited by muscular exercise
[AD-A110555] N82-26977
Effectiveness of five water-cooled undergarments in reducing heat stress of vehicle operating in a hot wet or hot dry environment
[AD-A107105] N82-26994

**HEAT STROKE**
Acute heat/exercise stress in rats: Effects on fluid and electrolyte regulatory hormones [AD-A110559] N82-26958
**HEAT TOLERANCE**
Acute heat/exercise stress in rats: Effects on fluid and electrolyte regulatory hormones [AD-A110559] N82-26958
Effects of acute plasma volume expansion on altering exercise heat performance [AD-A110558] N82-26975
Effects on heat tolerance of physical training in water and on land [AD-A110556] N82-26976
**HELMETS**
Advanced design linear noise-attenuating earphone-earcup system [AD-A110820] N82-26990
**HEMATOCRIT**
Evidence for diminished sensitivity of the hamster pulmonary vasculature to hypoxia A82-36035
**HEMATOPOIESIS**
Characteristics of hemapoiesis in athletes undergoing endurance-training A82-35670
**HEMODYNAMIC RESPONSES**
Blood circulation in weightlessness A82-35700
**HEMODYNAMICS**
Dynamics of blood flow rate in athletes upon changes in environmental conditions A82-35669
Regional blood flow in the domestic fowl immediately following chronic acceleration A82-35909
Electrophysical and hemodynamic factors conditioning cardiac arrhythmias during centrifuging A82-36689
**HEMOGLOBIN**
Bohr effect and slope of the oxygen dissociation curve after physical training A82-36032
**HEMOSTATICS**
The hemostasis system in man in high-altitude conditions A82-35832
**HERING-BREVER REFLEX**
Brain hypoxia and control of breathing - Role of the vagi A82-37928
**HIBERNATION**
Cell-mediated immune reactions in ground squirrels in winter lethargy - Two-way transplantation reaction A82-36229
**HIGH ALTITUDE**
The hemostasis system in man in high-altitude conditions A82-35832
Fibrinopeptide A after strenuous physical exercise at high altitude A82-37926
**HIGH ALTITUDE BALLOONS**
Man at extreme altitude A82-36026
**HIGH ALTITUDE BREATHING**
Differentiated ratings of perceived exertion are influenced by high altitude exposure [AD-A111075] N82-26967
**HIGH ALTITUDE ENVIRONMENTS**
Sparing effect of chronic high-altitude exposure on muscle glycogen utilization during exercise [AD-A111063] N82-26969
Medical and performance problems of acute high altitude-exposure [AD-A111062] N82-26970
**HIGH LEVEL LANGUAGES**
Linguistic decision structures for hierarchical systems A82-34968
**HIGH TEMPERATURE ENVIRONMENTS**
Evolutionary significance of the adaptation of animals to heat A82-35663
Dependence of reactions of the organism to extremal factors on initial state A82-35839
Effectiveness of five water-cooled undergarments in reducing heat stress of vehicle operating in a hot wet or hot dry environment [AD-A107105] N82-26994
**HOMEOSTASIS**
Evolutionary significance of the adaptation of animals to heat A82-35663
Physiological adaptations and maintenance of vegetative homeostasis A82-35826
A classification of behavioral adaptation A82-35827
**HOMOGENEITY**
The formation of homogeneous item sets when guessing is a factor in item responses [AD-A107134] N82-26986
**HORIZONTAL ORIENTATION**
Effects of horizontal body casting on the baroreceptor reflex control of heart rate A82-36033
**HORMONE METABOLISMS**
Changes of the oxygen transport function of the blood and some metabolic values in patients with hypertension and chronic ischemic heart diseases during ergometric exercise A82-35666
**HORMONES**
Hormonal mechanisms of adaptation and training --- Russian book A82-36976
Acute heat/exercise stress in rats: Effects on fluid and electrolyte regulatory hormones [AD-A110559] N82-26958
**HUMAN BEHAVIOR**
Behavioral and biological interactions with confined microsocieties in a programmed environment A82-35639
A classification of behavioral adaptation A82-35827
**HUMAN BEINGS**
Human visual orientation --- Book A82-35272
**HUMAN BODY**
The combined effect of medicines A82-35665
**HUMAN FACTORS ENGINEERING**
An empirical equation of elementary motion --- of human body A82-35674
Manned systems design: Methods, equipment, and applications; Proceedings of the Conference, Freiburg im Breisgau, West Germany, September 22-25, 1980 A82-36951
Methods - Past approaches, current trends and future requirements --- in human factors engineering A82-36952
The human operator simulator - An overview A82-36956
Statistical techniques for instrument panel arrangement A82-36959
Analysis of human movements for workplace design A82-36966
Screening designs used to estimate the relative effects of display factors on dial reading A82-37183
Using realistic sensor, target, and scene characteristics to develop a target acquisition model A82-37185
Perceptual discriminability as a basis for selecting graphic symbols A82-37186
Direct and neighboring sensitivity changes produced by red and blue-white adapting fields [AD-A111880] N82-26993
Design and validation of a tracking test for forming matched groups for continuous tracking experiments [PB-49] N82-27985
**HUMAN PATHOLOGY**
The use of trenthalum in acute vestibulocochlear disorders in patients with meningococcal infection A82-35689

Some questions open to discussion in clinical labyrinthology A82-35694
Affections of the upper respiratory tracts in transport-fleet sailors and the prophylaxis of these affections on long voyages A82-35696
Familial intermittent diplopia - A report of two cases A82-35916

**HUMAN PERFORMANCE**
Analysis and classification of human errors in troubleshooting live aircraft power plants A82-34970
A study on human tracking performance in a complex G field experiment A82-34971
Behavioral and biological interactions with confined microsocieties in a programmed environment A82-35639
Caloric methods for stimulation of the vestibular apparatus /Survey of the literature/ A82-35697
The hemostasis system in man in high-altitude conditions A82-35832
Head-temperature effects on physiology, comfort, and performance during hyperthermia A82-35901
Exercise performance after ventilatory work A82-36037
Analysis of human movements for workplace design A82-36966
The production of specified electrocortical activity as a measurable task [AD-A111422] N82-26965
An ergometer for concentric and eccentric muscular contraction [AD-A111061] N82-26971
Latent trait model contributions to criterion-referenced testing technology [AD-A112048] N82-26985
Performance test objectivity: A comparison of rater accuracy and reliability using three observation forms [AD-A111077] N82-27977
Empirical studies of procedural flaws, impasses, and repairs in procedural skills [AD-A113791] N82-27981
Organizational climate: Another look at a potentially important constant [AD-A113953] N82-27982
The human role in space [NASA-TM-82482] N82-27987

**HUMAN RESOURCES**
The human role in space [NASA-TM-82482] N82-27987

**HUMAN TOLERANCES**
Human adaptation in arid regions A82-35828
Stages of the adaptation of human lungs in conditions of the Far North A82-35829
Strain on the regulation systems as a condition of successful adaptation to heat A82-35837
Rate of change of physiolcgical functions as an index of the degree of adaptation A82-35840
Noise and annoyance - A new methodology A82-37107
Sleep deprivation and exercise tolerance [AD-A113043] N82-26963
The beginnings of aeromedical acceleration research [AD-A111048] N82-26978

**HUMAN WASTES**
Absorbent product and articles made therefrom [NASA-CASE-MSC-18223-2] N82-26960

**HUMIDITY**
Effectiveness of five water-cooled undergarments in reducing heat stress of vehicle operating in a hot wet or hot dry environment [AD-A107105] N82-26994

**HYDROGEN ATOMS**
Spin imaging equipment for small animal experiments [ISBN-951-41-0420-X] N82-26951

**HYPERCAPNIA**
Comparison of human vocal cord movements during isocapnic hypoxia and hypercapnia A82-37927

**HYPEROXIA**
Effect of dietary fat on pulmonary enzymes and toxicity during normobaric hyperoxia A82-35902
Pulmonary oxygen toxicity - Possible role of ammonia in desorbing lung surfactant A82-35908

**HYPERPNEA**
Exercise performance after ventilatory work A82-36037
Effects of glycogen depletion and pedaling speed on 'anaerobic threshold' A82-36038

**HYPERTENSION**
Changes of the oxygen transport function of the blood and some metabolic values in patients with hypertension and chronic ischemic heart diseases during ergometric exercise A82-35666
Radiogenic changes in the behavior and physiology of the spontaneously hypertensive rat - Evidence for a dissociation between acute hypotension and incapacitation A82-35903

**HYPERTHERMIA**
Head-temperature effects on physiology, comfort, and performance during hyperthermia A82-35901
Splanchnic vasoconstriction in heat-stressed men - Role of renin-angiotensin system A82-36028

**HYPOBARIC ATMOSPHERES**
Measurement of cardiopulmonary performance during acute exposure to a 2440-m equivalent atmosphere A82-35904

**HYPOCAPNIA**
Brain extracellular fluid pH and blood flow during isocapnic and hypocapnic hypoxia A82-37930

**HYPOGLYCEMIA**
Effects of endogenous glucagon on glucose kinetics in shivering dogs A82-36029

**HYPOKINESIA**
Dependence of reactions of the organism to extremal factors on initial state A82-35839

**HYPOXIA**
Investigation of the general fitness of the progeny of irradiated animals. III - The resistance of mice to irradiation, hypoxia, endotoxin, and physical stress A82-35652
Protective effect of a gaseous hypoxic mixture under the combined effect on the organism of radiation and physical stress A82-35653
Rare cases of serious disturbances in cardiac rhythm during a hypoxic functional test A82-35684
The hemostasis system in man in high-altitude conditions A82-35832
Rate of change of physiological functions as an index of the degree of adaptation A82-35840
Investigation of the combined effects of bedrest and mild hypoxia A82-35905
Postural stability during slow-onset and rapid-onset hypoxia A82-35906
Man at extreme altitude A82-36026
Evidence for diminished sensitivity of the hamster pulmonary vasculature to hypoxia A82-36035
Intrapulmonary blood flow redistribution during hypoxia increases gas exchange surface area A82-36036
The effect of acute hypoxia on the EEG and unit impulse activity of neurons of different brain structures in rats A82-36172

Comparison of human vocal cord movements during isocapnic hypoxia and hypercapnia
A82-37927
Brain hypoxia and control of breathing - Role of the vagi
A82-37928
Brain extracellular fluid pH and blood flow during isocapnic and hypocapnic hypoxia
A82-37930

I

IMAGES
Eye movements and visual information processing
[AD-A112399] N82-27967
IMAGING TECHNIQUES
Spin imaging equipment for small animal experiments
[ISBN-951-41-0420-X] N82-26951
IMMUNOLOGY
Cell-mediated immune reactions in ground squirrels in winter lethargy - Two-way transplantation reaction
A82-36229
IMPACT PREDICTION
Impact of an asteroid or comet in the ocean and extinction of terrestrial life
[NASA-CR-169086] N82-26955
IMPLANTATION
Prosthetic occlusive device for an internal passageway
[NASA-CASE-MFS-25640-1] N82-26962
INDUSTRIES
Reference book for the Nitrogen Industry Worker, volume 2 --- producing nitric acid and fertilizers
[AD-A113749] N82-27991
INFECTIOUS DISEASES
Health advice for aircrew on refugee flights
A82-35915
INFESTATION
Predicting the timing and potential of the spring emergence of overwintered populations of Heliothis spp
[NASA-CR-167444] N82-27962
INFORMATION
Signal analysis at the periphery of the auditory system --- Russian book
A82-35248
INSECTS
Zoological effects of variations in atmospheric oxygen levels
[NASA-CR-169020] N82-26954
Insects: A nutritional alternative
[NASA-CR-169056] N82-26988
Predicting the timing and potential of the spring emergence of overwintered populations of Heliothis spp
[NASA-CR-167444] N82-27962
INSTRUMENT ORIENTATION
Statistical techniques for instrument panel arrangement
A82-36959
INTELLIGIBILITY
Advanced design linear noise-attenuating earphone-earcup system
[AD-A110820] N82-26990
INTERCEPTION
Objectives hierarchy for air intercept controller prototype training system
[AD-A110847] N82-26981
INTERVERTEBRAL DISKS
Finite element analysis of the visco-elastic interaction of the annulus fibrosis and nucleus pulposis within the human intervertegral joint
[AD-A111161] N82-27971
IONIZING RADIATION
Structural changes of the plasmatic membrane under the effect of ionizing radiation
A82-35661
Radiogenic changes in the behavior and physiology of the spontaneously hypertensive rat - Evidence for a dissociation between acute hypotension and incapacitation
A82-35903
ISCHEMIA
Changes of the oxygen transport function of the blood and some metabolic values in patients with hypertension and chronic ischemic heart diseases during ergometric exercise
A82-35666
The role of stress in the pathogenesis of ischemic heart disease
A82-35677

J

JOINTS (ANATOMY)
Long bone and joint response to mechanical loading
[AD-A111551] N82-27969
Finite element analysis of the visco-elastic interaction of the annulus fibrosis and nucleus pulposis within the human intervertegral joint
[AD-A111161] N82-27971
JOINTS (JUNCTIONS)
Pressure suit joint analyzer
[NASA-CASE-ARC-11314-1] N82-26987
JUDGMENTS
Human visual orientation --- Book
A82-35272
Conditioned tilt naming - A modified absolute judgment method is used to measure the oblique effect
A82-35768
Performance test objectivity: A comparison of rater accuracy and reliability using three observation forms
[AD-A111077] N82-27977

K

KIDNEY DISEASES
Apparatus for disintegrating kidney stones
[NASA-CASE-GSC-12652-1] N82-26961
KIDNEYS
Apparatus for disintegrating kidney stones
[NASA-CASE-GSC-12652-1] N82-26961
KINEMATICS
Fracture and viscoelastic characteristics of the human cervical spine kinematics of the 3 actuator system
[AD-A110980] N82-27965
KNEE (ANATOMY)
Isokinetic, isometric, and isotonic strength relationships
[AD-A111039] N82-26972
KNOWLEDGE
Empirical studies of procedural flaws, impasses, and repairs in procedural skills
[AD-A113791] N82-27981
KOLMOGOROFF-SMIRNOFF TEST
A study on human tracking performance in a complex G field experiment
A82-34971
KRYPTON ISOTOPES
An electron-microscopic study of the brain of the fruit fly, Drosophila melanogaster, exposed to high-LET krypton /Kr-84/ particle radiation
A82-36320

L

LABORATORIES
Specialized laboratory for the educational and research activity of students and the psychodiagnostic study of athletes
A82-35673
LABYRINTH
Some questions open to discussion in clinical labyrinthology
A82-35694
LACTATES
Effects of glycogen depletion and pedaling speed on 'anaerobic threshold'
A82-36038
Influence of fiber type composition and capillary density on onset of blood lactate accumulation
[AD-A111038] N82-26973
LASER OUTPUTS
Investigation by means of a fluorescent probe of changes in cellular membranes of fibroblasts of the Chinese hamster under laser and X-ray irradiation
A82-35660
LASERS
Holographic laser visor mock-up
[AD-A112422] N82-27990

**LEARNING**
Aptitude requirements based on task difficulty: Methodology for evaluation
[AD-A110568] N82-26983
Empirical studies of procedural flaws, impasses, and repairs in procedural skills
[AD-A113791] N82-27981
**LEARNING MACHINES**
Linguistic decision structures for hierarchical systems
A82-34968
**LETHALITY**
Investigation of the radio-protective effect of cystamine on a model of thermally induced prophage lambda
A82-35659
**LIFE SCIENCES**
United States and Soviet Life Sciences factors in long-duration space flights
A82-35638
USSR Space Life Sciences Digest, volume 2, no. 3
[NASA-CR-168582] N82-26952
USSR Space Life Sciences Digest, volume 2, no. 4
[NASA-CR-168691] N82-26953
**LIFE SUPPORT SYSTEMS**
Operator indoctrination during introduction of new or modified aviation life support systems /ALSS/
A82-37968
**LIGHTING EQUIPMENT**
Direct and neighboring sensitivity changes produced by red and blue-white adapting fields
[AD-A111880] N82-26993
**LIMBS (ANATOMY)**
Long bone and joint response to mechanical loading
[AD-A111551] N82-27969
**LINE OF SIGHT**
A method for semi-automatic analysis of eye movements
A82-36960
Eye movements and visual information processing
[AD-A112399] N82-27967
**LINEAR ENERGY TRANSFER (LET)**
An electron-microscopic study of the brain of the fruit fly, Drosophila melanogaster, exposed to high-LET krypton /Kr-84/ particle radiation
A82-36320
**LINGUISTICS**
Linguistic decision structures for hierarchical systems
A82-34968
**LIQUID COOLING**
Effectiveness of five water-cooled undergarments in reducing heat stress of vehicle operating in a hot wet or hot dry environment
[AD-A107105] N82-26994
**LOADS (FORCES)**
Long bone and joint response to mechanical loading
[AD-A111551] N82-27969
**LONG DURATION SPACE FLIGHT**
United States and Soviet Life Sciences factors in long-duration space flights
A82-35638
A day off in space
A82-35698
**LONG TERM EFFECTS**
Affections of the upper respiratory tracts in transport-fleet sailors and the prophylaxis of these affections on long voyages
A82-35696
**LUNG MORPHOLOGY**
Regional changes of pulmonary functions in inhabitants of the North
A82-35830
Mechanical properties of the lungs during acclimatization to altitude
A82-36027
Evidence for diminished sensitivity of the hamster pulmonary vasculature to hypoxia
A82-36035
Intrapulmonary blood flow redistribution during hypoxia increases gas exchange surface area
A82-36036
**LUNGS**
Stages of the adaptation of human lungs in conditions of the Far North
A82-35829
Effect of dietary fat on pulmonary enzymes and toxicity during normobaric hyperoxia
A82-35902
Pulmonary oxygen toxicity - Possible role of ammonia in desorbing lung surfactant
A82-35908
**LYMPH**
Cell-mediated immune reactions in ground squirrels in winter lethargy - Two-way transplantation reaction
A82-36229

**M**

**MAGNETIC COILS**
Measurement of eye movement with a ferromagnetic contact ring
A82-35810
**MAGNETIC MEASUREMENT**
Measurement of eye movement with a ferromagnetic contact ring
A82-35810
**MAGNETOCARDIOGRAPHY**
Superconducting magnetocardiograph
A82-36260
**MAINTENANCE**
Analysis and classification of human errors in troubleshooting live aircraft power plants
A82-34970
**MAINTENANCE TRAINING**
Training maintenance technicians for troubleshooting - Two experiments with computer simulations
A82-37182
**MAMMALS**
Gravity, and metabolic scale effects in mammals
A82-36319
**MAN MACHINE SYSTEMS**
A study on human tracking performance in a complex G field experiment
A82-34971
Manned systems design: Methods, equipment, and applications; Proceedings of the Conference, Freiburg im Breisgau, West Germany, September 22-25, 1980
A82-36951
Methods - Past approaches, current trends and future requirements --- in human factors engineering
A82-36952
The human operator simulator - An overview
A82-36956
SAINT, a digital simulation language for the study of manned systems
A82-36957
A method for semi-automatic analysis of eye movements
A82-36960
Physiological monitoring and the concept of adaptive systems
A82-36963
Analysis of human movements for workplace design
A82-36966
Evaluating simulator validity
A82-36968
Crew workload prediction study
[AD-A111948] N82-26991
Effect of task duration on voice recognition system performance
[AD-A107442] N82-27979
**MANNED SPACE FLIGHT**
United States and Soviet Life Sciences factors in long-duration space flights
A82-35638
The human role in space
[NASA-TM-82482] N82-27987
**MEASURING INSTRUMENTS**
The determination of capillary resistance
A82-35667
Synchronized nystagmus calibrator
A82-35695
**MEDICAL SERVICES**
Inflight medical facilities
A82-35914
**MEMBRANE STRUCTURES**
Structural changes of the plasmatic membrane under the effect of ionizing radiation
A82-35661

**MEMBRANES**
Affections of the upper respiratory tracts in transport-fleet sailors and the prophylaxis of these affections on long voyages
A82-35696
Pulmonary oxygen toxicity - Possible role of ammonia in desorbing lung surfactant
A82-35908

**MENINGITIS**
The use of trenthalum in acute vestibulocochlear disorders in patients with meningococcal infection
A82-35689

**MENTAL PERFORMANCE**
The effect of threat on psychomotor and intellectual performance depending on characteristics of temperament
A82-36691
Narrowing of the visual field as an indicator of mental workload
A82-36961
The formation of homogeneous item sets when guessing is a factor in item responses
[AD-A107134] N82-26986
Effect of task duration on voice recognition system performance
[AD-A107442] N82-27979

**METABOLISM**
The effect of several pharmacologically active substances on the transformation of cystamine in mouse tissues --- and sulfur-containing antiradiation drug metabolism
A82-35654
Gravity, and metabolic scale effects in mammals
A82-36319
Does heat acclimation lower the rate of metabolism elicited by muscular exercise
[AD-A110555] N82-26977

**METHANE**
Contents of protein and amino acids in methanobacterial biomass
A82-36011
Methane flux in the Great Dismal Swamp
A82-37423

**MICROCOMPUTERS**
The measurement of heart rate variability spectra with the help of a personal computer
A82-35809

**MICROSCOPES**
Feasibility study: NMR imaging microscope
[PB82-125915] N82-27973

**MICROWAVE FREQUENCIES**
Auditory perception of radio-frequency electromagnetic fields
A82-35811

**MINERALS**
Plant diversity to support humans in a CELSS ground-based demonstrator
[NASA-CR-166357] N82-27988

**MOLECULAR INTERACTIONS**
The combined effect of medicines
A82-35665

**MOLECULAR STRUCTURE**
Beta decay and the origins of biological chirality - Theoretical results
A82-37421

**MONOCULAR VISION**
Conditioned tilt naming - A modified absolute judgment method is used to measure the oblique effect
A82-35768

**MOON ILLUSION**
Locus of the stimulus to visual accommodation - Where in the world, or where in the eye --- sources of visual perception errors
A82-37184

**MOTION SICKNESS**
Motion sickness, its prevention and treatment --- Russian book
A82-36971

**MUSCLES**
An ergometer for concentric and eccentric muscular contraction
[AD-A111061] N82-26971
Influence of fiber type composition and capillary density on onset of blood lactate accumulation
[AD-A111038] N82-26973

**MUSCULAR FATIGUE**
Exercise performance after ventilatory work
A82-36037
Muscle weakness following dynamic exercise in humans
A82-37929
Sparing effect of chronic high-altitude exposure on muscle glycogen utilization during exercise
[AD-A111063] N82-26969

**MUSCULAR FUNCTION**
Investigation of the functional state of the central nervous system and the motor apparatus for various regimes of rest and physical exercise
A82-35668
Effects of glycogen depletion and pedaling speed on 'anaerobic threshold'
A82-36038
Electromyography and applications
A82-36965
Muscle weakness following dynamic exercise in humans
A82-37929

**MUSCULAR STRENGTH**
Muscle weakness following dynamic exercise in humans
A82-37929
Isokinetic, isometric, and isotonic strength relationships
[AD-A111039] N82-26972

**MUSCULOSKELETAL SYSTEM**
Anatomic perspective of the female athlete: An approach to musculoskeletal profiling of women in sports
[AD-A110630] N82-26992

**MUTATIONS**
Investigation of the radio-protective effect of cystamine on a model of thermally induced prophage lambda
A82-35659

**MYOCARDIAL INFARCTION**
The effect of nitroglycerine on the functional state of the left ventricle in patients with acute myocardial infarction according to ultrasonic studies of the heart
A82-35679
The pharmocokinetic characteristics of trimecain as compared to lidocain in patients with myocardial infarction
A82-35682
Mechanisms of the development of hypersensitivity to strophanthin in experimental myocardial infarction and its pharmacological correction
A82-35683

**MYOCARDIUM**
Recent developments in assessing the myocardial dystrophy encountered in athletes as a consequence of chronic physical overexertion
A82-35680

**N**

**NASA PROGRAMS**
United States and Soviet Life Sciences factors in long-duration space flights
A82-35638

**NAVY**
Affections of the upper respiratory tracts in transport-fleet sailors and the prophylaxis of these affections on long voyages
A82-35696

**NEGATIVE IONS**
The effect of positive and negative ions of air on the content of catecholamines in the brain and adrenal glands
A82-36690

**NERVES**
Kainic acid as a tool in brain research
A82-35662
Brain hypoxia and control of breathing - Role of the vagi
A82-37928

**NERVOUS SYSTEM**
An electron-microscopic study of the brain of the fruit fly, Drosophila melanogaster, exposed to high-LET krypton /Kr-84/ particle radiation
A82-36320
Epidemiology feasibility study: Effects of noise on the cardiovascular system: Appendix B: Annotated bibliography. Literature. The effects of noise on the cardiovascular system
[PB82-147760] N82-27975

Epidemiology feasibility study: Effects of noise on the cardiovascular system. Appendix C: Review of non-noise related research of cardiovascular disease [PB82-147778] N82-27976

NEUROPHYSIOLOGY

Kainic acid as a tool in brain research A82-35662

Omega potential: Quantitative index of states of brain and organism structures. I - The physiological significance of the omega potential when it is recorded from deep structures and from the scalp A82-35834

NIGHT VISION

Prevalence of astigmatism among aviators and its limiting effect upon visual performance with the AN/PVS-5 flight vision goggles [AD-A112836] N82-27966

NITRIC ACID

Reference book for the Nitrogen Industry Worker, volume 2 --- producing nitric acid and fertilizers [AD-A113749] N82-27991

NITROGLYCERIN

The effect of nitroglycerine on the functional state of the left ventricle in patients with acute myocardial infarction according to ultrasonic studies of the heart A82-35679

NOISE (SOUND)

Epidemiology feasibility study: Effects of noise on the cardiovascular system [PB82-147752] N82-27974

Epidemiology feasibility study: Effects of noise on the cardiovascular system: Appendix B: Annotated bibliography. Literature. The effects of noise on the cardiovascular system [PB82-147760] N82-27975

Epidemiology feasibility study: Effects of noise on the cardiovascular system. Appendix C: Review of non-noise related research of cardiovascular disease [PB82-147778] N82-27976

NOISE INJURIES

State of the hearing function in diesel locomotive crewmen A82-35688

The landing signal officer - Auditory aspects --- of aircraft carrier flight operations A82-35910

NOISE REDUCTION

Advanced design linear noise-attenuating earphone-earcup system [AD-A110820] N82-26990

NOISE THRESHOLD

Advanced design linear noise-attenuating earphone-earcup system [AD-A110820] N82-26990

NOISE TOLERANCE

Noise and annoyance - A new methodology A82-37187

Epidemiology feasibility study: Effects of noise on the cardiovascular system [PB82-147752] N82-27974

Epidemiology feasibility study: Effects of noise on the cardiovascular system: Appendix B: Annotated bibliography. Literature. The effects of noise on the cardiovascular system [PB82-147760] N82-27975

Epidemiology feasibility study: Effects of noise on the cardiovascular system. Appendix C: Review of non-noise related research of cardiovascular disease [PB82-147778] N82-27976

NUCLEAR MAGNETIC RESONANCE

Spin imaging equipment for small animal experiments [ISBN-951-41-0420-X] N82-26951

Feasibility study: NMR imaging microscope [PB82-125915] N82-27973

NUTRITIONAL REQUIREMENTS

Insects: A nutritional alternative [NASA-CR-169056] N82-26988

Plant diversity to support humans in a CELSS ground-based demonstrator [NASA-CR-166357] N82-27988

NYSTAGMUS

Synchronized nystagmus calibrator A82-35695

O

OBLIQUENESS

Conditioned tilt naming - A modified absolute judgment method is used to measure the oblique effect A82-35768

OCCLUSION

Prosthetic occlusive device for an internal passageway [NASA-CASE-MFS-25640-1] N82-26962

ON-LINE SYSTEMS

The Clinical Practice Library of Medicine (CPLM): An on-line biomedical computer library. System documentation [NASA-CR-169018] N82-26964

OPERATOR PERFORMANCE

Psychophysiological analysis of periodic oscillations of performance quality within the limits of a work cycle A82-35833

Fatigue and the adaptive possibilities of the organism during work A82-35835

A procedure for the analysis of nystagmus and other eye movements A82-35911

The human operator simulator - An overview A82-36956

Screening designs used to estimate the relative effects of display factors on dial reading A82-37183

Effect of operator mental loading on voice recognition system performance [AD-A107477] N82-27980

OPERATORS (PERSONNEL)

Project STEAMER: 6. Advanced computer-aided instruction in propulsion engineering [AD-A110797] N82-26982

OPTICAL ACTIVITY

Beta decay and the origins of biological chirality - Experimental results A82-37420

Beta decay and the origins of biological chirality - Theoretical results A82-37421

OPTIMAL CONTROL

Linguistic decision structures for hierarchical systems A82-34968

ORGANIC CHEMISTRY

Publications of the exobiology program for 1981: A special bibliography [NASA-TM-84895] N82-26995

ORGANIZATIONS

Organizational climate: Another look at a potentially important constant [AD-A113953] N82-27982

ORTHOPEDICS

Anatomic perspective of the female athlete: An approach to musculoskeletal profiling of women in sports [AD-A110630] N82-26992

ORTHOSTATIC TOLERANCE

Effect of orthostatic stress on exercise performance after bedrest A82-35907

OTOLOGY

Characteristics of brain electric activity in different otoneurologic syndromes with vestibular asymmetry A82-35693

OXYGEN CONSUMPTION

Changes of the oxygen transport function of the blood and some metabolic values in patients with hypertension and chronic ischemic heart diseases during ergometric exercise A82-35666

Seasonal variations of human cardiorespiratory indices in the North A82-35838

Bohr effect and slope of the oxygen dissociation curve after physical training A82-36032

OXYGEN METABOLISM
Change in plasma cAMP and catecholamines in men subjected to the same relative amount of physical work stress A82-35912
Exercise performance after ventilatory work A82-36037

P

PARTICLE SPIN
Spin imaging equipment for small animal experiments [ISBN-951-41-0420-X] N82-26951
PASSAGEWAYS
Prosthetic occlusive device for an internal passageway [NASA-CASE-MFS-25640-1] N82-26962
PATHOGENESIS
The role of stress in the pathogenesis of ischemic heart disease A82-35677
PATHOLOGICAL EFFECTS
Possibility of evaluating radiation injury to skin on the basis of changes in its functional state A82-35655
Mechanisms of the development of hypersensitivity to strophanthin in experimental myocardial infarction and its pharmacological correction A82-35683
PATTERN RECOGNITION
Simulation of two forms of eye motion and its possible implication for the automatic recognition of three-dimensional objects A82-34965
A procedure for the analysis of nystagmus and other eye movements A82-35911
Perceptual discriminability as a basis for selecting graphic symbols A82-37186
PERCEPTION
Organizational climate: Another look at a potentially important constant [AD-A113953] N82-27982
PERCEPTUAL ERRORS
Locus of the stimulus to visual accommodation - Where in the world, or where in the eye --- sources of visual perception errors A82-37184
PERFORMANCE TESTS
The production of specified electrocortical activity as a measurable task [AD-A111422] N82-26965
PERIODIC VARIATIONS
Psychophysiological analysis of periodic oscillations of performance quality within the limits of a work cycle A82-35833
PERIPHERAL CIRCULATION
The bioenergetics of erythrocytes in inhabitants of the North A82-35831
Splanchnic vasoconstriction in heat-stressed men - Role of renin-angiotensin system A82-36028
PERIPHERAL VISION
Narrowing of the visual field as an indicator of mental workload A82-36961
PERSONALITY TESTS
The effect of threat on psychomotor and intellectual performance depending on characteristics of temperament A82-36691
PERSONNEL SELECTION
Aptitude requirements based on task difficulty: Methodology for evaluation [AD-A110568] N82-26983
PERSPIRATION
An evaluation of localized sweating rates for predicting total body sweating rates [AD-A111902] N82-27968
PETECHIA
The determination of capillary resistance A82-35667
PHARMACOLOGY
The effect of several pharmacologically active substances on the transformation of cystamine in mouse tissues --- and sulfur-containing antiradiation drug metabolism A82-35654
The first clinical experience with a new Soviet antiarrhythmic drug, the diethylamine analog of ethmosine, in patients with different disorders of the heart rhythm A82-35678
The pharmacokinetic characteristics of trimecain as compared to lidocain in patients with myocardial infarction A82-35682
Mechanisms of the development of hypersensitivity to strophanthin in experimental myocardial infarction and its pharmacological correction A82-35683
Studies on the interaction of pemoline and centrophenoxine with some flight factors A82-36688
PHOTON DENSITY
Emission computed tomography: The single photon approach [PB82-131285] N82-26980
PHYSICAL CHEMISTRY
Reference book for the Nitrogen Industry Worker, volume 2 --- producing nitric acid and fertilizers [AD-A113749] N82-27991
PHYSICAL EXERCISE
Changes of the oxygen transport function of the blood and some metabolic values in patients with hypertension and chronic ischemic heart diseases during ergometric exercise A82-35666
Investigation of the functional state of the central nervous system and the motor apparatus for various regimes of rest and physical exercise A82-35668
Recent developments in assessing the myocardial dystrophy encountered in athletes as a consequence of chronic physical overexertion A82-35680
Measurement of cardiopulmonary performance during acute exposure to a 2440-m equivalent atmosphere A82-35904
Effect of orthostatic stress on exercise performance after bedrest A82-35907
Change in plasma cAMP and catecholamines in men subjected to the same relative amount of physical work stress A82-35912
Man at extreme altitude A82-36026
An automated, indirect assessment of cardiac output during rest and exercise A82-36030
Parameters of ventilatory and gas exchange dynamics during exercise A82-36031
Bohr effect and slope of the oxygen dissociation curve after physical training A82-36032
Superficial shell insulation in resting and exercising men in cold water A82-36034
Exercise performance after ventilatory work A82-36037
Effects of glycogen depletion and pedaling speed on 'anaerobic threshold' A82-36038
Attenuation of blood pressure increases in Dahl salt-sensitive rats by exercise A82-36039
Effect of habitual exercise on left ventricular response to exercise A82-36040
Fibrinopeptide A after strenuous physical exercise at high altitude A82-37926
Muscle weakness following dynamic exercise in humans A82-37929
Sleep deprivation and exercise tolerance [AD-A113043] N82-26963
Sparing effect of chronic high-altitude exposure on muscle glycogen utilization during exercise [AD-A111063] N82-26969

An ergometer for concentric and eccentric muscular contraction
[AD-A111061] N82-26971
Perception of effort during isometric contractions as related to heart rate and blood pressure responses
[AD-A111033] N82-26974

**PHYSICAL FITNESS**
Investigation of the general fitness of the progeny of irradiated animals. III - The resistance of mice to irradiation, hypoxia, endotoxin, and physical stress
A82-35652
Characteristics of hemapoiesis in athletes undergoing endurance-training
A82-35670
Cardio-respiratory physical training in water and on land
[AD-A111064] N82-26968
Sparing effect of chronic high-altitude exposure on muscle glycogen utilization during exercise
[AD-A111063] N82-26969

**PHYSIOLOGICAL EFFECTS**
Protective effect of a gaseous hypoxic mixture under the combined effect on the organism of radiation and physical stress
A82-35653
Investigation by means of a fluorescent probe of changes in cellular membranes of fibroblasts of the Chinese hamster under laser and X-ray irradiation
A82-35660
Early diagnosis of overstrain of the cardiovascular system in athletes engaging in cyclic forms of sport
A82-35664
The combined effect of medicines
A82-35665
Variation of the biomechanical characteristics of an 800-m run under the influence of fatigue
A82-35671
Recent developments in assessing the myocardial dystrophy encountered in athletes as a consequence of chronic physical overexertion
A82-35680
Investigation of the combined effects of bedrest and mild hypoxia
A82-35905
Man at extreme altitude
A82-36026
Mechanical properties of the lungs during acclimatization to altitude
A82-36027
Effects of horizontal body casting on the baroreceptor reflex control of heart rate
A82-36033
Evidence for diminished sensitivity of the hamster pulmonary vasculature to hypoxia
A82-36035
Exercise performance after ventilatory work
A82-36037
Attenuation of blood pressure increases in Dahl salt-sensitive rats by exercise
A82-36039
Effect of habitual exercise on left ventricular response to exercise
A82-36040
The effect of acute hypoxia on the EEG and unit impulse activity of neurons of different brain structures in rats
A82-36172
Gravity, and metabolic scale effects in mammals
A82-36319
Fibrinopeptide A after strenuous physical exercise at high altitude
A82-37926
Medical and performance problems of acute high altitude-exposure
[AD-A111062] N82-26970
Models for the estimation of incapacitation times following exposures to toxic gases or vapors
[DE82-000619] N82-26979
The biological effects of nonionizing radiation
[AD-A111898] N82-27970

**PHYSIOLOGICAL FACTORS**
Sympathetic and parasympathetic cardiac control in athletes and nonathletes at rest
A82-36041

**PHYSIOLOGICAL RESPONSES**
Rare cases of serious disturbances in cardiac rhythm during a hypoxic functional test
A82-35684
Classification of vestibular disorders as a function of the phase of the disease and the degree of vestibular compensation
A82-35691
Physiological adaptations and maintenance of vegetative homeostasis
A82-35826
Human adaptation in arid regions
A82-35828
Stages of the adaptation of human lungs in conditions of the Far North
A82-35829
The bioenergetics of erythrocytes in inhabitants of the North
A82-35831
Evaluation of the functional state existing in the adaptation to high-altitude conditions
A82-35836
Seasonal variations of human cardiorespiratory indices in the North
A82-35838
Dependence of reactions of the organism to extremal factors on initial state
A82-35839
Rate of change of physiological functions as an index of the degree of adaptation
A82-35840
Postural stability during slow-onset and rapid-onset hypoxia
A82-35906
A procedure for the analysis of nystagmus and other eye movements
A82-35911
Splanchnic vasoconstriction in heat-stressed men - Role of renin-angiotensin system
A82-36028
Parameters of ventilatory and gas exchange dynamics during exercise
A82-36031
Physiological monitoring and the concept of adaptive systems
A82-36963
Electrophysiological measurement techniques
A82-36964
Brain extracellular fluid pH and blood flow during isocapnic and hypocapnic hypoxia
A82-37930
The evaluation of studies of flight personnel of the German Lufthansa on the question of stress during flights on the short European routes
[NASA-TM-76660] N82-27963
Long bone and joint response to mechanical loading
[AD-A111551] N82-27969

**PHYSIOLOGICAL TESTS**
Rare cases of serious disturbances in cardiac rhythm during a hypoxic functional test
A82-35684

**PHYSIOLOGY**
An evaluation of localized sweating rates for predicting total body sweating rates
[AD-A111902] N82-27968

**PILOT PERFORMANCE**
Postural stability during slow-onset and rapid-onset hypoxia
A82-35906
The effect of threat on psychomotor and intellectual performance depending on characteristics of temperament
A82-36691
Physiological monitoring and the concept of adaptive systems
A82-36963
Using realistic sensor, target, and scene characteristics to develop a target acquisition model
A82-37185
Design and validation of a tracking test for forming matched groups for continuous tracking experiments
[FB-49] N82-27985

**PILOT TRAINING**
Effects of whole-body motion simulation on flight skill development
[AD-A111115] N82-26984

**PLANETARY ENVIRONMENTS**
Publications of the exobiology program for 1981: A special bibliography
[NASA-TM-84895] N82-26995

**PLANTS (BOTANY)**
The effect of space flight factors on quiescent nuclei of certain plant and animal test objects
A82-37372

**PNEUMONIA**
Electrocardiographic diagnosis of the chronic pulmonary heart
A82-35681

**POLYETHYLENES**
The subchronic inhalation toxicity of polyethylene glycol 200 in the rat and mouse
[AD-A110668] N82-26956

**POLYMER CHEMISTRY**
Toxicity of thermal degradation products of spacecraft materials
[NASA-CR-167615] N82-27964

**POPULATIONS**
Evolutionary significance of the adaptation of animals to heat
A82-35663

**POSITIVE IONS**
The effect of positive and negative ions of air on the content of catecholamines in the brain and adrenal glands
A82-36690

**POSITRONIUM**
Beta decay and the origins of biological chirality - Experimental results
A82-37420

**POSTURE**
Postural vertigo as a specific symptom of Meniere's disease
A82-35690
Postural stability during slow-onset and rapid-onset hypoxia
A82-35906

**PREDICTIONS**
An evaluation of localized sweating rates for predicting total body sweating rates
[AD-A111902] N82-27968

**PRESSURE SUITS**
Pressure suit joint analyzer
[NASA-CASE-ARC-11314-1] N82-26987

**PROBES**
Investigation by means of a fluorescent probe of changes in cellular membranes of fibroblasts of the Chinese hamster under laser and X-ray irradiation
A82-35660

**PROGENY**
Investigation of the general fitness of the progeny of irradiated animals. III - The resistance of mice to irradiation, hypoxia, endotoxin, and physical stress
A82-35652

**PROGRAMMING LANGUAGES**
SAINT, a digital simulation language for the study of manned systems
A82-36957
Intelligent tutoring for programming tasks: Using plan analysis to generate better hints
[AD-A114020] N82-27983

**PROPHYLAXIS**
Affections of the upper respiratory tracts in transport-fleet sailors and the prophylaxis of these affections on long voyages
A82-35696
Health advice for aircrew on refugee flights
A82-35915
Motion sickness, its prevention and treatment --- Russian book
A82-36971

**PROPULSION SYSTEM PERFORMANCE**
Project STEAMER: 6. Advanced computer-aided instruction in propulsion engineering
[AD-A110797] N82-26982

**PROSTHETIC DEVICES**
Prosthetic occlusive device for an internal passageway
[NASA-CASE-MFS-25640-1] N82-26962

**PROTECTION**
Holographic laser visor mock-up
[AD-A112422] N82-27990

**PROTECTIVE CLOTHING**
Effectiveness of five water-cooled undergarments in reducing heat stress of vehicle operating in a hot wet or hot dry environment
[AD-A107105] N82-26994
Development of a microclimate cooling system for combat vehicles
[AD-A112017] N82-27989

**PROTEINS**
Contents of protein and amino acids in methanobacterial biomass
A82-36011
Insects: A nutritional alternative
[NASA-CR-169056] N82-26988
Plant diversity to support humans in a CELSS ground-based demonstrator
[NASA-CR-166357] N82-27988

**PSYCHOACOUSTICS**
Noise and annoyance - A new methodology
A82-37187

**PSYCHOLOGICAL FACTORS**
Influential factors of negative effects in the isolated and confined environment
A82-35641

**PSYCHOLOGY**
Organizational climate: Another look at a potentially important constant
[AD-A113953] N82-27982

**PSYCHOMOTOR PERFORMANCE**
The effect of threat on psychomotor and intellectual performance depending on characteristics of temperament
A82-36691

**PSYCHOPHYSIOLOGY**
Specialized laboratory for the educational and research activity of students and the psychodiagnostic study of athletes
A82-35673
Psychophysiological analysis of periodic oscillations of performance quality within the limits of a work cycle
A82-35833
Fatigue and the adaptive possibilities of the organism during work
A82-35835

**PUBLIC HEALTH**
Health advice for aircrew on refugee flights
A82-35915

**PULMONARY CIRCULATION**
Regional changes of pulmonary functions in inhabitants of the North
A82-35830
Parameters of ventilatory and gas exchange dynamics during exercise
A82-36031
Intrapulmonary blood flow redistribution during hypoxia increases gas exchange surface area
A82-36036

**PULMONARY FUNCTIONS**
Regional changes of pulmonary functions in inhabitants of the North
A82-35830
Measurement of cardiopulmonary performance during acute exposure to a 2440-m equivalent atmosphere
A82-35904
Evidence for diminished sensitivity of the hamster pulmonary vasculature to hypoxia
A82-36035

**PYROLYSIS**
Toxicity of thermal degradation products of spacecraft materials
[NASA-CR-167615] N82-27964

**R**

**RADIATION DAMAGE**
Possibility of evaluating radiation injury to skin on the basis of changes in its functional state
A82-35655
Bone-marrow haemopoiesis in dogs exposed to various repeated total-body nonuniform irradiations
A82-35656
Modeling of the recovery of cells from radiation damage and the principle of effective-dose reduction. I - Models of the recovery of cells after acute irradiation
A82-35657

**RADIATION DOSAGE**
Possibility of evaluating radiation injury to skin on the basis of changes in its functional state
A82-35655
Modeling of the recovery of cells from radiation damage and the principle of effective-dose reduction. I - Models of the recovery of cells after acute irradiation
A82-35657

**RADIATION EFFECTS**
Structural changes of the thymus of irradiated animals that were also subjected to heat trauma
A82-35651
Investigation of the general fitness of the progeny of irradiated animals. III - The resistance of mice to irradiation, hypoxia, endotoxin, and physical stress
A82-35652
Protective effect of a gaseous hypoxic mixture under the combined effect on the organism of radiation and physical stress
A82-35653
Structural changes of the plasmatic membrane under the effect of ionizing radiation
A82-35661
Radiogenic changes in the behavior and physiology of the spontaneously hypertensive rat - Evidence for a dissociation between acute hypotension and incapacitation
A82-35903
An electron-microscopic study of the brain of the fruit fly, Drosophila melanogaster, exposed to high-LET krypton /Kr-84/ particle radiation
A82-36320
The biological effects of nonionizing radiation
[AD-A111898] N82-27970

**RADIATION PROTECTION**
Protective effect of a gaseous hypoxic mixture under the combined effect on the organism of radiation and physical stress
A82-35653

**RADIATION SHIELDING**
Holographic laser visor mock-up
[AD-A112422] N82-27990

**RADIATION SICKNESS**
Bone-marrow haemopoiesis in dogs exposed to various repeated total-body nonuniform irradiations
A82-35656
Comparative evaluation of the efficiency of radio-protectors on the basis of criteria of the protection of bone marrow and the gastrointestinal tract
A82-35658

**RADIATION TOLERANCE**
Investigation of the general fitness of the progeny of irradiated animals. III - The resistance of mice to irradiation, hypoxia, endotoxin, and physical stress
A82-35652

**RADIOACTIVE DECAY**
Beta decay and the origins of biological chirality - Experimental results
A82-37420

**RADIOBIOLOGY**
Structural changes of the thymus of irradiated animals that were also subjected to heat trauma
A82-35651
Possibility of evaluating radiation injury to skin on the basis of changes in its functional state
A82-35655
Bone-marrow haemopoiesis in dogs exposed to various repeated total-body nonuniform irradiations
A82-35656
Structural changes of the plasmatic membrane under the effect of ionizing radiation
A82-35661
Radiogenic changes in the behavior and physiology of the spontaneously hypertensive rat - Evidence for a dissociation between acute hypotension and incapacitation
A82-35903

**RADIOIMMUNOASSAY**
A specific radioimmunoassay for osteocalcin with advantageous species crossreactivity
A82-36307

**RATES (PER TIME)**
An evaluation of localized sweating rates for predicting total body sweating rates
[AD-A111902] N82-27968

**RATINGS**
Differentiated ratings of perceived exertion are influenced by high altitude exposure
[AD-A111075] N82-26967
Performance test objectivity: A comparison of rater accuracy and reliability using three observation forms
[AD-A111077] N82-27977

**RATS**
Acute heat/exercise stress in rats: Effects on fluid and electrolyte regulatory hormones
[AD-A110559] N82-26958

**REACTION TIME**
Head-temperature effects on physiology, comfort, and performance during hyperthermia
A82-35901
Eye movements and visual information processing
[AD-A112399] N82-27967

**READING**
Screening designs used to estimate the relative effects of display factors on dial reading
A82-37183

**REBREATHING**
An automated, indirect assessment of cardiac output during rest and exercise
A82-36030

**REFLECTORS**
Holographic laser visor mock-up
[AD-A112422] N82-27990

**REFLEXES**
Effects of horizontal body casting on the baroreceptor reflex control of heart rate
A82-36033

**RELIABILITY**
Organizational climate: Another look at a potentially important constant
[AD-A113953] N82-27982

**RESEARCH AND DEVELOPMENT**
Superconducting magnetocardiograph
A82-36260

**RESISTANCE**
The determination of capillary resistance
A82-35667

**RESPIRATION**
The subchronic inhalation toxicity of polyethylene glycol 200 in the rat and mouse
[AD-A110668] N82-26956

**RESPIRATORY DISEASES**
Affections of the upper respiratory tracts in transport-fleet sailors and the prophylaxis of these affections on long voyages
A82-35696

**RESPIRATORY PHYSIOLOGY**
Stages of the adaptation of human lungs in conditions of the Far North
A82-35829
Regional changes of pulmonary functions in inhabitants of the North
A82-35830
Parameters of ventilatory and gas exchange dynamics during exercise
A82-36031
Comparison of human vocal cord movements during isocapnic hypoxia and hypercapnia
A82-37927

**RESPIRATORY RATE**
Rate of change of physiological functions as an index of the degree of adaptation
A82-35840
Effects of glycogen depletion and pedaling speed on 'anaerobic threshold'
A82-36038

**RESPIRATORY SYSTEM**
Seasonal variations of human cardiorespiratory indices in the North
A82-35838
Cardio-respiratory physical training in water and on land
[AD-A111064] N82-26960

**REST**
An automated, indirect assessment of cardiac output during rest and exercise
A82-36030

  Superficial shell insulation in resting and exercising men in cold water
  A82-36034
  Sympathetic and parasympathetic cardiac control in athletes and nonathletes at rest
  A82-36041

**RETINAL ADAPTATION**
  The constancy of stereoscopic depth perception
  [AD-A111484] N82-27984

**RHYTHM (BIOLOGY)**
  Rare cases of serious disturbances in cardiac rhythm during a hypoxic functional test
  A82-35684

**ROBOTS**
  Simulation of two forms of eye motion and its possible implication for the automatic recognition of three-dimensional objects
  A82-34965

**ROTATING ENVIRONMENTS**
  The use of nondamping sinusoidal rotation in the study of vestibular function
  A82-35692

**RUNNING**
  Variation of the biomechanical characteristics of an 800-m run under the influence of fatigue
  A82-35671
  Discriminative biomechanical characteristics in middle-distance running
  A82-35672

## S

**SALYUT SPACE STATION**
  A day off in space
  A82-35698

**SCALE EFFECT**
  Gravity, and metabolic scale effects in mammals
  A82-36319

**SEISMIC WAVES**
  Impact of an asteroid or comet in the ocean and extinction of terrestrial life
  [NASA-CR-169086] N82-26955

**SENSORIMOTOR PERFORMANCE**
  Investigation of the functional state of the central nervous system and the motor apparatus for various regimes of rest and physical exercise
  A82-35668
  Analysis of human movements for workplace design
  A82-36966
  Local serial correlation in behavioral states in the mouse
  [AD-A111021] N82-26959

**SENSORY DISCRIMINATION**
  Mass estimation and discrimination during brief periods of zero gravity
  A82-35769

**SHIVERING**
  Effects of endogenous glucagon on glucose kinetics in shivering dogs
  A82-36029

**SIGNAL ANALYSIS**
  Signal analysis at the periphery of the auditory system --- Russian book
  A82-35240

**SIGNAL PROCESSING**
  Evaluation of synthesized voice approach callouts /SYNCALL/
  A82-36967

**SIGNS AND SYMPTOMS**
  Influential factors of negative effects in the isolated and confined environment
  A82-35641
  Classification of vestibular disorders as a function of the phase of the disease and the degree of vestibular compensation
  A82-35691

**SKIN (ANATOMY)**
  Possibility of evaluating radiation injury to skin on the basis of changes in its functional state
  A82-35655
  The determination of capillary resistance
  A82-35667

**SKIN TEMPERATURE (BIOLOGY)**
  Superficial shell insulation in resting and exercising men in cold water
  A82-36034

**SLEEP**
  Local serial correlation in behavioral states in the mouse
  [AD-A111021] N82-26959

**SLEEP DEPRIVATION**
  Sleep deprivation and exercise tolerance
  [AD-A113043] N82-26963
  Sleep and wakefulness handbook for flight medical officers
  [AGARD-AG-270(E)] N82-27972

**SOCIAL ISOLATION**
  Behavioral and biological interactions with confined microsocieties in a programmed environment
  A82-35639
  Influential factors of negative effects in the isolated and confined environment
  A82-35641

**SODIUM CHLORIDES**
  Attenuation of blood pressure increases in Dahl salt-sensitive rats by exercise
  A82-36039

**SPACE EXPLORATION**
  The human role in space
  [NASA-TM-82482] N82-27987

**SPACE FLIGHT FEEDING**
  Insects: A nutritional alternative
  [NASA-CR-169056] N82-26988

**SPACE FLIGHT STRESS**
  Influential factors of negative effects in the isolated and confined environment
  A82-35641
  The effect of space flight factors on quiescent nuclei of certain plant and animal test objects
  A82-37372

**SPACE MAINTENANCE**
  Study of EVA operations associated with satellite services
  [NASA-CR-167614] N82-27986

**SPACE PERCEPTION**
  Simulation of two forms of eye motion and its possible implication for the automatic recognition of three-dimensional objects
  A82-34965
  Locus of the stimulus to visual accommodation - Where in the world, or where in the eye --- sources of visual perception errors
  A82-37184
  The constancy of stereoscopic depth perception
  [AD-A111484] N82-27984

**SPACEBORNE EXPERIMENTS**
  The effect of space flight factors on quiescent nuclei of certain plant and animal test objects
  A82-37372

**SPACECRAFT CABIN ATMOSPHERES**
  Investigation of the combined effects of bedrest and mild hypoxia
  A82-35905

**SPACECRAFT ENVIRONMENTS**
  Influential factors of negative effects in the isolated and confined environment
  A82-35641

**SPEECH**
  Evaluation of synthesized voice approach callouts /SYNCALL/
  A82-36967

**SPEECH RECOGNITION**
  Objectives hierarchy for air intercept controller prototype training system
  [AD-A110847] N82-26981
  Effect of task duration on voice recognition system performance
  [AD-A107442] N82-27979
  Effect of operator mental loading on voice recognition system performance
  [AD-A107477] N82-27980

**SPIN TESTS**
  Spin imaging equipment for small animal experiments
  [ISBN-951-41-0420-X] N82-26951

**SPINE**
  Fracture and viscoelastic characteristics of the human cervical spine kinematics of the 3 actuator system
  [AD-A110980] N82-27965
  Finite element analysis of the visco-elastic interaction of the annulus fibrosis and nucleus pulposis within the human intervertegral joint
  [AD-A111161] N82-27971

**SQUID (DETECTORS)**
Superconducting magnetocardiograph A82-36260

**STABILITY**
Empirical studies of procedural flaws, impasses, and repairs in procedural skills [AD-A113791] N82-27981

**STATISTICAL ANALYSIS**
Statistical techniques for instrument panel arrangement A82-36959

**STEREOCHEMISTRY**
Beta decay and the origins of biological chirality - Theoretical results A82-37421

**STEREOSCOPY**
The constancy of stereoscopic depth perception [AD-A111484] N82-27984

**STRESS (PHYSIOLOGY)**
Investigation of the general fitness of the progeny of irradiated animals. III - The resistance of mice to irradiation, hypoxia, endotoxin, and physical stress A82-35652
Protective effect of a gaseous hypoxic mixture under the combined effect on the organism of radiation and physical stress A82-35653
Early diagnosis of overstrain of the cardiovascular system in athletes engaging in cyclic forms of sport A82-35664
Recent developments in assessing the myocardial dystrophy encountered in athletes as a consequence of chronic physical overexertion A82-35680
Strain on the regulation systems as a condition of successful adaptation to heat A82-35837
Dependence of reactions of the organism to extremal factors on initial state A82-35839
Measurement of cardiopulmonary performance during acute exposure to a 2440-m equivalent atmosphere A82-35904
Effect of orthostatic stress on exercise performance after bedrest A82-35907
Change in plasma cAMP and catecholamines in men subjected to the same relative amount of physical work stress A82-35912
Exercise performance after ventilatory work A82-36037
Muscle weakness following dynamic exercise in humans A82-37929
Epidemiology feasibility study: Effects of noise on the cardiovascular system [PB82-147752] N82-27974
Epidemiology feasibility study: Effects of noise on the cardiovascular system: Appendix B: Annotated bibliography. Literature. The effects of noise on the cardiovascular system [PB82-147760] N82-27975
Epidemiology feasibility study. Effects of noise on the cardiovascular system. Appendix C: Review of non-noise related research of cardiovascular disease [PB82-147778] N82-27976

**STRESS (PSYCHOLOGY)**
The role of stress in the pathogenesis of ischemic heart disease A82-35677
The effect of threat on psychomotor and intellectual performance depending on characteristics of temperament A82-36691
Effect of operator mental loading on voice recognition system performance [AD-A107477] N82-27980

**STRESS ANALYSIS**
Does heat acclimation lower the rate of metabolism elicited by muscular exercise [AD-A110555] N82-26977

**STUDENTS**
Intelligent tutoring for programming tasks: Using plan analysis to generate better hints [AD-A114020] N82-27983

**SUBTRACTION**
Empirical studies of procedural flaws, impasses, and repairs in procedural skills [AD-A113791] N82-27981

**SULFUR COMPOUNDS**
The effect of several pharmacologically active substances on the transformation of cystamine in mouse tissues --- and sulfur-containing antiradiation drug metabolism A82-35654

**SUPERCONDUCTIVITY**
Superconducting magnetocardiograph A82-36260

**SURFACE NAVIGATION**
Evaluating simulator validity A82-36968

**SURFACTANTS**
Pulmonary oxygen toxicity - Possible role of ammonia in desorbing lung surfactant A82-35908

**SURVIVAL EQUIPMENT**
Operator indoctrination during introduction of new or modified aviation life support systems /ALSS/ A82-37968

**SYMBOLS**
Perceptual discriminability as a basis for selecting graphic symbols A82-37186

**SYMPATHETIC NERVOUS SYSTEM**
Sympathetic and parasympathetic cardiac control in athletes and nonathletes at rest A82-36041

**SYNTHESIS (CHEMISTRY)**
Reference book for the Nitrogen Industry Worker, volume 2 --- producing nitric acid and fertilizers [AD-A113749] N82-27991

**SYNTHETIC FUELS**
Toxicology of high energy fuels [AD-A111686] N82-26966

**SYSTEMS ENGINEERING**
Manned systems design: Methods, equipment, and applications; Proceedings of the Conference, Freiburg im Breisgau, West Germany, September 22-25, 1980 A82-36951
Methods - Past approaches, current trends and future requirements --- in human factors engineering A82-36952

**SYSTEMS SIMULATION**
The human operator simulator - An overview A82-36956
SAINT, a digital simulation language for the study of manned systems A82-36957

T

**TACHYCARDIA**
The diagnosis and treatment of heart-rhythm disorders - The role of intracardial electrophysiological investigation A82-35676

**TACTICS**
Objectives hierarchy for air intercept controller prototype training system [AD-A110847] N82-26981

**TANKS (COMBAT VEHICLES)**
Development of a microclimate cooling system for combat vehicles [AD-A112017] N82-27989

**TARGET ACQUISITION**
Using realistic sensor, target, and scene characteristics to develop a target acquisition model A82-37105

**TARGET RECOGNITION**
Eye movement measurement in the assessment and training of visual performance A82-36962
Using realistic sensor, target, and scene characteristics to develop a target acquisition model A82-37105

**TECHNOLOGICAL FORECASTING**
Methods - Past approaches, current trends and future requirements --- in human factors engineering A82-36952

**TECHNOLOGY ASSESSMENT**
Methods - Past approaches, current trends and future requirements --- in human factors engineering A82-36952
Evaluation of synthesized voice approach callouts /SYNCALL/ A82-36967
**TEMPERATURE DEPENDENCE**
Seasonal variations of human cardiorespiratory indices in the North A82-35838
**TEMPERATURE EFFECTS**
Structural changes of the thymus of irradiated animals that were also subjected to heat trauma A82-35651
**TESTS**
Latent trait model contributions to criterion-referenced testing technology [AD-A112048] N82-26985
**THERAPY**
The diagnosis and treatment of heart-rhythm disorders - The role of intracardial electrophysiological investigation A82-35676
Motion sickness, its prevention and treatment --- Russian book A82-36971
**THERMAL COMFORT**
Head-temperature effects on physiology, comfort, and performance during hyperthermia A82-35901
**THERMOELASTICITY**
Auditory perception of radio-frequency electromagnetic fields A82-35811
**THERMOREGULATION**
Human adaptation in arid regions A82-35828
Strain on the regulation systems as a condition of successful adaptation to heat A82-35837
Splanchnic vasoconstriction in heat-stressed men - Role of renin-angiotensin system A82-36028
Superficial shell insulation in resting and exercising men in cold water A82-36034
**THRESHOLDS (PERCEPTION)**
Auditory perception of radio-frequency electromagnetic fields A82-35811
**THYMUS GLAND**
Structural changes of the thymus of irradiated animals that were also subjected to heat trauma A82-35651
**TIME DEPENDENCE**
Strain on the regulation systems as a condition of successful adaptation to heat A82-35837
Bohr effect and slope of the oxygen dissociation curve after physical training A82-36032
Attenuation of blood pressure increases in Dahl salt-sensitive rats by exercise A82-36039
Effect of habitual exercise on left ventricular response to exercise A82-36040
**TISSUES (BIOLOGY)**
The biological effects of nonionizing radiation [AD-A111898] N82-27970
**TOMOGRAPHY**
Emission computed tomography: The single photon approach [PB82-131285] N82-26980
**TORQUEMETERS**
Pressure suit joint analyzer [NASA-CASE-ARC-11314-1] N82-26987
**TOXICITY**
Kainic acid as a tool in brain research A82-35662
Effect of dietary fat on pulmonary enzymes and toxicity during normobaric hyperoxia A82-35902
The subchronic inhalation toxicity of polyethylene glycol 200 in the rat and mouse [AD-A110668] N82-26956
Models for the estimation of incapacitation times following exposures to toxic gases or vapors [DE82-000619] N82-26979
Toxicity of thermal degradation products of spacecraft materials [NASA-CR-167615] N82-27964
**TOXICOLOGY**
Toxicology of high energy fuels [AD-A111686] N82-26966
**TRACKING (POSITION)**
Design and validation of a tracking test for forming matched groups for continuous tracking experiments [FB-49] N82-27985
**TRAINING ANALYSIS**
Training improvements for the Tactical Aircrew Training System (TACTS): Project summary report [AD-A107003] N82-27978
**TRAINING DEVICES**
Eye movement measurement in the assessment and training of visual performance A82-36962
Operator indoctrination during introduction of new or modified aviation life support systems /ALSS/ A82-37968
Objectives hierarchy for air intercept controller prototype training system [AD-A110847] N82-26981
**TRAINING EVALUATION**
Analysis and classification of human errors in troubleshooting live aircraft power plants A82-34970
Evaluation of the functional state existing in the adaptation to high-altitude conditions A82-35836
**TRAINING SIMULATORS**
Evaluating simulator validity A82-36968
Training maintenance technicians for troubleshooting - Two experiments with computer simulations A82-37182
**TRANSFER OF TRAINING**
Analysis and classification of human errors in troubleshooting live aircraft power plants A82-34970
**TRANSPLANTATION**
Cell-mediated immune reactions in ground squirrels in winter lethargy - Two-way transplantation reaction A82-36229
**TSUNAMI WAVES**
Impact of an asteroid or comet in the ocean and extinction of terrestrial life [NASA-CR-169086] N82-26955

U

**U.S.S.R. SPACE PROGRAM**
United States and Soviet Life Sciences factors in long-duration space flights A82-35638
USSR Space Life Sciences Digest, volume 2, no. 3 [NASA-CR-168582] N82-26952
USSR Space Life Sciences Digest, volume 2, no. 4 [NASA-CR-168691] N82-26953
**ULTRASONIC TESTS**
The effect of nitroglycerine on the functional state of the left ventricle in patients with acute myocardial infarction according to ultrasonic studies of the heart A82-35679
**ULTRASONICS**
Apparatus for disintegrating kidney stones [NASA-CASE-GSC-12652-1] N82-26961
**UNDERWATER TESTS**
Cardio-respiratory physical training in water and on land [AD-A111064] N82-26968
**USER MANUALS (COMPUTER PROGRAMS)**
The Clinical Practice Library of Medicine (CPLM): An on-line biomedical computer library. System documentation [NASA-CR-169018] N82-26964

V

VALVES
Prosthetic occlusive device for an internal passageway
[NASA-CASE-MFS-25640-1] N82-26962
VASCULAR SYSTEM
Evidence for diminished sensitivity of the hamster pulmonary vasculature to hypoxia
A82-36035
VASOCONSTRICTION
Splanchnic vasoconstriction in heat-stressed men - Role of renin-angiotensin system
A82-36028
VASOCONSTRICTOR DRUGS
The effect of several pharmacologically active substances on the transformation of cystamine in mouse tissues --- and sulfur-containing antiradiation drug metabolism
A82-35654
VEGETABLES
Plant diversity to support humans in a CELSS ground-based demonstrator
[NASA-CR-166357] N82-27988
VENTILATION
Development of a microclimate cooling system for combat vehicles
[AD-A112017] N82-27989
VERTIGO
Postural vertigo as a specific symptom of Meniere's disease
A82-35690
VESTIBULAR NYSTAGMUS
The use of nondamping sinusoidal rotation in the study of vestibular function
A82-35692
Characteristics of brain electric activity in different otoneurologic syndromes with vestibular asymmetry
A82-35693
VESTIBULAR TESTS
The use of trenthalum in acute vestibulocochlear disorders in patients with meningococcal infection
A82-35689
VESTIBULES
Classification of vestibular disorders as a function of the phase of the disease and the degree of vestibular compensation
A82-35691
Caloric methods for stimulation of the vestibular apparatus /Survey of the literature/
A82-35697
VIBRATION EFFECTS
State of the hearing function in diesel locomotive crewmen
A82-35688
VIBRATION PERCEPTION
State of the hearing function in diesel locomotive crewmen
A82-35688
VISCOELASTICITY
Fracture and viscoelastic characteristics of the human cervical spine kinematics of the 3 actuator system
[AD-A110980] N82-27965
Finite element analysis of the visco-elastic interaction of the annulus fibrosis and nucleus pulposis within the human intervertegral joint
[AD-A111161] N82-27971
VISION
Eye movements and visual information processing
[AD-A112399] N82-27967
VISORS
Holographic laser visor mock-up
[AD-A112422] N82-27990
VISUAL ACCOMMODATION
Locus of the stimulus to visual accommodation - Where in the world, or where in the eye --- sources of visual perception errors
A82-37184
VISUAL ACUITY
Prevalence of astigmatism among aviators and its limiting effect upon visual performance with the AN/PVS-5 flight vision goggles
[AD-A112836] N82-27966
VISUAL DISCRIMINATION
Conditioned tilt naming - A modified absolute judgment method is used to measure the oblique effect
A82-35768
Narrowing of the visual field as an indicator of mental workload
A82-36961
VISUAL FIELDS
Narrowing of the visual field as an indicator of mental workload
A82-36961
VISUAL PERCEPTION
Human visual orientation --- Book
A82-35272
Familial intermittent diplopia - A report of two cases
A82-35916
Eye movements and visual information processing
[AD-A112399] N82-27967
The constancy of stereoscopic depth perception
[AD-A111484] N82-27984
VISUAL STIMULI
Locus of the stimulus to visual accommodation - Where in the world, or where in the eye --- sources of visual perception errors
A82-37184
VISUAL TASKS
Statistical techniques for instrument panel arrangement
A82-36959
A method for semi-automatic analysis of eye movements
A82-36960
Narrowing of the visual field as an indicator of mental workload
A82-36961
Eye movement measurement in the assessment and training of visual performance
A82-36962
VITAMINS
Plant diversity to support humans in a CELSS ground-based demonstrator
[NASA-CR-166357] N82-27988
VOCAL CORDS
Comparison of human vocal cord movements during isocapnic hypoxia and hypercapnia
A82-37927
VOICE COMMUNICATION
Effect of task duration on voice recognition system performance
[AD-A107442] N82-27979
VOICE DATA PROCESSING
Evaluation of synthesized voice approach callouts /SYNCALL/
A82-36967
VOLUME
Mechanical properties of the lungs during acclimatization to altitude
A82-36027
Effects of acute plasma volume expansion on altering exercise heat performance
[AD-A110558] N82-26975

W

WAKEFULNESS
Local serial correlation in behavioral states in the mouse
[AD-A111021] N82-26959
Sleep and wakefulness handbook for flight medical officers
[AGARD-AG-270(E)] N82-27972
WASTE DISPOSAL
Absorbent product and articles made therefrom
[NASA-CASE-MSC-18223-2] N82-26960
WAVEFORMS
A procedure for the analysis of nystagmus and other eye movements
A82-35911
WEIGHT (MASS)
Mass estimation and discrimination during brief periods of zero gravity
A82-35769
WEIGHTLESSNESS
Blood circulation in weightlessness
A82-33700

**WEIGHTLESSNESS SIMULATION**
- Mass estimation and discrimination during brief periods of zero gravity A82-35769
- Effects of horizontal body casting on the baroreceptor reflex control of heart rate A82-36033

**WORK CAPACITY**
- Discriminative biomechanical characteristics in middle-distance running A82-35672
- Psychophysiological analysis of periodic oscillations of performance quality within the limits of a work cycle A82-35833
- Fatigue and the adaptive possibilities of the organism during work A82-35835
- Evaluation of the functional state existing in the adaptation to high-altitude conditions A82-35836
- Effect of habitual exercise on left ventricular response to exercise A82-36040
- Electromyography and applications A82-36965

**WORK-REST CYCLE**
- Investigation of the functional state of the central nervous system and the motor apparatus for various regimes of rest and physical exercise A82-35668
- A day off in space A82-35698

**WORKLOADS (PSYCHOPHYSIOLOGY)**
- Narrowing of the visual field as an indicator of mental workload A82-36961
- Physiological monitoring and the concept of adaptive systems A82-36963
- Crew workload prediction study [AD-A111948] N82-26991

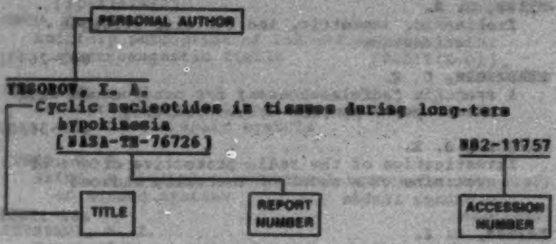
## X

**X RAY IRRADIATION**
- Investigation by means of a fluorescent probe of changes in cellular membranes of fibroblasts of the Chinese hamster under laser and X-ray irradiation A82-35660

# PERSONAL AUTHOR INDEX

AEROSPACE MEDICINE AND BIOLOGY / *A Continuing Bibliography (Suppl. 237)* OCTOBER 1982

## Typical Personal Author Index Listing



The title of the document is used to provide the user with a brief description of the subject matter. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstact in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

## A

**ABDVAKHITOVA, A. K.**
Investigation by means of a fluorescent probe of changes in cellular membranes of fibroblasts of the Chinese hamster under laser and X-ray irradiation
A82-35660

**ADAMS, E. B.**
Evidence for diminished sensitivity of the hamster pulmonary vasculature to hypoxia
A82-36035

**AHRENS, T. J.**
Impact of an asteroid or comet in the ocean and extinction of terrestrial life
[NASA-CR-169086] N82-26955

**AIDARALIEV, A. D.**
Evaluation of the functional state existing in the adaptation to high-altitude conditions
A82-35836

**AKOEV, I. G.**
Structural changes of the plasmatic membrane under the effect of ionizing radiation
A82-35661

**AKOPIAN, N. S.**
The effect of acute hypoxia on the EEG and unit impulse activity of neurons of different brain structures in rats
A82-36172

**AKULININ, A. I.**
Affections of the upper respiratory tracts in transport-fleet sailors and the prophylaxis of these affections on long voyages
A82-35696

**ALAVERDIAN, A. M.**
Early diagnosis of overstrain of the cardiovascular system in athletes engaging in cyclic forms of sport
A82-35664

**ALLEN, L. J.**
Finite element analysis of the visco-elastic interaction of the annulus fibrosis and nucleus pulposis within the human intervertegral joint
[AD-A111161] N82-27971

**ALPEROVICH, B. R.**
Early diagnosis of overstrain of the cardiovascular system in athletes engaging in cyclic forms of sport
A82-35664

**ALTMAN, IA. A.**
Signal analysis at the periphery of the auditory system
A82-35248

**ANDREEV, A. D.**
Modeling of the recovery of cells from radiation damage and the principle of effective-dose reduction. I - Models of the recovery of cells after acute irradiation
A82-35657

**ARNOLD, J. D.**
Effect of habitual exercise on left ventricular response to exercise
A82-36040

**ANTIPOV, V. V.**
The effect of space flight factors on quiescent nuclei of certain plant and animal test objects
A82-37372

**ARMSTRONG, J. W.**
Effect of task duration on voice recognition system performance
[AD-A107442] N82-27979
Effect of operator mental loading on voice recognition system performance
[AD-A107477] N82-27980

**ASHMARIN, I. IU.**
The effect of nitroglycerine on the functional state of the left ventricle in patients with acute myocardial infarction according to ultrasonic studies of the heart
A82-35679

**ASKOVA, L. N.**
Synchronized nystagmus calibrator
A82-35695

**ASLING, C. W.**
A specific radioimmunoassay for osteocalcin with advantageous species crossreactivity
A82-36307

**AVELLINI, B. A.**
Cardio-respiratory physical training in water and on land
[AD-A111064] N82-26968
Effects on heat tolerance of physical training in water and on land
[AD-A110556] N82-26976
Does heat acclimation lower the rate of metabolism elicited by muscular exercise
[AD-A110555] N82-26977

**AVTSYN, A. P.**
Stages of the adaptation of human lungs in conditions of the Far North
A82-35829

## B

**BAERTSCH, P.**
Fibrinopeptide A after strenuous physical exercise at high altitude
A82-37926

**BAKER, C. J.**
Freeze-thaw induced damage to endothelial cells in vitro. 1. Development of a suitable system
[AD-A111074] N82-26957

**BAKLAVADZHIAN, O. G.**
The effect of acute hypoxia on the EEG and unit impulse activity of neurons of different brain structures in rats
A82-36172

**BALDWIN, E.**
Toxicity of thermal degradation products of spacecraft materials
[NASA-CR-167615] N82-27964

**BALON, T. W.**
Attenuation of blood pressure increases in Dahl salt-sensitive rats by exercise
A82-36039

BANASZKIEWICZ, B.
The effect of positive and negative ions of air on the content of catecholamines in the brain and adrenal glands
A82-36690

BARABANOV, L. G.
Specialized laboratory for the educational and research activity of students and the psychodiagnostic study of athletes
A82-35673

BARNES, G. R.
A procedure for the analysis of nystagmus and other eye movements
A82-35911

BARTLETT, D., JR.
Comparison of human vocal cord movements during isocapnic hypoxia and hypercapnia
A82-37927

BATEMAN, J. B.
The biological effects of nonionizing radiation
[AD-A111898] N82-27970

BAUMAN, C.
Anatomic perspective of the female athlete: An approach to musculoskeletal profiling of women in sports
[AD-A110630] N82-26992

BEKETOVA, I. L.
Changes of the oxygen transport function of the blood and some metabolic values in patients with hypertension and chronic ischemic heart diseases during ergometric exercise
A82-35666

BENTON, E. V.
An electron-microscopic study of the brain of the fruit fly, Drosophila melanogaster, exposed to high-LET krypton /Kr-84/ particle radiation
A82-36320

BERINGER, D. B.
The production of specified electrocortical activity as a measurable task
[AD-A111422] N82-26965

BERRAT, E.
The effect of positive and negative ions of air on the content of catecholamines in the brain and adrenal glands
A82-36690

BILLING, J. E.
An automated, indirect assessment of cardiac output during rest and exercise
A82-36030

BILLMAN, G. E.
Effects of horizontal body casting on the baroreceptor reflex control of heart rate
A82-36033

BLAGOVESHCHENSKAIA, N. S.
Classification of vestibular disorders as a function of the phase of the disease and the degree of vestibular compensation
A82-35691

BLISTANOVA, L. S.
Early diagnosis of overstrain of the cardiovascular system in athletes engaging in cyclic forms of sport
A82-35664

BLUTH, B. J.
Influential factors of negative effects in the isolated and confined environment
A82-35641

BOENING, D.
Bohr effect and slope of the oxygen dissociation curve after physical training
A82-36032

BOIARSKII, G. F.
State of the hearing function in diesel locomotive crewmen
A82-35688

BOJENKO, S.
Electrophysical and hemodynamic factors conditioning cardiac arrhythmias during centrifuging
A82-36689

BONNEY, C. H.
Radiogenic changes in the behavior and physiology of the spontaneously hypertensive rat - Evidence for a dissociation between acute hypotension and incapacitation
A82-35903

# PUBLIC COLLECTIONS OF NASA DOCUMENTS

## DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

**CALIFORNIA**
University of California, Berkeley
**COLORADO**
University of Colorado, Boulder
**DISTRICT OF COLUMBIA**
Library of Congress
**GEORGIA**
Georgia Institute of Technology, Atlanta
**ILLINOIS**
The John Crerar Library, Chicago

**MASSACHUSETTS**
Massachusetts Institute of Technology, Cambridge
**MISSOURI**
Linda Hall Library, Kansas City
**NEW YORK**
Columbia University, New York
**OKLAHOMA**
University of Oklahoma, Bizzell Library
**PENNSYLVANIA**
Carnegie Library of Pittsburgh
**WASHINGTON**
University of Washington, Seattle

NASA publications (those indicated by an "*" following the accession number) are also received by the following public and free libraries:

**CALIFORNIA**
Los Angeles Public Library
San Diego Public Library
**COLORADO**
Denver Public Library
**CONNECTICUT**
Hartford Public Library
**MARYLAND**
Enoch Pratt Free Library, Baltimore
**MASSACHUSETTS**

Akron Public Library
Cincinnati and Hamilton County Public Library
Cleveland Public Library
Dayton Public Library
Toledo and Lucas County Public Library
**TEXAS**
Dallas Public Library
Fort Worth Public Library
**WASHINGTON**
Seattle Public Library
**WISCONSIN**
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

## EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

## A CONTINUING BIBLIOGRAPHY WITH INDEXES

## (Supplement 238)

**A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in October 1982 in**

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

NASA Scientific and Technical Information Branch
**National Aeronautics and Space Administration**
Washington, DC
1982

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS). Questions on the availability of the predecessor publications, Aerospace Medicine and Biology (Volumes I - XI) should be directed to NTIS.

This supplement is available as NTISUB/123/093 from the National Technical Information Service (NTIS), Springfield, Virginia 22161 at the price of $7.00 domestic; $14.00 foreign.

# INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* lists 583 reports, articles and other documents announced during October 1982 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the Earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections: *IAA Entries* and *STAR Entries*, in that order. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Two indexes -- subject and personal author -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1982 Supplements.

# AVAILABILITY OF CITED PUBLICATIONS

## IAA ENTRIES (A82-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at $8.00 per document. Microfiche(1) of documents announced in *IAA* are available at the rate of $4.00 per microfiche on demand, and at the rate of $1.35 per microfiche for standing orders for all *IAA* microfiche.

Minimum air-mail postage to foreign countries is $2.50 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

## STAR ENTRIES (N82-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $4.00 price, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Document Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26.1 reduction)

**Avail:** DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

**Avail:** Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

**Avail:** USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

**Avail:** HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

**Avail:** BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

**Avail:** Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

**Avail:** Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

**Avail:** U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

**Other availabilities:** If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

**A82-11697** # **The significance of the respiratory minute volume index in the evaluation of vestibular stability (Znachenie pokazatelei minutnogo ob'ema dykhaniia pri otsenke vestibuliarnoi ustoichivosti)**. A. S. Gusarov. *Voenno-Meditsinskii Zhurnal*, Aug. 1981, p. 48-50. In Russian.

The respiratory dynamics of persons of various vestibular stabilities undergoing Coriolis acceleration is investigated in order to assess the possibility of using respiratory minute volume in the evaluation of vestibular function. Respiratory rate, respiratory minute volume, heart rate and electrocardiography were monitored continuously in 100 men with healthy vestibular analyzers in a 5-min test of tolerance to cumulative Coriolis forces. Changes in respiratory parameters are observed to be correlated with levels of vestibular reaction to Coriolis acceleration. Rotational and especially post-rotational vestibulospirometry and vestibulospirography are found to be the objective means of determining vestibular condition. It is concluded that the determination of respiratory minute volume taking into account other vegetative reactions appears to be a useful means of evaluating subject vestibular stability. A.L.W.

NOVEMBER 1982

## IAA ENTRIES

**A82-38115** **Clay and the origin of life.** C. Ponnamperuma, A. Shimoyama, and E. Friebele (Maryland, University, College Park, MD). *Origins of Life*, vol. 12, Mar. 1982, p. 9-40. 118 refs.

The possible roles of clay minerals in chemical evolution on the primitive earth are reviewed on the basis of available experimental evidence. Experiments involving the synthesis of biomonomers, including amino acids, purines, pyrimidines and carbohydrates, from gas mixtures in the presence of various clay minerals have shown the minerals to act by promoting the synthesis reactions without changing the direction of the reaction path, thus decreasing the time required for significant quantities of these molecules to accumulate. The capacity of clay minerals to adsorb and concentrate by several orders of magnitude these biomonomers from aqueous solution has also been demonstrated, with conditions for the adsorption process most favorable at low pH, and with basic molecules. Finally, it has been shown that clays may act to promote the polymerization of biological monomers by concentrating them, providing containment and a surface for immobilization, and protecting the reaction products, rather than by catalysis or direct participation in the reaction. A.L.W.

**A82-38116** **Formation of cyanate and carbamyl phosphate by electric discharges of model primitive gas.** Y. Yamagata and T. Mohri (Kanazawa University, Kanazawa, Japan). *Origins of Life*, vol. 12, Mar. 1982, p. 41-44. 8 refs.

The formation of cyanate and carbamyl phosphate, possible condensing agents in early chemical evolution, as a result of electrical discharges in a model of the primitive atmosphere consisting of a mixture of nitrogen, carbon dioxide and hydrogen is reported. Experiments were performed in a 5-l discharge vessel containing 100 ml of 0.2 M NaHCO3 solution, 10 cm Hg nitrogen, 20 cm Hg carbon dioxide and from 5 to 30 cm Hg hydrogen. Determinations of cyanate formation according to the 690 nm absorption of the copper pyridine cyanate complex indicate maximum cyanate formation efficiency to be achieved at a hydrogen partial pressure of 10 cm Hg, corresponding to a largely oxidized gas mixture. The use of a phosphate solution in the discharge vessel with the same gas mixture is found to lead to the production of carbamyl phosphate, as indicated by the formation of ATP upon the incubation of the discharged solution with ADP and carbamyl phosphokinase. A.L.W.

**A82-38117** **Uracil synthesis via HCN oligomerization.** A. B. Voet and A. W. Schwartz (Nijmegen, Katholieke Universiteit, Nijmegen, Netherlands). *Origins of Life*, vol. 12, Mar. 1982, p. 45-49. 27 refs.

The identification of uracil among the products of the acid hydrolysis of HCN oligomers is reported. Oligomers were prepared from 1 and 0.1 M HCN solutions allowed to stand at room temperature for at least 6 months, then hydrolyzed in 6 M HCl at 110 C for 18 hours. Uracil was identified by high-pressure liquid chromatography following, although not prior to, acid hydrolysis, at concentrations corresponding to yields of 0.001% for the 1-M solution, and 0.005% for the 0.1-M solution. Experiments with oligomer hydrolysis in the presence of orotic acid have shown the uracil detected not to be a product of orotic acid decarboxylation, but to originate from at least two other precursor fractions. The results represent the first report of the production of a genetic code pyrimidine by HCN oligomerization. A.L.W.

**A82-38118 *** **The radiolysis and racemization of leucine on proton irradiation.** W. A. Bonner (Stanford University, Stanford, CA), R. M. Lemmon, and H. E. Conzett (California, University, Lawrence Berkeley Laboratory, Berkeley, CA). *Origins of Life*, vol. 12, Mar. 1982, p. 51-54. 19 refs. Contract No. W-7405-eng-48; Grant No. NGL-05-020-582.

D- and L-Leucine have been subjected to 39-55 percent radiolysis using 0.11 MeV protons, both with the proton beam passing through the sample or being absorbed by it and with quenching the sample immediately on completion of irradiation or after a 21-day interval. Racemization was small (1.1-1.7 percent) and comparable in all cases, suggesting that radioracemization and secondary degradative effects were not important factors in the recent unsuccessful attempts to induce optical activity in DL-Leucine by partial radiolysis using 0-11 MeV longitudinally polarized protons. (Author)

**A82-38119** **Polynucleotide replication coupled to protein synthesis - A possible mechanism for the origin of life.** A. G. Mackinlay (New South Wales, University, Kensington, Australia). *Origins of Life*, vol. 12, Mar. 1982, p. 55-69. 22 refs.

A speculative scheme is proposed for the origin of protein synthesis by the incorporation of amino acid linking into the process of polynucleotide replication. The scheme supposes polynucleotide replication to be accomplished by the condensation of aminoacyl-blocked oligonucleotides concomitant with the transfer of the blocking amino acid to an adjacent aminoacyl oligonucleotide, resulting in the formation of a peptide chain of random sequence. The polynucleotides are proposed to have been composed of repeating units similar to modern tRNAs, with internal complementarity. Selection of primitive tRNAs in which the amino acid and anticodon stem sequences were rotationally symmetrical could then have led to specific, anticodon-directed aminoacylation and the fixation of the genetic code. The end result of this evolution would have been a nucleoprotein structure resembling the ribosome, which would have been able to give rise directly to triplet-coded protein synthesis. Recent RNA sequence data are consistent with the proposed scheme. A.L.W.

**A82-38120** **Ambiguity and the evolution of the genetic code.** R. R. Kocherlakota and N. D. Acland (Vincent Massey Collegiate Institute, Winnipeg, Manitoba, Canada). *Origins of Life*, vol. 12, Mar. 1982, p. 71-80. 25 refs.

A scenario for the evolution of the genetic code by a word length alteration is proposed that relies on code ambiguity to minimize the time required for code changes. The model posits a primeval code containing only two bases (G and C) arranged in two-letter codons. The first alteration in the code that would probably have occurred would then be an alphabet alteration, in which the replacement of some G and C bases by A and U bases at a time when the environmental rate of change was high and ambiguity was favored would have expanded the vocabulary. Due to the high ambiguity, however, the vocabulary will begin to decline, and another alteration, this time a word length alteration to a value of three, could occur. The proposed model predicts the distribution of 4-blocs and 2-blocs in the genetic code, and determines the probable sites for code variations. A.L.W.

**A82-38121 *** **Evolution of major metabolic innovations in the Precambrian.** J. Barnabas (Georgetown University Medical Center, Washington, DC; Ahmednagar College, Ahmednagar, India), R. M. Schwartz, and M. O. Dayhoff (Georgetown University Medical Center, Washington, DC). *Origins of Life*, vol. 12, Mar. 1982, p. 81-91. 91 refs. Grants No. NIH-GM-08710; Contract No. NASw-3317.

A combination of information on the metabolic capabilities of prokaryotes with a composite phylogenetic tree depicting an overview of prokaryote evolution based on the sequences of bacterial ferredoxin, 2Fe-2S ferredoxin, 5S ribosomal RNA, and c-type cytochromes shows three zones of major metabolic innovation in the Precambrian. The middle of these, which reflects the genesis of oxygen-releasing photosynthesis and aerobic respiration, links metabolic innovations of the anaerobic stem on the one hand and, on the other, proliferation of aerobic bacteria and the symbiotic associations leading to the eukaryotes. Those pathways where information on the structure of the enzymes is known are especially considered. Halobacterium and Thermoplasma (archaebacteria) do not belong to a totally independent line on the basis of the composite tree but branch from the eukaryote cytoplasmic line. (Author)

**A82-38122 *** **Chemical evolution and the origin of life - Bibliography Supplement 1980.** L. G. Pleasant (George Washington University Medical Center, Washington, DC) and C. Ponnamperuma (Maryland, University, College Park, MD). *Origins of Life*, vol. 12, Mar. 1982, p. 93-114. 484 refs. Grants No. NASW-3165; No. NGR-21-002-317.

**A82-38151 † Changes in electrically neutral Ca/2+/-H/+/ exchange in rat liver mitochondria following gamma irradiation (Izmenenie elektroneitral'nogo Ca/2+/-H/+/ obmena v mitokhondriiakh pecheni krys posle gamma-oblucheniia).** B. I. Medvedev, G. V. Gogvadze, and A. M. Kuzin (Akademiia Nauk SSSR, Institut Biologicheskoi Fiziki, Pushchino, USSR). *Radiobiologiia*, vol. 22, May-June 1982, p. 291-295. 5 refs. In Russian.

**A82-38152 † Changes in the relations of pyrimidine blocks in DNA of the hematopoietic system immediately following gamma irradiation of the animal (Izmeneniia v sootnosheniiakh pirimidinovykh blokov DNK krovetvornoi sistemy neposredstvenno posle gamma-oblucheniia zhivotnogo).** A. A. Vetchinkina and G. A. Kritskii (Akademiia Nauk SSSR, Institut Biokhimii, Moscow, USSR). *Radiobiologiia*, vol. 22, May-June 1982, p. 296-300. 9 refs. In Russian.

**A82-38153 † Study of the relation between the number of sulfhydryl groups and the level of lipid antioxidant activity in the organs of individual animals of different species (Issledovanie sviazi mezhdu kolichestvom sul'fgidril'nykh grupp i urovnem antiokislitel'noi aktivnosti lipidov organov u individual'nykh zhivotnykh raznykh vidov).** E. B. Burlakova, G. F. Ivanenko, A. A. Konradov, V. M. Maksimov, and L. N. Shishkina (Akademiia Nauk SSSR, Institut Khimicheskoi Fiziki, Moscow, USSR). *Radiobiologiia*, vol. 22, May-June 1982, p. 301-306. 20 refs. In Russian.

A study is presented of the possible relation between the two principal determinants of an organism's radiosensitivity - sulfhydryl groups and lipid antioxidant activity - in the sensitive organs of individual animals of different species. Determinations of thiol contents and lipid anitoxidant activity were made simultaneously in the spleens and livers of individual rates, mice, golden hamsters and guinea pigs. Mathematical analysis reveals no linear or uniform correlation between the two parameters either in individual animals, or in animals of different species. It is thus concluded that the levels of sulfhydryl groups and lipid anitoxidant activity represent different aspects of cellular metabolism, both of which play a significant role in determining radiation tolerance. A.L.W.

**A82-38154 † Optimization of the conditions of modified cell irradiation (Optimizatsiia rezhima modifitsirovannogo oblucheniia kletok).** E. K. Palamarchuk (Akademiia Nauk SSSR, Fizicheskii Institut, Moscow, USSR) and S. V. Semenov (Vsesoiuznyi Nauchno-Issledovatel'skii Institut Fiziko-Tekhnicheskikh i Radiotekhnicheskikh Izmerenii, Mendeleevo, USSR). *Radiobiologiia*, vol. 22, May-June 1982, p. 307-311. 6 refs. In Russian.

Results are presented of the optimization of a cell irradiation procedure on the basis of a dynamic mathematical model describing the effects of ionizing radiation on cells. Numerical integrations of model equations were performed on a BESM-6 computer to obtain the temporal characteristics of preliminary sensitizing and subsequent damaging radiation fluxes leading to the maximal death of cells of different initial radiosensitivities for a given damaging radiation dose. Model parameters were taken from experimental data obtained in HeLa tumor cell cultures. The possibility of enhancing the damaging effects of the main dose by repeated preliminary sensitization is considered, and the potential for the sensitization of only one type of cell in a population with heterogeneous radiosensitivities is noted. A.L.W

**A82-38155 † Radiation-induced shortening of the life span of D. melanogaster. II - Sensitizing effects of 5-bromo-2-deoxyuridine (Radiatsionno-indutsirovannoe ukorochenie prodolzhitel'nosti zhizni D. melanogaster. II - Sensibiliziruiushchee deistvie 5-brom-2-dezoksiuridina).** A. I. Potapenko, A. P. Akif'ev, and V. I. Ivanov (Moskovskii Inzhenerno-Fizicheskii Institut; Akademiia Nauk SSSR, Institut Khimicheskoi Fiziki, Moscow, USSR). *Radiobiologiia*, vol. 22, May-June 1982, p. 318-322. 12 refs. In Russian.

**A82-38156 † Radiation damage and recovery of mouse T-cells. IV - Elimination of radiation-induced migration abnormalities in T-lymphocytes (Radiatsionnoe porazhenie i vosstanovlenie T-kletok myshei. IV - Likvidatsiia migratsionnykh defektov T-limfotsitov, indutsirovannykh oblucheniem).** A. A. Iarilin, Iu. N. Anokhin, and E. F. Polushkina (Akademiia Meditsinskikh Nauk SSSR, Obninsk, USSR). *Radiobiologiia*, vol. 22, May-June 1982, p. 341-345. 15 refs. In Russian.

**A82-38157 † Effects of cAMP accumulation activators on certain stages of genome expression in cells upon acute radiation damage to the organism. III - Comparative study of the properties of RNA synthesized in a system of isolated liver and spleen cell nuclei from irradiated rats and animals having been treated with serotonin prior to irradiation (Vliianie aktivatorov nakopleniia tsAMF na otdel'nye etapy ekspressii genoma v kletkakh pri ostrom luchevom porazhenii organizma. III - Sravnitel'noe izluchenie svoistv RNK, sintezirovannoi v sisteme izolirovannykh iader kletok pecheni i selezenki obluchennykh krys i zhivotnykh kotorym pered oblucheniem vvodili serotonin).** B. A. Tsudzevich, L. A. Galkina, and N. E. Kucherenko (Kievskii Gosudarstvennyi Universitet, Kiev, Ukrainian SSR). *Radiobiologiia*, vol. 22, May-June 1982, p. 379-382. 10 refs. In Russian.

**A82-38158 † State of the lactate dehydrogenase reaction in the muscular tissue of irradiated animals (Sostoianie laktatdegidrogenaznoi reaktsii v myshechnoi tkani obluchennykh zhivotnykh).** I. V. Savitskii and A. A. Mardashko (Odesskii Meditsinskii Institut, Odessa, Ukrainian SSR). *Radiobiologiia*, vol. 22, May-June 1982, p. 390-392. In Russian.

The state of the reaction catalyzed by lactate dehydrogenase is studied as an indicator of oxidative metabolism in the muscles of irradiated animals. Lactate dehydrogenase activity, isoenzyme levels and lactate and pyruvate levels were determined in muscle taken from rats having undergone whole-body X radiation at a dose of 5.82 gram roentgen. A decrease in enzyme activity is found in cardiac muscle on the third day following irradiation, followed by an increase to a peak on the 15th day, while skeletal muscle showed a steady increase in activity to the seventh day. The activity of the second lactate dehydrogenase activity is observed to increase steadily in cardiac muscle, while in skeletal muscle the activity of the dominant fifth isoenzyme dropped after 1-3 days, then increased significantly by the seventh day. A slight increase in the lactate/pyruvate ratio is observed in both tissues. It is thus concluded that the processes of aerobic metabolism are not affected by penetrating radiation in the early stages, and that the role of anaerobic reactions increases only at the height of radiation sickness. A.L.W.

**A82-38159 † Study of the radioprotective effectiveness of an hypoxic gas mixture during combined radiation and thermal injuries to rats (Izluchenie radiozashchitnoi effektivnosti gazovoi gipoksicheskoi smesi pri kombinirovannom radiatsionno-termicheskom porazhenii krys).** R. B. Strelkov, N. G. Kucherenko, M. V. Radzhapova, V. D. Baranov, A. I. Drozd, and A. I. Britun (Akademiia Meditsinskikh Nauk SSSR, Obninsk, USSR). *Radiobiologiia*, vol. 22, May-June 1982, p. 392-395. 11 refs. In Russian.

The possibility of using a breathing gas mixture containing 10% oxygen, which has been found effective in protecting against the harmful effects of ionizing radiation, to reduce the effects of combined radiation and thermal exposure is investigated. Rats were irradiated at total doses of 7.0, 8.5 and 10.0 gram roentgen while breathing either the hypoxic gas mixture or room air, then subjected to third-degree thermal trauma over 15% of their body surface. Hypoxia is observed to decrease the moribidity after 30 days of rats irradiated at all doses, with a dose reduction factor of 1.25, corresponding to the magnitude of that observed in rats subjected to radiation alone. Morbidity is higher, however, and mean lifetimes shorter, in rats exposed to both heat and radiation than in those undergoing radiation alone, even when both groups are subject to the hypoxic gas mixture during treatment. A.L.W.

**A82-38160 † Equivalent doses, dose rates and times of chronic exposure to ionizing radiation for various mammals (Ekvivalentnye dozy, moshchnosti dozy i vremena khronicheskogo oblucheniia ioniziruiushchei radiatsiei dlia razlichnykh mlekopitaiushchikh).** V. G. Tiazhelova (Akademiia Nauk SSSR, Institut Biologicheskoi Fiziki, Pushchino, USSR). *Radiobiologiia*, vol. 22, May-June 1982, p. 420-423. 9 refs. In Russian.

A survey of data reported in the literature shows that three distinct stages of clinical, biochemical and morphological changes are manifested in mammals after chronic exposure to varying nonlethal doses of ionizing radiation. Listed in a detailed table are the characteristics for each of these three stages, such as changes in the electrocardiogram, blood, and endocrine system. The doses, dose rates and times of chronic exposure necessary to produce equivalent physiological effects characterized by each of the three stages are determined for humans, dogs and mice. N.B.

**A82-38161 † Changes in the hemodynamics and efferent activity in the renal nerve with acute hypoxic hypoxia under the stabilization of perfusion pressure in carotid sinuses (Izmeneniia gemodinamiki i efferentnoi aktivnosti v pochechnom nerve pri ostroi gipoksicheskoi gipoksii v usloviiakh stabilizatsii perfuzionnogo davleniia v karotidnykh sinusakh).** O. V. Baziliuk (Akademiia Nauk Ukrainskoi SSR, Institut Fiziologii, Kiev, Ukrainian SSR). *Fiziologicheskii Zhurnal* (Kiev), vol. 28, May-June 1982, p. 285-289. 9 refs. In Russian.

**A82-38162 † Baroreflex regulation of hemodynamics under orthostatic effects /an investigation with a mathematical model/ (Baroreflektornaia reguliatsia gemodinamiki pri ortostaticheskikh vozdeistviiakh /issledovanie na matematicheskoi modeli/).** R. D. Grigorian (Akademiia Nauk Ukrainskoi SSR, Institut Kibernetiki, Kiev, Ukrainian SSR). *Fiziologicheskii Zhurnal* (Kiev), vol. 28, May-June 1982, p. 296-301. In Russian.

Mathematical modeling is used to investigate the role of the baroreflex from the reflexogenic zones of the carotid sinuses and aortic arch compensating for disturbances to the central hemodynamics during simulations of changes in body position. Here, the head moves upward and downward from the horizontal to angles of up to 90 deg. It is shown that in comparison with antiorthostatic compensation for an altered level of arterial pressure, compensation with orthostatism is effected with less baroreflex stress. By means of simulations on a model for the deafferentation of aortic and sinocarotid baroreflexes, it is shown that the method of deafferentation does not allow a quantitative evaluation of the relative regulatory roles of these processes. C.R.

**A82-38163 † The effect of repeated episodes of emotional stress on heart activity and the content of monoamines in the heart (Vliianie mnogokratno povtoriaemogo emotsional'nogo stressa na deiatel'nost' serdtsa i soderzhanie v nem monoaminov).** I. V. Raitses (Ivano-Frankovskii Meditsinskii Institut, Ivano-Frankovsk, Ukrainian SSR). *Fiziologicheskii Zhurnal* (Kiev), vol. 28, May-June 1982, p. 302-305. 10 refs. In Russian.

It is experimentally established that when rabbits are repeatedly subjected to emotional stress, changes occur in heart rhythm, with bradycardia alternating with tachycardia. In addition, the electrical activity of the heart is lowered, and ventricular extrasystoles are observed. The arrhythmia is found to be accompanied by an increase in the amount of noradrenaline and its precursors and of serotonin in the myocardium. C.R.

**A82-38164 † Features of microcirculatory hemostasis and of the clotting and fibrinolytic properties of blood and the activity of the antioxidant system in people of various ABO blood groups (Osobennosti mikrotsirkuliatornogo gemostaza, gemokoaguliruiushchikh i fibrino liticheskikh svoistv krovi i aktivnost' aktioksidantnoi sistemy u liudei razlichnykh grupp krovi sistemy AVO).** G. A. Loban' (Poltavskii Meditsinskii Stomatologicheskii Institut, Poltava, Ukrainian SSR). *Fiziologicheskii Zhurnal* (Kiev), vol. 28, May-June 1982, p. 317-321. 18 refs. In Russian.

**A82-38165 † The effect of helium on gas exchange and tissue respiration (Vliianie geliia na gazoobmen i tkanevoe dykhanie).** V. A. Berezovskii, A. I. Nazarenko, and T. N. Govorukha (Akademiia Nauk Ukrainskoi SSR, Institut Fiziologii, Kiev, Ukrainian SSR). *Fiziologicheskii Zhurnal* (Kiev), vol. 28, May-June 1982, p. 353-358. 31 refs. In Russian.

The various studies that have been carried out on the subject are surveyed. It is pointed out that many investigators believe that the effect of helium under normal pressure is more physical than pharmacological. On the basis of an analysis of these investigations, it is contended that helium is not neutral in relation to biological structure and that the effect of gases of the helium group on physiological processes is realized through a modification of the physical characteristics of the gaseous medium. It is also maintained that inert gases can exert a pharmacological effect by virtue of a change in cellular function brought about by interactions at the molecular level. C.R.

**A82-38166 † The characteristics of hemodynamic shifts under physical stress at mountain elevations (K kharakteristike gemodinamicheskikh sdvigov pri fizicheskoi nagruzke v usloviiakh vysokogor'ia).** L. G. Stepanenko (Akademiia Nauk Ukrainskoi SSR, Institut Fiziologii, Kiev, Ukrainian SSR). *Fiziologicheskii Zhurnal* (Kiev), vol. 28, May-June 1982, p. 361-363. 8 refs. In Russian.

The changes that occur in central hemodynamic parameters in athletes at mountain elevations are investigated. The study is carried out on 13 oarsmen ranging in age from 18 to 26. The subjects are given a week to adapt to a temperature of 18 C and a relative humidity of 60% at elevations of 2200 m and 3500 m above sea level. The circulatory systems of the athletes are found to possess sufficient stability in relation to the lower content of oxygen in the blood, a consequence of the physical stresses to which they are subjected and the lower partial pressure of oxygen in the air. The changes in the central hemodynamic indicators at the two elevations are found to be adaptive, attesting the resistance of the athletes to the effects of hypoxia. C.R.

**A82-38167 † Causes of high-altitude acute pulmonary edema (O prichinakh vysotnogo ostrogo oteka legkikh).** E. M. Ismailov (Kirgizskii Meditsinskii Institut, Frunze, Kirgiz SSR). *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia*, May-June 1982, p. 21-25. 6 refs. In Russian.

Changes in functional systems and their possible participation in triggering mechanisms of high-altitude acute pulmonary edema were studied in experiments performed on male rabbits. The development of the high-altitude edema is discussed in relation to hypo- and hyper-proteinemia, hypo- and hyper-volemia, the blocking of alpha and beta adrenoreceptors, tropinization, glomectomy, increases in the central blood volume and pressure in pulmonary vessels, and increases in the permeability of these vessels. B.J.

**A82-38168 † Early reaction of the hemopoietic organs depending on the condition of the peripheral M-cholinergic systems (Ranniaia reaktsiia krovetvornykh organov na stress-vozdeistvie v zavisimosti ot sostoianiia perifericheskikh M-kholinoreaktivnykh sistem).** Iu. B. Deshevoi. *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia*, May-June 1982, p. 25-27. 10 refs. In Russian.

Rats were subjected to six-hour immobilization during atropine block or aceclidine stimulation of the peripheral M-cholinergic receptors. It is shown that the injection of the agents produced no significant effect on the cellular reaction of the bone marrow and lymphoid organs to the stress. The injection of the agents did alter the character of the poststress lymphopenia and neutrophilia. It was found that atropine injection intensified while aceclidine injection reduced the degree of lymphopenia and neutrophilia. B.J.

**A82-38169 † The synthesis of nuclear and mitochondrial DNA and RNA, and the synthesis of heme and globin in rabbit bone marrow during the stimulation of erythropoiesis (Sintez iadernykh i mitokhondrial'nykh DNK i RNK, sintez gema i globina v kostnom mozge krolikov pri stimuliatsii eritropoeza).** Iu. D. Goncharenko and A. D. Pavlov (Riazanskii Meditsinskii Institut, Ryazan, USSR). *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia*, May-June 1982, p. 36-39. 16 refs. In Russian.

Biosynthesis in bone marrow cells for periods of 4 and 24 hours after hypoxia and bloodletting was studied in experiments on rabbits. Four hours after hypoxia, the serum erythropoietin level increased and the synthesis of nuclear and mitochondrial RNA in the bone marrow was augmented; nuclear DNA synthesis increased by the 24th hour. It is found that erythropoietin produces a primary activating effect on the differentiation of erythropoietin-responsive cells and a secondary effect on the proliferation of erythropoietin-responsive cells and maturating erythroid cells. Changes in the synthesis of mitochondrial DNA, heme, and globin were found to occur in phases, which was apparently associated with the characteristics of bone marrow cell energy in the early and late periods of hypoxia. B.J.

**A82-38170 † The effect of hypokinesia on the resistance of the heart to hypoxia (O vliianii gipokinezii na rezistentnost' serdtsa k gipoksii).** E. A. Markova, V. M. Gandziuk, and I. L. Popovich (Ternopol'skii Meditsinskii Institut, Ternopol, Ukrainian SSR). *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia*, May-June 1982, p. 46-50. 19 refs. In Russian.

Experiments performed on white mice show that hypokinesia reduces the heart's resistance to acute hypoxia and changes the character of the effects of adrenaline and inderal on the heart's tolerance to hypoxia. These data are explained in terms of heterochronous disease in the synthesis of protein structures of the sarcolemma and myocardiocytic sarcoplasmic reticulum during hypokinesia. The cation pump capacity is reduced and a change occurs in the relation between the effect of adrenaline on two differently directed processes determining the efficacy of oxygen utilization by the mitochondria. B.J.

**A82-38171 † The effect of denervation and tendotomy on oxidative phosphorylation in skeletal muscles of the rabbit and the resistance of phosphorylation to uncoupling agents (Vliianie denervatsii i tendotomii na okislitel'noe fosforilirovanie v skeletnykh myshtsakh krolika i rezistentnost' fosforilirovaniia k razobshchaiushchim agentam).** M. A. Shvets (Akademiia Meditsinskikh Nauk SSSR, Leningrad, USSR). *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia*, May-June 1982, p. 76-78. 10 refs. In Russian.

**A82-38177 † Experimental and clinical study of a new immunoregulatory preparation - thymalin (Eksperimental'noe i klinicheskoe izuchenie novogo immunoreguliruiushchego preparata - timalina).** V. Kh. Khavinson and V. G. Morozov. *Voenno-Meditsinskii Zhurnal*, May 1982, p. 37-39. In Russian.

Results are presented of studies of the preparation, pharmacological properties and clinical applications of thymalin, a substance with immunoregulatory properties. Thymalin was first isolated from the thymus of the calf in 1971, by a procedure involving acetone and acetic acid extraction to produce a polypeptide complex containing thymarin as its active agent. Injection of thymalin into thymectimized animals was found to facilitate the recovery of T-lymphocyte levels and the immune response to thymus-dependent antigens. In clinical studies on patients with various conditions connected with a disturbance of the immune system, the administration of thymalin has been shown to aid healing or improve the condition in a majority of cases, associated with increases in the activity and quantity of T-lymphocytes and the normalization of various metabolic processes with few side effects. Thymalin is therefore recommended for a wide range of medical purposes, including the improvement of human performance under conditions where the state of the immune system determines tolerance to unfavorable environments. A.L.W.

**A82-38178 † The effectiveness of perspiration in a hot environment (Ob effektivnosti potootdeleniia v usloviiakh zharkoi sredy).** F. T. Eronin and N. F. Koshelev. *Voenno-Meditsinskii Zhurnal*, May 1982, p. 42, 43. 8 refs. In Russian.

The relation of beverage consumption to the effectiveness of perspiration as a cooling mechanism in a hot environment is investigated. Measurements of perspiration, beverage consumption, sweat evaporation and heat loss were made in trained volunteers exercising in 34-34.5 C heat and drinking either water, a salt solution, or a vitamin solution. No significant differences were foun; in any of the measured parameters with the exception of beverage consumption, for which unpleasant tastes and appearances associated with the salt and vitamin drinks are credited with reducing the amounts consumed. It is noted, however, that most of the sweat produced, amounting to as much as 1000 g/h, was evaporated from the skin or clothing, and was thus effective in body cooling. A.L.W.

**A82-38179 † Evaluation of vestibular function in flight personnel with chronic diseases during stable remission (K otsenke vestibuliarnoi funktsii u letnogo sostava s khronicheskimi zabolevaniiami v period stoikoi remis-**

**ali).** E. V. Lapaev, O. A. Nakapkin, and O. A. Vorob'ev. *Voenno-Meditsinskii Zhurnal*, May 1982, p. 44-46. 11 refs. In Russian.

The status of vestibular nystagmus and vestibulosensory reactions in persons with several chronic diseases not impeding flying activities is investigated. Tests of vestibular-autonomic tolerance to intermittent Coriolis acceleration, nystagmus upon undamped sinusoidal rotation, postrotational nystagmus, counter-rotation, cupulometry and caloric stimulation of the labyrinth were performed on flight personnel with various diseases while their respective diseases were in stable remission. Definite changes in vestibular function are observed for patients with several conditions not preventing flying, most notable those with diseases of the nervous system and cochlear neuritis. It is thus recommended that flight personnel with histories of such conditions be evaluated by combined studies of vestibulo-autonomic, nystagmic and sensory reactions. A.L.W.

**A82-38180 † Some characteristics of the diurnal rhythm of physiological functions of sailors in the tropics (Nekotorye osobennosti sutochnogo ritma funktsii organizma u moriakov v tropikakh).** V. V. Berdyshev and G. F. Grigorenko. *Voenno-Meditsinskii Zhurnal*, May 1982, p. 47, 48. In Russian.

The diurnal patterns of central nervous system, thermoregulatory, cardiovascular, respiratory adrenal cortical, vitamin C metabolic and mental and physical work capacity parameters were investigated in sailors during prolonged cruises in the tropics. Evaluations prior to sailing show the patterns of 20 healthy sailors to be essentially similar to those of groups in other climatic regions, with most indicators reaching their maximal values at 1200 and 1600 hours in the absence of a daytime nap, and a two-peak structure present when a nap is taken after the midday meal. In the initial period of the cruise, during the period of acute adaptation, the average levels of the various parameters are observed to be shifted, and diurnal rhythms exhibit a pronounced peak in the hot afternoon hours while the daily curve was flattened. Prolonged exposure to tropical conditions leads to changes in the activity of the various systems, including an overall improvement in cardiovascular functioning, a reduction in urinary 17-ketosteroid and vitamin C excretion, an increase in work capacity and vascular resistance, and a pronounced decrease in the markedness of the functional peak in the hot hours of the day. A.L.W.

**A82-38268 Circadian changes in resting heart rate and body temperature, maximal oxygen consumption and perceived exertion.** I. E. Faria and B. J. Drummond (California State University, Sacramento, CA). *Ergonomics*, vol. 25, May 1982, p. 381-386. 20 refs.

The effect of time of day on maximal oxygen uptake, heart rate, body temperature, and the rated perceived exertion (RPE) during exercise was studied over a 24 hr day-night cycle. Thirty-one subjects were randomly administered a treadmill test on 24 separate occassions, 48 hr apart, and the RPE determined at heart rates of 130, 150 and 170 beats/min. Oral temperature and heart rate exhibited parallel variance and were lower in the morning than afternoon or evening, while the maximal oxygen uptake was stable throughouy 24 hr. Heart rate and RPE varied nonlinearly, with the RPE being higher at 02.00 and 04.00 hr than at 20.00, 22.00 and 24.00. N.B.

**A82-38325 Rotating shift work schedules that disrupt sleep are improved by applying circadian principles.** C. A. Czeisler (Center for Design of Industrial Schedules, Boston; Harvard University, Cambridge, MA), M. C. Moore-Ede (Harvard University, Boston, MA), and R. M. Coleman (Stanford University, Stanford, CA). *Science*, vol. 217, July 30, 1982, p. 460-463. 33 refs.

The possibility of easing the transition of circadian rhythms to different schedules was examined in terms of swing shift worker schedules which were shifted by a phase delay process. A control group of employees, numbering 33, changed shifts once per week while the experimental group, with 52 subjects, followed a phase delay schedule with a complete shift change only once every 21 days. The program continued for 9 mos, after which the previous complaint rate concerning abrupt changes of shift dropped from 90 to 20% of the workers rotating shifts. Productivity, health, and turnover rates improved among the phase shift delay subjects, indicating that work shift schedules which rotate by phase delay with lengthy intervals between each rotation are more compatible with the human circadian rhythm system than are abrupt changes in schedules. M.S.K.

**A82-38534 † Selecting optimal conditions for heart conservation in weak aldehyde solutions by using mathematical methods of experimental design (Vybor optimal'nykh rezhimov konservirovaniia serdtsa slabymi rastvorami al'degidov s ispol'zovaniem matematicheskikh metodov planirovaniia eksperimenta).** V. I. Tel'pukhov, V. A. Shapelev, and A. N. Lisenkov (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny*, vol. 93, May 1982, p. 106-109. 10 refs. In Russian.

Heart conservation experiments were carried out, in vitro and in vivo, on 200-300-g rats using weak aldehyde solutions, and a multiple-factor experiment was used to optimize the conditions of heart conservation. A regression model was obtained for the principal effects involved, and aldehyde concentrations for conservation in vitro and in vivo as well as the amount of aldehyde in ml per 100 g of animal weight were singled out as the most essential factors. The optimum values of these factors were then determined by using a two-level second-order experimental design; these values are: aldehyde concentrations of 0.037 and 0.03% for in vitro and in vivo heart conservation, respectively, with 0.65 ml of aldehyde used per 100 g of animal weight. V.L.

**A82-38535 † RNA-content distribution of cells from the normal and atherosclerctic human aorta (Raspredelenie po soderzhaniiu RNK kletok, vydelennykh iz normal'noi i vovlechennoi v ateroskleroz aorty cheloveka).** V. A. Kosykh, A. N. Orekhov, and V. S. Repin (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny*, vol. 93, May 1982, p. 104-106. 7 refs. In Russian.

The distributions of RNA contents in cells from the intima and media of normal and atherosclerotic human aortas are investigated. Measurements of red fluorescence from acridine-orange-stained nucleic acids were made by a flow cytofluorimeter in cells isolated from 15 men aged 40 to 53 within 3 hours of death by means of enzymatic dispersion. Plots of the intensity of red fluorescence against light scattering, an indicator of cell size, reveal the presence of two subpopulations of cells in normal and atherosclerotic arteries. Cells of subpopulation A, with low RNA levels, are smaller than those in subpopulation B, with high RNA levels. Intimal cells from vessels with atherosclerotic lesions are observed to exhibit a greater proportion of subpopulation A cells than those from normal vessels, while the relative proportions of the two subpopulations in the medial cells remained the same. It is proposed that the cells of subpopulation A are less active than cells of subpopulation B. A.L.W.

**A82-38536 † Separation of bone marrow cells in mice by free-flow electrophoresis (Razdelenie kletok kostnogo mozga myshei metodom preparativnogo elektroforeza).** V. M. Kotel'nikov, V. P. Reshchikov, N. M. Fertukova, O. A. Gurevich, N. A. Rudneva, and G. I. Kozinets (Ministerstvo Zdravookhraneniia SSSR, Institut Gematologii i Pereliveniia Krovi, Moscow, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny*, vol. 93, May 1982, p. 102-104. 12 refs. In Russian.

**A82-38537 † Study of RNA synthesis rate and DNA content in the myocardium of new-born rats during adaptation to high-altitude hypoxia (Izuchenie intensivnosti sinteza RNK i soderzhaniia DNK v miokarde novorozhdennykh krys v protsesse adaptatsii k vysotnoi gipoksii).** V. A. Kononova (Kirgizskii Nauchno-Issledovatel'skii Institut Akusherstva i Pediatrii, Frunze, Kirgiz SSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny*, vol. 93, May 1982, p. 100-102. 12 refs. In Russian.

**A82-38538 † The dynamics of quantitative changes of RNA in rat cerebellum Purkinje cells in different functional states (Dinamika kolichestvennykh izmenenii RNK v kletkakh Purkin'e mozzhechka krys pri razlichnykh funktsional'nykh sostoianiiakh).** Z. A. Mikeladze (Akademiia Nauk SSSR, Institut Biologii Razvitiia, Moscow, USSR; Tbilisskii Gosudarstvennyi Universitet, Tbilisi, Georgian SSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny*, vol. 93, May 1982, p. 94-96. 12 refs. In Russian.

UV cytophotometry was used to study the time-dependent effect of vestibular stimulation on RNA content in the Purkinje cells of the rat cerebellum. The rats were placed in narrow boxes which were rotated horizontally (60 rpm) for an hour. In order to evaluate the effects of stress and hypoxia, the RNA content was examined in immobilized animals placed in the same boxes without rotation. Rhythmic quantitative changes in RNA content in the cytoplasm and nucleus of Purkinje cells were observed upon vestibular stimulation of the cerebellum function. In the nucleolus, changes in the RNA content were less pronounced. Periodic quantitative changes in the RNA content in the cytoplasm, nucleus, and nucleolus of Purkinje cells were statistically significant in the majority of the rats, but weakly pronounced. B.J.

**A82-38539 † The influence of the GABA-receptor blocker bicuculline on the effects of fenibut and diazepam (Vliianie blokatora GMAK-retseptorov bikukullina na effekty fenibuta i diazepama).** L. Kh. Allikmets, L. K. Riago, and A. M. Nurk (Tartuskii Gosudarstvennyi Universitet, Tartu, Estonian SSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny*, vol. 93, May 1982, p. 64, 65. 9 refs. In Russian.

Fenibut (100 mg/kg) was found to suppress motility and emotional reactivity but did not show any antiaggressive properties, whereas diazepam (2.5 mg/kg) increased motility and decreased agressiveness in rats. Bicuculline (1.25 mg/kg) by itself did not cause any behavioral changes, though it was capable of counteracting the effects of diazepam and potentiating those of fenibut. Bicuculline attenuated the rise in GABA but did not affect the increased content of HVA and DOPAC after administration of fenibut. B.J.

**A82-38540 † Enzymes that detoxify active forms of oxygen and lipoperoxide in experimental ischemia and myocardial infarction (Fermenty detoksikatsii aktivnykh form kisloroda i lipoperekisei pri eksperimental'noi ishemii i infarkte miokarda).** V. Z. Lankin, A. Kh. Kogan, A. L. Kovalevskaia, G. G. Konovalova, D. R. Rakita, A. N. Kudrin, and A. M. Vikhert

(Akademiia Meditsinskikh Nauk SSSR; I Moskovskii Meditsinskii Institut, Moscow, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny*, vol. 93, May 1982, p. 58-60. 15 refs. In Russian.

The variation in the activity of superoxide dismutase, glutathione peroxidase, and glutathione-S-transferase was studied in experimental ischemia and myocardial infarction produced in rats. The activity of the first two enzymes mentioned decreased drastically two to fifteen minutes after ligation of the coronary artery and remained at a reduced level during the observation period (14 days). The activity of glutathione-S-transferase in the infarcted zone of the myocardium significantly decreased only by the third day of the experiment. The activity of glutathione perioxidase in the blood of patients with acute myocardial infarction rose more than 1.5-fold. B.J.

**A82-38541** † **Migration kinetics of hemopoietic stem cells in mice after severe mechanical trauma (Kinetika migratsii stvolovykh krovetvornykh kletok u myshei posle tiazheloi mekhanicheskoi travmy).** V. K. Kulagin and V. N. Aleksandrov (Voenno-Meditsinskaia Akademiia, Leningrad, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny*, vol. 93, May 1982, p. 45, 46. 7 refs. In Russian.

**A82-38542** † **Comparative study of systemic hemodynamics in normotensive and hypertensive rats (Sravnitel'naia otsenka sistemnoi gemodinamiki u normotenzivnykh i gipertenzivnykh krys).** Sh. I. Ismailov (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR) and O. S. Medvedev (Andizhanskii Meditsinskii Institut, Andizhan, Uzbek SSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny*, vol. 93, May 1982, p. 38-40. 9 refs. In Russian.

**A82-38543** † **The protective role of the forebrain with respect to pathological cardiac reflexes (O 'zashchitnoi' roli perednikh otdelov golovnogo mozga v otnoshenii patologicheskikh refleksov na serdtse).** G. E. Samonina (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny*, vol. 93, May 1982, p. 32-34. 16 refs. In Russian.

A study is presented of the relative importance of the facilitating and inhibitory influences of the hypothalamus on adaptive and pathological cardiac reflexes. The adaptive cardiocardiac reflex was elicited by the expansion of a small balloon in the right auricle and the pathological viscerocardiac reflex was elicited by the stretching of the urinary bladder in frogs undergoing electrical stimulation of the hypothalamus. Hypothalamic stimulation is found to either enhance or reduce the magnitude of the bradycardia produced by the viscerocardiac reflex and the tachycardia produced by the cardiocardiac reflex. Facilitation is observed in 27% of the cases of simultaneous and 31% of the cases of delayed reaction to the cardiac stimulus, but in only 23% of simultaneous and 12% of delayed reactions to the visceral stimulus. Reversal of the direction of the reflex was also observed. The greater inhibitory influence of the hypothalamus on the pathological reflex is thus seen as an instance of the physiologically beneficial control of lower nervous centers by higher ones. A.L.W.

**A82-38544** † **Local cerebral blood flow dynamics during experimental ischemia (Dinamika lokal'nogo mozgovogo krovotoka pri eksperimental'nom ishemicheskom insul'te).** L. N. Dorokhova, V. A. Sorokoumov, and V. A. Tsyrlin (I Leningradskii Meditsinskii Institut; Leningradskii Nauchno-Issledovatel'skii Institut Kardiologii, Leningrad, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny*, vol. 93, May 1982, p. 29-32. 6 refs. In Russian.

Changes in blood flow characteristics in various regions of the cerebral cortex during experimentally induced local ischemia are investigated. Experiments were performed on anesthetized cats undergoing ischemia produced by the occlusion of the middle cerebral artery. Recordings of local cerebral blood flow made by the hydrogen clearance method in 16 areas of the brain at various times after the ischemic insult show marked changes in the cerebral blood flow patterns, including enhancements and reductions in different areas, in both cerebral hemispheres. In addition, a disturbance in the mechanisms of cerebral blood flow regulation is noted in tests involving the artificial elevation of systemic blood pressure. A.L.W.

I. Kositskii, S. D. Mikhailova, and T. M. Semushkina (II Moskovskii Meditsinskii Institut, Moscow, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny*, vol. 93, May 1982, p. 24-26. 8 refs. In Russian.

**A82-38547** † **The role of central gray matter in the activation of antipain systems of the rat's brain under stress (Rol' tsentral'nogo serogo veshchestva v aktivatsii protivobolevykh sistem mozga krys pri stresse).** E. O. Bragin, G. F. Vasilenko, and R. A. Durinian (Tsentral'nyi Nauchno-Issledovatel'skii Institut Refleksoterapii, Moscow, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny*, vol. 93, May 1982, p. 22-24. 6 refs. In Russian.

Electrolytic lesions of central gray matter (CGM) were induced in rats. Analgesia produced by stress (foot shock) was found to be significantly reduced in the lesioned rats. The baseline pain threshold measured by the hot-plate method was significantly longer in CGM-lesioned rats. The baseline tail-flick latency was unaffected by the lesions. The role of CGM in the regulation of pain sensitivity in rats is considered. B.J.

**A82-38548** † **An improved apparatus for venous occlusion plethysmography (Usovershenstvovannaia ustanovka dlia venoznoi okkliuzionnoi pletizmografii).** L. F. Borisova (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny*, vol. 93, May 1982, p. 17, 18. 7 refs. In Russian.

An apparatus for venous occlusion plethysmography has been designed which allows the simultaneous recording of changes in the volume of a limb segment, and the rate and logarithm of these changes as the venous occlusion is effected and removed. The apparatus is based on a plethysmograph using a mercury-rubber sensor mounted on the limb to detect changes in limb size according to variations in sensor resistance, which depends on its length. Following amplification, plethysmographic signals are transmitted to a three-channel recording device directly, to obtain the plethysmographic curve, and after passage through a signal differentiator (an operational amplifier) and a logarithmic signal amplifier, to obtain the time rate of change and the logarithm of the limb volume, respectively. The device may be useful in studies of peripheral circulation in healthy subjects and in persons with disturbances in peripheral circulation. A.L.W.

**A82-38549** † **Two phases of the inotropic effect of adrenaline - The calcium dependence (Dve fazy inotropnogo deistviia adrenalina Kal'tsievaia zavisimost').** L. V. Sorokin, O. P. Iurchenko, and T. M. Turpaev (Akademiia Nauk SSSR, Institut Biologii Razvitiia, Moscow, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny*, vol. 93, May 1982, p. 15-17. 12 refs. In Russian.

The biphasic inotropic effect of adrenaline administered for a long time (30 minutes) was studied on a frog ventricular strip. The decrease in contraction amplitude became more pronounced as the intensity of Ca-ion introduction into myocardial cells was potentiated by the increased frequency of stimulation and calcium or adrenaline concentrations were increased. Mechanisms of the adrenaline-induced decrease in contraction amplitude are examined. B.J.

**A82-38550** † **The influence of the speed of blood flow in the carotid artery on the hematocrit of the blood being delivered to the brain (Vliianie skorosti krovotoka v sonnoi arterii na gematokrit krovi, raspredeliaemoi k golovnomu mozgu).** G. I. Mchedlishvili and M. N. Varazashvili (Akademiia Nauk Gruzinskoi SSR, Institut Fiziologii, Tbilisi, Georgian SSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny*, vol. 93, May 1982, p. 12-14. 8 refs. In Russian.

**A82-38551** † **The cholinergic nature of hypothalamo-cortical excitatory influence (Kholinergicheskaia priroda gipotalamo-korkovykh vozbuzhdaiushchikh vliianii).** S. N. Kozhechkin (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny*, vol. 93, May 1982, p. 10-12. 13 refs. In Russian.

The excitatory effect of electrical stimulation of the ventrocaudal area of the lateral hypothalumus on optical-cortex neurons in rabbits was observed mainly in cells whose activity increased under the effect of acetylcholine applied microionophoretically. Atropine applied microionophoretically decreased or completely blocked the hypothalamic excitatory effect as well as that of acetylcholine. Atropine did not change the depressing effect of the rostral region of the lateral hypothalamus on the neural cortical activity. It is found that the hypothalamo-cortical excitatory relationships are M-cholinergic in nature. B.J.

**A82-38552** † **Evidence of an immune mechanism of enzyme-hemostasis regulation (Dokazatel'stvo immunnogo mekhanizma reguliatsii fermentov gemostaza).** N. N. Tsybikov and B. I. Kuznik (Chitinskii Meditsinskii Institut, Chita, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny*, vol. 93, May 1982, p. 8, 9. 5 refs. In Russian.

Direct evidence was discovered of the immune regulation of homeostasis in the blood coagulation system. Autoantibodies that inactivate the appropriate enzymes were isolated from the plasma gamma-fraction and serum of nonimmunized animals by affinity chromatography on the sorbents IIa- and Xa-sepharose. The obtained immunoglobins displayed antienzymatic activity in pure systems and revealed a cross reaction in HIT. B.J.

**A82-38555 † A study of temporary absences from work arising from disorders of the circulatory system (Nekotorye voprosy izucheniia vremennoi netrudosposobnosti pri bolezniakh sistemy krovoobrashcheniia).** N. A. Frolova, G. S. Mazanov, A. N. Branskaia, V. L. Krasnenkov, and T. D. Kozlova. *Zdravookhranenie Rossiiskoi Federatsii,* no. 5, 1982, p. 30-33. In Russian.

The medical records of persons who missed work in a particular region because of illnesses of the circulatory system are reviewed. The timeliness and accuracy of the diagnosis in each case are studied, along with the reasons for the diagnosis. Hypertonic and ischemic disorders are found to be the most common. The incidence of the illnesses, as reflected in time lost from work, is found to be lower among workers on kolkhozes and sovkhozes than among workers in urban areas. Those absent from work for the longest periods tended to be younger women and older men. The importance of an early diagnosis and of hospitalization is stressed. C.R.

**A82-38556 † The effect of long-wave ultraviolet radiation on cyclophosphamide-induced levels of chromosome aberrations in the bone marrow cells of mice (Vliianie dlinnovolnovogo ul'trafioletovogo izlucheniia na indutsirovannuiu tsiklofosfamidom chastotu khromosomnykh aberratsii v kletkakh kostnogo mozga myshei).** V. Drozdova (Universitet Druzhby Narodov, Moscow, USSR). *Arkhiv Patologii,* vol. 44, no. 5, 1982, p. 35-41. 8 refs. In Russian.

The changes in heart activity that occur at various stages of arterial hypertension are investigated from a morphological and functional viewpoint. Experiments are carried out on 239 chinchilla rabbits ranging in weight from 3.0 to 3.2 kg. Three stages are discerned in the development of a hypertonic heart. The first stage (from the first to the fourth week) is a preparatory stage leading to compensation; the effects of overexertion manifest themselves and compensatory and adaptive changes begin. The second stage, from the sixth to the 10th week, is the compensation stage. Here, the process is stabilized and adaptive changes are strikingly apparent in the cardiac muscle, in particular, hypertrophy of the myocardium. The third stage, from the 22nd to the 52nd week, is one of decompensation. Here, destructive processes develop in the myocardium, and the contractile ability of the myocardium begins to weaken. C.R.

**A82-38558 † Ultrastructural changes in the brains of rats subjected to acute emotional stress (Ul'trastrukturnye izmeneniia mozga krys, perenesshikh ostroe emotsional'noe perenapriazhenie).** N. N. Bogolepov, L. B. Verbitskaia, T. I. Belova, and K. V. Sudakov (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Zhurnal Nevropatologii i Psikhiatrii im. S.S. Korsakova,* vol. 82, no. 5, 1982, p. 51-54. 7 refs. In Russian.

Changes in neuronal and synaptic ultrastructure in the parietal region of the cerebral cortex, the reticular formation of the midbrain and the pons varilii following acute emotional stress are studied in rats undergoing 2 hours of immobilization. Electron microscopic examination immediately, 1 hour and 24 hours after the immobilization procedure reveals two types of ultrastructural changes. The first type, including peripheral chromatolysis of the nerve cells and cytoplasmic changes including mitochondrial swelling, vacuolization and changes in the smooth endoplasmic reticulum, are of a functional, transitory character, being significantly reduced 24 hours after immobilization. The second type, on the other hand, are of a more pronounced and resistant nature, including vacuolization of the neuronal nuclei and marked changes in the synapses, and persist for at least 24 hours. It is suggested that these changes may represent the morphological basis for cerebrovisceral disorders developing after immobilization stress. A.L.W.

**A82-38559 † The thermal pulsation method in the study of several physiological mechanisms of the brain stem (Metod teplovoi pul'satsii v issledovanii nekotorykh fiziologicheskikh mekhanizmov mozgovogo stvola).** V. A. Likhtenshtein (Dagestanskii Meditsinskii Institut, Makhachkala, USSR). *Zhurnal Nevropatologii i Psikhiatrii im. S. S. Korsakova,* vol. 82, no. 5, 1982, p. 44-50. 14 refs. In Russian.

Results of physiological studies made using the application of thermal pulses to the body surface in the nasolabile region are discussed. Thermal pulsations have been observed to induce sleep, and thereby ameliorate neurotic and neurotic-like conditions. The somnogenic power of thermal pulsations has been noted to be enhanced when the pulsations are synchronized with respiration, a fact explained by the physiological thermopulsations normally experienced by the nasal thermoreceptors during the course of the respiratory cycle. A hypotensive effect of clinical significance has also been noted during thermal pulsation, which is attributed to local vascular dilation, along with an increase in peripheral blood flow. Results thus demonstrate the close relationship of thermoregulation with the mechanisms of sleep regulation, respiratory functions and the regulation of blood flow. A.L.W.

**A82-38560 † The concentration of adenyl nucleotides and creatine phosphate in the cerebral hemispheres during different manifestations of stress (Soderzhanie adenilovykh nukleotidov i kreatinfosfata v polushariiakh golovnogo mozga pri razlichnykh proiavleniiakh stressa).** V. V. Davydov, V. P. Tverdokhlib, and V. S. Iakushev (Orenburgskii Meditsinskii Institut, Orenburg, USSR). *Zhurnal Nevropatologii i Psikhiatrii im. S. S. Korsakova* vol. 82, no. 5, 1982, p. 31-34. 16 refs. In Russian.

Changes in cerebral high-energy phosphate metabolism occurring during various manifestations of stress are investigated using as a model the development of cardiac necrosis in previously stressed rats. A marked increase in creatine phosphate levels is found in rats subjected to both emotional-nociceptive stress and cardiac necrosis with respect to intact animals and those subjected to stress alone, while creatine levels fell sharply. Whereas ATP levels remained constant as a result of stress, cardiac necrosis led to a steady decrease in ATP levels, accompanied by an increase in the levels of its decompostion products. Results indicate the importance of creatine and creatine phosphate in maintaining cerebral ATP levels, and suggest a possible pathogenetic mechanism for neurotic-like conditions observed in many visceral ailments. Mekhilane (Tartuskii Gosudarstvennyi Universitet, Tartu, Estonian SSR). *Farmakologiia i Toksikologiia,* vol. 45, May-June 1982, p. 79-82. 14 refs. In Russian.

The individual pharmacokinetic capacities of a group of patients are studied on the basis of the rates for the biotransformation of a single drug. Levels of the barbiturate barbamyl (Amobarbital) in the blood were determined at hourly intervals for 6 hours following ingestion on an empty stomach in 42 female patients with schizophrenia, seven with chronic alcoholism and three healthy women. Calculations of the absorption constant, distribution coefficient, residence half-life, total clearance and elimination constant of the substance on the basis of the concentration data allow the classification of the patients into three pharmacokinetic types: average, slow and rapid. The pharmacokinetic types are found to be related to patient age, the duration of drug therapy, and especially the efficacy of drug treatment, indicating the usefulness of pharmacokinetic capacities in the prediction of the effectiveness of pharmacotherapy. The knife is designed for use in operations on the stomach and intestines. In discussing the advantages of lasers in medicine, it is pointed out that they eliminate bleeding during operations. An account is also given of the way in which lasers can be used in skin transplants. They can also be used in cosmetic procedures, such as removing tattoos. C.R.

**A82-38565 † Use of the thermovision method in the prophylactic examination of polar workers (Ispol'zovanie teplovizionnogo metoda pri**

**provedenii profilakticheskikh osmotrov rabochikh Zapoliar'ia).** A. V. Ivanov, B. A. Skripal', V. F. Taroev, and G. P. Gagarin (Ministerstvo Zdravookhraneniia RSFSR, Nauchno-issledovatel'skaia Laboratoriia Kompleksnykh Problem Gigieny Truda s Klinikoi Professional'nykh Zabolevanii, Kirovsk, USSR). *Gigiena Truda i Professional'nye Zabolevaniia*, May 1982, p. 56, 57. In Russian.

The potential of thermography for the early detection of neurovascular and osteoarticular disorders in the massive prophylactic examination of workers is evaluated in workers of the arctic metal-working industry. Thermograms of the hands and the wrist, elbow and shoulder joints were recorded photographically in 106 workers concurrently undergoing clinical and physiological studies. About 30% of the workers exhibited asymmetries in skin thermotopography and a reduction in thermal emission from the distal portions of the phalanges, which were often but not always accompanied by complaints of numbness and elevated sensitivity to cold. Similar disorders were found in fitters and molders, indicating the changes in skin thermotopography to be a result of the cold microclimate rather than vibration. Asymmetries in thermal emission from the large joints were observed in about 57% of the molders, corresponding to previously detected or unnoticed osteoarticular pathologies. Results thus support the use of thermography for the early detection of disorders induced by the combined effects of factors in the work environment. A.L.W.

V. Moikin, N. Iu. Tarasenko, B. E. Anan'ev, S. G. Kropivko, D. N. Kriukova, A. I. Mironov, V. V. Piskunov, A. C. Poberezhskaia, E. N. Pron'kova, and O. I. Iushkova (Akademiia Meditsinskikh Nauk SSSR; I Moskovskii Meditsinskii Institut, Moscow, USSR). *Gigiena Truda i Professional'nye Zabolevaniia*, May 1982, p. 11-15. 8 refs. In Russian.

Attention is given to the fatigue and overexertion that manifest themselves in physical work performed by, say, only the hands. The movements are of a prescribed type, and they do not require that the entire body be in motion. Fatigue of the neuromuscular apparatus, which is related to the workload, is found to be the principal cause of muscular strain. For work involving only hand motion, a link is found between the number of movements required by a particular type of work and the incidence of such maladies as myalgia and myofascitis. C.R.

Histoenzymological changes produced in various organs of rats exposed to 5 hours daily of transportation noise at an equivalent level of 65 dB over the course of 60 days are investigated. Measurements of the concentrations of glucose-6-phosphate dehydrogenase, peroxidase, succinate dehydrogenase and lactate dehydrogenase in the follicular epithelium of the thyroid gland reveal a significant enhancement in synthetic activity and hormone production at the expense of glycolysis, the pentose cycle and the Krebs cycle following noise exposure. Cells of the zona fasciculata of the adrenal cortex showed moderate changes indicative of a reduction of energy-producing processes, while myocardial cells showed evidence of an uncharacteristic activation of the pentose cycle. A.L.W.

**A82-38578** † **Setting hygienic standards to be applied to environmental standards pertaining to the rolling stock of railroads and subway systems (Voprosy gigienicheskogo normirovaniia faktorov sredy podvizhnogo sostava zheleznykh dorog i metropolitenov).** A. I. Ponomarenko and G. A. Antropov (Moskovskii Nauchno-Issledovatel'skii Institut Gigieny, Moscow, USSR). *Gigiena i Sanitariia*, Apr. 1982, p. 59-61. In Russian.

A method is described that makes possible a determination of quantitative and qualitative indicators of the following: the interactions of the first and second signal systems, criteria for stress on the nervous system, and the ratios between the principal nervous processes. The state of the central nervous system is evaluated by measuring the latent reaction time to light and then determining the ratio between excitation and inhibitory processes. The latent reaction time here is measured in three series in which the light stimulus acts for 3-5 sec. C.R.

**A82-38580** † **Setting safety standards for ionizing radiation (Ob obosnovaniiakh gigienicheskogo normirovaniia ioniziruiushchego izlucheniia).** I. V. Filiushkin and I. M. Petoian (Ministerstvo Zdravookhraneniia SSSR, Moscow, USSR). *Gigiena i Sanitariia*, Apr. 1982, p. 48-51. 16 refs. In Russian.

It is pointed out that safety standards today are based on a linear concept that does not recognize a threshold. An alternative approach, one based on a recognized threshold of carcinogenic effects, is described. In deciding between these two approaches, it is necessary to know whether a threshold is an actual biological phenomenon. The way in which the zero hypothesis can be used to justify both approaches is demonstrated. C.R.

Dedov (Tsentral'nyi Institut Usovershenstvovaniia Vrachei, Moscow, USSR). *Akademiia Nauk SSSR, Izvestiia, Seriia Biologicheskaia*, May-June 1982, p. 454-458. 8 refs. In Russian.

Experimental data are presented on the condition of rat endocrine system several months after a single injection of selenium-75-selenium methionine. The development of harmful side effects such as tumors of the mammary gland, uterus, and endocrine organs is shown to result from persistent disturbance of the hormonal homeostasis induced by the internal radiation. The principal pathogenetic factors in the development of the tumors are high blood levels of estrogen and prolactin combined with thyroxine deficiency. V.L.

**A82-38583** † **The effect of serotonin on the development of acute hyperthermia in rats (Vliianie serotonina na razvitie ostroi gipertermii u krys).** A. V. Konusova (Novosibirskii Gosudarstvennyi Universitet, Novosibirsk, USSR). *Akademiia Nauk SSSR, Sibirskoe Otdelenie, Izvestiia, Seriia Biologicheskikh Nauk*, Apr. 1982, p. 110-112. 7 refs. In Russian.

Injections of serotonin creatine sulfate were administered to rats following heating with a 250-W infrared lamp from a distance of 65 cm. The prior heating is found to accelerate the serotonin-induced overheating of the rat body to 42 C after the injection; however, the skin temperature of rats injected with serotonin is lower than that of rats in the control group. The effect of serotonin is found to be dose dependent and is attributed to heat transfer inhibition. V.L.

**A82-38584** † **Serotonin content of peripheral organs and tissues in rats under normal conditions and under stress during postnatal development (Soderzhanie serotonina v perifericheskikh organakh i tkaniakh v norme i pri deistvii stressa v protsesse razvitiia krys).** I. I. Lobacheva (Akademiia Nauk SSSR, Institut Tsitologii i Genetiki, Novosibirsk, USSR). *Akademiia Nauk SSSR, Sibirskoe Otdelenie, Izvestiia, Seriia Biologicheskikh Nauk*, Apr. 1982, p. 112-116. 20 refs. In Russian.

The serotonin levels of stomach, spleen, blood, and brain were determined in 4- and 16-day-old rats as well as in adult rats 70-80 days old. The serotonin levels are found to increase much more rapidly in peripheral tissues than in the brain. In response to immobilization, blood serotonin of adult rats increases, while serotonin level in stomach decreases. Stress-induced changes in the serotonin content of peripheral tissues are not evident immediately after birth, but appear at a certain point during postnatal development. Thus, such changes were not observed in 4-day-old rats but were marked in 16-day-old animals. V.L.

**A82-38589** † **The flavin-dependent consumption of oxygen in mitochondria under illumination (Flavin-zavisimoe potreblenie kisloroda v mitokhondriiakh pri osveshchenii).** N. L. Vekshin and G. P. Mironov (Akademiia Nauk SSSR, Institut Biologicheskoi Fiziki, Pushchino, USSR). *Biofizika*, vol. 27, May-June 1982, p. 537-539. 7 refs. In Russian.

The use (absorption) of light by oxygen in an illuminated suspension of mitochondria from rat liver is described. A 5% solution of copper sulfate is used as the heat filter. The consumption of oxygen ceases when the light is turned off. Alpha-ketoglutarate accelerates the consumption, but glutamate, beta-oxybutyrate, and succinate are found to have no effect. Since rotenone and antimycin retard the process only slightly, it is thought that the consumption cannot derive from the respiratory chain. Sodium azide, however, slows the process by half. The absorption of light by oxygen is therefore seen as a consequence of photochemical involving a substrate, triplet flavins, and oxygen. It is thought likely that these reactions are for the photochemical oxidation of phospholipids and substrates of the alpha-ketoglutarate type and that they involve triplet flavins and singlet oxygen.

**A82-38595** † **Changes in man's constant electric field in the course of adaptation to hypokinesia (Izmenenie postoiannogo elektricheskogo polia cheloveka v protsesse adaptatsii k usloviiam gipokinezii).** G. N. Zatsepina, S. P. Kuprin, S. V. Tul'skii, and M. N. Flerov (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR). *Biofizika*, vol. 27, May-June 1982, p. 520-526. 10 refs. In Russian.

It is shown that the process of adaptation to hypokinesia after normal physical stress, and vice versa, is characterized by equal values of the electric potential difference between certain fixed points of the skin. Once the state of adaptation is reached, superposition of adaptation processes does not change the mean value of the electric potential difference. The level of adaptation is the upper amplitude value of the electric potential difference for a healthy individual. V.L.

**A82-38597** † **A study of the mechanism governing the different types of behavior exhibited by the spiral excitation wave period in auricle and ventricle (Issledovanie mekhanizma razlichnogo povedeniia perioda spiral'nykh voln vozbuzhdeniia v predserdii i zheludochke).** A. K. Grenader and G. G. Zurabishvili (Akademiia Nauk SSSR, Institut Biologicheskoi Fiziki, Pushchino, USSR). *Biofizika*, vol. 27, May-June 1982, p. 505-508. 9 refs. In Russian.

Sources of spiral excitation waves (reverberators) were generated in strips of rabbit attrial and ventricular tissues by feeding a single, properly timed electric stimulus. It is found that the source period increases during the first seconds following its appearance in attrial tissue, while showing little change in ventricular tissue. The relationship between changes in the source period and the refractoriness of heart tissue is investigated, and a model is proposed which accounts for the observed differences in the bheavior of the source period in auricle and ventricle.

**A82-38598** † **Changes in the microelement content of muscles under denervation (Izmenenie soderzhaniia mikroelementov v myshtsakh pri denervatsii).** M. M. Ogievetskaia (Akademiia Nauk SSSR, Institut Khimicheskoi Fiziki, Moscow, USSR) and E. L. Zhuravleva (Ob'edinennyi Institut Iadernykh Issledovanii, Dubna, USSR). *Biofizika*, vol. 27, May-June 1982, p. 501-504. 10 refs. In Russian.

X-ray fluorescence spectrometry has been used to determine the contents of Zn, Br, and Rb in the rat musculus gastrocnemius following denervation. It is found that by the third week after denervation, the concentration of microelements increases in the denervated muscle and decreases in the intact muscle. Analysis of microelement content in the intact muscle has made it possible to identify two stages in post-denervation changes: hypertrophy and atrophy. The differences in the dynamics of concentration changes in denervated and intact cells suggest that the rate of protein decomposition and microelement utilization in denervated muscle cells are essentially different.

**A82-38601 † Conditions leading to kinetic and thermodynamic isotopic effects in a cell (Ob usloviiakh poiavleniia kineticheskikh i termodinamicheskikh izotopnykh effektov v kletke).** A. A. Iviev, D. A. Kniazev, and A. G. Kaloshin (Vsesoiuznaia Akademiia Sel'skokhoziaistvennykh Nauk, Moscow, USSR). *Biofizika*, vol. 27, May-June 1982, p. 485-488. 15 refs. In Russian.

A study was made of the conditions associated with thermodynamic and kinetic isotopic effects of carbon in metabolic processes. The key role of kinetic isotopic effects that occur at metabolic path bifurcations is demonstrated. It is shown that a kinetic isotopic effect involved in the reaction of pyruvate decarboxylation is the principal element of the mechanism of isotopic carbon fractionation in cells. V.L.

**A82-38602 † A possible explanation for the fluctuations in reflectivity exhibited by bilayer liped membranes excited during electrostriction (Vozmozhnaia priroda kolebanii otrazhatel'noi sposobnosti bisloinykh lipidnykh membran, vozbuzhdaemykh pri elektrostriktsii).** V. I. Pasechnik (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR). *Biofizika*, vol. 27, May-June 1982, p. 469-474. 16 refs. In Russian.

**A82-38603 † A measurement of the size distribution of lipoproteins in the plasma of human blood (Izmerenie raspredeleniia po razmeram lipoproteidov plazmy krovi cheloveka).** A. N. Klimov, G. E. Shmelev, V. A. Noskin, I. F. Mamontova, L. G. Petrova-Maslakova, and N. S. Parfenova (Akademiia Nauk SSSR, Leningradskii Institut Iadernoi Fiziki, Leningrad, USSR; Akademiia Meditsinskikh Nauk SSSR, Leningrad, USSR). *Biofizika*, vol. 27, May-June 1982, p. 458-462. 7 refs. In Russian.

It is shown that the optical displacement method can be used to investigate the size distribution of lipoprotein particles. The sensitivity of the method to changes in the distribution during the incubation of lipoprotein particles is assessed under various conditions. In particular, it is shown that in incubating lipoproteins of low density together with erythrocytes, donor properties of the lipoproteins relative to cholesterol manifest themselves; in the incubation of high-density lipoproteins with these cells, the result is more complex. Here, the lipoproteins separated from the hypercholesteremic plasma exhibit donor properties, whereas those obtained from the plasma having a normal level of cholesterol exhibit acceptor properties. C.R.

**A82-38604 † The conductivity of model protein-lipid membranes (Provodimost' model'nykh belkovo-lipidnykh membran).** S. A. Badzhinian and K. G. Manukian (Akademiia Nauk Armianskoi SSR, Institut Biokhimii, Yerevan, Armenian SSR). *Biofizika*, vol. 27, May-June 1982, p. 450-453. 11 refs. In Russian.

Artificial membranes are reconstructed using proteolipids from the white substance of cattle brains. The proteolipids differ in the extent to which they have been purified and in the content (72, 50-45, 15-8 wt %) and qualitative composition of the lipids connected to them. The conductivity of artificial membranes of all three types of proteolipids in 0.1-M solutions of alkali metal chlorides is found to be higher by two to three orders of magnitude than that of bilayer membranes composed of lecithin and the common phospholipids of the brain. In all cases, membranes composed of proteolipids that are 85-92% protein have the highest conductivity, and those of proteolipids that are 28% protein have the lowest. C.R.

**A82-38605 † Gramicidin A-induced conductance of the muscle fiber membrane (Indutsirovannaia gramitsidinom A provodimost' membrany myshechnogo volokna).** N. E. Shvinka, G. Kafier, and V. V. Malev (Akademiia Nauk SSSR, Institut Tsitologii, Leningrad, USSR; Tsentral'nyi Institut Fiziologii i Meditsiny Truda, Berlin, East Germany). *Biofizika*, vol. 27, May-June 1982, p. 445-449. 13 refs. In Russian.

The conductance of an isolated muscle fiber induced by gramicidin A has been investigated by the method of double saccharose bridge under constant current conditions. It is shown that the conductance is directly proportional to gramicidin concentration in the solution. The results suggest that the gramicidin channel in the muscle membrane is of dimer nature. V.L.

**A82-38606 † The incorporation of an erythrocyte membrane into planar bilayer lipid membranes (Vkliuchenie membrany eritrotsitov v ploskie bisloinye lipidnye membrany).** I. N. Babunashvili and V. A. Nenashev (Akademiia Nauk SSSR, Institut Biologicheskoi Fiziki, Pushchino, USSR). *Biofizika*, vol. 27, May-June 1982, p. 441-444. 8 refs. In Russian.

The volt-ampere characteristics of planar bilayer lipid membranes modified by vesicles from the erythrocyte membranes of rabbits are investigated. The vesicles contain amphotericin B and tetraethylammonium. It is shown that for several minutes after the vesicle makes contact with the membrane there is partial fusion and that while this is occurring a bilayer is formed consisting of a layer of erythrocyte membrane lipids and a planar membrane layer. Approximately 30 minutes later, the erythrocyte membranes are observed to enter the planar membrane; this occurs either through fusion or through the embedment of the sealed vesicle. Higher temperatures are found to increase the probability of fusion. The sealed vesicles are embedded in the membrane asymmetrically; the area of contact is always smaller than the area without contact. C.R.

**A82-38607 † An investigation of the conformational stability of immunoglobulin G in the monolayers at the phase boundary between aqueous solutions of NaCl and octane (Issledovanie konformatsionnoi ustoichivosti immunoglobulinov G v monosloiakh na granitse faz vodnye rastvory NaCl-oktan).** L. V. Chasovnikova, N. A. Matveeva, and V. V. Lavrent'ev (II Moskovskii Gosudarstvennyi Meditsinskii Institut, Moscow, USSR). *Biofizika*, vol. 27, May-June 1982, p. 435-440. 17 refs. In Russian.

**A82-38608 † Light curves for photosynthesis under intermittent illumination (Svetovye krivye fotosinteza pri impul'snom osveshchenii).** V. I. Zvalinskii (Akademiia Nauk SSSR, Institut Biologii Moria, Vladivostok, USSR) and F. F. Litvin (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR). *Biofizika*, vol. 27, May-June 1982, p. 410-414. 8 refs. In Russian.

A mathematical description is proposed for the light curve typical of intermittent-illumination photosynthesis for unicentral and multicentral organizations of photosynthetic units. It is shown that the curve shape is determined by the number of photosynthetic units per domain (degree of multicentrality) and the efficiency of energy migration between the units. A criterion is proposed for distinguishing between unicentral and multicentral photosynthetic unit organizations. V.L.

**A82-38609 † Thermodynamic parameters characterizing interaction between polymer-absorbed ligand molecules (Termodinamicheskie parametry, kharakterizuiushchie vzaimodeistvie mezhdu molekulami liganda, adsorbirovannymi na polimere).** Iu. D. Nechipurenko (Akademiia Nauk SSSR, Institut Molekuliarnoi Biologii, Moscow, USSR). *Biofizika*, vol. 27, May-June 1982, p. 391-398. 11 refs. In Russian.

**A82-38610 † Conformational dynamics of proteins and simplest molecular 'machines' (Konformatsionnaia dinamika belkov i prosteishie molekuliarnye mashiny).** K. V. Shaitan and A. B. Rubin (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR). *Biofizika*, vol. 27, May-June 1982, p. 386-390. 13 refs. In Russian.

The stochastic nature of macromolecular dynamics and the coupling between the functional activity and conformational mobility of proteins are discussed with reference to experimental data obtained by Mossbauer spectroscopy. It is shown that the conformational motion of macromolecule fragments is realized by a diffusion mechanism through conformational substrates. An equation describing the operation of a simple molecular 'machine' is obtained and its solution is presented. V.L.

**A82-38611 † The temperature dependence of the H-1 NMR spectrum of hydrated collagen (Temperaturnaia zavisimost' spektra IaMR 1H gidratirovannogo kollagena).** Iu. P. Meshalkin, S. P. Gabuda, and A. F. Rzhavin (Novosibirskii Gosudarstvennyi Meditsinskii Institut; Akademiia Nauk SSSR, Institut Neorganicheskoi Khimii, Novosibirsk, USSR). *Biofizika*, vol. 27, May-June 1982, p. 375-379. 7 refs. In Russian.

By analyzing the temperature dependence of the spin-spin interaction constant, it is shown that the population probabilities for the donor and acceptor adsorption centers on the collagen surface are 1/10 or less and zero, respectively, at temperatures below 265 K. At 265-283 K, the population probabilities are 1/30 or less for the donor centers and zero for the acceptor centers. Above 283 K, the fine structure of the H-1 NMR spectra disappears due to destruction of the clathrate-like structures of the protein hydrate shell. V.L.

**A82-38612 † The effect of urea and heat on the activity of lactate dehydrogenase and glucose 6-phosphate dehydrogenase (Vliianie mocheviny i tepla na aktivnost' laktatdegidrogenazy i gliukozo-6-fosfatdegidrogenazy).** V. I. Stabrovskaia and A. D. Braun (Akademiia Nauk SSSR, Institut Tsitologii, Leningrad, USSR). *Biofizika*, vol. 27, May-June 1982, p. 371-374. 6 refs. In Russian.

The stability of lactate dehydrogenase and glucose 6-phosphate dehydrogenase under exposure to urea and heat was investigated within the muscle system and in an isolated state. Both enzymes were found to have higher heat stability than creatine kinase, glucose 6-phosphate dehydrogenase being the more stable enzyme. In the case of muscle exposure to urea, glucose 6-phosphate dehydrogenase had the highest stability and lactate dehydrogenase had the lowest stability among the enzymes studied. However, when the effect of urea was investigated on isolated enzymes, glucose 6-phosphate dehydrogenase proved to be the most labile of the enzymes studied. V.L.

**A82-38613 † Acridine orange inhibition of the ATPase activity of myosin and its fragments (Ingibirovanie ATFaznoi aktivnosti miozina i ego fragmentov akridinovym oranzhevym).** L. G. Filatova, I. G. Shtrankfel'd, D. I. Levitskii, and N. G. Esipova (Akademiia Nauk SSSR, Institut Biologicheskoi Fiziki, Pushchino, USSR; Akademiia Nauk SSSR, Institut Molekuliarnoi Biologii; Moskovskii Gosudarstvennyi Universitet, Moscow, USSR). *Biofizika*, vol. 27, May-June 1982, p. 368-370. 8 refs. In Russian.

**A82-38614 † Reactions of O-18 exchange in the myosin systems of skeletal, cardiac, and smooth muscles (O-18-obmennye reaktsii v sisteme**

**miozina skeletnykh, serdechnoi i gladkikh myshts).** N. S. Panteleeva, E. A. Karandashov, G. G. Ivanov, I. E. Krasovskaia, N. V. Kuleva, V. M. Danilova, and M. A. Zueva (Leningradskii Gosudarstvennyi Universitet, Leningrad, USSR; Vsesoiuznyi Kardiologicheskii Nauchnyi Tsentr, Moscow, USSR; Kievskii Gosudarstvennyi Universitet, Kiev, Ukrainian SSR). *Biofizika*, vol. 27, May-June 1982, p. 365-367. 14 refs. In Russian.

**A82-38815 † The effect of monovalent cations on the ATPase activity and superprecipitation of actomyosin (Vliianie odnovalentnykh kationov na ATFaznuiu aktivnost' i superpretsipitatsiiu aktomiozina).** G. I. Pavliashvili, M. Sh. Simonidze, R. M. Kupatadze, and M. M. Zaalishvili (Akademiia Nauk Gruzinskoi SSR, Institut Fiziologii, Tbilisi, Georgian SSR). *Biofizika*, vol. 27, May-June 1982, p. 362-364. 7 refs. In Russian.

**A82-38694 F-actin is a helix with a random variable twist.** E. H. Egelman, N. Francis, and D. J. DeRosier (Brandeis University, Waltham, MA). *Nature*, vol. 298, July 8, 1982, p. 131-135. 21 refs. Grant No. NIH-GM-21189.

Electron microscopic observations and modeling of disorder in the structure of the F-actin filaments are reported. Digitized electron micrographs of negatively stained filaments were analyzed by Fourier transformations, layer line spacings were measured, and the number of units per turn were quantified. The actin filaments were found to untwist 0.5 deg per subunit. A variable twist model is constructed considering a constant axial rise of 27.3 A and a sequence of random angular deviations. An angular disorder of 10 deg was chosen and model predictions regarding the variability between cross-over points within a filament and the effects of the transform of the filaments by the presence of a variable twist were made. It is concluded that actin filaments within cross-bridged bundles are not helical and are governed by interfilament interaction. M.S.K.

**A82-38698 Similar genes for a mitochondrial ATPase subunit in the nuclear and mitochondrial genomes of Neurospora crassa.** P. van den Boogaart, J. Samallo, and E. Agsteribbe (Groningen Rijksuniversiteit, Groningen, Netherlands). *Nature*, vol. 298, July 8, 1982, p. 187-189. 17 refs. Research supported by the Nederlandse Organisatie voor Zuiver-Wetenschappelijk.

The location and possible function of a nucleotide sequence on the mitochondrial DNA of N. crassa which encodes a dicyclohexylcarbodiimide (DCCD) protein are discussed along with its evolutionary origin. Evidence for the genetic character of the 225 nucleotide sequence includes a conservation of glycine in three positions, arginine at one, proline at one, and alanine at one, the conservation of the DCCD-binding glutamic acid at another, the absence of histidine and tryptophan, and the distribution of hydrophobic and hydrophilic amino acid residues along the polypeptide chain. Noting that the gene segment lacks a small mRNA transcript, the possibility that the gene has recently become nonfunctional is discussed. The continued presence of the gene is taken as evidence that the gene is active, has existed in Neurospora for a long time, and may have resulted from the uptake of a foreign gene. M.S.K.

**A82-38795 Changes in the human visually evoked cortical potential in response to chromatic modulation of a sinusoidal grating.** H. M. Petry, W. J. Donovan, R. K. Moore, W. B. Dixon, and L. A. Riggs (Brown University, Providence, RI). *Vision Research*, vol. 22, no. 7, 1982, p. 745-755. 38 refs. Grant No. NIH-EY-0744.

**A82-38796 Contrast influence on perceived orientation.** A. Cattaneo (CNR, Istituto di Neurofisiologia, Pisa, Italy) and D. Spinelli (Padova, Università, Padua, Italy). *Vision Research*, vol. 22, no. 7, 1982, p. 783-785. 7 refs.

When two gratings of slightly different orientation and equal contrast are presented dichoptically the observer perceives a unique fused grating at an orientation intermediate between the two. It is shown that if the contrast of the two gratings is different the perceived orientation of the fused grating depends on the relative contrast of the two monocular images. The results show that the perceived orientation varies linearly with the contrast difference, provided that the contrast values of the gratings presented to each eye are such as to give rise to a fused image. In these conditions, the perceived orientation is the average of the two monocular orientations, weighted with their contrast. (Author)

**A82-38797 Effects of reference lines on displacement thresholds at various durations of movement.** C. A. Johnson and R. P. Scobey (California, University, Davis, CA). *Vision Research*, vol. 22, no. 7, 1982, p. 819-821. 14 refs. Grants No. NIH-R01-EY-03424; No. NIH-R01-EY-01495.

Subjects were exposed to a moving line and a reference line, both in vertical orientation, in order to determine the threshold for detection of movement. The lines were projected on a CRT, with the mobile line being moved according to a ramp function, with the slope of the ramp determined by the displacement and duration of the stimulus. Movements lasted from 10-2500 msec, and trials were run with and without reference lines. The presence of the reference line was found to reduce the movement displacement detection threshold at all time intervals examined. The thresholds were not linked to a constant velocity process. Finally, the use of reference stimuli was determined to result in acuity of 12-15 arcsec among the subjects. M.S.K.

**A82-38798 Color vision in the peripheral retina under photopic conditions.** U. Stabell and B. Stabell (Oslo, Universitetet, Oslo, Norway). *Vision Research*, vol. 22, no. 7, 1982, p. 839-844. 22 refs.

**A82-38799 Hyperacuity for luminance phase angle in the human visual system.** M. J. Morgan and R. J. Watt (University College, London, England). *Vision Research*, vol. 22, no. 7, 1982, p. 863-866. 12 refs. Medical Research Council *Grant No. G979/870/N.*

A moving target with identical trajectories in the two eyes appeared shifted in depth if flickered with a phase difference between the eyes. The direction of the depth shift was the same as if the phase-lagging eye had been seeing the target with a spatial advance in the direction of target motion. Maximum acuity for this effect was in the region of 7 deg of phase angle, which may be expressed as a spatial difference between corresponding luminance points of about 13 sec arc. Acuity was approximately constant over a wide range of modulation periods from 50 to 150 msec when expressed in terms of phase angle, but fell off rapidly at higher and at lower frequencies. The results cannot be explained simply by either conventional disparity theory or by spatio-temporal interpolation, but suggest that inter-ocular correspondence is influenced by dynamic luminance information. (Author)

**A82-38802 Absorption characteristics of prolate spheroidal models exposed to the near fields of electrically small apertures.** A. Lakhtakia, M. F. Iskander, C. H. Durney, and H. Massoudi (Utah, University, Salt Lake City, UT). *IEEE Transactions on Biomedical Engineering*, vol. BME-29, Aug. 1982, p. 569-576. 20 refs.

Irradiation of prolate spheroidal models of biological models by the near fields of electrically small apertures is analyzed. The solution procedure involves the replacement of the aperture source by an equivalent configuration of electric and magnetic dipoles. The specific absorption rate induced in the irradiated object is then calculated using the extended boundary condition method. Numerical results are presented for the exposure case where the incident electric field at the spheroid location is parallel to the major axis of the model. This polarization is associated with the maximum low-frequency absorption in biological models and, hence, is the most important polarization case in microwave dosimetry. (Author)

**A82-38823 # On the mathematical modelling of microbial age dynamic and some control aspects of microbial growth processes.** J. Ranta (Technical Research Centre of Finland, Electrical Engineering Laboratory, Esbo, Finland). *Acta Polytechnica Scandinavica, Mathematics and Computer Science Series*, no. 35, 1982. 107 p. 164 refs. Research supported by the Academy of Finland, Alfred Kordelin Foundation, Emil Aaltonen Foundation, and Finnish Cultural Foundation.

The biomass age dynamic is studied, and it is shown that the model of the age distribution dynamic can be converted into a feedback system described by a Volterra type integral equation. The latter's asymptotic properties show that the age distribution can be stabilized only by using a dilution rate with the constant specific growth rate, which is proposed. The maximum sustainable yield is found and it is shown that there is only one age distribution for which the process can be stabilized, this being the eigenvector associated with the maximum eigenvalue of the Leslie matrix. The discrete model can be presented as a bilinear system with stability properties. Dynamic equations for the average age of biomass and the variance of the average age can be produced, and the average age and age distribution can describe changes in the intercellular states of the biomass. Mathematically analogous statements can be formulated for other measures such as the DNA or protein content. C.D.

**A82-38841 The nature and rate of occurrence of medical emergencies on board Air France aircraft (Nature et fréquence des urgences médicales à bord des avions d'Air France).** J. Pasquet, J. Lavernhe, and E. Dozolme (Compagnie Nationale Air France, Service Médical, Paris, France). *Médecine Aéronautique et Spatiale*, vol. 21, 1st Quarter, 1982, p. 14-17. In French.

Illnesses and injuries requiring medical attention on board Air France aircraft during the years 1978-79 are discussed. A total of 585 events requiring medical attention and 379 uses of the emergency medical kit occurred, with seven instances leading to the necessity of requesting radio-relayed instructions from the ground. A plurality of all incidents comprised benign neurological or neurotic disorders such as excitement or anxiety, while 30.74 percent of the total cases were actual injuries such as foreign bodies in the mouth or eye. Twelve cases needing surgical intervention were encountered, including appendicitis, pancreatitis, and bleeding ulcers. The equipment, procedures, and the presence of a radio are concluded to have proved efficacious in handling the medical events which have happened on the flights. M.S.K.

**A82-38842 Physiological stresses linked to flight on airliners (Contraintes physiologiques liées au vol sur les avions de ligne).** J. Colin (Service de Santé des Armées, Paris, France). *Médecine Aéronautique et Spatiale*, vol.

21, 1st Quarter, 1982, p. 18-22. In French.

Pathological physiological conditions linked to flight on board aircraft are caused either by characteristics of the cabin atmosphere, to motions of the aircraft, or to normal functions of the aircraft, such as radio communications, vibrations, etc. Atmospheric problems which occur include hypoxia if pressurization is lost above 5000 m and barotraumatisms such as diaphragmatic spasms due to exposure to the ambient pressures at 1800 m altitude. Decompression is most dangerous to persons who have been deep-sea diving very soon prior to flight. Some protection from high altitude ionizing and nonionizing radiation is lost during flights, although the duration of flights is nominally short enough to ensure no excessive radiation is absorbed by passengers. Air sickness is largely eliminated by high altitude cruising to avoid turbulence. Finally, sound levels encountered in modern airliners are kept below the 80 dB levels which serve as a standard above which physical damage can occur. M.S.K.

**A82-38843** **Medical emergencies in flight - Pathogenic aspects (Urgences médicales en vol aspects pathogéniques).** G. Leguay (Hôpital Dominique Larrey, Versailles, France). *Médecine Aéronautique et Spatiale*, vol. 21, 1st Quarter, 1982, p. 22-26. In French.

Medical emergencies which occur during flight happen with a frequency of 1/17,271 passengers, are chiefly of a benign neurological nature, and in serious cases mainly comprise coronary angina, epileptic crises, nephretic colic, or acute abdominal pain. Causes of myocardial anoxia, which is indicated by the presence of angina, are explored, including those due to the cabin conditions and the emotional stress experienced by the passenger. Although high altitude flight does offer precipitating circumstances which can lead to anginal pain, only 29 cases have been observed thus far with 20,900,000 passengers. Little evidence exists for a significant role of flight in lithogenesis or renal colic, while cases of epileptic fits have been observed at a rate of 37/20,897,000 passengers. Contributing factors which can be linked to flight are a lack of sleep, hyperventilation, and intermittent lighting levels which precipitate photogenic attacks. It is concluded that most events occurring in flight are due to a disruption of normal living patterns, a change of surroundings, fear of flying, or an alteration in medication schedules. M.S.K.

**A82-38844** **Medical emergencies on board an airliner - Procedures when a doctor is on board (Urgences médicales à bord des avions de ligne - Conduite à tenir en vol en présence d'un médecin).** P. Fourn (Union de Transports Aériens, Paris, France). *Médecine Aéronautique et Spatiale*, vol. 21, 1st Quarter, 1982, p. 26-30. In French.

**A82-38845** **Medical emergencies on board airliners - Procedures in the absence of a doctor (Les urgences médicales à bord des avions de ligne - Conduite à tenir en l'absence de médecin à bord).** P. Ledoux (Lignes Aériennes Intérieures Air Inter, Paray-Vieille-Poste, Essonne, France). *Médecine Aéronautique et Spatiale*, vol. 21, 1st Quarter, 1982, p. 30-32. In French.

Procedures which a flight attendant will follow in the event of a medical emergency on board an airliner in flight when a doctor has not been found among the passengers are reviewed. An inventory is made of available medical supplies after first aid has been givin to the stricken passenger. Medications are administered from the emergency medical kit where deemed necessary while other utensils are improvised from material at hand. Advice is gained by radio communications with the ground and emergency evacuation of seriously ill persons is arranged to take place immediately upon landing. Attention is given to the process of examining the passenger, including skin color, location of pain, state of consciousness, pulse, breathing, and an assessment of the threat to the person's life due to heart malfunction. A suitable posture must be found for the passenger and oxygen from the emergency breathing apperatus must be ready. M.S.K.

**A82-38846** **Medical emergencies on board airliners - Ground management (Urgences médicales à bord des avions de ligne - Conduite à tenir ausol).** A. van Elstraete and M. Cara (Hôpital Necker, Paris, France). *Médecine Aéronautique et Spatiale*, vol. 21, 1st Quarter, 1982, p. 33-36. In French.

Ground-based assistance to medical emergencies on board an airliner in-flight include the provision of medical information, the power to deny or comply with a request for rerouting for an emergency landing, and to prepare assistance for a stricken person whose plane lands. French airports have on hand necessary medical equipment, personnel, access to other branches of an international aeromedical network, and the authority to accept a patient from a foreign aircraft which has been diverted to an emergency medical landing. A 24-hr radio monitoring service for medical emergencies was established in 1973 to operate on a high frequency unique side band reserved for medical calls. Case-history examples are outlined for instances of diverting an aircraft for an emergency landing, noting the necessity of providing for medical services at airports in different countries in order to provide life-saving medical care to seriously ill passengers. M.S.K.

**A82-38847** **Standards of physical condition for private pilots of aircraft and gliders (Normes d'aptitudes médicales des pilotes prives d'avions et de planeurs).** J. M. Masson (Tours, Université, Tours, France) and R. Auffret (Centre d'Essais en Vol, Laboratoire de Médecine Aérospatiale, Bretigny-sur-Orge, Essonne, France). *Médecine Aéronautique et Spatiale*, vol. 21, 1st Quarter, 1982, p. 37-39. In French.

The establishment of legal jurisdiction and the levels of health necessary for the obtaining and renewal of a private pilot's and glider pilot's license in France are discussed. The standards are noted to agree in the most part with international agreements, particularly the Chicago Convention of 1944 which required each signatory nation to ensure that pilot health standards were met domestically. The doctor who qualifies a private pilot is held directly responsible for any accidents or injuries which result from a debilitating physical condition which existed during the physical examination. A medical examiner is empowered to request a review or supplementary tests, including sonograms, ECG, and more frequent tests after the pilot reaches 40 years of age. Particular visual acuity, color perception and aural competency levels are outlined. M.S.K.

**A82-38848** **Aerobatics in light aircraft - Sensations and stresses experienced by the pilot (La voltige sur avions légers - Sensations et efforts subis par le pilote).** C. Lelaie. *Médecine Aéronautique et Spatiale*, vol. 21, 1st Quarter, 1982, p. 40-42. In French.

Physical stresses experienced by pilots of light aircraft during spins are categorized into stresses from pitching motion in the vertical plane and angular accelerations in rolls or side slip. An increase in g forces of from 3.8 to 8 times normal can be incurred. The same forces can be induced in rolls and square and octagonal loops, where the maneuver places a maximum structural strain on the aircraft for a short period of time. A chief danger is in greying or blacking out of vision, which occurs in degrees depending on the pilot's physical condition and ability to concentrate, and may be lessened in effect by contraction of the abdominal muscles. Planning the rhythm of the maneuvers before entering the rolls is noted to be necessary in order to retain control. The geometry of aircraft rolls is examined, and it is noted that female pilots have displayed a greater capacity for the physical stresses of extreme maneuvers than males. M.S.K.

**A82-38849** **Medico-physiological aspects of stunt-flying (Aspects médico-physiologiques de la voltige aérienne).** A. Leger (Centre d'Essais en Vol, Laboratoire de Médecine Aérospatiale, Bretigny-sur-Orge, Essonne, France). *Médecine Aéronautique et Spatiale*, vol. 21, 1st Quarter, 1982, p. 43-47. In French.

Physiological stresses encountered by a pilot during aerobatic maneuvers may be manifested in cardiovascular, sensorial, hormonal, and psychological effects. Cardiovascular consequences are caused by linear accelerations in the head-buttock axis which produce both positive and negative loadings. Rotations about the same body axis produce sensory disorientation, arising from input to sensory neural receptors which have evolved for ground-based activity. Increased g forces during flying maneuvers are tolerated inversely to the magnitude of the increase, and depend on the state of fatigue, hypoglycemia, presence of alcohol, and the heat of the environment in which the pilot sits. A neural model is assumed to physically exist, which stores possible tolerable orientations, shifts of orientations, and accelerations which a human might encounter, and the introduction of sensations, shifting scenery, and accelerations on otolith organs is noted to create a conflict between stimulated organs and expectations, leading to the onset of motion sickness. M.S.K.

**A82-38850** **Physiological stresses in flying a sailplane (Les contraintes physiologiques du vol-à-voile de performance).** J. P. Crance and M. Pittaco (Nancy I, Université, Vandoeuvre-les-Nancy, Meurthe-et-Moselle, France). *Médecine Aéronautique et Spatiale*, vol. 21, 1st Quarter, 1982, p. 48-50. In French.

Flying a sailplane requires constant attention, sometimes to the extent of 19-20 hr/day. Consciousness must be focused efficiently on the ambient meteorological conditions, the instruments, navigation, and obstacles which threaten collision. Continued deteriorating flying conditions, a lack of a place to land, and even a lack of experience can lead to anxiety, fatigue, and errors in judgment. Sitting for long periods with the body inclined to the vertical by 40-50 deg, arms extended, feet reaching the control pedals, and back in a bent posture can result in a pathological lumbar condition. Severe changes in interior cabin temperature can be experienced among different terrains and at varying heights and exacerbated by sweating. Respirators must be used after an hour of flying at 4000 m, or 4 hr at 2500-3500 m, or a 20 percent reduction in mental workload capacity occurs. Finally, hypoglycemia is a danger if a substantial meal is not consumed shortly before take-off for a long flight. M.S.K

**A82-38851** **In-flight incapacitation and pathology for the light aircraft stunt-flyer (Incapacités en vol et pathologie de la voltige aérienne en avion léger).** B. Froissart, A. Hermant, and A. Milhaud. *Médecine Aéronautique et Spatiale*, vol. 21, 1st Quarter, 1982, p. 51-56. 9 refs. In French.

The physiopathology of stunt flying is examined in terms of the stresses and effects induced by vertical angular accelerations. A total of 109 responses were received from questionnaires distributed to pilots, asking 400 questions regarding physiological phenomena observed by the pilots during and after stunt-flying episodes. The subjects' responses were categorized by the level of experience and type of activity. Specific queries were devoted to vertiginous and disorientational experiences, painful vertebral syndromes, black-out, loss of consciousness, convulsive trembling in the jaw or hands, and hiatal hernias during negative acceleration. A further investigation of causes of incapacity which led to accidents and fatalities revealed factors such as alcohol consumption before flight, and accelerations exceeding tolerance levels. The pathology of stunt-flying was found to be dominated by vertebral symptomology and problems with equilibration. M.S.K.

**A82-38852** **The clinical selection of astronauts at the C.P.E.M.P.N. (La sélection clinique des spationautes au C.P.E.M.P.N.).** R. Carre. *Médecine Aéronautique et Spatiale*, vol. 21, 1st Quarter, 1982, p. 57-59. In French.

The process of clinically qualifying astronaut candidates at the French CPEMPN in Paris is reviewed. A medical history dossier is completed by the family doctor and the candidate before a one week clinical examination begins. An ECG is then taken for a 24 hr period, along with heart radiography, peripheral pulse readings at different points, ECG readings during maximal exercise, and phonocardiography at four frequency bands. Spirography is employed to assess ventilatory functioning, capacity, and reserves. An EEG trace is obtained in normal and hyperventilation conditions, and thorough examination is made of the lymphatic system, the thyroid, the genitals, rectum, and the abdomen by palpitation. All areas of the body are X rayed and laboratory tests are run in hematology, serology, urinology, parasitology, blood chemistry, and enzymatic activity. Clinical and functional appraisal of the ophthalmological status is obtained and dental health is assessed. Conditions of rejection are discussed. M.S.K.

**A82-38853** **Vestibular screening of cosmonauts (Sélection vestibulaire des cosmonautes).** A. Leger and G. Bezamat. *Médecine Aéronautique et Spatiale*, vol. 21, 1st Quarter, 1982, p. 60-63. In French.

The methods employed in the first French clinical examinations of vestibular tolerances of astronaut candidates at the CEMPN are reviewed. Closely following Soviet practices, the candidates are exposed to a continuous application of Coriolis accelerations. Candidates are strapped into a seat which can be made to spin at 0-8 turns/sec, with monitoring proceeding on vital physiological parameters. Trials are performed in short spin modes at 180 deg/sec, constantly reversing the direction of motion, and in a long mode where spinning continues for tens of seconds, with the subject occasionally required to tilt his (her) head in response to an auditory signal. Questionnaires are filled out regarding the candidate's subjective assessment of motion sickness experiences. Assessments are made of the degree of nausea encountered, both from candidate reports and from measurements of arterial pressure. The severity of the tests is regarded as suitable in order to avoid onsets of motion sickness in actual flights. M.S.K.

**A82-38854** **Orthostatic tests during cosmonaut selection (Tests d'orthostatisme lors de la sélection des cosmonautes).** J. L. Poirier (Centre d'Essais en Vol, Laboratoire de Médecine Aérospatiale, Bretigny-sur-Orge, Essonne, France). *Médecine Aéronautique et Spatiale*, vol. 21, 1st Quarter, 1982, p. 64-71. In French.

Techniques for assessing the orthostatic tolerance to weightlessness by assessing the lower body negative pressure before flight are described. The lower part of the body is exposed to a lower barometric pressure than the upper part by placing the lower body in a neoprene-sealed cylinder. Another test is performed wherein the subject is fixed in a web on a table and tilted back, head down, at different inclinations lasting 10 min each, interspersed with five minutes in the horizontal position. Continuous monitoring proceeds of ECG, arterial pressure, and the volume variation and blood flow in the lower leg. The state of return circulation in the lower extremities is thus assessed, following the results of trials performed on board Spacelab. An assessment of the tolerance to orthostatic changes in the distribution of bodily fluids encountered during the first few hours of spaceflight and the level of hypotension which will be sustained in the first week after returning to the ground is possible with the techniques. M.S.K.

**A82-39159** **Mechanical chemical and bio-hazards.** S. M. Siegel (Hawaii, University, Honolulu, HI). *Advances in Space Research*, vol. 2, no. 3, 1982, p. 61-64.

Mechanical and chemical hazards resulting from space activities are briefly discussed, while biohazards are more extensively treated. The toxic materials that might be introduced into the atmosphere from mechanical and chemical space activity would be so slight in quantity as to pose no significant threat. Biohazards include contamination of other planets by terrestrial microorganisms, contamination of earth by extraterrestrial organisms, and contamination of earth by mutated terrestrial organisms exposed to space environments. It is concluded that the environment on other planets, including Mars, is completely inhospitable to terrestrial life forms, and that extraterrestrial forms would be so different from those of earth that they would be unable to survive in the biosphere or parasitize any organism on earth. No mutant capable of infecting or otherwise disrupting the earth's biosphere has ever been developed in scientific research, and any greatly mutated organism would not survive. C.D.

**A82-39241** † **Pathomorphological investigation of the mechanism of cochlear damage caused by noise (Patomorfologicheskoe issledovanie mekhanizma povrezhdenii ulitki shumom).** L. Voldrich (Ceskoslovenska Akademie Ved, Ustav Experimentalni Mediciny, Prague, Czechoslovakia). *Vestnik Otorinolaringologii*, July-Aug. 1982, p. 23-26. 7 refs. In Russian.

An investigation of the pathogenesis of inner ear damage in guinea pigs induced by excessive noise shows that excessive noise has a dual influence on auditory organs. Sound intensity that exceeds the limits of the mechanical rigidity of the exposed inner ear tissues (145 dB) destroys these tissues or their components. Repeated or prolonged exposure to sound at intensities not strong enough to mechanically destroy the structural integrity of the inner ear (90 dB) causes the auditory analyzer cells to die off due to an induced hyperactivity which results in the exhaustion of the cell's metabolic capabilities. N.B.

**A82-39242** † **Alterations of histochemical organization in the organ of Corti under the influence of chronic noise (Izmeneniia v gistokhimicheskoi organizatsii spiral'nogo organa pri khronicheskikh shumovykh vozdeistviiakh).** A. B. Karpanchev (Meditsinska Akademiia, Sofia, Bulgaria). *Vestnik Otorinolaringologii*, July-Aug. 1982, p. 29-31. In Russian.

A histochemical investigation of receptor cell metabolism in the organ of Corti in guinea pigs is undertaken to study the effects of chronic noise exposure on aerobic and anaerobic metabolism. A high level of activity of two enzymes, succinic dehydrogenase and lactic dehydrogenase, indicators of aerobic and anaerobic metabolism respectively, is found in the outer and inner receptor cell zones of the receptor structures of the organ of Corti. When the animals are exposed to chronic noise (85-90 dB), the activity of these enzymes decreases in some experimental animals, as reflected by a lower concentration of the reaction product in the outer and inner receptor cells. In addition to cells showing a lower activity, some cells show very little alteration of the reaction intensity. These alterations are morphological and cytochemical expressions of adaptation, overstrain and primary degeneration of receptor cells. N.B.

**A82-39243** † **Application of xylite for the detection of labyrinthine hydrops (Primenenie ksilita dlia vyiavleniia vnutrilabirintnogo gidropsa).** V. T. Pal'chun, V. I. Aslamazova, O. A. Buianovskaia, and T. S. Poliakova (II Moskovskii Meditsinskii Institut, Moscow, USSR). *Vestnik Otorinolaringologii*, July-Aug. 1982, p. 35-38. 10 refs. In Russian.

The use of xylite for detecting labyrinthine hydrops (Meniere's syndrome) is examined in order to find a compound more suitable for detecting this condition than glycerol, which has serious side effects and cannot be used in many patients. Xylite was administered in single oral doses of 0.75 to 1.5 g/kg body weight to 40 patients with Meniere's syndrome and its effects on auditory threshold values and several biochemical parameters of blood serum (potassium, sodium, sugar, total protein, osmolarity) were studied. Xylite in doses of 1 to 1.5 g/kg body weight significantly increased the levels of sugar, potassium and osmolarity and altered the auditory thresholds of the patients. The maximum dehydrating effect was obtained 2 hr after a xylite intake of 0.75-1 g/kg body weight and 1 hr after doses of 1-1.5 g/kg body weight, the latter being twice as fast as for a like amount of glycerol. Thus, xylite can be used effectively to diagnose Meniere's syndrome. N.B.

**A82-39244** † **Alterations in the labyrinth receptors after laser irradiation as detected by electron microscopy (Elektronno-mikroskopicheskoe izuchenie izmenenii v retseptorakh ushnogo labirinta pri vozdeistvii lazera).** M. P. Nikolaev, V. F. Anichin, O. P. Tokarev, and Iu. L. Tverskoi (Moskovskaia Klinicheskaia Bol'nitsa imeni S. P. Botkina; Ministerstvo Zdravookhraneniia RSFSR, Moskovskii Nauchno-Issledovatel'skii Institut Ukha, Nosa i Gorla, Moscow; Leningradskii Sanitarno-Gigienicheskii Meditsinskii Institut, Leningrad, USSR). *Vestnik Otorinolaringologii*, July-Aug. 1982, p. 39-44. 11 refs. In Russian.

Laser irradiation of the vertical semicircular canal in rabbits was conducted to assess its usefulness in the surgical treatment of ear diseases such as Meniere's syndrome. The receptor apparatus was examined by electron microscopy at periods of 1 hr, 3 days and 1 month following pulsed laser irradiation at 250 J/sq cm. The cellular structure was completely destroyed in the vertical semicircular canal within 1 hr after irradiation, but the cellular structure of the other receptors was not damaged, although erythrocytes were observed both in the endolymphatic space and in the interstitial tissues. After three days, again no structural elements were observed in the vertical semicircular canal. However, in the remaining receptors, several ultrastructural changes had occurred, including bending of the stereocilia on the apical surface of the ampullar receptor, an outflow of part of the supporting cells' cytoplasm into the endolymphatic space, and cytoplasmic vacuolization. No structural damage was found after 1 month, although there were ultrastructural changes in the myelin nerve fibers. Thus, laser irradiation exerts only a locally destructive effect on the semicircular canal, and the ultrastructural changes observed in the other ear receptors are general biologic actions which occur under the influence of external factors. N.B.

**A82-39263** † **The cortical regulation of human motion (Korkovaia reguliatsiia dvizhenii cheloveka).** E. B. Sologub. Leningrad, Izdatel'stvo Meditsina, 1981. 184 p. 228 refs. In Russian.

The book presents results of the electroencephalographic study of systems in the cerebral cortex involved in the control of human motor activity. Problems associated with the recording of EEGs during the performance of muscular work are considered, and techniques for EEG recording during intensive exercise are presented which are suitable for use under laboratory and field conditions. The general characteristics of EEGs during muscular work are then discussed, and the specific changes associated with particular motions are examined. The formation, characteristics, programming, actualization, regulation and noise tolerance of cortical functional systems controlling motion are then discussed, and the problem of the automatization of human motions is considered. Attention is also given to interhemispheric relations during motor activity, impairments in cortical systems of motor control in fatigue and neuroses, and the relation between cortical control systems and motion effectiveness. A.L.W.

**A82-39286 † Otoneurological symptoms and syndromes (Otonevrologicheskie simptomy i sindromy).** N. S. Blagoveshchenskaia. Moscow, Izdatel'stvo Meditsina, 1981. 328 p. 146 refs. In Russian.

The book considers the auditory and vestibular symptoms and syndromes which are encountered as a result of cerebral and peripheral damage at various levels. Following a review of vestibular and auditory anatomy and physiology and the methods available for the study of the vestibular and auditory analyzers, symptoms and syndromes associated with impairments of these analyzers are discussed on the basis of vast clinical experience. Methods examined for the detection of vestibular symptoms include the recording of spontaneous nystagmus either visually or by means of electronystagmography, and vestibular tests involving caloric stimulation and rotation. The differentiation between peripheral and central vestibular syndromes is also considered, and the classification of vestibular disorders as a function of the phase of the disease and the degree of vestibular compensation is discussed. Clinical symptoms and syndromes indicative of auditory disorders addressed include noises, hypercausia, and auditory hallucinations, and the use of the Weber experiment to differentiate between cochlear and retrocochlear lesions is discussed. A.L.W.

**A82-39290 † Histamine in biochemistry and physiology (Gistamin v biokhimii i fiziologii).** I. L. Vaisfel'd and G. N. Kassil'. Moscow, Izdatel'stvo Nauka, 1981. 280 p. 710 refs. In Russian.

Various aspects of the way in which histamine figures in the physiology of human beings and animals are considered. Recent theories on the biosynthesis and metabolism of this widely distributed biogenic amine are presented, as are assessments of its importance in the neurohumoral regulation of bodily functions, in biochemical transformations, and in the diurnal rhythm of formation and excretion. Also considered are the normal working of histamine and its effect when it is interfered with in certain ways. Attention is given to the importance of the synthesizing and splitting enzymes that bind and liberate factors in the mechanisms by which histamine works on cells, organs, physiological systems, and the organism as a whole. The interaction of histamine with other biologically active substances, serotonin in particular, is discussed. C.R.

**A82-39416 † Current problems concerning the vestibulo-ocular interaction (Sovremennye problemy zritel'no-vestibuliarnogo vzaimodeistviia).** A. A. Mit'kin (Akademiia Nauk SSSR, Institut Psikhologii, Moscow, USSR). *Uspekhi Fiziologicheskikh Nauk*, vol. 13, July-Sept. 1982, p. 56-81. 233 refs. In Russian.

Results of recent research on the tri-neural reflex arc linking the receptors of the labyrinth with the external muscles of the eyes are reviewed, emphasizing the plasticity and adaptivity of the vestibular-eye movement reaction, which is dependent upon the participation of many nerve structures and the close interaction of afferent-efferent mechanisms in various levels of integration. The main aspects that are discussed include: the dual character of the link between the vestibular and ocular systems, the integrated functions of the vestibular nuclei, the role of the pontomedullar reticular formations in the organization of vestibulo-ocular responses, the adaptive changes in the vestibulo-ocular interactions conditioned by the vestibular section of the cerebellum, the participation of the central and peripheral zones of the retina in evaluating the parameters of movement and the postural reactions of an organism, and the unity of the mechanisms of the vestibular and optical nystagmus. N.B.

**A82-39417 † Systemic mechanisms of homeostasis (Sistemnye mekhanizmy gomeostaza).** A. N. Medelianovskii (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Uspekhi Fiziologicheskikh Nauk*, vol. 13, July-Sept. 1982, p. 96-126. 209 refs. In Russian.

A systemic theory of homeostasis is developed, in which the basic organizational forms of the inner medium that provide adaptive behavior for an organism in its interactions with the surrounding medium are considered. Graphic models of regulation mechanisms and the direct material-energetic interactions of the most important factors of an organism's inner medium are presented. These models are suitable for a general representation of structural mechanisms of homeostasis and for the formation of algorithms for bioregulation of artificial organs. The role of mechanisms for the search of optimal conditions of the inner medium is discussed, and the applied modeling of these mechanisms is considered. A quantitative method is developed for the analysis of the state of a functional system which maintains the conditions of the inner medium. This systemic method is based on the modeling, separation, and synchronous registration of the values of the most important indicators, and the calculation of the indicators of the efficiency and the steadiness of the system. N.B.

**A82-39422 Is the CH4, H2 and CO venting from submarine hydrothermal systems produced by thermophilic bacteria.** J. A. Baross, M. D. Lilley, and L. I. Gordon (Oregon State University, Corvallis, OR). *Nature*, vol. 298, July 22, 1982, p. 366-368. 27 refs. NSF-supported research; Contract No. N00014-79-C-0004.

The results of chemical, physical, and microbiological analyses of microbial cultures obtained from eight hot water samples from black and white smoking chimneys and on a chimney wall obtained at the East Pacific Rise at 21 deg north are presented. The cultures were high in concentrations of H2S, Mn, and Fe and were found to be capable of growing in 86 C water. The culture from the hottest water held the highest amount of H2S, while the surrounding water had the lowest observed pH. Mixed cultures at 100 C displayed a 37-65 min generation time in a medium containing S, Mn, Fe, and NaHCO3, and were found to be giving off CH4 and H2. The results are concluded to be important for the fields of prokaryotic evolution, marine geochemistry, industrial microbiology, and exobiology. M.S.K.

**A82-39423 Ligation of oligonucleotides by pyrimidine dimers - A missing 'link' in the origin of life.** R. J. Lewis and P. C. Hanawalt (Stanford University, Stanford, CA). *Nature*, vol. 298, July 22, 1982, p. 393-396. 22 refs. Grant No. NIH-GM-09901-20.

It is reported that thymidine oligonucleotides annealed to polydeoxyadenylate on DNA strands can be ligated end-to-end by UV irradiation by means of thymine dimerization of the terminal nucleotides in adjacent oligonucleotides. Direct photoreversal of the linkages is then possible with 254 nm UV radiation, although cleavage by the bacteriophage T4 endonuclease V, is not possible. Further discussion is given to the possibility that high molecular weight polynucleotides in primordial seas were generated from oligonucleotides by pyrimidine dimerization induced by solar UV radiation without a protective ozone layer. It is suggested that cyclobutane pyrimidine dimer which is hostile to DNA replication and survival in present day organisms once played a role in the prebiotic assembly of primordial genetic material. M.S.K.

**A82-39426 † Abiogenic synthesis of the peptide bond. II (Abiogennyi sintez peptidnoi sviazi. II).** L. N. Moiseeva, R. F. Zaiats, and T. E. Pavlovskaia (Akademiia Nauk SSSR, Institut Biokhimii, Moscow, USSR). *Akademiia Nauk SSSR, Izvestiia, Seriia Biologicheskaia*, Mar.-Apr. 1982, p. 230-241. 81 refs. In Russian.

Experimental approaches to abiogenic peptide synthesis in heterogeneous conditions are surveyed along with mechanisms of such synthesis. An examination of heterogeneous polycondensation of amino acids with the participation of their active forms indicates that mineral matrices can carry out catalytic functions, leading to different mechanisms of polycondensation for homogeneous and heterogeneous conditions, and to increased polymerization of amino acids. The specific character of abiogenic peptide synthesis in open systems is also considered. B.J.

**A82-39427 † Metabolism of the thermophilic hydrogenous bacterium Pseudomonas thermophila K-2 (Metabolizm termofil'noi vodorodnoi bakterii Pseudomonas thermophila K-2).** E. E. Emnova and A. K. Romanova (Akademiia Nauk SSSR, Institut Mikrobiologii, Moscow, USSR). *Akademiia Nauk SSSR, Izvestiia, Seriia Biologicheskaia*, Mar.-Apr. 1982, p. 271-283. 39 refs. In Russian.

**A82-39428 † Mycelial fungi, isolated from the ice sheet of the central Antarctic (Mitselial'nye griby iz tolshchi lednika tsentral'noi Antarktiki).** S. S. Abyzov (Akademiia Nauk SSSR, Institut Mikrobiologii, Moscow, USSR) and L. A. Beliakova (Akademiia Nauk SSSR, Institut Biokhimii i Fiziologii Mikroorganizmov, Pushchino, USSR). *Akademiia Nauk SSSR, Izvestiia, Seriia Biologicheskaia*, May-June 1982, p. 432-436. 23 refs. In Russian.

Microbiological analyses of core samples from the central Antarctic ice sheet have identified various microorganisms, including mycelial fungi preserved for a long period of time in a state of anabiosis. Attention is given to certain morphological peculiarities of the fungi, which are apparently associated with the long-term effect of extremal conditions. B.J.

**A82-39429 † Investigation of the cardiovascular system during prolonged space flights on board the Salyut space stations (Issledovaniia serdechno-sosudistoi sistemy v dlitel'nykh kosmicheskikh poletakh na orbital'nykh stantsiiakh 'Saliut').** A. D. Egorov, I. V. Alferova, O. D. Anashkin, V. I. Bernadskii, Z. A. Golubchikova, M. V. Domracheva, O. G. Itsekhovskii, I. I. Kas'ian, V. R. Liamin, and A. P. Poliakova (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *Akademiia Nauk SSSR, Izvestiia, Seriia Biologicheskaia*, July-Aug. 1982, p. 485-498. 38 refs. In Russian.

The effects of weightlessness on the cardiovascular system of cosmonauts during space flights lasting up to six months are investigated. Changes in blood circulation indicators measured at rest and during dynamic tests both during and after the flights showed no linear dependence on the length of the flight and, in general, did not increase with a lengthening of flights from one to six months. The changes in the central hemodynamics were reflected by an initial increase in the systolic volume and a longer, continuing increase from preflight levels in the circulatory minute volume. The changes in the phase structure of the cardiac cycle at rest were characterized by a reduction of the isometric phases of contraction and relaxation and a prolonging of both the sphygmic phase and the rapid filling phase. The regional hemodynamics showed an increase in the venous pressure of the jugular vein, and in the veins of the antebrachium and the tibia. Also, several parameters of arterial pressure and the peripheral resistance showed a slight tendency to decrease. Functional tests conducted during and after the flights showed a decrease in the orthostatical tolerance and physical efficiency of the cosmonauts, but this decrease remained at a constant level during flights of up to 5-6 months. N.B.

**A82-39430** † **The microflora of the central Antarctica glacier and control methods for the sterile isolation of an ice core for microbiological analyses (Mikroflora lednika Tsentral'noi Antarktiki i metody kontrolia steril'nogo otbora ledianogo kerna dlia mikrobiologicheskikh analizov).** S. S. Abyzov, V. Ia. Lipenkov, N. E. Bobin, and B. B Kudriashov (AN SSSR, Institut Mikrobiologii, Moscow; Leningradskii Gornyi Institut; Gosudarstvennyi Komitet po Gidrometeorologii i Kontroliu Prirodnoi Sredy, Arkticheskii i Antarkticheskii Nauchno-Issledovatel'skii Institut, Leningrad, USSR). *Akademiia Nauk SSSR, Izvestiia, Seriia Biologicheskaia*, July-Aug. 1982, p. 537-548. 31 refs. In Russian.

**A82-39431** **Field sensitivity of the 'red' mechanism derived from primate local electroretinogram.** R. M. Boynton (California, University, San Diego, CA) and W. S. Baron (SRI International, Life Sciences Div., Menlo Park, CA). *Vision Research*, vol. 22, no. 8, 1982, p. 869-878. 25 refs. Grants No. NIH-EY-01451; No. NIH-EY-01579.

Using the local ERG in response to a long-wavelength stimulus as an indicator, field sensitivity functions have been obtained from cynomolgus macaque monkeys (Macaca fascicularis) with flashed and sinusoidally flickering test stimuli. These functions show the reciprocal of the relative radiance, for various adapting wavelengths, required to reduce a 667-nm test response to a criterion level. The resulting functions resemble both Stiles's pi and the S sub R function of Smith and Pokorny, provided that pis and S sub R are displaced about 7 nm toward longer wavelengths, in agreement with microspectrophotometric evidence. When field sensitivity functions are obtained with a 20 Hz sinusoidal test stimulus, using a continuous change of field wavelength, the direction of a slow spectral traverse has a large effect upon the shape of the sensitivity and phase functions - a hysteresis effect. These effects do not occur at 5 Hz. The test light is proven to be ineffective upon G cones, and it appears unlikely that measurably significant signals are significantly induced into G cones as an indirect result of the modulation of R cones. Therefore, the steady background light absorbed in the G cones seems to be influencing the response of the R cones. (Author)

Walraven (Centrale Organisatie voor Toegepast-Natuurwetenschappelijk Onderzoek, Instituut voor Zintuigfysiologie TNO, Soesterberg, Netherlands). *Vision Research*, vol. 22, no. 8, 1982, p. 929-943. 54 refs.

The influences of background chromaticity and luminance and stimulus contrast on chromatic adaptation are studied in an experiment involving a white test field superposed on a range of background colors. Stimuli were presented as a flashed annulus superimposed on a circular background field, with the observer task being to adjust the intensities of the two complementary test beams making up the stimulus so as to maintain an achromatic (white) appearance. The shift in chromaticity of the achromatic point is found to be in the direction of the chromaticity of the background, with the magnitude of this shift depending directly on background luminance and inversely on contrast. Results support a model of chromatic adaptation in which the transient test and steady background fields are nonadditive, in that the background field only affects the test flash by altering the gain of cone pathways, the Vos-Walraven cone spectral sensitivities are applicable, and a proportionality is found between the attenuation of dim and bright test flashes. **A82-39435** **Global visual processing for saccadic eye movements.** J. M. Findlay (Durham, University, Durham, England). *Vision Research*, vol. 22, no. 8, 1982, p. 1033-1045. 26 refs. Medical Research Council of England *Grant No. G977/865/N.*

Four experiments are reported in which saccadic eye movements are examined when the eye moves to targets in peripheral vision which consist of two discrete stimuli. It is found that under a variety of conditions, the saccade amplitude is such that the saccade lands at an intermediate position between the stimuli. This result has been termed the global effect and is interpreted as an influence of the global target configuration on the saccade amplitude. It is suggested that this phenomenon may be explicable in terms of activity in an ensemble of cells with large receptive fields. The experiments demonstrate the global effect in the situations of rapid automatic tracking, scanning for target detail and comparison of target configurations. The effect depends in a systematic quantitative manner on the properties of the visual stimuli. This may be loosely described by saying the saccade is directed to the center of gravity of the target configuration. But the saccades are generally directed closer to the near target than predicted by the geometric center of gravity. (Author)

**A82-39436** **Retinal location and visual localization during pursuit eye movement.** L. Mitrani and G. Dimitrov (B'lgarska Akademiia na Naukite, Institut po Fiziologiia, Sofia, Bulgaria). *Vision Research*, vol. 22, no. 8, 1982, p. 1047-1051. 9 refs.

Experiments were performed to measure the mislocation of a brief visual stimulus presented during pursuit eye movements in different places over the retina. The results obtained show that the mislocation for regions 5 deg from fovea in the direction of motion is greater than in fovea. This fact shows that some kind of reorganization takes place in the visual localization mechanisms during pursuit eye movements. The results cast doubts on the concept of 'perception time' which is often used to explain the visual mislocation phenomenon. (Author)

**A82-39439** **Detection/discrimination in the long-wavelength pathways.** B. A. Wandell, J. Sanchez, and B. Quinn (Stanford University, Stanford, CA). *Vision Research*, vol. 22, no. 8, 1982, p. 1061-1069. 35 refs. Grant No. NIH-5-R01-EY-03164-02.

The simultaneous detection/discrimination method is applied to the mechanisms mediating the detection of long- and middle-wavelength test lights. The results suggest the following: (1) a test light detected by a signal initiated primarily in the long-wavelength receptors will be ultimately detected by different sets of nerve cells, depending upon the background illumination; (2) the discriminability of two test lights depends upon their duration, even when the lights are equated (at threshold) for visibility. (Author)

**A82-39440** **Gravity and the tilt aftereffect.** J. M. Wolfe and R. Held (MIT, Cambridge, MA). *Vision Research*, vol. 22, no. 8, 1982, p. 1075-1078. 18 refs. Grants No. NIH-EY-01191; No. NIH-EY-02621.

Wolfe and Held (1981) have reported that, following monocular exposure to a tilt aftereffect-inducing stimulus, binocularly measured tilt aftereffects were significantly smaller than either monocularly or interocularly measured effects. Interocular effects are those measured in the eye not exposed to the adapting pattern. They are smaller than monocular effects. The present investigation has the object to provide support for an hypothesis considered in the earlier study, taking into account the difference between the chevron and tilted grating versions of the tilt aftereffect. The ability of gravity to alter the grating results but not the chevron results is found to suggest that the grating results are produced, in part, by a binocular process not active in the chevron experiment. The hypothetical binocular process would be subject to vestibular influences. G.R.

*SSSR, Izvestiia, Seriia Biologicheskaia,* Jan.-Feb. 1982, p. 25-43. 65 refs. In Russian.

Various experimental approaches for the abiogenic synthesis of the peptide bond in homogeneous and heterogeneous conditions are reviewed, and the likelihood of each of these processes being involved in the origin of life is examined. The role of the different energy sources, as well as the thermodynamic and physical requirements, in these processes is also discussed. Synthesis of the peptide bond under homogeneous conditions can occur in four general ways: thermal polycondensation of amino acids at high temperatures, polymerization of amino acids and their precursors under the influence of prebiological condensation agents of the carbodiimide type, polycondensation of amino acids with the participation of polyphosphate, and polycondensation of amino acids with the participation of aminoacyladenilate. Synthesis under heterogeneous conditions involves polycondensation of amino acids on the surface of minerals. N.B.

**A82-39507 # Selection and training of European astronauts (Auswahl und training Europäischer Raumfahrer).** K. E. Klein, J. R. Hordinsky, and L. Vogt (Deutsche Forschungs - und Versuchsanstalt für Luft- und Raumfahrt, Institut für Flugmedizin, Bonn, West Germany). *Luft- und Raumfahrt,* vol. 3, 2nd Quarter, 1982, p. 35-38, 40-42. 11 refs. In German.

Planning for the participation of European astronauts in the Spacelab mission is discussed. The historical development of the plan, the design concept for the spacecraft and lab, and the preliminary astronaut selection process in Europe are described, including the roles of ESA and NASA. Training for the mission is discussed, including training not directly concerned with the scintific goals of the mission and that directly concerned with the payload. The ESA training program is detailed, and ideas for furthering biomedical training are discussed along with training procedures using mission and experiment simulation. C.D.

**A82-39541 Lockheed involvement in Shuttle life sciences flight experiments.** T. M. Olcott (Lockheed Research Laboratories, Palo Alto, CA). *Lockheed Horizons,* Summer 1982, p. 36-47.

The goals, procedures, and equipment for the Shuttle life sciences program, which will assess effects of microgravity environment on humans, allow continuous observations of humans in space, and include exobiological experimentation are described. Physiological and metabolic changes caused by microgravity will be monitored, along with variations due to sex, motion sickness, and bone demineralization. The role of gravity in plant growth will be assessed, as will plant and animal gravity proprioceptive mechanisms, the interaction of gravitational forces and stress or light, and effects of microgravity over several generations. Details of the Spacelab facilities and experiments are discussed in terms of the use of a plant growth unit, and animal holding facility, a general purpose work station, a vestibular research facility, and accelerators and a centrifuge. M.S.K.

**A82-39569 # Approaches to the study of the hypothalamus-pituitary gland relationship (Neki od pristupa izuchavaniu khipotalamus-khipofiza i mekhanizma povratne sprege).** P. N. Martinovich. In: Collection of papers dedicated to Pavle Savic on the occasion of his 70th birthday.
Belgrade, Srpska Akademiia Nauka i Umetnosti, 1980, p. 111-121. 33 refs. In Serbo-Croatian.

Experimental studies relating to hypothalamus-pituitary gland relationships are summarized. Particular attention is given to ovulation induced in rats by mechanically produced lesions in the region of the pituitary stalk; the effects of X-rays on anterior hypophysis; and hypothalamus releasing factors and the control of the anterior pituitary function. B.J.

Various aspects in the use of mathematical models and computer simulation to study basic biological processes are examined. Particular attention is given to the use of simulation in studies of metabolism and excitability. B.J.

**A82-39743 Image orientation for RPV ground station crew.** R. S. Harvey (Army Personnel Research Establishment, Farnborough, Hants., England). In: Remotely piloted vehicles; International Conference, 2nd, Bristol, England, April 6-8, 1981, Conference Papers. Bristol, England, University of Bristol, 1982, p. 24.1-24.7. 6 refs.

An experiment was carried out to determine the most appropriate image orientation for the crew in the ground station of a remotely piloted vehicle equipped with a steerable sensor. Such a sensor could provide imagery with a 'horizon-up' orientation or a 'specified-compass-direction' orientation. Each of these orientations has a different impact interpretation and vehicle navigation. (Author)

**A82-39749 Human factors of an RPV ground control station.** S. J. Page (Army Personnel Research Establishment, Farnborough, Hants., England). In: Remotely piloted vehicles; International Conference, 2nd, Bristol, England, April 6-8, 1981, Supplementary Papers. Bristol, England, University of Bristol, 1982, p. 25.1-25.3. 5 refs.

The human factors of system design are concerned with the many facets of the man in the system. The range covers not only the design of the man-machine interfaces and the general working environment but also wider issues such as task performance, selection, training and job design. As part of a research programme studying the human factors of RPV systems, a ground control station simulator was commissioned. This paper reviews the evolution and use of this simulator as a system research and development tool. (Author)

**A82-39792 † The histochemistry of enzymes in specific skin glands of the European hedgehog /Erinaceus europeaus/ during hibernation (Gistokhimiia fermentov spetsificheskikh kozhnykh zhelez evropeiskogo ezha /erinaceus europaeus/ v period zimnei spiachki).** V. Dzhemukhadze (Akademiia Nauk SSSR, Institut Evoliutsionnoi Morfologii i ekologii Zhivotnykh, Moscow, USSR). *Akademiia Nauk SSSR, Doklady,* vol. 264, no. 6, 1982, p. 1492-1494. 15 refs. In Russian.

**A82-39793 † The participation of the lymphatic system in the resistance of an organism to hypoxia (Uchastie limfoidnoi sistemy v rezistentnosti organizma k gipoksii).** V. T. Antonenko, N. P. Pen'kovskaia, and V. I. Danileiko (Kievskii Institut Usovershenstvovaniia Vrachei, Kiev, Ukrainian SSR). *Akademiia Nauk SSSR, Doklady,* vol. 264, no. 6, 1982, p. 1511-1513. 13 refs. In Russian.

The relationship of changes in the cellular metabolism of the lymphatic system with the formation of resistance to altitude hypoxia is investigated. Mice were injected intraperitoneally with anti-thymocyte and anti-cytochrome sera and subjected to conditions equivalent to 11,000 m above sea level in an altitude chamber. The survival times of the mice increased by 5 and 10.4 times following injections (0.5 ml) of anti-thymocyte and anti-cytochrome sera respectively, while normal rabbit serum only slightly increased the survival times. In addition, anticytochrome injections induce decreases in the amount of lactic acid found in the liver, while after 24 hr the amount of lactic acid increases by 65-120%. The antihypoxic effect of the anti-cytochrome serum is linked with anti-cytochrome oxidase antibodies, since no antihypoxic activity remains after the serum is boiled. The antihypoxic effect is observed 30-60 min after the injections of anti-thymocvte and anti-cytochrome sera. N.B.

**A82-40277 # Experimentally determined pilot models using hovering VTOL flight data.** D. Andrisani (Purdue University, West Lafayette, IN), S. M. Bourne, and C. F. Gau. *American Institute of Aeronautics and Astronautics, Atmospheric Flight Mechanics Conference, 9th, San Diego, CA, Aug. 9-11, 1982, Paper 82-1294.* 12 p. 10 refs. Contract No. N62269-81-C-0729.

It is pointed out that the successful design of manned aircraft and their flight control systems requires careful attention to the dynamic interaction of the pilot and the vehicle. The present investigation is concerned with this interaction for a hovering VTOL. The specific approach employed in the investigation involves the use of time domain parameter identification methods to determine the mathematical model of the human pilot. In connection with the conducted research the pilot was told to precisely hover a VTOL aircraft, the X-22A, over a landing pad which moved in semirandom step like manner. The reported research involves an attempt to obtain time domain pilot models from transient responses of a manned VTOL. Attention is given to the employed two-strategy pilot model, preliminary pilot model results using that model, and a discussion of problems involved with time domain pilot modeling. G.R.

**A82-40307 † Echocardiographic characterization of heart hypertension (Ekhokardiograficheskaia kharakteristika gipertonicheskogo serdtsa).** A. I. Sinopal'nikov. *Voenno-Meditsinskii Zhurnal,* June 1982, p. 34-37. 19 refs. In Russian.

An approach to the analysis of echocardiograms of the left ventricle in patients with hypertension is proposed. It is shown that this approach makes it possible to identify different types of heart hypertension as well as different stages in the evolution of such hypertension. This approach should lead to a greater differentiation of the types of antihypertension treatments. B.J.

**A82-40308 † Factors of the natural resistance of the body and methods for studying them (Faktory estestvennoi rezistentnosti organizma i metody ikh izucheniia).** G. A. Bashmakov. *Voenno-Meditsinskii Zhurnal,* June 1982, p. 38-40. 18 refs. In Russian.

**A82-40309 † Diagnostics of disturbances of heart rhythm and conductance and their professional evaluation in flight personnel (Diagnostika naruschenii serdechnogo ritma i provodimosti i ikh ekspertnaia otsenka u letnogo sostava).** V. I. Koledenok, V. M. Kondrakov, and N. A. Lysogor, *Voenno-Meditsinskii Zhurnal,* June 1982, p. 46-49. 10 refs. In Russian.

The paper describes an investigation of the incidence of heart arrhythmias and intracardial blockades in flight personnel at rest and in conditions of measured physical loads. A large number of flight personnel ranging in age from 20 t0 54 years were tested. Heart arrhythmias and blockades were revealed in 3.5% of the tested cases in a state of rest. Physical-exercise testing led to the disclosure of hidden disturbances of heart rhythm and conductance in 10.1% of the supposedly healthy subjects. Some recommendations on the professional evaluation of such disturbances are given. B.J.

**A82-40310 † The content of cAMP and cGMP in brain tissues during adaptation to ischemia (Soderzhanie tsAMF i tsGMF pri adaptatsii tkanei mozga k ishemii).** L. V. Govorova, A. G. Ziabkina, Kh. M. Markov, Sh. S. Tashaev, and S. I. Teplov (Leningradskii Nauchno-Issledovatel'skii Neirokhirurgicheskii Institut, Leningrad; Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Fiziologicheskii Zhurnal SSSR,* vol. 68, June 1982, p. 752-757. 16 refs. In Russian.

The participation of the adrenergic and cholinergic systems in the adaptation of the brain to ischemia, caused by the occlusion of both common carotid arteries, is studied in rats. The dynamics of cAMP and cGMP levels in the cerebral hemisphere following ischemia induced in normal animals and in rats that have undergone cervical sympathectomy show that at the onset of compensatory reactions the adrenergic mechanisms are optimal, but during prolonged brain ischemia and severe brain damage the cholinergic reactions play the leading role. In addition, these findings support previous observations which show that parasympathetic influences determine the increase in the stability of animals to extreme hypoxia. N.B.

**A82-40311 † The physiological mechanisms of the arousal response in animals under conditions of hypobiosis (Fiziologicheskie mekhanizny 'storozhevoi reaktsii' u zhivotnykh v sostoianii gipobioza).** S. A. Bugaev and E. V. Nikitina (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Fiziologicheskii Zhurnal SSSR,* vol. 68, June 1982, p. 758-762. 9 refs. In Russian.

The arousal response is studied in rats during conditions of artificial hypobiosis as a means of investigating the mechanism of the animals' interrelation with the outside environment. The arousal response in rats during hypobiosis is characterized by an outburst of movement with a definite coordinated sequence of motion in response to a change of the animal's posture. Repeated responses of this type lead to a rapid accumulation of electromyographic activity and an increase in body temperature. These responses are more pronounced in heterothermic animals, and are accompanied by a restoration of the original body position and a significant increase in body temperature. This effective heat production in heterothermic animals during the arousal response is probably linked with the mechanism of 'special' awakening under conditions of reduced activity. N.B.

**A82-40313 † The regulation of calcium exchange in the cells of different regions of the warm-blooded animal heart (O reguliatsii obmena kal'tsiia v kletkakh razlichnykh otdelov serdtsa teplokrovnogo zhivotnogo).** V. V. Barabanova, V. Ia. Egorov, and T. A. Smirnova (Leningradskii Gosudarstvennyi Pedagogicheskii Institut, Leningrad, USSR). *Fiziologicheskii Zhurnal SSSR,* vol. 68, June 1982, p. 791-798. 10 refs. In Russian.

The effect of the specific calcium-regulating hormone calcitonin on the action potentials of contractile myocardium and pacemaker cells is studied in sexually mature and immature rabbits under conditions of a normal ionic environment and an increased calcium concentration. Results show that the regulating influence of calcitonin is exerted through the alteration of calcium ion transport in the electroexcitable channels of the membranes in various regions of the myocardium. The age specificity of the hormone's action is a result of the varying contributions of the different potential-forming ions to the action potential generation in the myocardium cells of animals of different ages. N.B.

**A82-40314 † The changes in the concentration of free amino acids in muscles during exercise (Izmeneniia soderzhaniia svobodnykh aminokislot v myshtsakh pri ikh usilennoi aktivnosti).** A. A. Viru and A. K. Eller (Tartuskii Gosudarstvennyi Universitet, Tartu, Estonian SSR). *Fiziologicheskii Zhurnal SSSR,* vol. 68, June 1982, p. 799-803. 16 refs. In Russian.

The effect of exercise on the amino acid metabolism in rats is studied by determining the concentration of free amino acids in the quadriceps femorii muscle and the liver of rats which have been subjected to swimming for 1.5 hr with a load of 6% of body weight or 12 hr without load. Results show a decrease in the concentrations of free amino acids both in the quadriceps femorii muscle and in the liver after 1.5 and 12 hr of exercise. After 1.5 hr of exercise the concentration of alanine is sharply lower, although no further decrease in alanine concentration is observed after 12 hr of exercise. The total content of oxidizable amino acids (alanine, asparagine, valine, glycine, isoleucine, and leucine) is found to decrease after 1.5 hr of exercise, but increases after 12 hr of exercise. Thus, prolonged muscular work seems to suppress the tissue catabolism of amino acids, as well as to suppress the glucose-alanine cycle in muscle. In addition, no pronounced change in the amino acid content of myocardial muscle is observed. N.B.

**A82-40315 † The gradualness of the reaction of the pituitary-adrenocortical system to activating and inhibiting signals (Gradual'nost' reaktsii gipofizarno-adrenokortikal'noi sistemy na aktiviruiushchii i tormoznyi signaly).** A. I. Bogdanov, L. P. Filaretova, and A. A. Filaretov (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad, USSR). *Fiziologicheskii Zhurnal SSSR,* vol. 68, June 1982, p. 804-808. 12 refs. In Russian.

The influence of electrical stimulation (0.3-1.1 mA) of the skin and injections of hydrocortisone (5-100 micrograms/kg body weight) on the functioning of the pituitary-adrenocortical system in rabbits is investigated. Results show that electrical stimulation of the skin of 0.3-0.7 mA induces a rise in the level of corticosteroids in the blood that is proportional to the electric current applied. However, an increase in the electric current to 0.9-1.1 mA results in a decrease of the hormonal response. Hydrocortisone intravenously injected immediately prior to immobilization of the rabbits for 90 min inhibits the response of the pituitary-adrenocortical system to the applied stress in proportion to the amount of hydrocortisone injected. N.B.

**A82-40316 † Trace reactions of the frog tissue metabolism on changes of ambient temperature in the frog Rana ridibunda Pall (O sledovykh reaktsiiakh tkanevogo metabolizma pri smene temperatur sredy u ozernoi liagushki Rana ridibunda Pall).** G. I. Ibraimova (Akademiia Nauk Kirgizkoi SSR, Institut Fiziologii i Eksperimental'noi Patologii Vysokogor'ia, Frunze, Kirgiz SSR). *Fiziologicheskii Zhurnal SSSR,* vol. 68, June 1982, p. 809-813. 16 refs. In Russian.

The influence of temperature compensation on frogs which have been acclimated to cold (7 C) and ware (17-22 C) environments is investigated by observing the metabolic shifts in the acclimated frogs upon changes in the ambient temperature. Moving a frog from a cold to a warm environment causes a signigicant decrease in the temperature coefficient (Q10) of the brain and skeletal muscle tissue respiration, a trace reaction, within a 1.4-24 hr period. However, moving a frog from a warm to a cold environment results in no change of the Q10 value. The temperature coefficient of brain tissue respiration gradually begins to decrease after one hour following the transfer from a cold to a warm environment and reaches a minimum value after 24 hr. One hour after the transfer from a cold to a warm environment, the Q10 of skeletal muscles sharply increases (from 1.87 to 2.27). A plateau in Q10 occurs during 6-18 hr after the transfer, and is followed by a decrease in Q10 to 1.78 by the 24th hour. It is proposed that these responses are linked to a discordance between the permeability of the cell membrane and the activities of the cellular enzymes, which results in changes in the cellular enzyme/substrate ratios. N.B.

**A82-40435 Aging and visual function of military pilots - A review.** R. Sekuler, D. Kline, and K. Dismukes (National Research Council, Assembly of Behavioral and Social Sciences, Washington, DC). *Aviation, Space, and Environmental Medicine,* vol. 53, Aug. 1982, p. 747-758. 83 refs. Contract No. N00014-80-C-0159. NR Project 201-124.

The results of the U.S. Navy Committee on Vision survey of existing data regarding sight impairment with age and its importance to the performance of military pilots are presented. Military pilot tasks which diverge from commercial pilot responsibilities are reviewed, noting that no data specifically concerned with military pilot vision was available. Attention is given to alterations in visual functions such as light transmission, dark adaptation, acuity, contrast sensitivity, dynamic visual acuity, oculomotor behavior, the visual field, depth perception, temporal resolution, visual information processing, and perceptual organization. Methodological problems inherent in conducting cross-sectional and longitudinal tests are discussed. Significant military pilot visual factors affected by age are concluded to include contrast sensitivity, dynamic acuity, glare recovery, night vision, and information processing. M.S.K.

**A82-40436 * Rapid perceptual adaptation to high gravitoinertial force levels - Evidence for context-specific adaptation.** J. R. Lackner (Brandeis University, Waltham, MA) and A. Graybiel (U.S. Navy, Naval Aerospace Medicine Research Laboratory, Pensacola, FL). *Aviation, Space, and Environmental Medicine,* vol. 53, Aug. 1982, p. 766-769. 12 refs. Contract No. NAS9-15147. NASA Order T-9140-E.

Subjects exposed to periodic variations in gravitoinertial force (2-G peak) in parabolic flight maneuvers quickly come to perceive the peak force level as having decreased in intensity. By the end of a 40-parabola flight, the decrease in apparent force is approximately 40%. On successive flight days, the apparent intensity of the force loads seems to decrease as well, indicating a cumulative adaptive effect. None of the subjects reported feeling abnormally 'light' for more than a minute or two after return to 1-G background force levels. The pattern of findings suggests a context-specific adaptation to high-force levels. (Author)

**A82-40437 * Antimotion-sickness efficacy of scopolamine 12 and 72 hours after transdermal administration.** A. Graybiel (U.S. Navy, Naval Aerospace Medical Research Laboratory, Pensacola, FL), D. B. Cramer (NASA, Washington, DC; U.S. Navy, Naval Aerospace Medical Research Laboratory, Pensacola, FL), and C. D. Wood (U.S. Navy, Naval Aerospace Medical Research Laboratory, Pensacola, FL; Louisiana State University, Shreveport, LA). *Aviation, Space, and Environmental Medicine*, vol. 53, Aug. 1982, p. 770-772. 6 refs. NASA Order T-3384-G.

The antimotion sickness remedy, transdermal therapeutic system-scopolamine, administered in this experiment was scheduled to deliver 1.0 mg of scopolamine over a period of 3 d, and this paper compares its efficacy 12 and 72 h after administration. In a double-blind study, six male college students were individually exposed to a standardized provocative test in a slow rotation room after six apparently identical treatments comprising four placebos and two medications. Efficacy was categorized as beneficial, inconsequential, or detrimental. None of the responses was detrimental. Following the first administration of the therapeutic system, there were four beneficial responses after 12 h but none was beneficial after 72 h. Following the second treatment regimen, there were four beneficial responses after 12 h and three beneficial responses after 72 h. Great individual differences were demonstrated, two subjects accounting for six beneficial responses and two accounting for only one beneficial response. The difference in efficacy after 12 and 72 h has practical and theoretical significance. (Author)

**A82-40438 *** **Dynamics of subjective discomfort in motion sickness as measured with a magnitude estimation method.** O. L. Bock and C. M. Oman (MIT, Cambridge, MA). *Aviation, Space, and Environmental Medicine*, vol. 53, Aug. 1982, p. 773-777. 27 refs. Grants No. NAG2-88; No. NCC9-1.

Eight subjects, wearing left-right vision reversing goggles, executed sequences of controlled active head movements to provoke motion sickness. Head movement sequences were interspaced with periods of eye closure and no head movement to permit partial remission of symptoms between sequences. Subjects reported the level of discomfort experienced by using a magnitude estimation technique derived from Stevens' (1957) ratio scaling method. Using this approach, we demonstrated that the time course of subjective discomfort exhibits a profile, similar in all our subjects, characterized by both fast and slow response components. The potential usefulness of magnitude estimation for research on the dynamic properties of the mechanism generating motion sickness symptoms is discussed. (Author)

**A82-40439** **Task categorization and the limits of human performance in extreme heat.** P. A. Hancock (Illinois, University, Urbana, IL). *Aviation, Space, and Environmental Medicine*, vol. 53, Aug. 1982, p. 778-784. 43 refs.

A literature review is presented to synthesize data for the effects of extreme thermal stress on human performance in tasks of mental and cognitive skill, tracking, and complex or dual task performance. In the first category, it was found that the limit for unimpaired mental performance was close to the thermophysiological limit, with core temperature tolerance set at 1.0 F and mental performance being impaired when core temperature was raised 2.4 F. Tracking performance displays a higher decrement, with onset beginning at 1.6 F rise in core temperature. Concurrent task performance was determined to be subject to inefficiency once core temperature rises 0.4 F. Task complexity induces earlier heat stress-related losses of efficiency, and can be partially compensated for in terms of operator skill. M.S.K.

**A82-40440** **Auxiliary cooling - Comparison of air-cooled vs. water-cooled vests in hot-dry and hot-wet environments.** Y. Shapiro, K. B. Pandolf, M. N. Sawka, M. M. Toner, F. R. Winsmann, and R. F. Goldman (U.S. Army, Army Research Institute of Environmental Medicine, Natick, MA). *Aviation, Space, and Environmental Medicine*, vol. 53, Aug. 1982, p. 785-789. 15 refs.

Twelve male subjects were exposed to hot-wet and hot-dry climatic conditions while wearing either air- or water-cooled vests in addition to nominal tank crew clothing, i.e., chemical protective uniforms. Metabolic rates were monitored in terms of heart rate, skin temperature, sweat rate, weight losses, and O2 and CO2 concentrations in the breath, while the convective heat transfer, radiative heat transfer, and the maximal evaporative cooling capacity were calculated. A lesser cardiovascular strain was found for the ventilated air-cooled vest conditions, while other parameters were equal in the hot-wet conditions. Neither type of vest furnished any sweat rate reduction in the hot-dry conditions, and the air-cooled vest was noted to potentially cause skin damage in a hot-dry environment due to high velocity hot air. M.S.K.

**A82-40441** **Thermoregulation and the menstrual cycle.** S. M. Horvath and B. L. Drinkwater (California, University, Santa Barbara, CA). *Aviation, Space, and Environmental Medicine*, vol. 53, Aug. 1982, p. 790-794. 27 refs. Grants No. NIH-1-R01-ES-00849; No. NIH-5-R01-OH-00896.

Eight women subjects performed exercise to 30% maximum oxygen volume uptake in 28 C-12.6 torr, 35 C-28 torr, and 48 C-8.7 torr conditions as part of trials to determine whether plasma concentrations of estradiol and progesterone associated with ovulatory, luteal, and flow phases of the menstrual cycle affect female response to exercise in warm and hot environments. The cycle day was chosen by means of body temperature or physical evidence. Each subject performed 90 m/min treadmill exercise as the grade increased 1 deg/min to verbally announced tolerance levels. Blood volume, body density, ECG, rectal temperature, skin temperature at seven sites, blood pressure, hematocrit, etc. were monitored and all exercise was performed in a pressure/temperature controlled chamber. The hormonal changes during the phases of the menstrual cycle were found to not affect the ability to exercise. M.S.K.

**A82-40442** **Effect of the Circutone seat on hemodynamic, subjective, and thermal responses to prolonged sitting.** E. Shvartz, J. G. Gaume, R. C. Reibold, E. J. Glassford, and R. T. White (Douglas Aircraft Co., Long Beach; Mercy Hospital and Medical Center, San Diego, CA). *Aviation, Space, and Environmental Medicine*, vol. 53, Aug. 1982, p. 795-802. 14 refs.

Eight young men were twice administered - on two different days - a series of hemodynamic (using an impedance plethysmograph), subjective, and skin temperature measurements during 5 h of quiet sitting. On one day, a Circutone seat (massage-type seat cushion) was activated for 14 min/h, and on the other day it was not. During the 'Circutone off' day, 5 h of sitting resulted in a continuous decrease in calf blood flow and an increase in venous blood pooling in the calf; an increase in blood pressure and a stable cardiac output (4.6 l/min); very low urine output; large increases in skin temperatures at the body areas in contact with the seat (thigh and lower back); and increases in various subjective responses of discomfort. The Circutone activation resulted in a substantial exchange of the stagnant blood in the calf and thigh; a tendency to increase thigh and calf blood flow; a decrease in venous pooling in the thigh; and less subjective discomfort. The Circutone activation had no effect on skin temperature. The results indicate that the Circutone seat improved seat comfort by improving local circulation, especially in the thigh, which probably accounted for the improved subjective reactions. (Author)

**A82-40443** **Central nervous dysfunctions after near-miss accidents in diving.** R. J. Vaernes (Bergen, Universitetet, Bergen, Norway) and S. Eidsvik (Naval School of Diving, Norway). *Aviation, Space, and Environmental Medicine*, vol. 53, Aug. 1982, p. 803-807. 19 refs.

The possible differences in specific central nervous system functions in two groups of divers were studied: divers with a history of diving accidents (accident group, N = 9) and accident-free divers (non-accident group, N = 15). Both groups were characterized with a mean I.Q. level (WAIS) within the normal range. Of the nine accident group divers, eight showed abnormalities on neuropsychological tests implicating lesions on higher CNS levels. In addition, five of the accident group divers had a syndrome of subcortical/limbic dysfunctions - specific memory deficits, low autonomic reactivity, sustained attention problems, and emotional liability. The data confirmed previous findings that a severe diving accident may lead to cerebral dysfunctions. However, in contrast to the previous studies, it was found that divers with average intellectual levels can develop specific CNS dysfunctions after a near-miss diving accident. Therefore, it is concluded that a combined effect of emboli with multifocal lesions and/or a more specific effect on limbic structures represent the pathophysiology of a severe near-miss diving accident. **A82-40444** **Neutron radiation dosimetry in high altitude flight personnel.** P. E. Baily (Texas, University, Houston, TX). *Aviation, Space, and Environmental Medicine*, vol. 53, Aug. 1982, p. 808-817. 29 refs.

In an attempt to determine cosmic radiation exposure in high altitude NASA flight personnel, eight WB-57F flight crewmen were monitored for a period of six months using a combination radiation dosimeter. Each dosimeter consisted of two thermoluminescent chips capable of measuring gamma dose and one Albedo and two Track Etch neutron dosimeters. A total of 78 flights were monitored consisting of 251 flight hours at altitudes above 14 km (45,000 ft). The maximum yearly dose equivalent measured was 104 mrem, a value well below the Maximum Permissible Dose (MPD) of 5.0 rem/y for occupational exposures and 0.5 rem/y for members of the general public. A discussion of the theory and use of several types of neutron dosimeters is included. (Author)

**A82-40445** **The accuracy of venturi masks at altitude.** R. B. Stonehill (Indiana, University, Indianapolis, IN) and A. G. Peoples (Wishard Memorial Hospital, Indianapolis, IN). *Aviation, Space, and Environmental Medicine*, vol. 53, Aug. 1982, p. 818-821. 7 refs. Research supported by the American Lung Association of Indiana.

The concentration of oxygen provided in the inspired gas by five samples of a venturi mask were measured at ground level and at altitudes up to 10,000 ft for each of the oxygen port settings from 24-50% oxygen. The concentration of oxygen provided at a given setting was virtually identical for each of the five masks and was unaffected by ascent to 10,000 ft. Thus, patients with chronic hypercarbia could receive 'low flow oxygen therapy' while traveling on commercial airlines without danger of acute hypo-ventilation by utilizing a venturi mask. (Author)

**A82-40446** **Subjective response to negative air ion exposure.** L. W. Buckalew and A. Rizzuto (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, OH). *Aviation, Space, and Environmental Medicine*, vol. 53, Aug. 1982, p. 822-823. 15 refs. USAF-sponsored research.

This study investigated specific subjective or psychological effects of relatively long exposure to negative ions generated by a conventional air purification device. Subjects - 24 males matched for age, education, physical condition, and smoking habits - were divided into a control (N=12) and an ion exposure group (N=12). The groups were subjected to 6 h normal and negatively charged atmospheres, respectively. The tests used were the Taylor Manifest Anxiety Scale (TMAS) and a self-report mood index. The analysis of TMAS change scores clearly showed no effect of negative ion exposure on anxiety. Analysis of mood index data showed significant changes in the subjective perception of both physiological state (relaxation increased) and psychological state (irritability, depression, and tenseness decreased while calmness and stimulation increased). (Author)

**A82-40447 † From a man-machine system to a social-engineering system (Ot sistemy 'chelovek-mashina' k 'sotsiotekhnicheskoi' sisteme).** A. A. Piskoppel' and L. P. Shchedrovitskii (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR). *Voprosy Psikhologii,* May-June 1982, p. 15-25. 22 refs. In Russian.

. The concept of the man-machine system is examined. It is noted that this term covers at least three notions corresponding to three different ergonomical concepts: cybernetic, subject-oriented, and system-of-activity. Typical approaches to the definition of man-machine systems are examined in the light of this classification, and attention is given to the use of the concept of social-engineering systems in the framework of the system-of-activity approach. B.J.

**A82-40448 † An absolute threshold in psychoacoustics (Ob absoliutnom poroge v psikhoakustike).** Iu. A. Indlin (Vsesoiuznyi Nauchno-Issledovatel'skii Kinofotoinstitut, Moscow, USSR). *Voprosy Psikhologii,* May-June 1982, p. 108-112. 14 refs. In Russian.

The discussion that has ensued since the concept of internal sensory noise was introduced is summarized. The results of experiments on the detection of a signal against a background of continuous noise are presented indicating the existence of a low sensory threshold. The internal sensory noise is continuous. Consequently, a signal can be detected against a background of this noise only when the sensory effect caused by the signal exceeds an absolute sensory threshold. The magnitude of this threshold depends on the statistical characteristics of the internal noise. C.R.

**A82-40449 † A test for the prediction of risk-taking attitude in operators (Test dlia diagnostiki otnosheniia operatora k priniatiiu riska).** A. A. Kondratskii (Nauchno-Issledovatel'skii Institut Psikhologii, Ukrainian SSR). *Voprosy Psikhologii,* May-June 1982, p. 133-136. In Russian.

An apparatus designed to measure the inclination of subjects to take justified or unjustified chances, and to show unjustified (excessive) prudence, is described. The task to be performed by the subject is presented to him as a test of his sensorimotor abilities. The specific values of these inclinations are ascribed to a subject on the basis of comparing his choices of aims in consecutive trials with the actual level of his sensorimotor efficiency. N.B.

**A82-40450 † Adapting a scale for measuring competition anxiety (Adaptatsiia shkaly sorevnovatel'noi lichnostnoi trevozhnosti).** Iu. L. Khanin (Vysshaia Profsoiuznaia Shkola Kul'tury, Leningrad, USSR). *Voprosy Psikhologii,* May-June 1982, p. 136-141. 18 refs. In Russian.

Studies carried out in order to prepare a scale equivalent to that proposed by Martens (1974, 1977) are described. The intent is to make the scale suitable for use in cross-cultural studies. The Martens scale, which relies on questionnaires, is described. C.R.

**A82-40451 † The effect of inotropic factors on the postexercise characteristics of the heart (Vliianie inotropnykh faktorov na postnagruzochnye kharakteristiki serdtsa).** Ts. R. Orlova, S. E. Ragimov, V. A. Shlain, M. P. Sakharov, and A. V. Trubetskoi (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny,* vol. 93, June 1982, p. 5-7. 5 refs. In Russian.

Acute experiments performed on cats show that the postexercise characteristics of the left ventricle plotted as a relationship between the magnitudes of the maximal blood flow velocity and systolic intraventricular pressure in normal cases and in cases of inotropic exposure are close to the linear ones. Adrenalino shifts the postexercise characteristics upward and to the right, increasing both the maximal magnitude of the blood flow velocity at zero pressure and the maximal magnitude of the pressure at zero blood flow. Calcium chloride and obsidian produce a parallel shift of the postexercise characteristics. B.J.

**A82-40452 † A factor of resistance to emotional stress in the brain of rats (Faktor ustoichivosti k emotsional'nomu stressu v mozge krys).** E. A. Iumatov, Iu. G. Skotselias, N. A. Kovalenko, I. I. Votrin, K. V. Sudarkov, and S. S. Debov (I Moskovskii Meditsinskii Institut; Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny,* vol. 93, June 1982, p. 21-23. 13 refs. In Russian.

A factor that promotes resistance to emotional stress is extracted from the brains of rats that are highly resistant to chronic emotional stress, and causes increased resistance to stress in rats predisposed to stress. Brain homogenates of rats resistant to stress are extracted by several different methods, heat treated, filtered on Sephadex G-15, and lyophilized. The fractions extracted, assumed to be small peptides, are low molecular weight, thermostable, and resistant to pronase hydrolysis. Injections of the partially purified stress resistance factor significantly (p less than 0.05) increases the resistance of the recipient rats to chronic stress. N.B.

**A82-40453 † The correlations of the central nervous system and thyroid functions in conditions of chronic emotional stress (Korreliatsionnye otnosheniia funktsional'nogo sostoianiia tsentral'noi nervnoi sistemy i shchitovidnoi zhelezy v usloviiakh khronicheskogo emotsional'nogo stressa).** M. G. Amiragova and M. I. Arkhangel'skaia (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny,* vol. 93, June 1982, p. 24-27. 11 refs. In Russian.

The correlations of the central nervous system function, determined by the time course of changes in the EEG of the cortical and subcortical regions of the brain, and the content of thyroxin in the peripheral blood, are investigated in cats exposed to chronic emotional stress. In the course of stress, induced during one week by daily four-hour immobilization of the animals in combination with aperiodic electrical stimulation, it was observed that the EEG patterns show cycles of bursts of activity of slow waves, which are first recorded in the posterior hypothalamus. The bursts of slow waves then become generalized throughout the brain, and are accompanied by a high level of thyroxin secretion. As the stress exposures are repeated, the EEG changes intensify and the thyroxin secretions continue at a high level. For several days following the cessation of electrical stimulation, the cycles of bursts of slow wave activity accompanied by enhanced thyroid function are observable. N.B.

**A82-40454 † The effect of hyperactivation of the anterior amygdaloid nucleus on heart activity during states of altered reactivity (Vliianie giperaktivatsii perednogo amigdaliarnogo iadra na deiatel'nost' serdtsa v usloviiakh ego izmenennoi reaktivnosti).** Iu. I. Pivovarov (Irkutskii Meditsinskii Institut, Irkutsk, USSR) and G. N. Kryzhanovskii (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny,* vol. 93, June 1982, p. 27-30. 15 refs. In Russian.

Changes in the heart reactivity of rats caused by injections of adrenaline, rausedyl, potassium chloride, and strophanthine facilitate the occurrence of cardiac rhythm abnormalities during the creation of the generator of pathologically enhanced excitation (GPEE) in the anterior amygdaloid nucleus. While the moments of rhythm abnormalities are correlated with the occurrence of GPEE epileptic activity, the pattern of cardiac rhythm abnormalities is largely determined by the specificity of action of the injected substances. Myocardial ischemia caused by the occlusion of the anterior or posterior left coronary artery causes cardiac rhythm abnormalities similar to those observed during GPEE creation in the nucleus. However, the differences in the pattern of cardiac rhythm abnormalities depend on the area of ischemia. N.B.

**A82-40455 † Prevention of heart function abnormalities during reoxygenation after ischemia by adaptation to altitude hypoxia (Preduprezhdenie postishemicheskikh reoksigenatsionnykh narushenii funktsii serdtsa s pomoshch'iu adaptatsii k vysotnoi gipoksii).** L. M. Belkina, V. A. Saltykova, E. E. Ustinova, and F. Z. Meerson (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny,* vol. 93, June 1982, p. 31-33. 10 refs. In Russian.

The influence of adaptation to altitude hypoxia (2100 m) on rat myocardial contractility is studied by means of transitory ischemia induced by ligation of the descending branch of the left coronary artery and subsequent reperfusion. Ischemia causes identical depressions of heart function both in animals adapted to hypoxia and in control animals, but after reperfusion only the adapted animals show a partial recovery of contractile function. In addition, evaluation of the heart function after ischemia and reperfusion demonstrates that the hearts of animals adapted to hypoxia have the capacity to withstand isometric loads equal to those attained during adaptation, while the control animals experience substantial disorders of heart function. Thus, it is demonstrated that adaptation to hypoxia increases the resistance of the heart to damages that occur during reoxygenation. N.B.

**A82-40456 † Respiratory movements of the facial muscles and respiratory resistance (Dykhatel'nye dvizheniia litsevoi muskulatury i soprotivlenie dykhaniiu).** S. I. Frankshtein and Z. N. Sergeeva (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Biulletin' Eksperimental'noi Biologii i Meditsiny,* vol. 93, June 1982, p. 33, 34. 8 refs. In Russian.

**A82-40458 † The toxic properties of rabbit and dog sera under controlled hyperthermia (Toksicheskie svoistva syvorotki krolikov i sobak pri**

**upravliaemoi gipertermii).** V. S. Solov'ev (Tiumenskii Gosudarstvennyi Universitet, Tyumen, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny*, vol. 93, June 1982, p. 45-47. 10 refs. In Russian.

The toxic properties of rabbit and dog blood sera obtained following controlled hyperthermia are studied in mice with reticuloendothelial system blockage, and mast cell degranulation is studied in rats during hyperthermia, in order to determine the linkage between the physiological response to hyperthermia and the functional condition of the mast cell system. The controlled hyperthermia enhanced the toxic properties of sera from rabbits and from dogs which had been given injections of thiopental sodium prior to hyperthermic treatment. Heating intensified the degranulation of mast cells in rats. In addition, the toxic properties of the sera are correlated with the rate of mast cell degranulation. It is concluded that the appearance of the toxic properties of the sera and the significant amount of mast cell degranulation during hyperthermia testifies to the systemic pattern of the pathogenesis of hyperthermia. N.B.

**A82-40459 † Diurnal changes in the duration of the S and G2 phases of the mitotic cycle in mononuclear and binuclear hepatocytes of normal and thyroxine-treated rats (Izmeneniia v techenie sutok dlitel'nosti S i G2-periodov mitoticheskogo tsikla v odno- i dvuiadernykh gepatotsitakh u normal'nykh i tiroksinizirovannykh krys).** T. V. Savchenko and Iu. A. Romanov (II Moskovskii Meditsinskii Institut, Moscow, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny*, vol. 93, June 1982, p. 94-96. 6 refs. In Russian.

**A82-40460 † Occult bacterial persistence and resistance to colonization after antibiotic therapy (Skrytoe bakterionositel'stvo i kolonizatsionnaia rezistentnost' posle antibiotikoterapii).** N. M. Shustrova, O. V. Chakhava, A. A. Ivanov, and I. N. Gailonskaia (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Zhurnal Mikrobiologii, Epidemiologii i Immunobiologii*, June 1982, p. 50-53. 8 refs. In Russian.

The enteral administration of antibiotics to mice and rats has been shown to induce the occult persistence of sporulating Gram-positive bacilli, inhabiting the intestine before the administration of the antibiotics. After the prolonged use of some antibiotics, the intestinal tract becomes an unsuitable environment for nonpathogenic E. Coli, which easily colonize the intestines of germ-free animals. This type of resistance to colonization is an unfavorable consequence of antibiotic therapy. B.J.

N. Il'inskikh and G. D. Gubin (Tiumenskii Meditsinskii Institut, Tyumen, USSR). *Tsitologiia i Genetika*, vol. 16, May-June 1982, p. 59-62. 20 refs. In Russian.

**A82-40463 † Vegetative reactions to the administration of atropine and propranolol in rats that exhibit different types of behavior (Vegetativnye reaktsii pri vvedenii atropina i propranolola u krys s raznym kharakterom povedeniia).** N. M. Khonicheva (Akademiia Nauk SSSR, Institut Vysshei Nervnoi Deiatel'nosti i Neirofiziologii, Moscow, USSR) and M. A. Bulgakova (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR). *Zhurnal Vysshei Nervnoi Deiatel'nosti*, vol. 32, May-June 1982, p. 433-441. 22 refs. In Russian.

**A82-40464 † Dynamics of a stabilized motor defensive conditioned reflex for different levels of motivation in irradiated rats (Dinamika uprochennogo dvigatel'no-oboronitel'nogo uslovnogo refleksa pri raznykh urovniakh motivatsii u obluchennykh krys).** A. S. Shtemberg. *Zhurnal Vysshei Nervnoi Deiatel'nosti*, vol. 32, May-June 1982, p. 463-471. 18 refs. In Russian.

The total-body gamma irradiation of rats with superlethal doses is shown to produce phasic disturbances of a stabilized motor defensive conditioned reflex. As the radiation syndrome progresses, sharp fluctuations in the magnitude and relations of the main cortical nervous processes are observed, with an increase in the predominant role of transmarginal inhibition. The highest level of electrical defensive reinforcement provides for maximal strengthening of temporal connections and their high stability against severe stress impacts. B.J.

**A82-40465 † Characteristics of human auditory evoked potentials during the lateralization of a 'moving' auditory image (Kharakteristiki slukhovykh vyzvannykh potentsialov cheloveka pri lateralizatsii 'dvizhushchegosia' zvukovogo obraza).** Ia. A. Al'tman, I. M. Belov, S. F. Vaitulevich, and N. V. Mal'tseva (Akademiia Nauk SSSR, Institut Fiziologii; I Leningradskii Meditsinskii Institut, Leningrad, USSR). *Zhurnal Vysshei Nervnoi Deiatel'nosti*, vol. 32, May-June 1982, p. 472-479. 15 refs. In Russian.

Human auditory evoked potentials were studied during the dichotic presentation of acoustic signals which produce a sensation of directed movement of an acoustic image. Such signals cause the disappearance of the P1 component of the evoked potentials and the reduction of the latencies of the N1 and P2 components as compared with the corresponding characteristics of the components during monaural stimulation and binaural stimulation with a constant interaural delay of 900 ms, which produces complete lateralization of the acoustic image. B.J.

**A82-40466 † The influence of a constant magnetic field on the epileptogenic foci in the hippocampus of rabbits (Vliianie postoiannogo magnitnogo polia na epileptogennye ochagi v gippokampe krolikov).** L. I. Tyvin (Pediatricheskii Meditsinskii Institut, Leningrad, USSR). *Zhurnal Vysshei Nervnoi Deiatel'nosti*, vol. 32, May-June 1982, p. 495-501. 19 refs. In Russian.

The influence of a nonuniform magnetic field on rabbits injected with penicillin in the epileptogenic foci of the hippocampus, which gives rise to epileptic seizures, is investigated. Results show that for the control animals the activity between seizures and the number of electrographic correlates of seizures in the left hippocampus is significantly higher than in the right. Upon the application of the magnetic field, the number of epileptiform discharges between seizures remains relatively constant, but the number of electrographic correlates of the seizures increases. In addition, the interhemispherical difference in the epileptiform activity in the left and right hippocampus is accentuated in the experimental animals. A constant application of the magnetic field for 15 days does not result in any indication that the central nervous system of the animals adapted to the presence of the magnetic field. Finally, it is proposed that the effect of the magnetic field action on the experimental animals is similar to the influence of hypoxia. N.B.

**A82-40467 † Statistical analysis of neuronal impulse activity in the diencephalon during immobilization-produced emotional stress in rats (Statisticheskii analiz impul'snoi aktivnosti neironov mezhutochnogo mozga pri immobilizatsionnom emotsional'nom stresse u krys).** E. A. Kiiatkin (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Zhurnal Vysshei Nervnoi Deiatel'nosti*, vol. 32, May-June 1982, p. 502-510. 14 refs. In Russian.

**A82-40468 † The anti-stress role of the gamma-aminobutyric acid system of the brain (Antistressornaia rol' gamkergicheskoi sistemy mozga).** B. V. Andreev, Iu. D. Ignatov, Z. S. Nikitina, and I. A. Sytinskii (I Leningradskii Meditsinskii Institut; Leningradskii Institut Fizicheskoi Kul'tury, Leningrad, USSR). *Zhurnal Vysshei Nervnoi Deiatel'nosti*, vol. 32, May-June 1982, p. 511-519. 23 refs. In Russian.

The reactions of the gamma-aminobutyric acid (GABA) system during conditions of painful and emotional stress and the functional role of the GABA mechanisms during such conditions are studied in rats. It is found that emotional and painful stress disrupts the emotional and somatic status of the animal, and is accompanied by a rise in the level of GABA and an inhibition of GABA-transaminase in the forebrain, but not in the brainstrem. Both gamma-vinyl GABA and gamma-acetyline GABA induce similar, but more pronounced, changes in GABA metabolism, reduce the number of gastric mucosal erosions, and lead to a greater metabolism of diazepam and mucin. In addition, gamma-vinyl GABA and diazepam also reduce the amount of behavioral depression following stress. GABA-negative compounds, such as picrotoxin and thiosemicarbazide, reduce the animals' resistance to stress. It is concluded that the directed activation of GABA transmission is one of the pathways of stress regulation. N.B.

A. Moiseeva (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad, USSR). *Zhurnal Vysshei Nervnoi Deiatel'nosti*, vol. 32, May-June 1982, p. 549-552. 5 refs. In Russian.

**A82-40471 † An LED system for the formation of visual stimuli (Sistema formirovaniia zritel'nykh stimulov na baze svetodiodov).** S. A. Pogrebinskii (Vsesoiuznyi Nauchno-Issledovatel'skii Institut Obshchei i Sudebnoi Psikhiatrii, Moscow, USSR). *Zhurnal Vysshei Nervnoi Deiatel'nosti*, vol. 32, May-June 1982, p. 569, 570. In Russian.

A minicomputer-controlled LED system for the formation of visual stimuli is described, and a block diagram of the system is presented. This system satisfies the following requirements: (1) situation of the image in a single plane, perpendicular to the line of sight; (2) a rapid succession of images (in a time less than 100 ms); (3) short exposure times (of the order of milliseconds); and (4) presentation of images in different halves and parts of the field of vision (angle of sight with respect to the horizontal of not less than 2 deg). B.J.

**A82-40472 † Intrahemispherical relations of EEG slow-wave components in patients with local brain lesions (Vnutripolushamye sootnosheniia medlennovolnovykh sostavliaiushchikh EEG u bol'nykh s ochagovymi porazheniiami golovnogo mozga).** E. V. Sharova and M. A. Kulikov (Akademiia Nauk SSSR, Institut Vysshei Nervnoi Deiatel'nosti i Neirofiziologii, Moscow, USSR). *Zhurnal Vysshei Nervnoi Deiatel'nosti,* vol. 32, May-June 1982, p. 546-548. 5 refs. In Russian.

**A82-40473 † Robotics: Problems and prospects (Robototekhnika: Problemy i perspektivy).** I. M. Makarov. *Akademiia Nauk SSSR, Vestnik,* no. 5, 1982, p. 51-60. In Russian.

It is noted that by 1980 there were more than 100 models of industrial robots in the USSR, together with 7000 automated manipulators. These devices are mainly used to perform tasks that are hazardous or physically demanding. While formerly confined mostly to machine building, they are now being designed for use in mining, metallurgy, the food-processing industry, agriculture, construction, and light industry. The present five-year plan calls for 40,000-45,000 automated manipulators. C.R.

**A82-40474 † As if in weightlessness (Kak v nevesomosti).** A. Golikov and E. Ettinger. *Ogonek,* May 15, 1982. 3 p. In Russian.

The simulation of weightlessness by means of hypnosis is described. Experimental results show that functional changes produced in the body during hypnotically induced weightlessness are similar to those produced in actual weightlessness. B.J.

**A82-40475 † The combined effect of carbon monoxide and total-body vibration on the organism (O sochetannom deistvii na organizm okisi ugleroda i obshchei vibratsii).** V. V. Kustov, V. G. Litau, and S. M. Razinkin. *Gigiena Truda i Professional'nye Zabolevaniia,* June 1982, p. 15-18. 18 refs. In Russian.

The combined effect of carbon monoxide and vibration, with an accompanying noise of 90 dB, on white male rats is investigated. Results show that the combined effect of carbon monoxide and vibration enhances the development of carbon monoxide poisoning by delaying the normal development of hemoglobin compensation that is evoked by exposure to carbon monoxide. However, the effects of carbon monoxide and vibration on the level of carboxy-hemoglobin in the blood are not additive, i.e., the combined effect is less than the sum of their individual effects. In addition, the influence of vibration, as well as the combination of carbon monoxide and vibration, on the level of carboxyhemoglobin in the blood increases over the course of the experimental period, while the influence of carbon monoxide alone decreases. N.B.

**A82-40476 † State of adaptation in patients with hypertension (Sostoianie adaptatsii u bol'nykh gipertonicheskoi bolezn'iu).** I. S. Zozulia (Kievskii Institut Usovershenstvovaniia Vrachei, Kiev, Ukrainian SSR). *Vrachebnoe Delo,* May 1982, p. 72, 73. In Russian.

Adaptive capacities of the auditory, visual, and motor analyzers are studied in 40 patients with cerebral hypertension (in hypertension stages 1 and 2). Results indicate that in the early stage of hypertension, the adaptive capacities of the auditory, visual, and motor analyzers are slightly decreased, but these decreases grow far more pronounced as greater cerebral atherosclerosis is manifested during later stages of hypertension. Normalization of these adaptive capacities is observed after treatment of the patients in the biotron. In addition, it is suggested that the variations in these adaptive capacities would be a useful indicator to differentiate the earliest stages of hypertension. N.B.

**A82-40477 † The significance of the bicycle ergometer test for evaluating the work capacity in patients with hypertension (Znachenie veloergometricheskogo testa v otsenke trudosposobnosti bol'nykh gipertonicheskoi bolezn'iu).** O. A. Proskurkina, L. G. Garkusha, L. G. Stepanova, and I. A. Mikhailiuk (Dnepropetrovskii Nauchno-Issledovatel'skii Institut Vosstanovleniia i Ekspertizy Trudosposobnosti Invalidov, Dnepropetrovsk, Ukrainian SSR). *Vrachebnoe Delo,* May 1982, p. 70-72. 7 refs. In Russian.

**A82-40478 † The diagnostic value of phonoenterography in acute renal failure (Znachenie fonoenterografii dlia raspoznavaniia ostroi pochechnoi nedostatochnosti).** P. S. Semiak, V. K. Denisov, V. S. Shirokov, and A. P. Prityka (Donetskii Meditsinskii Institut, Donetsk, Ukrainian SSR). *Vrachebnoe Delo,* May 1982, p. 23-25. In Russian.

**A82-40479 † ATPase activity and the potassium ion permeability of erythrocyte membranes in the presence of serotonin and radiation (ATFaznaia aktivnost' eritrotsitarnykh membran i ikh pronitsaemost' dlia ionov kaliia v usloviiakh oblucheniia i pri deistvii serotonina).** V. V. Zhegnevskaia, M. F. Vinogradova, and V. V. Polevoi. *Leningradskii Universitet, Vestnik, Biologiia,* May 1982, p. 67-72. 22 refs. In Russian.

**A82-40480 † Changes of intracellular rest potential and the length of isolated muscle under different loads (Izmeneniia vnutrikletochnogo potentsiala pokoia i dliny izolirovannoi myshtsy pri razlichnykh ee nagruzkakh).** V. S. Darinskaia, I. D. Il'chenko, and M. I. Sologub. *Leningradskii Universitet, Vestnik, Biologiia,* May 1982, p. 62-67. 27 refs. In Russian.

**A82-40481 † Energy requirements of workers at an oil field in western Siberia (Potrebnosti v energii rabochikh-neftianikov Zapadnoi Sibiri).** G. I. Bondarev, V. Ia. Vissarionova, V. S. Dupik, T. A. Zemlianskaia, and S. A. Khotimchenko (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Voprosy Pitaniia,* May-June 1982, p. 18-21. 11 refs. In Russian.

**A82-40482 † The role of nutrition in the changes of energy metabolism during stress (Rol' pitaniia v izmenenii energeticheskogo obmena v usloviiakh stressa).** L. E. Panin and D. I. Kuz'menko (Akademiia Meditsinskikh Nauk SSSR, Novosibirsk, USSR). *Voprosy Pitaniia,* May-June 1982, p. 15-18. 11 refs. In Russian.

The effect of three different isocaloric diets, which differ in the ratios of proteins, fats and carbohydrates, on energy metabolism is studied in rats exposed to stress (swimming in an aquarium at different water temperatures). Results show that the high protein-lipid diet is the most desirable under stress, since this diet promotes the transition of energy metabolism from the carbohydrate type to the lipid type, and thus contributes to the development of adaptive changes in the body during extreme stress. In addition, analyses of kidney mitochondria show dissociation of oxidative phosphorylation and inhibition of ATPase activity in rats on normal and high carbohydrate diets, but these effects are not observed in rats on the high protein-lipid diet. N.B.

**A82-40484 † An automated system for the collection and processing of cardiovascular information from athletes (Avtomatizirovannyi kompleks dlia sbora i obrabotki informatsii o serdechno-sosudistoi sisteme sportsmenov).** A. P. Grishanovich and A. I. Zav'ialov (Belorusskii Gosudarstvennyi Universitet, Minsk, Belorussian SSR). *Teoriia i Praktika Fizicheskoi Kul'tury,* May 1982, p. 52, 53. In Russian.

**A82-40485 † A respirator for training in conditions of changeable respiratory mixture (Respirator dlia trenirovok v usloviiakh izmenennoi dykhatel'noi smesi).** I. M. Epshtein (Vsesoiuznyi Nauchno-Issledovatel'skii Institut Fizicheskoi Kul'tury, Moscow, USSR). *Teoriia i Praktika Fizicheskoi Kul'tury,* May 1982, p. 31, 50. In Russian.

The paper describes a simple, portable respirator which does not require the chemical treatment of gases. The chief feature of this respirator is that it assures a moderate level of hypoxia and hypercapnia in the respiratory mixture. B.J.

**A82-40486 † Somatotypology and athletics (Somatotipologiia i sport).** B. A. Nikitiuk (Gosudarstvennyi Tsentral'nyi Institut Fizicheskoi Kul'tury, Moscow, USSR). *Teoriia i Praktika Fizicheskoi Kul'tury,* May 1982, p. 26-28. 15 refs. In Russian.

An attempt is made to clarify the concept of somatotype (or constitution type) with particular reference to the application of this concept to athletics. The goals of somatotypology in athletics are defined as selective, metabolic, and explanatory of the reactivity and dynamics of ontogeny. Particular consideration is given to the norm of skeletal reaction to mechanical excitations, and to the growth (or development) dynamics of the body. B.J.

**A82-40487 † Physical activity and human requirements for energy and food substances (Fizicheskaia aktivnost' i potrebnost' cheloveka v energii i pishchevykh veshchestvakh).** V. A. Shaternikov (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR), M. N. Volgarev, and K. A. Korovnikov. *Teoriia i Praktika Fizicheskoi Kul'tury,* May 1982, p. 22-26. In Russian.

Tables are presented that list the requirements for a variety of nutrients. Both age and the type of work performed are taken into account, with the standards presupposing an ideal body weight. The nutritional needs of athletes are distinguished from those doing heavy labor, noting that the former require nutrients that will enable them to perform physically at a high level for a relatively short period of time. C.R.

**A82-40488 † Increasing the efficiency of running on the basis of learning algorithms and information tools (Povyshenie ekonomichnosti bega na osnove ispol'zovaniia algoritmov obucheniia i informatsionnykh sredstv).** V. L. Rostovtsev (Vsesoiuznyi Nauchno-Issledovatel'skii Institut Fizicheskoi Kul'tury, Moscow, USSR). *Teoriia i Praktika Fizicheskoi Kul'tury,* May 1982, p. 17-19. In Russian.

A method is developed for increasing the efficiency of running which is based on the use of learning algorithms and information on heart rate and the main biomechanical parameters. The use of such algorithms and information tools considerably improves evaluation of the efficiency of running and makes it possible to determine a more efficient structure of running in one to three sessions. A decrease of vertical oscillations and stopping exertions was found to accompany the increase in running efficiency. B.J.

**A82-40489 † Psychic stress in athletic activity (Psikhicheskaia napriazhennost' v sportivnoi deiatel'nosti).** I. B. Viktorov (Sportkomitet, Latvian SSR), L. N. Golovnikov (Akademiia Pedagogicheskikh Nauk SSSR, Moscow, USSR), and A. V. Rodionov (Vsesoiuznyi Nauchno-Issledovatel'skii Institut Fizicheskoi Kul'tury, Moscow, USSR). *Teoriia i Praktika Fizicheskoi Kul'tury*, May 1982, p. 13-15. In Russian.

Experiments performed on boxers show that in stressful conditions there occurs a redistribution of the level of response to standard load (the morning response exceeds the evening one). Psychic components of stress predominate on days of a match. A series of control matches shows that adaptation occurs not only on the basis of the principle of functional economization but also on the basis of the principle of the homogeneity and heterogeneity of psychophysiological reactions. The heterogeneity of psychophysiological reactions can be accompanied by a negative effect of activity when it is connected with psychic functions that are largely responsible for the efficiency of the boxer. B.J.

**A82-40490 † X-ray study of loaded skeletal portions in the upper extremities of athletes engaging in karate (Rentgenologicheskoe issledovanie nagruzhaemykh otdelov skeleta verkhnikh konechnostei sportsmenov, zanimaiushchikhsia karate).** S. G. Antonov and V. N. Shustov (Leningradskii Institut Fizicheskoi Kul'tury, Leningrad, USSR). *Arkhiv Anatomii, Gistologii i Embriologii*, vol. 82, May 1982, p. 71-77. 9 refs. In Russian.

**A82-40491 † Cytoarchitectronics of the epidermis and the epidermal proliferative units /EPU/ (Tsitoarkhitektonika epidermisa i epidermal'nye proliferativnye edinitsy /EPE/).** G. Ia. Grafova (Voenno-Meditsinskaia Akademiia, Lenningrad, USSR). *Arkhiv Anatomii, Gistologii i Embriologii*, vol. 82, Apr. 1982, p. 73-85. 59 refs. In Russian.

**A82-40492 † Peculiarities of the relief of the trabecular surface of the spongy substance of the human vertebrae (Osobennosti rel'efa poverkhnosti trabekul gubchatogo veshchestva pozvonkov u cheloveka).** A. A. Doktorov and Iu. I. Denisov-Nikol'skii (Ministerstvo Zdravookhraneniia SSSR, Nauchno-Issledovatel'skaia Laboratoriia Biologicheskikh Struktur, Moscow, USSR). *Arkhiv Anatomii, Gistologii i Embriologii*, vol. 82, May 1982, p. 61-70. 30 refs. In Russian.

**A82-40493 † The response of the venous walls in the extremities to a disturbed venous outflow (Reaktsiia stenki ven konechnostei na narushenie venoznogo ottoka).** I. M. Baibekov and V. A. Khoroshaev (Akademiia Meditsinskikh Nauk SSSR, Tashkent, Uzbek SSR). *Arkhiv Anatomii, Gistologii i Embriologii*, vol. 82, May 1982, p. 45-51. 16 refs. In Russian.

The dynamics of morphological changes occurring in the veins of rabbit and rat pelvic extremities are studied by means of light and electron microscopy at various time intervals of venous congestion produced by the ligation of the posterior vena cava. During early postoperative stages, lesions of the venous endothelium appear, and are manifested by an increased permeability of the endothelial cells, thickening of the borders between endotheliocytes, interaction with blood cells, exfoliation from the basal membrane, and an increased pinocyte activity. Later, the inner membranes of the venous walls thicken, at first due to the migration of blood leukocytes into the subendothelial layer, and then due to the appearance of a typical smooth muscle cells and fibroblasts. After 1-2 months, intimosclerosis begins to develop, collagenous fibers appear, and a proliferation of all types of cells in the venous walls takes place. The primary cause of the damage to the endothelial cells is hypoxia of the venous walls, which also results in phlebosclerosis of the venous wall structures. N.B.

**A82-40494 † Changes in neurons of the spinal cord and spinal ganglia under hypokinesia /neuromorphological and histochemical investigation/ (Izmeneniia neironov spinnogo mozga i spinnomozgovykh uzlov pri gipokinezii /neiromorfologicheskoe i gistokhimicheskoe issledovanie/).** R. A. Nasyrov (Akademiia Meditsinskikh Nauk SSSR, Leningrad, USSR) and G. V. Konovalov (Semipalatinskii Meditsinskii Institut, Semipalatinsk, USSR). *Arkhiv Anatomii, Gistologii i Embriologii*, vol. 82, May 1982, p. 27-32. 13 refs. In Russian.

**A82-40495 † Afferent associative and commissural projections of the cortical vestibular zone VI of cats (Afferentnye assotsiativnye i komissural'nye proektsii korkovoi vestibuliarnoi zony VI u koshki).** F. N. Makarov and T. F. Kuleshova (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad, USSR). *Arkhiv Anatomii, Gistologii i Embriologii*, vol. 82, Apr. 1982, p. 25-30. 32 refs. In Russian.

**A82-40496 † Age changes in the cerebral cortex of humans and cats /A comparative electron-microscopical investigation/ (Vozrastnye izmeneniia kory mozga cheloveka i koshki /Sravnitel'noe elektronno-mikroskopicheskoe issledovanie/).** A. S. Iontov (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad, USSR) and V. F. Shefer (Leningradskii Nauchno-Issledovatel'skii Psikhonevrologicheskii Institut, Leningrad, USSR). *Arkhiv Anatomii, Gistologii i Embriologii*, vol. 82, Apr. 1982, p. 13-20. 24 refs. In Russian.

**A82-40497 † The microcirculatory bed of the lungs after an effect exerted on the right vagus nerve (Mikrotsirkuliatornoe ruslo legkikh pri vozdeistvii na pravyi bluzhdaiushchii nerv).** P. N. Aleksandrov, V. I. Chumakov, and V. E. Krasnikov (Akademiia Meditsinskikh Nauk SSSR, Moscow; Vladivostokskii Meditsinskii Institut, Vladivostok, USSR). *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia*, May-June 1982, p. 10-12. 6 refs. In Russian.

**A82-40498 † The cause of high-altitude acute pulmonary edema (O prichinakh vysotnogo ostrogo oteka legkikh).** E. M. Ismailov (Kirgizskii Meditsinskii Institut, Frunze, Kirgiz SSR). *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia*, May-June 1982, p. 21-25. 6 refs. In Russian.

The possible role of shifts in functional systems in the triggering of high-altitude acute pulmonary edema is examined. Attention is given to thy significance of hypo- and hyper-proteinemia, hypo- and hyper-volemia, the blocking of alpha and beta adrenoreceptors, atropinization, glomectomy, increases in central blood volume and pressure in pulmonary vessels, and increases in the permeability of these vessels. B.J.

**A82-40499 † The early reaction of the hemopoietic organs to stress, depending on the condition of the peripheral M-cholinergic systems (Ranniaia reaktsiia krovetvornykh organov na stress-vozdeistvie v zavisimosti ot sostoianiia perifericheskikh M-kholinoreaktivnykh sistem).** Iu. B. Deshevoi. *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia*, May-June 1982, p. 25-27. 10 refs. In Russian.

Rats were subjected to six-hour immobilization during atropine block or aceclidine stimulation of the peripheral M-cholinergic receptors. It is shown that the injection of the agents did not produce any essential effect on the cellular reaction of the bone marrow and lymphoid organs to the immobilization stress. Atropine injection intensified while aceclidine injection reduced the degree of poststress lymphopenia and neutrophilia. B.J.

**A82-40500 † The effect of products erythrocyte destruction on immunological processes (Vliianie produktov raspada eritrotsitov na immunologicheskie protsessy).** E. G. Kirdei and V. I. Nechaev (Irkutskii Meditsinskii Institut, Irkutsk, USSR). *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia*, May-June 1982, p. 27-30. 12 refs. In Russian.

Tests performed on white mice showed that the products of erythrocyte destruction had a stimulating effect on the resistance to infection, antibody formation, blood serium bactericidal and complementary activity, granulocyte phagocytic activity, allograft rejection, and macrophage cytotoxic activity. These data indicate that erythrocyte-destruction products contribute to the regulation of the immune response by the activation of the macrophagal-granulocytic link of immunogenesis. B.J.

**A82-40501 † The synthesis of nuclear and mitochondrial DNA and RNA, and the synthesis of heme and globin in rabbit bone marrow during the stimulation of erythropoiesis (Sintez iadernykh mitokhondrial'nykh DNK i RNK, sintez gema i globina v kostnom mozge krolikov pri stimuliatsii eritropoeza).** Iu. D. Goncharenko and A. D. Pavlov (Riazanskii Meditsinskii Institut, Ryazan, USSR). *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia*, May-June 1982, p. 36-39. 18 refs. In Russian.

**A82-40502 † The effect of hypokinesia on the resistance of the heart to hypoxia (O vliianii gipokinezii na rezistentnost' serdtsa k gipoksii).** E. A. Markova, V. M. Gandziuk, and I. L. Popovich (Ternopol'skii Meditsinskii Institut, Ternopol, Ukrainian SSR). *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia*, May-June 1982, p. 46-50. 19 refs. In Russian.

Experiments performed on white mice show that hypokinesia reduces the resistance of the heart to acute hypoxia and changes the character of the effect of adrenaline and inderal on the heart's tolerance to hypoxia. These data are explained from the vantage point of the heterochronous decrease in the synthesis of protein structures of the sarcolemma and the myocardiocytic sarcoplasmic reticulum during hypokinesia, as a consequence of which the cation pump capacity decreases and a change is produced in the relation between the effect of adrenaline on two differently directed processes, determining the efficiency of oxygen utilization by the mitochondria. B.J.

**A82-40503 † Changes in mineralized tissues in the case of calcitonin and somatotropic hormone injections under hypokinesia (Izmeneniia v mineralizovannykh tkaniakh pri vvedenii kal'tsitonina i somatotropnogo gormona v usloviiakh gipokinezii).** A. I. Volozhin and R. A. Druzhinina (Moskovskii Meditsinskii Stomatologicheskii Institut, Moscow, USSR). *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia*, May-June 1982, p. 64-67. 7 refs. In Russian.

The effect of daily subcutaneous injections of calcitonin (CT) and somatotropic hormone (STH) on the structure of the femur and the alveolar process was investigated on unrestrained and hypokinetic rats. CT was found to activate osteogenesis and inhibit bone-tissue resorption to a greater extent in rats allowed free movement than in immobilized rats. STH injections given for 10 and 20 days did not have a protective effect on the bone when movements were restricted. CT injection was found to inhibit the development of a dystrophic in the alveolar process induced by long-term hypokinesia. B.J.

**A82-40504 † The effect of denervation and tendotomy on oxidative phosphorylation in the skeletal muscles of the rabbit and on the resistance of phosphorylation to uncoupling agents (Vliianie denervatsii i tendotomii na okislitel'noe fosforilirovanie v skeletnykm myshtsakh krolika i rezistentnost' fosforilirovaniia k razobshchaiushchim agentam).** M. A. Shvets (Akademiia Meditsinskikh Nauk SSSR, Leningrad, USSR). *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia,* May-June 1982, p. 76-78. 10 refs. In Russian.

**A82-40560 # Psychological investigation of pilot behavior during integration of control systems in the cockpit of passenger airliners (Psychologische Untersuchung des Pilotenverhaltens Bediensystemintegration im Cockpit von Verkehrsflugzeugen).** F. V. Schick. Braunschweig, Technische Universität, Naturwissenschaftliche Fakultät, Doktor der Naturwissenschaften Dissertation, 1980. 143 p. 27 refs. In German.

The influence of modifications in passenger airliner control systems on pilot behavior is experimentally investigated. The experimental setup is described in detail, including the division of labor in the cockpit, the simulated flight mission, and the choice of measurement and registration procedures. The data evaluation and results are discussed, including the influence of turbulence, control system component configuration, and practice on handling speed, as well as visual aspects. The results are interpreted for general aspects of control systems. C.D.

**A82-40642 † Higher integrative systems of the brain (Vysshie integrativnye sistemy mozga).** A. S. Batuev. Leningrad, Izdatel'stvo Nauka, 1981. 256 p. 563 refs. In Russian.

The book reviews experimental data concerning the physiology of the association systems of the brain and their role in the formation of complex forms of behavior in animals and humans. Particular attention is devoted to the neuronal and synaptic organization and the neurophysiological characteristics of the higher association systems of the brain, the thalamoparietal and the thalamofrontal association systems. The features of the evolutionary and ontogenic development of the association systems, and their participation in the mechanisms of information processing and in the processes of the directing and programming activities of the brain are examined. Also discussed is the role of the association systems in the programming activities of the brain which are based on dominating motivations, and on the structural accuracy of the surrounding environment, resulting in the formation of the functional structure of behavioral acts. N.B.

**A82-40643 † Space gastroenterology (Kosmicheskaia gastroenterologiia).** K. V. Smirnov and A. M. Ugolev. Moscow, Izdatel'stvo Nauka, 1981. 280 p. 375 refs. In Russian.

A monographic review of studies dealing with space gastroenterology is presented, with an emphasis on the results of studies of the digestive system of cosmonauts obtained during flights of the Soyuz and Salyut spacecraft. The introductory chapters are devoted to a general description of gastroenterological principles and methods, especially as applied to spacefight conditions involving humans and animals. This analysis is followed by chapters devoted to different factors involved in space gastroenterology, including: factors of spaceflight and the digestive system during hypokinesia and acceleration, the effect of space diet on the function of the digestive-system, and the mechanism of the influence of spaceflight factors on the digestive system. A concluding chapter presents a synthesis of the general features of the functioning of the digestive system during spaceflight conditions. N.B.

**A82-40646 † Neurochemical mechanisms of learning and memory (Neirokhimicheskie mekhanizmy obucheniia i pamiati).** R. I. Kruglikov. Moscow, Izdatel'stvo Nauka, 1981. 212 p. 515 refs. In Russian.

The roles of neurochemical systems and the metabolism of nucleic acids and proteins in the processes of learning and memory are reviewed. After a detailed survey of previous studies concerning the neurochemical mechanisms of learning and memory, the roles of the neuron mediating systems of the brain in the processes of learning and memory are analyzed, focusing on the cholinergic, serotonin, and catecholamine systems. The metabolism of proteins in the brain and its relation to learning and memory are discussed. In addition, the mechanisms for the participation of the neuron mediating systems of the brain in the processes of learning and memory are examined, giving consideration to the interactions of the neuron mediating systems, the regulating influence of serotonin on the protein metabolism of the brain, and the role of the catecholamine mechanisms of the brain in the regulation of the chemoreactive properties of the cerebral neurons. N.B.

**A82-40649 Proceedings of a Meeting of the IUPS Commission on Gravitational Physiology.** Physiologist, Supplement, *vol. 22, Dec. 1979 (1982). 88 p. (For individual items see A82-40650 to A82-40685)*

Topics discussed include procedural approaches to gravitational physiology, methodological aspects of future cardiovascular research in space, and low-G simulation in mammalian research. Particular papers are presented on a rat model for the simulation of certain aspects of space flight, cardiovascular responses to isometric exercise during simulated zero gravity, the morphogenesis of a higher plant from cultured cells and embryos in space, and centrifuge high-g effects on temperature regulation in unanesthetized rats. Also considered are the effect of baroreceptor denervation on +Gz tolerance in dogs, the dynamics of weight loss during prolonged space flight, and the effects of horizontal hypokinesia on performance and circadian physiological rhythms in female humans. B.J.

**A82-40650 # Gravitational scale effects.** T. A. McMahon (Harvard University, Cambridge, MA). *Physiologist, Supplement,* vol. 22, Dec. 1979 (1982), p. S-5, S-6. 5 refs.

Some simple aspects of the performance of living organisms as a function of gravity and size are considered. Gravitational scale effects related to the walking and running of animals are considered, with particular attention given to a ballistic walking model; the walking of the Apollo astronauts on the moon is discussed. In addition, gravitational scale effects on trees growing on other planets (the moon and Jupiter) are examined. B.J.

**A82-40651 * # Study of high-g effects in animals.** A. H. Smith (California, University, Davis, CA). *Physiologist, Supplement,* vol. 22, Dec. 1979 (1982), p. S-7 to S-10. NSF Grant No. G-2255; Grants No. NGR-05-004-008; No. NsG-7493.

General aspects of animal centrifugation are examined. It is shown that once a covariance is established and the nature of the kinetics is determined it is possible to calculate a regression of the biological change (with suitable numerical transforms of the data) upon field strength. This should yield a rather simple equation containing two arbitrary constants: a, the zero intercept (a mathematical prediction of the magnitude of the parameter y, when $G = 0$); and b, the proportionality coefficient, the change in the parameter y per unit change in G: $Y = a + bG$. B.J.

**A82-40652 # Methodological aspects of future cardiovascular research in space.** K. Kirsch, L. Röcker, and H. J. Wicke (Berlin, Freie Universität, Berlin, West Germany). *Physiologist, Supplement,* vol. 22, Dec. 1979 (1982), p. S-11 to S-14. 10 refs.

The exposure of man to a zero-g environment creates unique experimental conditions, which disclose certain functional characteristics of the cardiovascular system that might play an important role in terrestrial physiology. This paper describes instrumentation developed for cardiovascular studies in space flight. Particular consideration is given to: (1) a device which permits repeated recording of the pressure in the antecubital vein; and (2) ultrasonic pulse equipment for studying fluid migration on the body axis. B.J.

**A82-40653 # Research opportunities and limitations of protracted hypogravity simulations for plant gravitational physiology.** A. H. Brown (Pennsylvania, University, Philadelphia, PA). *Physiologist, Supplement,* vol. 22, Dec. 1979 (1982), p. S-15 to S-18. 32 refs.

Various aspects of the use of clinostats for protracted hypogravity simulation on plants are examined. Consideration is given to the quantitative characterization of a plant's bioaccelerometer functions; the morphological dependence on the g-force; the determination of the persistence of circumnutation in the absence of a determining effect of gravity; the establishment of the g-dependence of a physiological trait over a range of g-levels; the exploration of the limits of the reciprocity rule; and the use of clinostats to simulate whatever g-condition may be planned for a space experiment. The limitations of the use of clinostats are also considered. B.J.

**A82-40654 * # Low-G simulation in mammalian research.** H. Sandler (NASA, Ames Research Center, Biomedical Research Div., Moffett Field, CA). *Physiologist, Supplement,* vol. 22, Dec. 1979 (1982), p. S-19 to S-22. 23 refs.

After a review of space-flight research concerning the effects of weightlessness on mammals, the paper reviews various methods of low-G simulation. Consideration is given to water immersion; bed rest, chair rest, and confinement; immobilization; and partial body-support systems. Countermeasures to offset the effects of weightlessness are also discussed. B.J.

**A82-40655 * # A new rat model simulating some aspects of space flight.** E. R. Morey, E. E. Sabelman, R. T. Turner, and D. J. Baylink (NASA, Ames Research Center, Moffett Field, CA; U.S. Veterans Administration Medical Center, Tacoma, WA). *Physiologist, Supplement,* vol. 22, Dec. 1979 (1982), p. S-23, S-24.

A rat suspension model to simulate the effects of weightlessness was developed by U.S. researchers coincident with U.S. involvement in Cosmos-satellite studies. This paper presents some preliminary data dealing with weight gain, food consumption, and bone formation in the rat model as compared with data from the Cosmos 782 and 936 experiments. It is shown that significant changes in bone formation rates may occur during a space flight lasting only five days. B.J.

**A82-40656 # Effects of a weighlessness simulation on the velocity curves measured by Doppler sonography at the level of the carotid system.** A. Guell, A. Bes, L. Braak, and M. Barrere (Centre Hospitalier Universitaire Rangueil, Toulouse, France). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-25, S-26. 8 refs.

A weightlessness simulation (seven days of prolonged bedrest in an antiorthostatic position of -4 deg) was performed on four healthy human subjects. The parameters studied were the systolic time, the arterial resistance index, and the surface ratios and average velocity index which vary in the same sense as the cerebral blood flow. A significant increase was found in the systolic time from the 10th hour to the fourth day. The arterial resistance index increased during the first four days. The surface ratios and the average velocity index decreased significantly after the second hour and returned to the basal state after 48 hours. Qualitatively, a decrease was noted in the second positive wave of the sonogram, corresponding to a decrease in the arterial tonus. B.J.

**A82-40657 * # Changes in blood volume and response to vaso-active drugs in horizontally casted primates.** D. T. Dickey, K. K. Teoh, H. Sandler, and H. L. Stone (Oklakoma, University, Oklahoma City, OK). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-27, S-28. 5 refs. Grant No. NsG-2282.

Experiments were performed on horizontally casted primates (male rhesus monkeys) in order to note changes in blood volume caused by horizontal restraint, to compare orthostatic tolerance before and after casting using the responses to upright tilting, to begin to uncover the cardiovascular and neural mechanisms involved in deconditioning, and to compare the data with that obtained from bed-rested human subjects and from humans exposed to weightlessness. Bolus injections of norepinephrine of 2.0 microgram/kg, phenylephrine of 4.0 microgram/kg, and nitroprusside of 2.0 microgram/kg were administered; and aortic pressure and heart rate were recorded during the injections. The results indicate that the horizontally casted primate is a valid animal model for studying the effects of simulated zero-G on the human cardiovascular system. B.J.

**A82-40658 # Human lymphocyte activation is depressed at low-g and enhanced at high-g.** A. Cogoli, M. Valluchi, J. Reck, M. Möller (Zürich, Eidgenössische Technische Hochschule, Zurich, Switzerland), W. Briegleb (Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt, Institut für Flugmedizin, Bonn, West Germany), I. Cordt, and C. Michel (Zürich, Universität, Zurich, Switzerland). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-29, S-30. Swiss National Science Foundation Grant No. 3,109,077.

**A82-40659 * # Computer simulations of postural change, water immersion and bedrest - An integrative approach for understanding the spaceflight response.** J. I. Leonard (General Electric Co., Houston, TX), C. S. Leach, and J. A. Rummel (NASA, Johnson Space Center, Houston, TX). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-31, S-32. Contract No. NAS7-14587.

Mathematical modeling techniques were used to simulate the fluid electrolyte (F-E) responses during gravity unloading. It is shown that the response to weightlessness can best be understood by separately examining the acute (hours to days) and chronic (days to weeks) phases, and assuming the presence of normal, although complex, feedback regulatory processes. Headward shifts of fluid are shown to be primarily responsible for acute body losses of extracellular F-E. Losses of body water are closely related to the volume of fluid shifts from the legs. A diuresis is predicted within the first several hours of hypogravity, and this may be obscured by a reduced F-E intake; on Skylab, early F-E losses occurred primarily by deficit intake. B.J.

**A82-40660 # Effect of postural changes on minute ventilation, functional residual capacity and pulmonery N2 clearance.** E. U. Chae and S. H. Bae (Kyungpook National University, Taegu, Republic of Korea). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-33, S-34. 5 refs.

Respiratory responses to passive tilt were studied in anesthetized dogs that were tilted from horizontal to upright (+90 deg) and head-down (-90 deg) positions. The functional residual capacity (FRC) increased in the upright position and decreased in the head-down position. The decreased FRC was compensated by the increased minute ventilation, and an adequate percent oxygen saturation of arterial blood was maintained in the head-down position. On the other hand, in spite of increased FRC, minute ventilation was diminished and the lung clearance time was prolonged, and the percent oxygen saturation of arterial blood was decreased in the upright position. B.J.

**A82-40661 # Running in circles.** P. R. Greene and T. A. McMahon (Harvard University, Cambridge, MA). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-35, S-36.

One technique for simulating the effects of enhanced gravitational acceleration on human locomotion is to have the individual run along a circular trajectory. Under these conditions, it is found that some parameters of the gait (i.e. top speed, ground contact time, and ballistic air time) change dramatically with the radius of the circle, whereas other parameters (i.e. stride frequency and step length) are essentially independent of the radius. Experimental results from 12 subjects are compared with a simple mathematical theory which assumes that the anti-gravity muscles have reached peak force. Theory and experiments agree quite well. Results are applied to the athletic question of running on a closed path, with the surprising conclusion that athletic tracks should be circular, not oval. (Author)

**A82-40662 # Cardiovascular responses to isometric exercise during simulated zero gravity.** F. Bonde-Petersen, Y. Suzuki, and T. Sadamoto (Copenhagen, University, Copenhagen, Denmark). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-37, S-38. 10 refs.

Experiments were performed on six healthy males (age 21-35 years) in order to investigate whether blood pressure reflexes during isometric exercise are related to relative muscle strength applied, and whether these reflexes are influenced by simulated weightlessness (the supine position). It is shown that knee extension has the greatest impact on cardiovascular parameters; in addition, the cardiac output showed its greatest increase to above 10 l/min during contraction. Contrary to the results of Lind et al. (1964), responses to isometric exercise at 40% MVC (maximal voluntary contraction) are found to depend on the muscle mass involved. B.J.

**A82-40663 # Effect of athletic training on physical fitness under hypodynamics.** H. Saiki, M. Nakaya, M. Sudoh, M. Abe, Y. Taketomi, and M. Naruse (Jikei University, Tokyo, Japan). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-39, S-40. 6 refs.

Twenty-nine healthy male adults were subjected to two weeks of vigorous athletic altitude training. As a result of training, such indicators as maximal oxygen uptake, flicker fusion value, and HPA reaction level, showed an increase of the physical fitness capacity; in addition, no decrease in orthostatic tolerance was observed. Water immersion exposure (six hours in head-out supine position) after training showed negative stress effects from the vantage points of the mineral and hormonal metabolisms. The results seem to indicate that an increase of physical fitness capacity, including orthostatic tolerance, can be achieved during training. B.J.

**A82-40664 * # Effect of physical training in cool and hot environments on +Gz acceleration tolerance in women.** P. J. Brock, D. Sciaraffa, and J. E. Greenleaf (NASA, Ames Research Center, Biomedical Research Div., Moffett Field, CA). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-41, S-42. 13 refs.

Acceleration tolerance, plasma volume, and maximal oxygen uptake were measured in 15 healthy women before and after submaximal isotonic exercise training periods in cool and hot environments. The women were divided on the basis of age, maximal oxygen uptake, and +Gz tolerance into three groups: a group that exercised in heat (40.6 C), a group that exercised at a lower temperature (18.7 C), and a sedentary control group that functioned in the cool environment. There was no significant change in the +Gz tolerance in any group after training, and terminal heart rates were similar within each group. It is concluded that induction of moderate acclimation responses without increases in sweat rate or resting plasma volume has no influence on +Gz acceleration tolerance in women. B.J.

**A82-40665 * # Interaction of gravitic and mechanical stimuli in tropic and nastic responses in beans.** M. J. Jaffe (Ohio University, Athens, OH). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-43, S-44. 7 refs. NASA-supported research.

Experiments designed to explore the interaction of gravity and mechanical stimuli in the tropic and nastic movements of Cherokee Bush bean plants were summarized. When 10-day-old plants were rubbed just prior to presentation of the gravitic stimulus (by placing them on their sides), they displayed much less geotropic curvature than did nonrubbed controls. Geotropism could also be inhibited by rubbing even after it had been progressing for two hours. Wind from a fan could also inhibit geotropism, suggesting that this phenomenon also occurs in nature. P.J.

**A82-40666 * # Morphogenesis of a higher plant from cultured cells and embryos in space.** A. D. Krikorian, F. R. Dutcher, C. E. Quinn, and F. C. Steward (New York, State University, Stony Brook, NY). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-45, S-46. Grant No. NsG-7270; Contract No. NAS2-10150.

Reference is made to the Cosmos 782 experiment, which showed that cultured totipotent cells of carrot can give rise to embryos with well-developed roots but minimally developed shoots at near-zero g. The problem of whether the development of leafy shoots is sensitive to near-zero g conditions is considered. A test system that would allow this problem to be resolved in a future space flight is described. C.R.

**A82-40667 # Gravity sensing, polar transport and cytoplasmic streaming in plant cells.** J. O. Kessler (Arizona, University, Tucson, AZ). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-47, S-48. 5 refs.

**A82-40668 * # Receptors signaling gravity orientation in an insect.** H. B. Hartman (Texas Tech University, Lubbock, TX). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-49, S-50. 6 refs. NSF-supported research; Grant No. NsG-7435.

Displacement in any direction from primary orientation is found to evoke tonic activity from at least one of the four interneurons of a certain type of burrowing cockroach; the receptive field for each interneuron is slightly more than a quadrant. The receptive field of each interneuron is found to be the same as the row of receptors providing the input. Displacement about the least stable axis (0-180 deg) or roll, on the one hand, and the most stable axis (90-270 deg) or pitch, on the other, is found to be unambiguously signaled by pairs of interneurons. Indications are obtained that receptors in the lateral row drive a giant interneuron in a contralateral connective and those in the medial row drive one in an ipsilateral connective. C.R.

**A82-40669 * # Bone growth and composition in weanling and mature rats exposed to chronic centrifugation.** L. C. Keil (NASA, Ames Research Center, Moffett Field, CA) and J. W. Evans (California, University, Davis, CA). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-53, S-54. 8 refs.

The primary objective of the study is to determine the effect of continuous exposure to hypergravity on the development and composition of weight-bearing bone. The experimental results are seen to suggest that many, if not all, of the changes observed in bone growth and composition derive from the retarded growth rate of the centrifuged rats. Both centrifuged weanling and mature rats exhibit a significant reduction in femur length and mass. The changes in femur size are more apparent in the weanlings since they are exposed to hypergravity during their most rapid phase of skeletal development. In addition to a slower growth rate, the body mass of the mature and weanling animals is reduced even further by the depletion of body fat. The rapid loss of body fat observed in rats and mice during centrifugation, it is found, can produce a prompt and significant rise in relative femur mass after two weeks of exposure. After adaptation to centrifugation, however, relative femur mass is similar to that of controls at four and eight weeks. At 18 weeks, the centrifuged rats again exhibit an increase in relative femur mass. It is thought that this increase in relative femur mass may be generated by the difference in fat deposition between the 1-G controls and the high-G rats. C.R.

**A82-40670 * # Cardiovascular responses of the chronically instrumented monkey during simulated space flight.** E. P. McCutcheon, E. Carlson, R. C. Mains, N. Pace, D. F. Rahlmann, and H. Sandler (NASA, Ames Research Center, Biomedical Research Div., Moffett Field; California, University, Berkeley, CA). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-55, S-56.

A pod enclosure system designed by the Environmental Physiology Laboratory at the University of California at Berkeley is found to be eminently suitable for work with monkeys. The pattern of cardiovascular activity is found to vary. In the first half of the exposure, the hourly mean values suggest an initial period of instability, most marked for heart rate, beginning at 'launch.' In the second half of the exposure, the final three days, the responses appear much more ordered, with a stable phase relationship between circadian shifts in heart rate and mean aortic pressure. Since the latter stability is more normal, the assumption is made that the animal had become adjusted to its situation. Imposition of a daily lower body negative pressure (LBNP) stress shows characteristic responses. C.R.

**A82-40671 * # Centrifuge high-g effects on temperature regulation in unanesthetized rats.** J. M. Horowitz, E. R. Schertel, and B. A. Horwitz (California, University, Davis, CA). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-57, S-58. Grant No. NsG-2234.

**A82-40672 # Effects of high-G on ventilation/perfusion in the domestic fowl.** S. C. Walgenbach, R. E. Burger, and A. H. Smith (California, University, Davis, CA). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-59, S-60. 7 refs. Grant No. AF-AFOSR-77-3430.

**A82-40673 * # Dynamics of weight loss during prolonged spaceflight.** C. S. Leach (NASA, Johnson Space Center, Houston, TX), J. I. Leonard (General Electric Co., Houston, TX), and P. C. Rambaut (NASA, Washington, DC). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-61, S-62. 6 refs.

Data from three Skylab flights lasting 28, 59, and 84 days are used to study changes in body composition occurring during extended spaceflight. The analysis includes pre- and postflight measurements used to compute lean body mass and body fat losses for an entire mission using previously accepted methods based on total body water, potassium, and density, and also includes the daily metabolic balances in order to provide an estimate of the time course of the changes in water, protein, and fat. The analytical approach is explained and the results presented, including a summary of changes in lean body mass and changes in weight loss and tissue components. It is concluded that little more than half of the weight loss observed during the missions can be attributed to loss in lean body mass, the remainder being derived from fat stores. C.D.

**A82-40674 * # Otoconial complexes as ion reservoirs in endolymph.** M. D. Ross and T. J. Williams (Michigan, University, Ann Arbor, MI). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-63, S-64. 5 refs. Grant No. NsG-9047.

Scintillation spectrometry was employed to examine the Ca-45(2+) uptake and exchange by otoconial complexes in the sensory region endolymph medium, and a comparison was made with bone mineral deposition. CaCl was injected intraperitoneally into 222 rats and blood samples were collected at set intervals during the subsequent 15 min-l mo life durations of the animals. The animals were eventually sacrificed and saccular and utricular otoconial complexes were microdissected while bone chips from the otic bone and femur were gathered by scraping. Ca-45 was present in the saccular otoconial complexes within 15 min of injection, an uptake similar to the bone deposition, while slower rates were observed with the utricular complexes. Utricular uptake, however, accelerated 5-6 hr postinjection, and total otoconial content was always lower than proportional bone absorption. M.S.K.

**A82-40675 # Effect of baroreceptor denervation on +G sub z tolerance in dogs.** D. F. Peterson (Oral Roberts University, Tulsa, OK) and V. S. Bishop (Texas, University, San Antonio, TX). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-65, S-66. Grant No. AF-AFOSR-73-2525.

**A82-40676 # The effects of +G2 acceleration stress on right ventricular pressures in conscious miniature swine..** M. H. Laughlin and J. E. Whinnery (USAF, School of Aerospace Medicine, Brooks AFB, TX). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-67, S-68.

The effects of various levels of g-stress due to acceleration were examined on five young female miniature swine. Physiological parameters were monitored by means of catheters inserted in the cranial vena cava and outfitted with pressure transducers which were moved into the right ventricular chamber when the animals were placed in a centrifuge. Sample pressures were taken during rest, and during and after 30 sec exposures to 1-9 g integer increments of stress. Increases were observed in mean right ventricular systolic pressure, torr/sec, and heart during acceleration. The highest mean right ventricular diastolic pressure increase occurred at 5 g, while the pressure peaked at 3 g. It is concluded that acceleration induced a reflex increase in sympathetic tone to the heart, affected the mechanical processes of the lungs, and increased pulmonary vascular resistance. M.S.K.

**A82-40677 * # Effect of simulated weightlessness on energy metabolism in the rat.** J. P. Jordan, H. A. Sykes, J. C. Crownover, C. L. Schatte, J. B. Simmons, II, and D. P. Jordan (Colorado State University, Fort Collins, CO). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-69, S-70. Grant No. NsG-2232.

Results of measurements of food uptake and body weight changes occurring in rats suspended from a harness so that the antigravity muscles were not used for locomotion are presented. The rats were tested in pairs, with both in a harness but only one suspended off its hind legs; this section lasted 7 days. A second phase of the experiment involved feeding the nonsuspended rat the same amount of food the experimental rat had consumed the previous day. All rats experienced decreased in body weight and food intake in the first stage, while in the second stage the suspended rat lost more weight. The total oxygen uptake, CO2 output, and rate of C-14O2 production were depressed in the suspended rats, then returned to normal levels once the rats were back on thyground. It is concluded that the gross metabolic processes are unaffected by simulated weightlessness. M.S.K.

**A82-40678 # Gravity, metabolic rate and body size of mammals.** A. C. Economos (San Jose State University, San Jose, CA). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-71, S-72. 10 refs.

The discrepancy of mammalian basal metabolic rate allometry from the theoretically plausible 'surface law' is studied from the perspective of response to experimentally induced hypergravity. Gravitational tolerance, 'rate' of repression of growth, and basal metabolic rate as a function of body mass are determined for a variety of animals. It is shown that gravitational tolerance obeys a power law, which is also found for repression of growth in hypergravity. C.D.

**A82-40679 * # Altered bone turnover during spaceflight.** R. T. Turner, E. R. Morey, C. Liu, and D. J. Baylink (U.S. Veterans Administration Medical Center, Tacoma, WA; NASA, Ames Research Center, Moffett Field, CA). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-73, S-74. 5 refs.

Modifications in calcium metabolism during spaceflight were studied, using parameters that reflect bone turnover. Bone formation rate, medullary area, bone length, bone density, pore size distribution, and differential bone cell number were evaluated in growing rate both immediately after and 25 days after orbital spaceflights aboard the Soviet biological satellites Cosmos 782 and 936. The primary effect of space flight on bone turnover was a reversible inhibition of bone formation at the periosteal surface. A simultaneous increase in the length of the periosteal arrest line suggests that bone formation ceased along corresponding portions of that surface. Possible reasons include increased secretion of glucocorticoids and mechanical unloading of the skeleton due to near-weightlessness, while starvation and immobilization are excluded as causes. C.D.

**A82-40680 * #** **Effect of space flight on bone strength.** D. M. Spengler, E. R. Morey, D. R. Carter, R. T. Turner, and D. J. Baylink (NASA, Ames Research Center, Moffett Field, CA; U.S. Veterans Administration Medical Center, Tacoma, WA). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-75, S-76. 6 refs.

To test the possibility that spaceflight has a deleterious effect on bone mechanical properties, femur breaking strength by torsional loading in rats that had been flown for 19 days aboard Cosmos 936 was determined. The results showed that femurs from flight rats were less stiff than the flight controls, and failed under torsion at a lower torque and energy of absorption. The defect was corrected following space flight and could be prevented during space flight by centrifuging the rats at 1 x g. Altered bone geometry due to inhibition of bone formation at the periosteal surface provides the most likely explanation for the decrease in bone strength during spaceflight. C.D.

**A82-40681 #** **The effect of G sub z acceleration on pulmonary perfusion in the miniature swine.** J. E. Whinnery and M. H. Laughlin (USAF, School of Aerospace Medicine, Brooks AFB, TX). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-77, S-78.

**A82-40682 * #** **Influences of horizontal hypokinesia on performance and circadian physiological rhythms in female humans.** C. M. Winget, C. W. DeRoshia, and H. Sandler (NASA, Ames Research Center, Biomedical Research Div., Moffett Field, CA). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-79, S-80. 5 refs.

Eight females from 35-45 yr of age were subjected to seven days of ambulatory control, seven days of bed rest, and a five day recovery period, with 30 min of centrifugation on day seven of bedrest to determine the effects of weightlessness on the circadian rhythms of females in that age group. Heart rate and rectal temperature (RT) were monitored and each subject was tested in a flight simulator twice a day in conditions of varying levels of turbulence. The flight simulations were run during the morning and acrophase of the circadian RT and performance errors wery monitored for 6 min. No significant differences were detected in the group performance data pre-, during, and post-bedrest, although better performance in the simulator was observed after the centrifuge exposure. An RT phase shift was statistically significant between pre- and during bedrest stages. M.S.K.

**A82-40683 * #** **Instantaneous stroke volume in man during lower body negative pressure /LBNP/.** J. A. Loeppky, K. L. Richards, E. R. Greene, M. W. Eldridge, D. E. Hoekenga, M. D. Venters, and U. C. Luft (Lovelace Foundation for Medical Education and Research; U.S. Veterans Administration Medical Center, Albuquerque, NM). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-81, S-82. 6 refs. Contract No. NAS9-15483.

Results of an examination of the instantaneous time course of the stroke volume (SV) and cardiac output (Q) in response to the onset and release of -50 torr lower body negative pressure (LBNP) are reported. Six male subjects were sealed into a LBNP box up to the iliac crest while being monitored by echocardiograph for centerlamina blood velocity, fluid displacement, stroke volume, heart rate, and leg volume. Particular use was made of pulsed ultrasonic Doppler velocity meters for measuring the blood velocities and flow dynamics. Measurements were made of the subjects continuously beginning from 20 sec prior to and one min after LBNP onset and release. A linear fall in the SV was observed with LBNP at 49% of the baseline value after 33 sec. A 62% drop, the lowest, was detected after 8 min of LBNP. The leg volume was inversely related to Q for the duration of the experiment. M.S.K.

**A82-40684 #** **Ultra-high impact free-fall survival.** R. G. Snyder (Michigan, University, Ann Arbor, MI). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-83, S-84. 11 refs.

Results of a survey of recorded literature empirically defining the lethal limits of stopping time afte;free fall are reported. The studies covered impacts on a variety of surfaces, including water, snow, ice, concrete, etc. A decisive factor in the survival after impact following free-fall was determined to be the distribution of the force. Cleaving water by head-first or feet-first entrance was found to have prevented death after terminal speeds of 97 and 116 ft/sec. Cases are cited, however, of suicide attempts from jumping off five and six story buildings, where the individuals received only minor injuries, and actually were ambulatory after the impact. It is suggested that if the time duration of an abrupt impact decreases below 600 microsec, levels of impact forces may be withstood which in other conditions would be lethal. M.S.K.

**A82-40685 #** **Simulated gravitational field influences on the aging process.** A. Vrabiescu (National Institute of Gerontology and Geriatrics, Bucharest, Rumania). *Physiologist, Supplement*, vol. 22, Dec. 1979 (1982), p. S-85, S-86. 7 refs.

Results of experiments on 97 rats to assay the influence of gravity on aging process are reported. Three groups experienced 1, 2, and 5 g's each for period of at least 473 days in a centrifugal device. Growth, skin condition, hair, nails, behavior, memory, O2 consumption, body temperature, ECG, peripheral blood cytomorphology, morbidity, and mortality were evaluated in all the animals, with 6-10 rats from parallel groups also undergoing autopsy for morphological examination of internal organs and the biological age of collagen. Rats exposed to higher accelerations experienced growth slowdown 30-90 days earlier than the normal gravity rats. Symptoms such as arthrosis, osteoporosis, and decalcification, all indicative of advanced age, were also present in the rats exposed to two and five g acceleration after several months. Accelerated collagen aging was evident in the rats enduring 5 g's, as were neuro-endocrine reactions suggestive of stress. M.S.K.

**A82-40686** **International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980, Proceedings.** Physiologist, Supplement, *vol. 23, Dec. 1980 (1982). 159 p.*

The Proceedings of the Second Annual Meeting of the IUPS Commission on Gravitational Physiology are presented. Papers are presented on the effects of gravity and weightlessness on the physiology of humans and other animals, both during space flights and in simulation experiments. Topics discussed include the adaptation of animals to changed gravity; metabolic and morphological studies of physiological systems during conditions of changed gravity; the function and structure of the gravity-dependent systems, such as the vestibular, bone, and muscle systems; hypokinesia and immobilization; as well as various other aspects of gravitational physiology. N.B.

**A82-40687 #** **Aspects of cardiovascular adaptation to gravitational stresses.** F. Bonde-Petersen, N. J. Christensen, O. Henriksen, B. Nielsen, C. Nielsen, P. Norsk, L. B. Rowell, T. Sadamoto, G. Sjogaard, and K. Skagen (Copenhagen, University, Copenhagen, Denmark). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement*, vol. 23, Dec. 1980 (1982), p. S-7 to S-10. 10 refs. Research supported by the Danish Space Council, and Statens Laegevidenskabelige Forskningsrad.

Conditions of gravitational stress were studied in humans during exercise, both dynamic and static. The subjects were exposed to high and low gravity conditions, simulated by a variety of methods, including lower body negative and positive pressures, bed rest, and water immersion. Dynamic exercise tests were conducted on bicycle ergometers. Various parameters were measured, including cardiac output (CO), mean arterial blood pressure, heart rate, and skin blood flow. Blood samples were analyzed for proteins, hemoglobin, colloid osmotic pressure, etc. Among other results, it was found that plasma volume decreases during studies lasting six hours. The adaptation of CO, which first was increased by up to 60%, was more rapid as CO was gradually recovering during the first two hr. However, the decrease in forearm vascular resistance, which was observed immediately at the onset of head-out water immersion, persisted during the experiment. During exercise, static and dynamic water immersion to the xiphoid level produced greater changes than during the control situation. In addition, local hydrostatic forces elicit vascular reflexes, which can be dominated by the general sympathetic nervous activity evoked during lower body negative pressure. N.B.

**A82-40688 #** **Adaptation to weightlessness and its physiological mechanisms - Results of animal experiments aboard biosatellites.** O. G. Gazenko, A. M. Genin, E. A. Il'in, V. S. Oganov, and L. V. Serova (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement*, vol. 23, Dec. 1980 (1982), p. S-11 to S-15. 47 refs.

Results of experiments on mammals aboard several Cosmos biological satellites are reviewed. These experiments were conducted to investigate the patterns of adaptation of higher animals to weightlessness, to study the physiological and morphobiochemical characteristics of organs and tissues of weightless animals, and to explore their readaptation to earth's gravity after exposure to zero-g. Results of these biosatellite experiments demonstrated certain patterns of adaptation of animals to weightlessness. For example, a relatively prolonged exposure to weightlessness did not cause pathological changes in the structure of any of the organs tested. The changes observed in the hypothalamus-hypothysis-adrenal system, muscles, bones, myocardium, and other organs proved reversible, returning to normal by 25 days after the flights. Certain experiments suggest that the space flight-induced stress reaction remains at a moderate level throughout the flight. Among other results, the studies provided information about structural and metabolic changes in muscles and bones, which were found to be similar to the changes seen in ground-based simulation experiments (hypokinesia and hypodynamia). N.B.

**A82-40689 # Physiological mechanisms of adaptation of rat skeletal muscles to weightlessness and similer functional requirements.** V. S. Oganov, S. A. Skuratova, A. N. Potapov, and M. A. Shirvinskaia (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement,* vol. 23, Dec. 1980 (1982), p. S-16 to S-21. 34 refs.

Investigations of the mechanisms of functional atrophy in skeletal muscles, such as muscle mass loss, and the decline of muscle tone, strength, and endurance, which occurs during long periods of weightlessness were conducted on rats aboard Cosmos biosatellites and in ground-based simulated weightlessness studies. It was observed that the soleus and extensor digitorum longus muscles showed a decrease of muscle contraction strength upon their tetanic stimulation, loss of elasticity, and a decline of tolerance to fatigue. In addition, the soleus muscle displayed a selective acceleration of tetanus development and a decrease of the amplitude of the twitch/tetanic tension ratio. A decrease in the maximum amplitude of isometric tension (Pm) was observed in the slow soleus muscle and, to a lesser extent, in the medial head of the triceps brachii muscle. Hypokinetic experiments did not reveal significant changes of Pm in glycerinated fibers of any fore- or hind-limb muscle tested. Hypodynamic studies demonstrated a decrease in strength and a shortening of the time of tetanus development in the intact medial head of the triceps brachii muscle. N.B.

**A82-40690 # Weightlessness effects on resistance and reactivity of animals.** L. V. Serova (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement,* vol. 23, Dec. 1980 (1982), p. S-22 to S-26. 10 refs.

Studies of bodily resistance and reactivity in rats during weightless conditions were conducted aboard several Cosmos biosatellites during flights lasting 18.5-22 days (approximately 1/50 of the lifespan of the animals). It was observed that both catabolic and anabolic processes were activated, the thymus and spleen weights decreased, and the thymocyte and splenocyte counts we reduced. In addition, the animals exhibited lumphopenia in the blood and a decrease in the percentage content of lymphocytes in the bone marrow. Stress tests showed that the animals exposed to weightless conditions largely retained their ability for adequate reactions of blood cells to additional stressors, in spite of the fact that the intial (postflight-pretest) blood of flight animals differed significantly from that of control animals. It is concluded that an 18-22 day exposure to weightlessness reduces resistance of the animal body, although this reduction is not great and exerts no significant effect on animal viability. N.B.

**A82-40691 # Artificial gravity in space flight.** A. R. Kotovskaia, E. A. Il'in, V. I. Korolkov, and A. A. Shipov (Ministerstvo Zdravookhraneniia SSSR, Insitut Mediko-Biologicheskikh Problem, Moscow, USSR). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement,* vol. 23, Dec. 1980 (1982), p. S-27 to S-29. 5 refs.

The biomedical effects of artificial gravity generated by spacecraft rotation on rats was investigated during a 19.5 day space flight, and compared to the effects caused by weightlessness. An artificial gravity of 1 g generated inflight helped to prevent to a large degree the development of weightlessness-induced adverse changes in the animals. Artificial gravity normalized the effects of weightlessness on the functions of the myocardium, skeletal muscule system, and the excretory system. However, specific effects caused by the rotation were also observed, including functions realized through the combined action of the optic, vestibular, and motor sensors (equilibrium function, turning reflex, orientation in a maze, higher motor control). N.B.

**A82-40692 # Biorhythms of rats during and after space flight.** V. Ia. Klimovitskii, E. A. Il'in, V. S. Oganov, G. G. Shlyk, V. V. Verigo (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR), K. Hecht, M. Poppei, T. Schlegel, E. Wahtel, and D. Zass (Berlin, Humboldt Universität, Berlin, East Germany). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement,* vol. 23, Dec. 1980 (1982), p. S-30 to S-33. 9 refs.

The influence of weightlessness, confinement, and the remoteness of natural terrestrial time cues on biorhythms in rats was investigated both during and after space flights on Cosmos satellites. Results showed that weightlessness did not exert an adverse effect on the formation and stability of circadian rhythms of rats in-flight. The rate with which the phase of the circadian rhythm of motor activity and body temperature drifted after a day-night inversion was normal. It was suggested that weightlessness, being an additional stressor that was absent in the synchronous animals, somehow helped t accentuate circadian rhythmicity. After flight and synchronous experiments, the circadian and minute rhythms changed in both animal groups, although these experiments were completed during the phase drift which continued after day-night inversion. However, the physiological loads associated with the adaptation to weightlessness and readaptation to 1 g upon return to earth of flight animals were responsible for more stable changes in their biorhythms than for synchronous rats. N.B.

**A82-40693 # Rhythms of electrolytes and hydroxyproline excretion in urine of rats after three weeks of weightlessness - Biosatellite Cosmos-1129.** K. Kwarecki, H. Debiec, and Z. Koter (Wojskowy Instytut Medycyny Lotniczej, Warsaw, Poland). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement,* vol. 23, Dec. 1980 (1982), p. S-34 to S-37. 14 refs.

Investigations were carried out on rats subjected to a 180 deg light-dark phase shift within 10 days of spaceflight. On the third, eighth and thirteenth day after landing the following rhythms were determined: urine volume, excretion of sodium, potassium, calcium, phosphate and hydroxyproline with urine. All rhythms studied in the urine in control groups were synchronized within 13 days after being subjected to the inverted lighting schedule. In postflight animals the circadian rhythms of diuresis, sodium and potassium excretion with urine were synchronized to the new lighting regimen whereas the other variables were not phase-shifted even within 23 days period. The results suggest that the synchronizing effect of the light-dark cycle under space conditions was weakened. (Author)

**A82-40694 # Ultrastructural qualitative and quantitative evaluation of cytoplasmatic structures of heart muscle of rats living aboard biosputnik Kosmos 936.** S. Baranski, M. Kujawa, and A. Kaplanskii (Wojskowy Instytut Medycyny Lotniczej, Warsaw, Poland; Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement,* vol. 23, Dec. 1980 (1982), p. S-38 to S-40. 8 refs.

Ultrastructural morphometrical examinations of some cytoplasmatic structures from heart muscle of rats flight on board of the biosatellite Cosmos 936 were carried out. Two groups of animals were examined; one living in weightlessness conditions and the second in weightlessness with artificial, centrifuge-induced gravity. In both groups of animals the following was observed; changes in the structure of mitochondrial and smooth endoplasmatic reticulum and miofilaments. Artificial gravity does not prevent changes in rat heart muscle. (Author)

**A82-40695 # Body composition of rats flown aboard Cosmos-1129.** A. S. Ushakov, T. A. Smirnova (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR), G. C. Pitts (Virginia, University, Charlottesville, VA), N. Pace, A. H. Smith, and D. F. Rahlmann (California, University, Berkeley and Davis, CA). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement,* vol. 23, Dec. 1980 (1982), p. S-41 to S-44. 9 refs.
(Previously announced in STAR as N82-20832)

**A82-40696 # Stress in space flight - Metabolic aspects.** R. A. Tigranian, L. Macho, R. Kvetnansky, S. Nemeth, and N. F. Kalita (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR: Slovenska Akademia Vied, Ustav Experimentalnej Endokrinologie, Bratislava, Czechoslovakia). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement,* vol. 23, Dec. 1980 (1982), p. S-45 to S-50. 25 refs.

In order to identify the stress reaction associated with a prolonged exposure to weightlessness, various stress indicators (such as the concentration of catecholamines; the activities of enzymes involved in adrenal, hypothalamus, myocardium, and blood metabolism; the hormone content in blood; and the enzyme activity in the liver) were investigated in different organs and tissues of rats flown for 18.5 days aboard a Cosmos biosatellite. The results obtained were compared to data from rats exposed to the effects of artificial gravity generated by a centrifuge on the biosatellite, as well as from vivarium controls. It was concluded that the space flight was not a powerful stressor for the sympatho-adrenal system. An increase in the activities of aspartate aminotranferase, alanine aminotransferase, fructose-1,6-diphosphatase, and gluocose-6-phosphatase was the only convincing evidence of weightlessness-induced chronic stress to which the rats were exposed throughout the flight. Thus, this study demonstrated a good adaptation of animals to prolonged weightlessness alone and to space flight effects on the whole. N.B.

**A82-40697 # Results of morphological investigations aboard biosatellites Cosmos.** A. S. Kaplanskii, E. A. Savina, V. V. Portugalov, E. I. Il'ina-Kakueva, E. I. Alekseev, G. N. Durnova, A. S. Pankova, G. I. Plakhuta-Plakutina, V. N. Shvets, and V. I. Yakovleva (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement,* vol. 23, Dec. 1980 (1982), p. S-51 to S-54. 20 refs.

A review is presented of morphological studies, conducted on Cosmos biosatellites, designed to identify the systems and organs showing reactions to weightlessness and to determine the pattern, specificity, and reversibility of changes induced. Results of these studies show that the direct effect of weightlessness causes inhibition of bone growth, resorption and demineralization of bone tissues, functional atrophy of muscles, depletion of a portion of the capillaries in muscles, inhibition of erythropoiesis and thrombocytopoiesis, and the appearance of morphological signs of a decreased functioning of certain components of the neuroendocrine system. A stress reaction during weightlessness results in the involution of lymphoid organs. It is concluded that all morphological effects of weightlessness are directly or indirectly associated with a diminished functioning of different organs and systems, and reflect the adaptation of the animal body to a new environment. N.B.

**A82-40698 * #** **Studies of specific hepatic enzymes involved in the conversion of carbohydrates to lipids in rats exposed to prolonged spaceflight aboard Cosmos 1129.** S. Abraham, C. Y. Lin (Children's Hospital Medical Center, Oakland, CA), H. P. Klein, C. Volkmann (NASA, Ames Research Center, Moffett Field, CA), R. A. Tigranian, and E. G. Vetrova (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement*, vol. 23, Dec. 1980 (1982), p. S-55 to S-58. 6 refs.
(Previously announced in STAR as N81-32831)

**A82-40699 #** **Effect of prolonged weightlessness on certain aspects of brain metabolism of the rat.** N. N. Demin, O. G. Gazenko, and R. A. Tigranian (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement*, vol. 23, Dec. 1980 (1982), p. S-59 to S-62.

The effect of relatively long periods of weightlessness on the metabolism of the central nervous system was studied in rats aboard several Cosmos biosatellites. Results showed that during stable adaptation to space flight conditions, cerebral metabolism was slightly inhibited, as expressed in the brain segments associated with motor activity. The decline in the absolute content of RNA and the normal content of proteins in Purkinje cells suggested that the level of protein metabolism in these neurons was lowered. This was also indicated by a decrease in the activities of acetylcholinesterase and cholinesterase. In the motor lobe, the content of thiol groups as well as cholinesterase activity decreased, perhaps reflecting an inhibition of central structures. In general, the changes identified are suggestive of a passive suppression of the functional activity of the brain, rather than manifestations of stress reactions. N.B.

**A82-40700 #** **Effect of spaceflight on lymphocyte stimulation.** A. Cogoli and A. Tschopp (Zürich, Eidgenössische Technische Hochschule, Zurich, Switzerland). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement*, vol. 23, Dec. 1980 (1982), p. S-63 to S-66. 14 refs. Swiss National Science Foundation *Grant No. 3,499,0,79.*

A review is presented of experiments on human lymphocytes performed either during space flights or at high-g and simulated low-g conditions in order to test the efficiency of the specific immune system during and after space flight. Results show that low-g conditions depress the activity of lymphocytes, whereas high-g conditions have a stimulating effect. Although no mechansim of activation is proposed, a number of effects are possible, including changes in the distribution of organelles induced by gravity or weightlessness which change the concentration of molecules involved in lymphocyte activation. In addition, the observed effect of gravity on the rate of lymphocyte activation suggests that a not-yet-identified biological clock in lymphocytes could be regulated by gravity. N.B.

**A82-40701 #** **Study of contractile properties and composition of myofibrillar proteins of skeletal muscles in the Cosmos-1129 experiment.** T. Szilagyi, A. Szoor, O. Takacs, M. Rapcsak, V. S. Oganov, S. A. Skuratova, S. S. Oganesian, L. M. Murashko, and M. A. Eloian (Debreceni Orvostudomanyi Egyetem, Debrecen; Szegedi Orvostudomanyi Egyetem, Szeged, Hungary; Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR; Institute of Cardiology, Yerevan, Armenian SSR). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement*, vol. 23, Dec. 1980 (1982), p. S-67 to S-70. 14 refs.

The influence of weightlessness on the soleus, extensor digitorum longus, triceps, and brachial muscles was investigated in rats flown for 18.5 days aboard a Cosmos biosatellite. Results suggest that the changes in the muscles due to weightlessness depend on the functional properties of the muscles, although all of the muscles studied showed a great decrease in weight and contractile properties. The most sensitive reaction was displayed by the soleus muscle, which predominantly consists of slow fibers. Gel electrophoresis studies revealed an increase in the quantity of LC-3 fast myosin subunits in the soleus and extensor digitorum muscles, indicating that a transformation of the muscles takes place under conditions of weightlessness. Recovery experiments demonstrated that the soleus and brachial muscles showed significant change on the sixth day, whereas on the 29th day readaptation was complete. In addition, plaster cast immobilization studies were found to serve as a good model for the simulation of the effects of weightlessness. N.B.

**A82-40702 #** **Variability of physiological properties of rat skeletal muscles at different gravity levels.** V. S. Oganov, A. N. Potapov, S. A. Skuratova, and M. A. Shirvinskaia (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement*, vol. 23, Dec. 1980 (1982), p. S-71 to S-75. 26 refs.

Changes in the physiological parameters of skeletal muscles of rats exposed to weightlessness and to artificial gravity both in terrestrial and space flight conditions were investigated. Hindlimb muscles exhibited a significant decrease of maximal amplitude of isometric tension, especially in the soleus muscle, in the absence of significant changes in the contraction strength of the extensor digitorium longus muscle. Studies of the forelimb muscles suggested that the final result of weightlessness on the triceps muscle is very similar to the reaction of the antigravity soleus muscle. The response of the brachial muscle to space flight includes a more marked 'training' effect, which is manifested as an increased maximal amplitude of isometric tension. These experimental findings give evidence that the reactions of the contraction system of different muscle due to an altered gravity are strongly dependent on their functional specialization and the biomechanics of their contraction. N.B.

**A82-40703 * #** **Morphometric analysis of rat muscle fibers following space flight and hypogravity.** L. A. Chui (Southern California, University, Los Angeles, CA) and K. R. Castleman (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement*, vol. 23, Dec. 1980 (1982), p. S-76 to S-78. 10 refs. NASA-supported research.

The effect of hypogravity on striate muscles, containing both fast twitch glycolytic and slow twitch oxidative fibers, was studied in rats aboard two Cosmos biosatellites. Results of a computer-assisted image analysis of extensor digitorum muscles from five rats, exposed to 18.5 days of hypogravity and processed for the alkaline ATPase reaction, showed a reduction of the mean fiber diameter (41.32 + or - 0.55 microns), compared to synchronous (46.32 + or - 0.55 microns) and vivarium (49 + or - 0.5 microns) controls. A further experiment studied the ratio of fast to slow twitch fibers in 25 rats exposed to 18.5 days of hypogravity and analyzed at four different periods of recovery following the space flight. Using the previous techniques, the gastrocnemius muscle showed a reduction of the total muscle fiber area in square microns and a reduction in the percentage of slow fibers of flight animals compared to the control animals. N.B.

**A82-40704 * #** **Bone resorption and calcium absorption in rats during spaceflight.** C. E. Cann, R. R. Adachi, and E. Morey Holton (NASA, Ames Research Center, Biomedical Research Div., Moffett Field; California, University, San Francisco, CA). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement*, vol. 23, Dec. 1980 (1982), p. S-83 to S-86. 7 refs.
(Previously announced in STAR as N81-32845)

**A82-40705 #** **Bone growth in the rat mandible during space flight.** D. J. Simmons, J. E. Russell, F. Winter, W. Walker (Washington University, St. Louis, MO), A. Vignery, Mr. Tran Van Thuc (Yale University, New Haven, CT), G. D. Rosenberg (Indiana University; Purdue University, Indianapolis, IN), and R. Baron. *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement*, vol. 23, Dec. 1980 (1982), p. S-87 to S-90. 8 refs.
(Previously announced in STAR as N81-32839)

**A82-40706 * #** **A new rat model for studies of hypokinesia and antiorthostasis.** X. J. Musacchia and D. R. Deavers (Louisville, University, Louisville, KY). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement*, vol. 23, Dec. 1980 (1982), p. S-91, S-92. 12 refs. Grants No. NsG-2191; No. NsG-2325.

A new rat model (suspension and immobilization) is described for induction of hypokinesia and orthostatic manipulations. Hypokinetic responses were comparable to those in prolonged bed rest and weightlessness in humans, body or limb casted and small cage restrained animals. Responses to antiorthostasis (15 to 20 deg head down tilt) in rats were similar to those in neutral bouyancy tests in humans and animals and to those in prolonged bed rest in humans. During seven days of hypokinesia there was an atrophy of the gastrocnemius and increased excretion of urinary nitrogeneous end products. The antiorthostatic (AOH) 15 to 20 deg head down tilt resulted in diuresis, natriuresis and kaliuresis. No comparable responses were observed in orthostatic hypokinetic (OH) rats. Readaptation from AOH and OH occurred during one week recovery in metabolic cage conditions. (Author)

**A82-40707 #** **Na/+/-K/+/ dependent ATP-ase modifications of skeletal muscle and myocardium of hypokinetic rats.** P. Groza, S. Cananau, D. Ungureanu, A. Petrescu, and C. T. Dragomir (Academia de Stiinte Medicale, Bucharest, Rumania). *(International Union of Physiological Sciences, Annual*

*Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement,* vol. 23, Dec. 1980 (1982), p. S-93, S-94. 8 refs.

Membrane ionic transfer in skeletal and cardiac muscles was studied in rats exposed to 15, 30, and 60 days of hypokinesia by determining the Na(+)-K(+) dependent ATPase membrane activity. Electron microscopy showed that both types of muscles were modified after hypokinesia, and mitrochondrial alteration and atrophy of the myofibrils were also observed. The changes in the myocardium were more marked, due to a decreased metabolic rate based on a diminished oxygen need and use and a functional deficiency. Na(+)-K(+) dependent ATPase activity diminished with a lengthening of the time of hypokinesia. In the myocardium, the decrease in the activity of this enzyme was more pronounced, as well as more rapid, than in the soleus muscle, thus demonstrating a greater functional lability of this muscle. The intracellular content of Na(+) increased, while that of K(+) decreased, which can be explained as the consequence of structural modifications and alterations of the complex ATPase membrane system which ensures the Na(+) and K(+) extracellular and intracellular distribution and polarization. N.B.

**A82-40708 # Effect of immobilization on the ATPase activities and Ca-uptake of sarcoplasmic reticulum in different types of muscles.** G. Jakab, L. Gajdos, and F. Guba (Szegedi Orvostudomanyi Egyetem, Szeged, Hungary). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement,* vol. 23, Dec. 1980 (1982), p. S-95, S-96. 7 refs.

The effect of immobilization on the activity of ATPase calcium ion uptake is studied in sacroplasmic reticulum vesicles isolated from rabbit gastrocnemius and soleus muscles. The changes in the 'extra' Ca(2+) ATPase activity of normal and immobilized muscles are examined in order to study the Ca transport system. Results show that the 'extra' Ca(2+) ATPase activity increases about two-fold in the gastrocnemius muscle and about five-fold in the soleus muscle in comparison with the controls after two weeks of immobilization. The calcium ion uptake capacity values in both types of muscles are the highest after two weeks of immobilization, increasing three-fold in the gastrocnemius muscle and four-fold in the soleus muscle. It is concluded that immobilization has a strong effect on the calcium metabolism of the fibers, in which the muscles adapt to new situations by establishing a new steady state. N.B.

**A82-40709 # Plasticity of fast and slow muscle myofibrillar proteins in model experiments simulating weightlessness.** M. G. Meszaros, O. Takacs, J. Hideg, E. Berenyi, and F. Guba (Szegedi Orvostudomanyi Egyetem, Szeged; Hungarian People's Army, Medical Corps., Hungary). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement,* vol. 23, Dec. 1980 (1982), p. S-97, S-98.

Plaster cast immobilization seems to be an adequate method for simulating the effect of weightlessness on muscles under terrestrial conditions. Therefore, the protein composition of myofibrils from fast and slow muscles of rabbit hind limbs immobilized by plaster cast was analyzed using one- and two-dimensional gel-electrophoretic techniques. It was demonstrated that the response of structural elements from functionally different muscles on the altered demands manifests itself in a fading of isomyosin pattern characteristic of fast and/or slow contractile properties. In the fast muscle the quantity of homodimeric LC-3 isomyosin decreases, while increases in the slow one. This results in a transformation of the myosin population, consequently a de-differentiation of muscle cells. The changes will be discussed in the term of plasticity of vertebrate striated muscles. (Author)

**A82-40710 # Effect of immobilization of the excitatory parameters of different type skeletal muscle.** A. Torok, I. Sziklai, O. Takacs, and F. Guba (Szegedi Orvostudomanyi Egyetem, Szeged, Hungary). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement,* vol. 23, Dec. 1980 (1982), p. S-99, S-100.

The effect of immobilization on the physiological functions of rabbit skeletal muscles is investigated. Results indicate that the latency time, which may be regarded as one of the excitation parameters, increases in immobilized muscles, and may be related to the effect of disuse. The twitching amplitude of the gastrocnemius muscle does not change with disuse, while it decreases by about 50% in the soleus muscle, and these values are found to be parallel to the decrease of myofibrillar protein content. More importantly, it is determined that the half-time of tension development and the half-time of relaxation for the soleus muscle are equivalent to the values found for the gastrocnemius muscle as a result of disuse. It is concluded that disuse leads to the dedifferentiation of muscles with different functions. N.B.

**A82-40711 # Effect of immobilization on the nonhistone protein composition in different types of skeletal muscles.** I. Sziklai, O. Takacs, Z. Kiss, and F. Guba (Szegedi Orvostudomanyi Egyetem, Szeged, Hungary). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement,* vol. 23, Dec. 1980 (1982), p. S-101, S-102.

Nonhistone proteins of fast-twitch glycolytic head of the gastrocnemius muscle and slow-twitch oxydative soleus muscle of rabbit were extracted and analyzed by two-dimensional gel electrophoresis in normal stages and after two weeks of disuse. The ratio of the quantities of nonhistone chromosomal proteins to DNA was nearly standard in soleus muscle: 1.21 (normal), 1.29 (disused); and decreased in gastrocnemius muscle: 2.66 (normal), 2.26 (disused). After disuse, besides the basically unchanged nonhistone patterns, there was a disappearance of the low mol. weight spots in the soleus muscle while new polypeptides emerged in the same range in the gastrocnemius muscle. **A82-40712 # Immobilization effects upon aerobic and anaerobic metabolism of the skeletal muscles.** I. Edes, I. Sohar, H. Mazarean, O. Takacs, and F. Guba (Szegedi Orvostudomanyi Egyetem, Szeged, Hungary). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement,* vol. 23, Dec. 1980 (1982), p. S-103, S-104.

The effect of different periods of immobilization (1-6 weeks) on the aerobic and anaerobic metabolism of rabbit soleus and gastrocnemius muscles is studied by measuring the total activity of lactic dehydrogenase (LDH), malic dehydrogenase (MDH), aldolase (ALD), isocitrate dehydrogenase (ICDH), as well as the distribution of LDH isoenzymes. In the soleus muscle, the activity of the enzymes taking part in the oxidative metabolism (ICDH, MDH) decreases more rapidly than the rate of the glycolytic enzyme activities (LDH, ALD), while in the gastrocnemius muscle the rate of decrease in the activity of these enzyme pairs is reversed. For both types of muscles, increasing periods of immobilization lead to increasing amounts of LDH isoenzymes containing M subunits, which are characteristic for anaerobic metabolism. N.B.

**A82-40713 # The effect of hypoxic and hypobaric exercises on the blood-brain barrier in rats.** E. Dux, F. Joo (Magyar Tudomanyos Akademia, Biofizikai Intezet and Biologiai Kozpont, Szeged, Hungary), L. Dux, A. Gecse, A. Ottlecz, Zs. Mezei, G. Telegdy (Szegedi Orvostudomanyi Egyetem, Szeged, Hungary), L. Bognar, P. Remes, and J. Hideg (Hungarian People's Army, Medical Corps., Hungary). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement,* vol. 23, Dec. 1980 (1982), p. S-105 to S-107. 10 refs.

The effect of intermittent hypoxic and hypobaric environments on the ultrastructure of the blood-brain barrier in rats is studied, and the ability of the isolated brain capillaries of the pups from the previously exposed rats, as well as adult male rats, to synthesize prostacyclin and prostaglandin (PG) is determined. Results show that in pregnant rats, hypoxic exercises enhance the transport processes through the endothelial cells, as shown by an incrased number of pinocytotic vesicles and a contraction of the nuclei of endothelial cells. Progesterone treatment prevents these alterations, and also normalizes the changes in the PGF 2 and PGE 2 synthesizing ability of the pups of hypoxic exercised rats. In adult male rats, no ultrastructural changes and milder alterations of PG synthesis are found. N.B.

**A82-40714 # Relations between respiratory and circulatory control during gravitational load in man.** S. Waurick (Leipzig, Universität, Leipzig, East Germany). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement,* vol. 23, Dec. 1980 (1982), p. S-108 to S-110. 11 refs.

The respiratory CO2-responses (0, 2, 4% CO2 in air) of five healthy males were investigated in a horizontal (0 deg), a 30 and 70 deg upright position. The response curves were shifted to the left, depending on the gravitational load. As the cardiac output diminishes under these conditions it is concluded that the influence of circulatory control on respiratory regulation is not based on the magnitude of bloodflow. The ratio of relative change in heart rate and respiratory minute-volume was 1:2.35 compared to 1:3 or 1:4 during workload. Furthermore increasing CO2-concentrations provoked chronotropic effects, with their direction and extent depending on the initial state. Going from horizontal to vertical positions the changes in the inclinations of CO2 heartrate and CO2 respiratory response curves were always correlated. (Author)

**A82-40715 # The effects of human growth hormone administration on the functional status of rat atrophied muscle following immobilization.** M. Apostolakis, A. Deligiannis, and A. Madena-Pyrgaki (Salonika, University, Salonika, Greece). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement,* vol. 23, Dec. 1980 (1982), p. S-111, S-112. 6 refs.

In 40 adult rats the right hind limb was immobilized by insertion of a metal pin. Fifteen days later the pin was removed and the animals divided into two equal groups: group A-untreated and group B-treated by 0.06 I.U. hGH daily. After two weeks the following parameters of both gastrocnemius muscles in all the animals were obtained: total EMG activity, contractile properties and work capacity. From the results it can be concluded that hGH administration (1) increased the EMG activity of atrophied muscle in group B by 73%, (2) increased the isometric tension of the same muscles by 58% and 65% (twitch and tetanic tension respectively), and (3) restored to a great extent (by 44%) the work capacity of the atrophied muscles in group B as compared to the atrophied muscles of group A. (Author)

**A82-40716 * #** **Gravitational adaptation of animals.** A. H. Smith (California, University, Davis, CA) and R. R. Burton (USAF, School of Aerospace Medicine, Brooks AFB, TX). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement*, vol. 23, Dec. 1980 (1982), p. S-113, S-114. 9 refs. Grant No. NGR-05-004-008.

The effect of gravitational adaptation is studied in a group of five Leghorn cocks which had become physiologically adapted to 2 G after 162 days of centrifugation. After this period of adaptation, they are periodically exposed to a 2 G field, accompanied by five previously unexposed hatch-mates, and the degree of retained acceleration adaptation is estimated from the decrease in lymphocyte frequency after 24 hr at 2 G. Results show that the previously adapted birds exhibit an 84% greater lymphopenia than the unexposed birds, and that the lymphocyte frequency does not decrease to a level below that found at the end of 162 days at 2 G. In addition, the capacity for adaptation to chronic acceleration is found to be highly heritable. An acceleration tolerant strain of birds shows lesser mortality during chronic acceleration, particularly in intermediate fields, although the result of acceleration selection is largely quantitative (a greater number of survivors) rather than qualitative (behavioral or physiological changes). N.B.

**A82-40717 #** **Some of biochemical parameters in rat brain during +Gz acceleration.** H. Debiec, W. Kowalski, S. Wroblewski, and K. Kwarecki (Wojskowy Instytut Medycyny Lotniczej, Warsaw, Poland). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement*, vol. 23, Dec. 1980 (1982), p. S-117, S-118. 7 refs.

Stability of lysosomes and mitochondria were tested to determine the influence of acceleration on brain injuries. The degree of enzymatic adaptation to hypoxic conditions was also evaluated. After 1 hr of +5Gz acceleration, cytoplasmic activity of intralysosomal and intramitochondrial enzymes increased, which indicates damage of these cell structures. An increase in isoenzyme LDH5 activity suggests a change of cell metabolism to anaerobic. (Author)

**A82-40718 * #** **Alterations in heat loss and heat production mechanisms in rat exposed to hypergravic fields.** J. M. Horowitz, B. A. Horwitz, and J. Oyama (NASA, Ames Research Center, Biomedical Research Div., Moffett Field; California, University, Davis, CA). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement*, vol. 23, Dec. 1980 (1982), p. S-119, S-120. 7 refs. Grant No. NsG-2234.

A review of studies investigating the thermal response of rats exposed to hypergravic fields well below maximum tolerance levels is presented. It is concluded that several lines of evidence indicate that the neural switching network for temperature regulation and cardiovascular channeling of blood flow is transiently affected during the first hour a rat is exposed to hypergravity. Moreover, even after one hour of exposure, when the core temperature has fallen several degrees, shivering and nonshivering thermogenesis are not fully activated. Only after prolonged exposure to hypergravic fields do heat production mechanisms recover sufficiently to bring the core temperature back to a normal level. Thus, the data indicate a more rapid recovery of effector mechanisms for heat loss than for heat production. N.B.

**A82-40719 * #** **Chronic central vascular expansion induces hypokalemia in conscious primates.** M. C. Moore-Ede and D. A. Kass (Harvard University, Boston, MA). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement*, vol. 23, Dec. 1980 (1982), p. S-123, S-124. 5 refs. Grant No. NsG-9054.

Central vascular expansion maintained for four days in conscious squirrel monkeys reconciles the apparently conflicting short-term fluid and electrolyte responses to water immersion and atrial balloon distension, with those described for prolonged weightlessness during space flight. The monkeys are subjected to an increased lower body positive air pressure (LBPP) of 20 torr which produces a 3 cm water increase in the central venous pressure. Results show a marked increase in the urinary excretion of sodium, potassium, and water during the firxt six hours of LBPP, and the diuresis is maintained throughout the period of LBPP, although the levels of sodium and potassium excretion decline after 24 hours of exposure. Plasma aldosterone transiently drops within the first three hours of LBPP, and then regains normal levels within 24 hours, after which time these levels are maintained despite the continued LBPP stimulus. It is suggested that the normal plasma aldosterone levels observed in the experiments, as well as during space flight, might, epresent a relative hyposecretion in terms of volume homeostasis and a relative hypersecretion with respect to plasma potassium regulation. Thus, kaliuresis and marked natriuresis is confined primarily to the first 24 hours of central volume expansion, a period for which comparable data from space flights are lacking. N.B.

**A82-40720 #** **Autonomic reactions in labyrinthectomized rabbits during centrifuge acceleration.** H. Urano, Y. Mizuno, S. Watanabe (Gifu University, Gifu, Japan), and G. Mitarai (Nagoya University, Nagoya, Japan). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement*, vol. 23, Dec. 1980 (1982), p. S-125, S-126. 6 refs.

The effects of acceleration produced by centrifugal force upon cardiopulmonary and somatosensory system were investigated using 23 adult rabbits. The experiments were included to compare with intact and labyrinthectomized animals, and also with awake and light anaesthetized ones. The centrifugal force (G) was applied up to 5 G making a load paradigm of staircase-type or trapezoid-type, in which each plateau level of G continued over 45 sec. The respiratory rate and heart rate were not in proportion to magnitude of acceleration. Responses by the staircase acceleration drew a hysteresis loop and it seems that the responses of respiratory and heart rates produced by acceleration took either of those two values on the hysteresis curve. It was also observed in some cases that the nystagmus induced by acceleration was correlated inversely to EMG response of hind limbs. (Author)

**A82-40721 #** **Labyrinth plugging as a model of suspended vestibular sensory input.** L. Korzenszky and L. Simon (Semmelweis Orvostudomanyi Egyetem, Budapest, Hungary). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest Hungary, July 13-19, 1980.) Physiologist, Supplement*, vol. 23, Dec. 1980 (1982), p. S-127, S-128.

A simple, clearly reproducible experimental method is described for blocking the labyrinthine functions in mice, which can serve as a model for studying the vestibular adaptations to normal gravity and also can make it possible to differentiate the physiological states of animals during space flight. The vestibulum is filled with a sterile mixture of beeswax and paraffin which prevents movements of the endolymph in the semicircular ducts, as well as the deformation of otolithic receptor organs during accelerational or gravitational stimulation. Animals that have undergone the operation on one side show considerable asymmetry of postural tone, which is later exaggerated into a continuous rolling toward the plugged side. Mystagmography, biaxial stabilography, and the lift reaction are used to quantitatively evaluate the asymmetry in the postural and motor behavior, as well as to determine the time curve of adaptation. N.B.

**A82-40722 #** **Space flight effects upon plasma and tissue lipids in rats.** I. Ahlers, E. Ahlersova, E. Paulikova, I. Datelinka, B. Smajda, M. Toropila, M. Praslicka (Univerzita Pavla Jozefa Safarika, Kosice, Czechoslovakia), and R. A. Tigranian (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement*, vol. 23, Dec. 1980 (1982), p. S-131, S-132. 6 refs.

Plasma and tissue lipids were determined in rats flown in average 20 days aboard four (690, 782, 936, 1129) Cosmos biosatellites. Immediately after landing there was an increase in lipomobilization, in plasma lipids, in liver, thymus, and bone marrow triglycerides. The creation and use of artificial gravity (Cosmos 936) prevented the appearance of 'fatty liver', the increase of phospholipids in serum and the accumulation of triglycerides in bone marrow. The additional stress (repeated short-term immobilization) on days 1-6 postflight acted more profundly on the space flight group, as compared with animals from terrestrial modelling experiments or with intact control ones. On day 25 postflight all changes disappeared but accumulation of bone marrow triglycerides persisted. (Author)

**A82-40723 #** **Effects of space flight factors and artificial gravity on deoxyribonucleoprotein in lymphoid organs of rats.** E. Misurova, M. Praslicka, K. Kropacova, T. Szabova (Univerzita Pavla Jozefa Safarika, Kosice, Czechoslovakia), and R. A. Tigranian (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh-Problem, Moscow, USSR). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement*, vol. 23, Dec. 1980 (1982), p. S-133, S-134. 5 refs.

The influence of space flight and artificial gravity on changes in the levels of deoxyribonucleoprotein (DNP) and nucleic acid is studied for the spleen and thymus of rats after approximately 20 days onboard three Cosmos satellites. Several hours after landing, partial DNP breakdown was found in the spleen and liver and the content of nucleic acids was reduced by about 60%. However, rats exposed to artificial gravity during the space flights show decreased DNP breakdown in the thymus, but not in the spleen. The changes in the DNP and nucleic acid levels evoked by the space flights recovered quickly after landing (within six days). Immobilization stress tests conducted 25 days after landing showed, on the other hand, a decrease in the DNA levels only in flight rats, but not in rats from model experiments or control groups. N.B.

**A82-40724 #** **Initiation of nutation in sunflower hypocotyls.** A. H. Brown (Pennsylvania, University, Philadelphia, PA) and D. K. Chapman (University City Science Center, Philadelphia, PA). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement*, vol. 23, Dec. 1980 (1982), p. S-135, S-136. 10 refs.

A biophysical model for simulating the circumnutation of sunflower hypocotyls, developed by Johnsson (1968), is tested for validity by observing the initiation of nutation in these plants. The preferred experimental method consists of observations of clinostatted plants at rest and during the application of a 1 G centripetal force in the axial direction of the plants. The results obtained are not decisively incompatible with Johnsson's model of circumnutation as a gravitropic hunting process. However, they are more easily reconciled with the less definitive concept of an endosenous oscillator which can initiate nutational motion when triggered by an axially imposed gravitational force without a significant prelude in the form of patently inductive wandering growth movements. N.B.

**A82-40725 # Changes of periodic protoplasmic movements on the fast clinostat.** W. Briegleb and A. Schatz (Forschungs- und Versuchsanstalt für Luft- und Raumfahrt, Institut für Flugmedizin, Bonn, West Germany). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement,* vol. 23, Dec. 1980 (1982), p. S-137, S-138. 7 refs.

The effect of weightlessness on different physiological states of two organisms, the water plant Elodea canadensis and the slime mold Physarum polycephalum, is investigated. Small specimens of single cells of the test organisms are placed on a fast clinostat, and observed microscopically to detect changes of the periodic intracellular movements. The results are compatible with a general g-sensitivity of the cells and can be interpreted as an adaptation process of a rated value donor which cybernates the cell matrix. For Physarum, the speed of protoplasmic motion temporarily increases, and a long lasting induction of asymmetric half-period lengths, which may be more directly attributed to growth differentiation of the ectoplasm, is observed. In addition, the changes of period lengths, especially in Elodea, indicate correlations between endogenous clocks, especially those of circadian nature, and gravity. N.B.

**A82-40726 # Skin temperature and thermal comfort in weightlessness.** L. Novak (Universita J. E. Purkyne, Brno, Czechoslovakia), A. M. Genin (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR), and S. Kozlowski (Polish Academy of Sciences, Laboratory of Applied Physiology, Warsaw, Poland). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement,* vol. 23, Dec. 1980 (1982), p. S-139, S-140. 6 refs.

The influence of weightlessness on the process of heat transfer between the human body and the outer environment during space flights is investigated. Results, obtained by an electrical dynamic katathermometer, show that skin temperatures during weightlessness differ markedly both at rest and after a work load has been applied from those under normal terrestrial conditions, including an increase in the skin temperature of the chest and a decrease in that of the extremities. In addition, the temperature of the space cabin exhibited a greater cooling power than did a test cabin on earth, despite the fact that they had similar temperature variations. N.B.

**A82-40727 # Aortic and tibial bloodflow response to lower body negative pressure /LBNP/.** J. A. Loeppky, E. R. Greene, D. E. Hoekenga, M. D. Venters, and M. W. Eldridge (Lovelace Foundation for Medical Education and Research; U.S. Veterans Administration Medical Center, Albuquerque, NM). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement,* vol. 23, Dec. 1980 (1982), p. S-141 to S-144. 12 refs.

Blood velocities in the ascending aorta from the suprasternal notch were determined by a 3.0 MHz pulse Doppler velocity meter (PD) for seven subjects before, during, and after progressive 5 min stages of LBNP. Changes in the stroke volume (SV) were calculated from the systolic velocity integrals, while the blood flow in the posterior tibial artery was estimated by using a unique 20 MHz PD. At -20 torr, mean SV fell by 11% and gradually declined by 48% with successive increments of LBNP to -60 torr. Mean tibial flow fell progressively with LBNP stress, due to an increase in the reverse flow component and a reduction in the peak forward flow and diameter. SV increased and the heart rate fell sharply during the first 15 sec of recovery. In two subjects, vasovagal symptoms were observed, during which the SV rose by 86% and more than compensated for the drop in heart rate. It is suggested that vasovagal presyncope is accompanied by a paradoxical increase in venous return and that the reduction in heart rate is the primary cardiovascular event. N.B.

**A82-40728 # Effects of lower body negative pressure on the reliability of cardiovascular system using X-ray kymograms.** Y. G. Zorbas, Mr. Sadeghi-Shoja, and S. Khaligh (European Institute of Environmental Cybernetics, Athens, Greece). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement,* vol. 23, Dec. 1980 (1982), p. S-145, S-146. 16 refs.

The effects of lower-body negative pressure (LBNP) on man's cardiovascular system reliability (functional capacity) were investigated by the X-ray kymography method. Twenty-six experiments were conducted on 16 physically healthy males in the age group from 18 to 22 years. X-ray kymograms were recorded before and during the exposure to LBNP of -40 and -60 mm Hg. Diastolic, systolic and stroke volumes of the heart were computed. A decrease in the diastolic, systolic and stroke volumes and cardiac output, and contractile activity and an elevation in tilting of myocardium axis were determined. Under the influence of LBNP the reliability of the cardiovascular system exhibits an appreciable impairment. (Author)

**A82-40729 # Vibration and decompression gas bubbles.** U. I. Balldin (Forsvarets Forskningsanstalt, Stockholm, Sweden) and A. Sporrong (Kungl. Karolinska Institutet, Stockholm, Sweden). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement,* vol. 23, Dec. 1980 (1982), p. S-147, S-148. 7 refs.

The paper describes experiments conducted to determine if vibrations, similar to those that may appear in helicopter flights, might also release decompression gas bubbles after diving. Subjects are exposed to intermittent hyperbaric conditions while performing bicycle ergometer work, followed by hypobaric exposure, which causes decompression gas bubbles in great amounts. During hypobaric exposure the subjects are exposed to alternating periods of 0.23 g sub z (peak) vibrations of 15 Hz and periods of nonvibrations. Results show that no significant differences in the release of decompression gas bubbles could be found between 15 Hz vibration and nonvibration conditions. Similar results are found in a few experiments using a 25 Hz vibration. N.B.

**A82-40730 # Relation between physiological effects of gravitational forces and that of magnetic forces.** H. Saiki, M. Saiki, M. Nakaya, M. Sudoh, M. Abe, and Y. Taketomi (Jikei University, Tokyo, Japan). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement,* vol. 23, Dec. 1980 (1982), p. S-149, S-150. 5 refs.

Physiological functions of mice are examined during and after exposure to low magnetic fields (1% intensity of the geomagnetic field) under simulated hypogravic conditions, and the results compared to those of geomagnetic field exposure. Results indicate a decline in the healing process of wounds inflicted with a punch to the dorsum under hypokinetic fields after exposure to low magnetic fields. In addition, the detrimental effects of hypokinetics on swimming capacity is attenuated by low magnetic fields. However, the deterioration in swimming capacity caused by hypokinetic exposure gradually ameliorates over time, and the swimming capacity returns to normal after a three month hypokinetic exposure. N.B.

**A82-40731 # Orthostatic tolerance and exercise response before and after 7 days simulated weightlessness.** A. Guell, L. Braak, J. Bousquet, M. Barrere, and A. Bes (Centre Hospitalier Universitaire Ranguell, Toulouse, France). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement,* vol. 23, Dec. 1980 (1982), p. S-151, S-152. 5 refs.

Four volunteers underwent orthostatic tests before and after a 7-day period of prolonged bedrest in antiorthostatic position (-4 deg). A +65 deg tilt test (head up) during 20 minutes and a squat-stand test were performed. Tests on an ergometric bicycle were also performed. Concerning orthostatic tolerance after the simulation, a greatly increased intolerance among two of the volunteers was noted, that can be translated as a presyncopal state with severe arterial hypotension, whereas the other two volunteers showed a paradoxical reaction with a hypertensive spike. The exercise response was also perturbed after, especially for one of the volunteers for whom the test had to be stopped. It is concluded that these results confirm the value of such a position when one intends to simulate the cardiovascular changes that occur during weightlessness. (Author)

**A82-40732 # Postural control related to the different tilting body positions.** V. Litvinenkova F. Hlavacka, and M. Krizkova (Slovenska Akademia Vied, Ustav Normalnej a Patologickej Fyziologie, Bratislava, Czechoslovakia). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement,* vol. 23, Dec. 1980 (1982), p. S-153, S-154.

The effects of 5 minutes exposure to different body tilting positions on the patterns of postural control were investigated. By means of a stabilographic method the influence of recumbent (supine) position - head horizontal 0 deg, head up +60 deg, head down -15 deg and sitting position head +90 deg was measured. The evaluated parameters of the posture stability were: statokinesigram area (A) and the velocity index of body sways (I). Thirty-one healthy men aged 18-24 were tested after all tilting exposures with eyes open and eyes closed. Romberg quotient (R) was computed from data obtained. Horizontal position 0 deg induced the mildest decrease of postural stability. The most destabilizing effect after +60 deg tilting was found. The significant changes were manifested only in subjects with eyes closed. It was the R for A which reflected the reduced ortostatic tolerance most sensitively. (Author)

**A82-40733 # The reaction of simulated and true weightlessness on digestive tract of rats.** P. Groza, A. Bordeianu, A. Boca, and S. Cananau (Academia de Stiinte Medicale, Bucharest, Rumania). *(International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980.) Physiologist, Supplement,* vol. 23, Dec. 1980 (1982), p. S-155, S-156.

In order to better differentiate the reactions produced by stress and weightlessness, changes in the digestive tract of rats produced by restraining their movements are determined and compared with the changes produced in true space flight. Histochemical studies show that 15-30 days of terrestrial hypokinesia produces modifications similar to those evoked by a space flight lasting 18.5 days, including decreased mucopolysaccharide secretion in different digestive organs, increased secretion of several enzymes of the intestinal wall, and increased secretory activity of antral and duodenal gastrin secreting cells. Gastric acid and pepsin secretions, as well as secretions of plasmatic corticosterone, increase only during terrestrial hypokinesia, and not during space flights, and are a result of stress reactions. N.B.

**A82-40734** **International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, September 29-October 2, 1981, Proceedings.** Physiologist, Supplement, *vol. 24, Dec. 1981 (1982). 126 p.*

The proceedings of the Third Annual Meeting of the IUPS Commission on Gravitational Physiology are presented. Particular consideration is given to such topics as the reduction in renal artery blood flow impedance during upright tilt in man; the atrophy of rat skeletal muscles in simulated weightlessness; induced hypokinesia and antiorthostasis as a simulation of weightlessness; the restraint of animals in space research; and cellular aspects of gravitational biology. Attention is also given to embryonic development during chronic acceleration, cardiac and cerebral vascular adaptation to gravitational stresses in man, evidence for arrested bone formation during space flight, and gravity perception and asymmetric growth in plants. B.J.

**A82-40735** # **Reduction in renal artery blood flow impedance during upright tilt in man.** J. A. Loeppky, E. R. Greene, and M. W. Eldridge (Lovelace Foundation for Medical Education and Research, Albuquerque, NM). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement,* vol. 24, Dec. 1981 (1982), p. S-1, S-2. 6 refs.

Because of the relative inaccessibility of the renal vascular bed, there is little information on the dynamics of renal artery blood flow in response to alterations in gravitational stress in man. In the present study, a 5.0 MHz real-time two-dimensional pulsed Doppler duplex scanner was used to noninvasively characterize the changes in renal artery impedance and flow during orthostasis. These changes were then compared to changes in the central circulation in an attempt to define the redistribution of pressures and flow occurring in the central and renal vascular beds. B.J.

**A82-40736** # **Relevance of aldosterone on circulatory, renal and blood reactions during simulated weightlessness and on aerobic metabolic rate.** W. Skipka and J. Stegemann (Köln, Deutsche Sporthochschule, Cologne, West Germany). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement,* vol. 24, Dec. 1981 (1982), p. S-3, S-4. 13 refs.

The present study examined the relevance of the decrement in aldosterone level during simulated weightlessness by head-out water immersion (WI) with respect to circulatory, renal, and blood reactions. Four-hour WI experiments were performed in which aldosterone was substituted by injections of Aldocorten at the beginning and after two hours of WI. Red cell 2,3-DPG concentration increased significantly in the opposite direction to that of the controls (WI without aldosterone). Additional experiments showed that aldosterone significantly augmented oxygen uptake during work loads. This indicates that the WI-induced decrease of performance capacity can be due to a concomitant aldosterone decrement. B.J.

**A82-40737** # **Relation between sensoric and motoric function of Wistar rats after space flight by biosatellite Cosmos 1129.** M. Poppei, K. Hecht, V. S. Oganov, V. Ia. Klimovitskii, T. Schlegel, D. Sass, E. Wachtel, and V. S. Magedov (Berlin, Humboldt-Universität, Berlin, East Germany; Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement,* vol. 24, Dec. 1981 (1982), p. S-7, S-8. 7 refs.

The locomotor avoidance reflex of rats on Cosmos 1129 was evaluated in order to determine the relationship between sensory and motor functions. An automatic timing clock was used to study the central nervous reaction time and the motor reaction time. Changes in muscle structure after 18 and one-half days of space flight were found to be reflected in changes in motor reaction. Markedly shortened motor reaction times pointed to a motor hyperactivity related to an increased muscle metabolism, indicating the effects of weightlessness and a stress reaction. B.J.

**A82-40738** * # **Atrophy of rat skeletal muscles in simulated weightlessness.** D. D. Feller, H. S. Ginoza, and E. R. Morey (NASA, Ames Research Center, Biomedical Research Div., Moffett Field, CA). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement,* vol. 24, Dec. 1981 (1982), p. S-9, S-10. 11 refs.

A hypokinetic rat model was used for elucidation of the mechanism of skeletal muscle wasting which occurs in weightlessness. Rats were suspended from a back-harness with the head tilted downward and the hind limbs totally unloaded. A progressive decrease in the size of the soleus muscle from suspended rats was observed as a function of time. The rate of protein degradation of the homogenates from the soleus muscles of suspended and control animals was not significantly different. The rate of cell-free protein synthesis was severely repressed in the atrophied muscle. An initial rise in the levels of plasma glucose and corticosterone was observed on the second day of suspension, but they subsequently returned to normal values. (Author)

**A82-40739** # **The effect of hypokinesia and hypoxia on the function of muscles.** T. Szilagyi, J. Hideg, E. Beranyi, A. Pozsgai (Hungarian People's Army, Medical Corps, Hungary), A. Szoor (Debreceni Orvostudomanyi Egyetem, Debrecen, Hungary). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement,* vol. 24, Dec. 1981 (1982), p. S-11, S-12. 5 refs.

Experiments were performed on adult male rats to study the effects of hypokinesia and hypoxia on the extensor digitorum longus, gastrocnemius, and soleus muscles. It is shown that plaster cast immobilization causes rapid and pronounced structural and functional changes in all three types of muscles, first of all in the antigravitational soleus muscle. These changes are similar to those observed in weightlessness. Hypokinesia causes slight changes which develop slowly, while hypoxia (the equivalent of 7000 m above sea level for eight hours a day) intensifies the effect of hypokinesia. B.J.

**A82-40740** # **Analysis of transient cardiovascular response to orthostatic stress using noninvasive methods.** H. Pessenhofer, G. Schwaberger, N. Sauseng, and T. Kenner (Graz, Universität, Graz, Austria). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement,* vol. 24, Dec. 1981 (1982), p. S-13, S-14. 7 refs.

The application of noninvasive methods for the analysis of dynamic control phenomena in the cardiovascular system on clinical and space research problems is demonstrated. In an investigation, performed in 10 volunteers, the transient responses of heart period, systolic time intervals and impedance cardiogram were recorded immediately after a sudden change in body position from horizontal to vertical (tilt-table), beat-per-beat for one minute. To estimate the time course of variables which could not be directly determined by noninvasive methods, a mathematical model of the physiological system was used, the free parameters of which were estimated by means of a systems identification procedure. The resulting time functions of the measured variables and of the variables calculated on the basis of the model (mean arterial pressure, enddiastolic filling pressure, total peripheral resistance) demonstrated the interplay between baroreceptor reflex and Frank-Starling-mechanism in the adjustment of the mean arterial pressure after a change in body position. (Author)

**A82-40741** * # **Antiorthostatic hypokinesia and circulation in the rat.** V. Popovic (Emory University, Atlanta, GA). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement,* vol. 24, Dec. 1981 (1982), p. S-15, S-16. Grant No. NGR-11-001-009.

Circulatory mechanisms that occur during exposure to head-down hypokinesia as well as during readaptation to control conditions were studied on unanesthetized unrestrained Sprague-Dawley rats exposed to hypokinesia for seven days. The heart rate was slightly elevated, and the right atrial pressure increased to 4 mm Hg, but returned to 0 mm Hg after three days of exposure. Mean arterial blood pressure decreased from 118 to 100 mm Hg during early exposure to antiorthostatic hypokinesia. Cardiac output and stroke volume of resting rats increased during early exposure to hypokinesia but decreased continuously during the next seven days. The results indicate that antiorthostatic hypokinesia induces circulatory changes similar to those seen in astronauts after several days of exposure to 0 g forces. B.J.

**A82-40742** # **Protein composition of mRNA containing 18S-40S subribosomal particles in soleus muscle before and after immobilization.** I. Sziklai, D. Szekely, Z. Kiss, and F. Guba (Szegedi Orvostudomanyi Egyetem, Szeged, Hungary). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement,* vol. 24, Dec. 1981 (1982), p. S-17, S-18.

**A82-40743** # **Effects of prolonged bedrest in antiorthostatic position on rCBF measured by 133Xe inhalation technique - Effects of clonidine.** A. Guell, G. Victor, A. Bru, P. Montastruc, and A. Bes (Centre Hospitalier Universitaire Rangueil, Toulouse, France). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement,* vol. 24, Dec. 1981 (1982), p. S-19, S-20. 12 refs.

Experiments involving prolonged bedrest in antiorthostatic position were performed in order to simulate cardiovascular changes observed in weightlessness. Six young healthy subjects were placed in strict bedrest in a -4-deg antiorthostatic position for seven days. The rCBF (regional cerebral blood flow) measurements were made by an Xe-133 inhalation method; three of the subjects received 0.450 mg of clonidine during the experiment. A constant increase in rCBF was observed during the first 12 hours in subjects who did not receive clonidine; at the 72nd hour, all values returned to the basal state. These findings agree with the rapid correction of hemodynamic disturbances observed in the first days of weightlessness. In subjects treated with clonidine, the increase in rCBF did not occur. B.J.

**A82-40744 * # Suspension restraint - induced hypokinesia and antiorthostasis as a simulation of weightlessness.** X. J. Musacchia, J. M. Steffen (Louisville, University, Louisville, KY), and D. R. Deavers (College of Osteopathic Medicine and Surgery, Des Moines, IA). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement*, vol. 24, Dec. 1981 (1982), p. S-21, S-22. 5 refs. Grants No. NsG-2191; No. NsG-2325.

Muscle, renal, fluid and electrolyte responses were measured in suspended rats; the hind limbs are non-load bearing and the front limbs can be used for feeding and grooming. Hind limb hypokinesia reverses after removal from the suspension harness. This suspension system is adjustable for a head-down tilt to produce antiorthostatic responses which are also reversible. Responses to hypokinesia or antiorthostatic hypokinesia for up to 14 days were measured, e.g., muscle atrophy: soleus greater than gastrocnemius equals plantaris greater than extensor digitorum longus, kaliuresis, and increased excretion of urea, NH3, and 3 methylhistidine. Muscle protein loss, a response to a reduction in RNA, is also reversible. A head-down tilt for 7-14 days results in diuresis and natriuresis. These changes are reversed within 24 hours after removal from the restraint harness. Physiological effects of suspension restraint can be used to simulate and predict responses to microgravity exposure. (Author)

**A82-40745 # Root cell gravireaction - Hormone interaction.** P. E. Pilet (Lausanne, Université, Lausanne, Switzerland). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement*, vol. 24, Dec. 1981 (1982), p. S-25 to S-28. 9 refs.

Some interactions between two endogeneous hormones, indole-3yl-acetic acid (IAA) and abscisic acid (AbA), were studied in gravistimulated maize roots (cultivars of Zea mays). It is found that the growth reaction of the gravistimulated roots is regulated by the IAA movement, which is strongly acropetal and by the AbA transport, which is preferentially basipetal. These two hormones, being found in larger amounts in the lower part of the growing region, induce a growth inhibition in this region, causing a downward root curvature. B.J.

**A82-40746 # The effect of gravity on the distribution of plant growth substances in plant tissues.** W. Hartung (Würzburg, Universität, Würzburg, West Germany). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement*, vol. 24, Dec. 1981 (1982), p. S-29 to S-32. 14 refs. Research supported by the Deutsche Forschungsgemeinschaft.

The distribution of abscisic acid (ABA) in root tip tissues and of indole acetic acid (IAA) in shoot tissues of several plants is not affected by gravity. Pretreatment with ABA (roots) and IAA (shoots), however, increases the geotropic reaction of the organs. Treatment of the roots and shoots that alters the pH-gradients within the cells and thus the cellular phytohormone distribution reduces the sensitivity of horizontally placed plant organs to gravity. The results communicated in this paper cast doubt on the validity of the Cholodny Went theory. It appears possible that gravity influences the cellular compartmentation of plant growth substances. Code (Mayo Medical School, Rochester, MN). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement*, vol. 24, Dec. 1981 (1982), p. S-33 to S-36. 11 refs.

**A82-40748 # Restraint of animals in space research.** R. R. Burton, J. W. Burns, and A. H. Smith (USAF, School of Aerospace Medicine, Brooks AFB, TX; California, University, Davis, CA). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement*, vol. 24, Dec. 1981 (1982), p. S-41 to S-44. 26 refs.

The restraint of animals for orientation purposes in a space (zero G) environment for research purposes is considered. Attention is given to types of restraint; restraint tolerance criteria; and animal training, adaptation, and selection for restraint. Potential problems concerning animal restraint in a space environment are examined. B.J.

**A82-40749 * # Animal models for simulating weightlessness.** E. Morey-Holton and T. J. Wronski (NASA, Ames Research Center, Biomedical Research Div., Moffett Field, CA). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement*, vol. 24, Dec. 1981 (1982), p. S-45 to S-48. 17 refs.

NASA has developed a rat model to simulate on earth some aspects of the weightlessness alterations experienced in space, i.e., unloading and fluid shifts. Comparison of data collected from space flight and from the head-down rat suspension model suggests that this model system reproduces many of the physiological alterations induced by space flight. Data from various versions of the rat model are virtually identical for the same parameters; thus, modifications of the model for acute, chronic, or metabolic studies do not alter the results as long as the critical components of the model are maintained, i.e., a cephalad shift of fluids and/or unloading of the rear limbs. B.J.

**A82-40750 # Results of investigations of weightlessness effects during prolonged manned space flights onboard Salyut-6.** O. P. Kozerenko, A. I. Grigor'ev, and A. D. Egorov (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement*, vol. 24, Dec. 1981 (1982), p. S-49 to S-54. 15 refs.

Salyut-6 results indicate that a prolonged exposure to weightlessness may induce homeostatic changes in various physiological systems, bringing the body to a level of functioning that is different from that on earth. The physiological changes observed during and after flights were reversible; return to normal occurred after a relatively short period of readaptation. There was no linear correlation between flight duration and the level of inflight and postflight reactions. B.J.

**A82-40751 # Results of biosatellite studies of gravity-dependent changes in the musculo-skeletal system of mammals.** V. S. Oganov (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement*, vol. 24, Dec. 1981 (1982), p. S-55 to S-58. 26 refs.

Results of rat experiments performed on Cosmos satellites indicate that space flight may induce not only atrophic changes in the slow antigravitational muscles but also adaptive and biologically expedient transformations of phenotypes of muscle fibers, including (in all likelihood) reprogrammed synthesis of contractile muscle proteins. This may cause the rearrangement of the functional profile of muscles: the slow antigravitational soleus muscle acquires the features typical of fast muscles, while the fast brachialis muscle gains those peculiar to slow muscles. B.J.

**A82-40752 # Mechanisms of the effects of weightlessness on the motor system of man.** I. B. Kozlovskaia, Iu. V. Kreidich, and A. S. Rakhmanov (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement*, vol. 24, Dec. 1981 (1982), p. S-59 to S-64. 15 refs.

A broad spectrum of motor effects of weightlessness has been revealed, including changes in muscle properties, shifts in sensory systems and reflex mechanisms, and perceptual and coordination disorders. These changes are usually attributed primarily to weight-bearing unloading and related muscle atrophy. But clinical and physiological examinations of the motor function performed during 140 and 175 day flights on Salyut-6 are at variance with this idea and point to a multifactorial genesis of the postflight changes. In particular, the magnitude and duration of changes in different components of the motor system of crew members were found to be uncorrelated. B.J.

**A82-40753 # Adaptation of the rat skeleton to weightlessness and its physiological mechanisms - Results of animal experiments aboard the Cosmos-1129 biosatellite.** D. J. Simmons (Washington University, St. Louis, MO). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement*, vol. 24, Dec. 1981 (1982), p. S-65 to S-68. 12 refs.

Results from Cosmos-1129 and from other Cosmos biosatellites have provided an incisive description of the effect of null gravity on the kinetics of the rat skeleton, and its cells and mineral metabolism. The applicability of the rat model to the adult human astronaut skeleton has yet to be validated in all of its aspects. The rat model is least controversial in terms of changes in bone matrix formation. It is most controversial in terms of how it relates to the resorption/remodeling rates of bone. B.J.

**A82-40754 # Cellular aspects of gravitational biology.** M. G. Tairbekov and G. P. Parfenov (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct.2, 1981.) Physiologist, Supplement*, vol. 24, Dec. 1981 (1982), p. S-69 to S-72. 20 refs.

The mechanisms of energy use and material transport through the walls of a biologic cell are reviewed, along with the results of spaceborne bioscience experiments, to conclude that cells with dimensions of one cubic millimeter or less function independent of a gravity field. Additionally, the absence of gravity-induced convection gradients in space environments enhance the equilibrated processes of cell functions. The effects become more complicated with multicellular species, which may have both vegetative and animal components and display teleocentric behavior during growth. Changes which occur in multicellular species, or in a cell which is part of a multicellular organism, are concluded to occur due to metabolic shifts caused by energy process changes within and outside of gravity fields. M.S.K.

**A82-40755 * #** **Embryonic development during chronic acceleration.** A. H. Smith and U. K. Abbott (California, University, Davis, CA). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct.2, 1981.) Physiologist, Supplement,* vol. 24, Dec. 1981 (1982), p. S-73, S-74. 7 refs. Grant No. NsG-7493.

Experiments carried out on chicken eggs indicate that the embryo is affected during very early development, especially over the first four days, and during hatching. In the first four days, the brain develops as well as the anlage for all other organs. In addition, the heart commences to function and the extraembryonic membranes that compartmentalize the egg contents form. The latter require an appreciable extension and folding of tissue which may be disrupted by the mechanical load. Observations of embryonic abnormalities that occur during chronic acceleration suggest an inhibition of development of the axial skeleton, which is rarely seen otherwise, a general retardation of embryonic growth, and circulatory problems. The final stages of development (after 18 days) involve the uptake of fluids, the transition to aerial respiration, and the reorientation of the embryo into a normal hatching position. At 4 G mortality is very high during this period, with a majority of embryos failing to reorient into the normal hatching position. C.R.

**A82-40756 * #** **Suppression of osteoblast differentiation during weightlessness.** W. E. Roberts, P. G. Mozsary (University of the Pacific, San Francisco, CA), and E. R. Morey (NASA, Ames Research Center, Moffett Field, CA). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement,* vol. 24, Dec. 1981 (1982), p. S-75, S-76. Research supported by the Pacific Dental Research Foundation; Grants No. NCA2-OR-588-002; No. NIH-DE-05136; No. NIH-2-S07-RR-05301.

It is pointed out that associated with weightlessness is a marked depression or arrest of bone formation. Although the mechanism of this effect is unknown, it probably involves a failure of osteogenic induction. The present study's objective is to determine if weightlessness alters osteoblast differentiation, as evidenced by a change in relative distribution of large to small nuclei in rat moral periodontal ligament of the maxilla. In conjunction with the U.S./USSR Biological Satellite Program, male Wistar rats were flown aboard a modified Soviet Vostok spacecraft (Cosmos 1129). The results of the study are discussed. Morphometric investigations suggest that depleted numbers of preosteoblasts may be an important factor in the inhibition of bone formation during weightlessness. G.R.

**A82-40757 * #** **Clinostat exposure and symmetrization of frog eggs.** G. W. Nace (Michigan, University, Ann Arbor, MI) and J. W. Tremor (NASA, Ames Research Center, Biosystems Div., Moffett Field, CA). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement,* vol. 24, Dec. 1981 (1982), p. S-77, S-78. 6 refs. Grant No. NAGW-29; Contract No. NAS2-10945.

Since the orientation of unfertilized eggs and the righting of eggs after grey crescent formation do not affect the axes, attention here is directed toward a comparative study of the initial rotation of the fertilized egg, the so-called rotation of orientation (R-of-O). The goal of the investigation is to determine the timing and dynamics of the R-of-O (as distinct from inversion rotations), to confirm prior observations, and to examine the influence of gravity compensation at periods that might be crucial. Gravity compensation for 1 hr during the R-of-O is found to yield fewer abnormalities. It is hypothesized that it changes the axes and that return to normal conditions permits regulation. Longer exposure is found to yield more abnormalities, perhaps by perturbing both the action of the aster and regulation. C.R.

**A82-40758 * #** **The intracellular responses of frog eggs to novel orientations to gravity.** G. P. Radice, A. W. Neff, and G. M. Malacinski (Indiana University, Bloomington, IN). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement,* vol. 24, Dec. 1981 (1982), p. S-79, S-80. 5 refs. Grant No. NAGW-60.

It is found that multiple short doses of ultraviolet light are as effective as a single large dose in producing neural defects. In addition, 180 deg rotation (inversion) of irradiated eggs reduces the ultraviolet effect. Since yolk platelets may be the gravity sensing mechanism, their size, density, and distribution in normal and inverted eggs are investigated. Large platelets are denser and for the most part are in a distinct zone in the vegetal hemisphere, whereas small platelets are less dense and occur in the animal hemisphere. When inverted, the large platelets flow into the animal hemisphere as a coherent mass and partially displace the small platelets. Inversion is thought to rearrange cytoplasmic components necessary for later neural development into an appropriate configuration. C.R.

**A82-40761 #** **Effect of sustained Gz acceleration on lung fluid balance - An ultrastructural study.** W. J. Weidner, L. F. Hoffman, and D. O. DeFouw (California, University, Davis, CA; New Jersey, College of Dentistry and Medicine, Newark, NJ). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement,* vol. 24, Dec. 1981 (1982), p. S-85, S-86.

In order to examine the effects of sustained acceleration on lung fluid balance, chickens were centrifuged at +2Gz or +4Gz for one hour. At the end of the centrifuge run, the animals were immediately anesthetized with pentobarbital and the lungs were fixed by tracheal instillation at 20 cm H2O pressure with 2% glutaraldehyde. Interstitial pulmonary edema was observed in those animals subjected to 4Gz acceleration. Micromorphometric data indicate that thickening of the pulmonary interstitial space separating alveolar epithelial cells and capillary endothelium occurred in the 4Gz group. Both 2G and 4G acceleration were associated with a decrease in mean capillary diameter. Endothelial vesicular density was progressively reduced in upper and middle lung sections at 2G and 4G, while this parameter was progressively increased in dependent lung sections. Results suggest that pulmonary edema can occur at acceleration intensities below 5 Gz if centrifuge runs are prolonged. (Author)

**A82-40762 #** **Vestibular effects of water immersion and Clonidine.** S. Vesterhauge, A. Mansson, F. Bonde-Petersen, P. Norsk, and K. Zilstorff (Rigshospitalet; Copenhagen, Universitet, Copenhagen, Denmark). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement,* vol. 24, Dec. 1981 (1982), p. S-87, S-88. 6 refs. Research supported by the Danish Space Board and Boehringer Ingelheim.

Attention is given to the way in which circulatory changes modify the vestibular function and the way in which they contribute to the development of space motion sickness. Circulatory changes similar to those occurring during microgravity can be induced by head-out water immersion; these changes are modified here by the administration of Clonidine. It is shown that circulatory changes induced by simulated weightlessness increase the unphysiologic caloric response but do not influence the physiological function of the semicircular canals. Clonidine is found to reduce the caloric response and increase the rotatory phase lag, probably due to an 'unspecific' central sedation rather than to circulatory changes. C.R.

**A82-40763 #** **The effect of Clonidine on peripheral vasomotor reactions during simulated zero gravity.** F. Bonde-Petersen, A. Guell, K. Skagen, and O. Henriksen (Copenhagen, Universitet, Copenhagen, Denmark; Centre Hospitalier Universitaire Rangueil, Toulouse, France). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement,* vol. 24, Dec. 1981 (1982), p. S-89, S-90. 8 refs.

The influence of prolonged bedrest (BR) on the venous compliance (VC) and the vasocunstrictor response in the arterioles during local increases in hydrostatic pressure and during tilt are investigated. BR is also combined with Clonidine medication. Clonidine stimulates the CNS cardiovascular depressor center and the peripheral alpha-receptors. Clonidine's main effect is found to be as a central sympathetic nervous activity (SNA) depressor. Water immersion per se is found to depress SNA; an additive effect of water immersion and Clonidine shows an additional reduction of splanchnic vascular resistance down to 50% of control values. This effect counteracts the increased total peripheral resistance which otherwise would be a consequence of an increased alpha stimulation. A fall in mean arterial pressure is therefore observed. C.R.

**A82-40764 #** **Cardiovascular effects of Clonidine during 20 hours head down tilt /-5 deg/.** P. Norsk, F. Bonde-Petersen, and J. Warberg (Copenhagen, Universitet, Copenhagen, Denmark). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement,* vol. 24, Dec. 1981 (1982), p. S-91, S-92. 8 refs.

The cardiovascular effects of Clonidine during 20 hr of bedrest where the head is tilted downward by 5 deg are investigated, as are the effects of Clonidine on exercise capacity and orthostatic tolerance before and after the bedrest. The stress induced by the 20 hr of bedrest is found to be counteracted by the central depressor effect of Clonidine on the heart. The peripheral effect of Clonidine increasing forearm vascular resistance, venous tone, and lung tissue volume facilitates the adaptation to the microgravity environment. C.R.

**A82-40765 #** **Cardiac and cerebral vascular adaptation to gravitational stresses in man.** A. Belluschi (Ospedale Maggiore Ca'Granda, Milan, Italy). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement,* vol. 24, Dec. 1981 (1982), p. S-93, S-94.

A polygraphic method comprising a cerebral rheogram (REG), digital plethysmography, and a phonocardiogram (PCG) is used in analyzing the behavior of the cerebral vascular resistances and that of the cardiac output. The influence of the gravitational vector, which is constant in its direction, is found to change for the different postures and in the arterial and venous network, the brain, and the peripheral area. It is concluded that the gravitational vector is a stimulus for the regulation of the arterial tone. Another finding is that the gravitational vector associated with the thorax bellows is a coefficient of the venous outflow and as such a stimulus to the cerebral capillary vascular reactions. C.R.

**A82-40766 * #** **Response of rat body composition to simultaneous exercise and centrifugation at 3.14g.** G. C. Pitts (Virginia, University, Charlottesville, VA) and J. Oyama (NASA, Ames Research Center, Biomedical Research Div., Moffett Field, CA). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement,* vol. 24, Dec. 1981 (1982), p. S-95, S-96. 9 refs.

A study is described calling into question the hypothesis that an increased physical load during chronic centrifugation contributes to the body composition changes observed in centrifuged rats. Considering fat-free and fat-free dry masses of the total body and carcass, it is seen that centrifugation combined with either wheel running or restraint reduced these masses to approximately 85% of the respective 1-g values, that is, the same result with either sedentary rats or rats running several hundred meters per day. It is pointed out that if an effect of a centrifugation-induced load is present but hidden by opposing factors, an analysis of variance should reveal it as an interaction between acceleration and other variables; however, no such interactions are found here. Tables are included emphasizing the pervasive influence of chronic centrifugation after only 12 days exposure. C.R.

**A82-40767 * #** **Evidence for arrested bone formation during spaceflight.** R. T. Turner, J. D. Bobyn, P. Duvall, E. R. Morey, D. J. Baylink, and M. Spector (NASA, Ames Research Center, Moffett Field, CA; South Carolina, Medical University; U.S. Veterans Administration Medical Center, Charleston, SC; U.S. Veterans Administration, Medical Center, Tacoma, WA). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement,* vol. 24, Dec. 1981 (1982), p. S-97, S-98. 7 refs.

Addressing the question of whether the bone formed in space is unusual, the morphology of bone made at the tibial diaphysis of rats before, during, and after spaceflight is studied. Evidence of arrest lines in the bone formed in space is reported suggesting that bone formation ceases along portions of the periosteum during spaceflight. Visualized by microradiography, the arrest lines are shown to be less mineralized than the surrounding bone matrix. When viewed by scanning electron microscopy, it is seen that bone fractures more readily at the site of an arrest line. These observations are seen as suggesting that arrest lines are a zone of weakness and that their formation may result in decreased bone strength in spite of normalization of bone formation after flight. The occurrence, location, and morphology of arrest lines are seen as suggesting that they are a visible result of the phenomenon of arrested bone formation. C.R.

**A82-40768 #** **Validation of a new method for studying the effects of vibration on the primate spine.** P. Quandieu and C. Nogues (Laboratoire Central de Biologie Aérospatiale, Paris, France). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement,* vol. 24, Dec. 1981 (1982), p. S-99, S-100.

The results obtained from miniature accelerometers implanted anteriorly on the vertebral bodies of primates are discussed. It is found that when stimulated by vibration, the intervertebral disk behaves as a low-pass filter. The filter is linear, even when the amplitude of stimulation acceleration reaches relatively high levels (0.4 G). Muscle activity causes a variation in the transfer properties of the disk. Muscle contraction improves its low-pass properties (lower transmission in the high-frequency range), whereas muscle relaxation causes a translation of filter properties towards the high-frequency range (transmission at 80 Hz improving with nembutal and curare). Removal of the nucleus pulposus brings about a shift in resonance to the high-frequency range, the occurrence of nonlinearity, and a serious increase in transfer toward that high-frequency range of the lumbar disks nearest the sacrum. C.R.

**A82-40769 * #** **Chronic acceleration and brain density.** L. F. Hoffman and A. H. Smith (California, University, Davis, CA). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement,* vol. 24, Dec. 1981 (1982), p. S-101, S-102. 9 refs. Grant No. NsG-7493.

Tests carried out on rabbits show that the effect of chronic acceleration is not uniform among the various tissues studied. Although body mass is reduced by the treatment, as expected, no change is apparent in brain mass o in the density of cerebrospinal fluid. Acceleration-induced changes are encountered in tissue density, the myocardium exhibiting a transient increase followed by an exponential decrease toward a limit and the brain showing an arithmetic increase in density with continued exposure to 2.5 G. The data are seen as suggesting that a specific brain load is not a regulated phenomenon and that no physiological processes occur to attenuate the increased load imposed by the hyperdynamic environment. An equation is derived indicating that the stimulus potential per unit of brain load increases with body size, even though brain density decreases and cerebrospinal fluid density increases. C.R.

**A82-40770 #** **Gravity only dependent receptor field of the vestibular sensors - its significance in orbital flight.** T. Gualtierotti (Milano, Università, Milan, Italy). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement,* vol. 24, Dec. 1981 (1982), p. S-103, S-104. 5 refs.

In the bull frog the gravity dependent receptive field of tonic and phasic-tonic vestibular receptors covers nearly the entire 360 deg solid angle. Consequently any given position of the head will modify the adapted firing rate of the entire family of statoreceptors, in an orderly pattern. As a result, stationary responses to gravity effectively modulate the evoked activity of the vestibular receptors due to head movement. In '0' g this organized gravity dependent pattern disappears altering the amplitude and mode of the vestibular responses to head movements. The problem is further complicated by the random 'wandering' of the cell mean frequency which is orders of magnitude larger in '0' g than on earth. (Author)

**A82-40771 #** **Relation between physiological effects of gravitational forces and that of magnetic forces. II.** H. Saiki, M. Sudoh, M. Nakaya, and M. Abe (Jikei University, Tokyo, Japan). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement,* vol. 24, Dec. 1981 (1982), p. S-105, S-106. 6 refs.

The effects of various intensities of magnetic field (low, geomagnetic, and high) on the metabolic and cardiovascular functions of albino rats are investigated under various gravity conditions. The high magnetic field tends to diminish the effects of hypodynamic exposure in such parameters as urine volume and metabolic rate at rest. The low magnetic field tends to attenuate the effect of the hypodynamic exposure in such parameters as urine volume and the excretion rate of K(+) and Ca(2+). C.R.

**A82-40772 * #** **Core temperature and brainstem auditory evoked potentials as complimentary noninvasive measures of central neural function during exposure to hypergravic fields.** T. A. Jones and J. M. Horowitz (California, University, Davis, CA). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) **A82-40773 #** **Response of cultured cells to hyper- and hypogravity.** A. Tschopp, A. Cogoli (Zürich, Eidgenössische Technische Hochschule, Zurich, Switzerland), and W. Briegleb (Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt, Institut für Flugmedizin, Cologne, West Germany). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement,* vol. 24, Dec. 1981 (1982), p. S-109, S-110. Swiss National Science Foundation *Grant No. 3,499-0,79.*

Preliminary results obtained with four cell lines at high-g and with lymphocytes monitored in a fast-rotating clinostat are described. The experiments shown that gravity has an influence on cell growth that is independent of cell line. High-g increases the growth rate, whereas low-g has an inhibitory effect. At high-g, no correlation is found between g-level and cell growth; the high-g effect remains essentially the same at 3-g, 20-g, and 40-g. C.R.

**A82-40774 * #** **Temperature and behavioral responses of squirrel monkeys to 2Gz acceleration.** C. A. Fuller (California, University, Riverside, CA), J. Tremor, J. P. Connolly, and B. A. Williams (NASA, Ames Research Center, Biosystems Div., Moffett Field, CA). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct.2, 1981.) Physiologist, Supplement,* vol. 24, Dec. 1981 (1982), p. S-111, S-112. 6 refs. NSF Grant No. BNS-79-2441; Grant No. PHS-BRD-RR-09070; Contract No. NAS2-10536.

This study examines the responses of squirrel monkeys to acute +2Gz exposure. Body temperature responses of loosely restrained animals were recorded via a thermistor in the colon. Behavioral responses were recorded by video monitoring. After baseline recording at 1G, monkeys were exposed to 2G for 60 min. The body temperature started to fall within 10 min of the onset of centrifugation and declined an average of 1.4 C in 60 min. This is in contrast to a stable body temperature during the control period. Further, after a few minutes at 2G, the animals became drowsy and appeared to fall asleep. During the control period, however, they were alert and continually shifting their gaze about the cage. Thus, primates are susceptible to hypergravic fields in the +Gz orientation. The depression in primate body temperature was consistent and significant. Further, the observed drowsiness in this study has significant ramifications regarding alertness and performance in man. (Author)

**A82-40775 * #** **Gravity perception and asymmetric growth in plants - A model derived from the grass pulvinus.** P. Dayanandan, C. I. Franklin, and P. B. Kaufman (Michigan, University, Ann Arbor, MI). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement*, vol. 24, Dec. 1981 (1982), p. S-113, S-114. Grant No. NAGW-34.

It is pointed out that gravitropic responses in plants involve asymmetric growth. On the basis of the geometry of growth response in grass leaf sheath pulvinus, a general model is proposed for gravitropism in multicellular plant organs. The negative gravitropic response of a pulvinus is a result of cell elongation involving all but the uppermost region of a horizontally placed organ. Whereas the uppermost region does not grow, the lowermost region elongates maximally. The regions between elongate to intermediate extents. An expression is given relating the angle of curvature of the organ to the diameter and initial and final lengths of the organ. It is shown that the response of the individual cells can be expressed as inherent sensitivity to gravitational stimulus according to a particular equation. C.R.

**A82-40776 #** **ADH suppression under immersion combined with dehydration.** H. von Ameln, M. Laniado, L. Röcker, K. Kirsch, H. J. Wicke, and I. Busch (Berlin, Freie Universität, Berlin, West Germany). *(International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, Sept. 29-Oct. 2, 1981.) Physiologist, Supplement*, vol. 24, Dec. 1981 (1982), p. S-115.

It is assumed that under zero gravity, an increased central blood volume is a concomitant of elevated plasma osmolality. This is seen to present a problem with respect to ADH secretion because, on the one hand, increased plasma osmolality stimulates ADH secretion whereas, on the other, an increase in central blood volume suppresses ADH secretion. The experiment described here involves a regimen of thermal dehydration that is followed by either head-out immersion or chair rest. The immersion is found to lead to a volume shift of about 700 ml into the intrathoracic compartment. Therefore, given high plasma osmolality combined with hypovolemia, after thermal dehydration the maximal stimulatory drive for ADH secretion will be counteracted by immersion. C.R.

**A82-40885 #** **Human factor and flight safety.** J. C. Wanner. In: International Council of the Aeronautical Sciences, Congress, 13th and AIAA Aircraft Systems and Technology Conference, Seattle, WA, August 22-27, 1982, Proceedings. Volume 1. New York, American Institute of Aeronautics and Astronautics, 1982, p. 83-96.

Design considerations developed to assist human operators of the Concorde in emergency situations are explored for principles which may be extended to other complex machine control design problems. Noting that with complex machinery, no one factor can nominally be identified as the only cause of an accident, each accident is considered to be a chain of events. In-flight accidents occur because of pilotability incidents, aircraft control sensitivity to perturbation incidents, and maneuverability incidents, which may have to do solely with changing the functional status of the aircraft. Characteristics of human attentiveness, a natural inclination to search fo; data, and the ability to compensate for an altered workload are outlined. Recommendations are given that information relayed by instruments be useful, that information follow anticipation, alarms be easy to identify, and that necessary appropriate actions be limited in number. M.S.K.

**A82-41122 *** **Ultrasonic determination of thermodynamic threshold parameters for irreversible cutaneous burns.** J. H. Cantrell, Jr. (NASA, Langley Research Center, Hampton, VA). *Acoustical Society of America, Journal*, vol. 72, Aug. 1982, p. 337-339. 10 refs.

In vivo ultrasonic measurements of the depth of conductive cutaneous burns experimentally induced in anesthetized Yorkshire pigs are reported as a function of burn time for the case in which the skin surface temperature is maintained at 100 C. The data are used in the solution of the one-dimensional heat diffusion equation with time-dependent boundary conditions to obtain the threshold temperature and the energy of transformation per unit mass associated with the transition of the tissue from the state of viability to the state of necrosis. The simplicity of the mathematical model and the expediency of the ultrasonic measurements in studies of thermal injury are emphasized. (Author)

**A82-41195** **Molecular basis for the genetic code.** M. Shimizu (Tokyo, University, Tokyo, Japan). *Journal of Molecular Evolution*, vol. 18, July 1982, p. 297-303. 30 refs.

It was found by using the CPK molecular model that holes on the complexes of four nucleotides (C4N) on the tRNAs, namely complexes of the anticodon bases with the discriminator base at 4th position of 3' end, had lock and key relations to the corresponding protein amino acids. Various general features of the universal and mitochondrial genetic codes were easily explained in terms of the C4N model. The recognition mechanism of the tRNA by the aminoacyl-tRNA-synthetase is closely correlated with the formation of the C4N on the Rossmann fold on the synthetase. The meaning of the hypermodification of the tRNA base next to the third anticodon base and other phenomena were also discussed. (Author)

**A82-41196 *** **Chemical evolution. XL - Clay-mediated oxidation of diaminomaleonitrile.** J. P. Ferris, W. J. Hagan, Jr., K. W. Alwis, and J. McCrea (Rensselaer Polytechnic Institute, Troy, NY). *Journal of Molecular Evolution*, vol. 18, July 1982, p. 304-309. 30 refs. NSF Grant No. 79-24364; Grant No. NGR-30-018-148.

The inhibition of the oligomerization of HCN by montmorillonite clays is shown to be caused by oxidation of diaminomaleonitrile (DAMN) by ferric ion in the clay lattice, with ferrous ion and oxalic acid the reaction products. It is demonstrated that diminosuccinonitrile is the initial reaction product and is rapidly hydrolized to oxalic acid and HCN. The same oxidative transformations are effected by ferric ion bound to Dowex 50, ferric ion in solution, and Ni(NH3)6(2+). The rate of reaction of DAMN indicates no catalytic role for the clay in the oxidation of DAMN, and little reaction of the latter was observed with montmorillonite in which the bulk of the iron was in the divalent state. The possible significance of these redox reactions to chemical evolution is discussed. C.D.

**A82-41197** **The radiolysis of aqueous propionitrile - Compounds of interest to chemical evolution studies.** S. Jovanovic, V. Spiric (Institut za Nuklearne Nauke, Belgrade, Yugoslavia), S. Neskovic (Beograd, Univerzitet, Belgrade, Yugoslavia), Z. Draganic, and I. Draganic (Universidad Nacional Autónoma de México, Villa Oregón, Mexico). *Journal of Molecular Evolution*, vol. 18, July 1982, p. 337-343. 11 refs.

Oxygen-free aqueous solutions of CH3CH2CN (0.1 M, pH 6) were exposed to gamma rays from a Co-60 source and the mixture of radiolytic products fractionated. The separated fractions were analyzed by magnetic resonance methods (EPR, NMR), spectrophotometry (UV-VIS-IR), gas chromatography and amino acids analysis. About 70 percent of radiolytic products consist of nonvolatile material. A large variety of compounds was detected: propionaldehyde, acetaldeyde, sixteen carboxylic acids and, in the hydrolysate, eleven protein and nonprotein amino acids. About 20 percent of the nonvolatile radiolytic products have a hydrophobic character and can be extracted with chloroform. Among them is a long-living nitroxide free radical which is stable for months at room temperature. It has been suggested that the nitroso compounds are formed as radiolytic products, and that they act as spin-traps by converting some of the short living radicals to the observed nitroxide radical. This and other experimental findings are discussed in the light of free radical reactions induced by ionizing radiation. (Author)

**A82-41198** **A model for the origin of life.** F. J. Dyson (Institute for Advanced Study, Princeton, NJ). *Journal of Molecular Evolution*, vol. 18, July 1982, p. 344-350. 12 refs.

A simple statistical model is constructed, describing the transition from disorder to order in a population of mutually catalytic molecules undergoing random mutations. The consequences of the model are calculated, and its possible relevance to the problem of the origin of life is discussed. The main conclusion of the analysis is that the model allows populations of several thousand molecular units to make the transition from disorder to order with resonable probability. (Author)

**A82-41199** **Acceleration of HCN oligomerization by formaldehyde and related compounds - Implications for prebiotic syntheses.** A. W. Schwartz and M. Goverde (Nijmegen, Katholieke Universiteit, Nijmegen, Netherlands). *Journal of Molecular Evolution*, vol. 18, July 1982, p. 351-353. 17 refs.

Formaldehyde and other simple carbonyl compounds are known to react rapidly with HCN in aqueous solution to produce the corresponding cyanohydrin compounds. It is observed that these cyanohydrins markedly accelerate the rate of HCN oligomerization, both in homogeneous solution as well as in the frozen state. These results, for which a tentative mechanism is suggested, significantly extend the possible range of conditions for HCN oligomerization on the prebiotic earth. (Author)

**A82-41200 *** **Formation of the thioester, N-acetyl, S-lactoylcysteine, by reaction of N-acetylcysteine with pyruvaldehyde in aqueous solution.** A. L. Weber (Salk Institute for Biological Studies, San Diego, CA). *Journal of Molecular Evolution*, vol. 18, July 1982, p. 354-359. 50 refs. Grant No. NsG-7627.

N-acetylcysteine reacts efficiently with pyruvaldehyde (methylglyoxal) in aqueous solution (pH 7.0) in the presence of a weak base, like imidazole or phosphate, to give the thioester, N-acetyl, S-lactoylcysteine. Reactions of 100 mM N-acetylcysteine with 14 mM, 24 mM and 41 mM pyruvaldehyde yield, respectively, 86%, 76% and 59% N-acetyl, S-lactoylcysteine based on pyruvaldehyde. The decrease in the percent yield at higher pyruvaldehyde concentrations suggests that during its formation the thioester is not only consumed by hydrolysis, but also by reaction with some substance in the pyruvaldehyde preparation. Indeed, purified N-acetyl, S-lactoylcysteine disappears much more rapidly in the presence of pyruvaldehyde than in its absence. Presumably, N-acetyl, S-lactoylcysteine synthesis occurs by rearrangement of the hemithioacetal of N-acetylcysteine and pyruvaldehyde. The significance of this pathway of thioester formation to molecular evolution is discussed. (Author)

**A82-41206** **Ventilatory and heart rate responses to hypoxia and hypercapnia during sleep in adults.** L. L. Hedemark and R. S. Kronenberg

(Minnesota, University, Minneapolis, MN). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Aug. 1982, p. 307-312. 24 refs.

**A82-41207 Altitude-induced changes in plasma thyroxine, 3,5,3 prime-triiodothyronine, and thyrotropin in rats.** J. M. Connors (Illinois, University, Chicago, IL) and L. G. Martin (Peoria School of Medicine, Peoria, IL). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Aug. 1982, p. 313-315. 21 refs. Grant No. NIH-5-S01-RR-05369-12.

The thyroid function of high-altitude-acclimated (6,900 m for 5 wk) and nonaltitude-acclimated control (198 m) rats was studied. After 5 wk of high-altitude exposure the plasma concentrations of both thyroxine (T4) and triiodothyronine (T3) were lower than those in control rats (4.7 + or - 0.3 vs. 3.3 + or - 0.2 micrograms/dl and 96 + or - 5 vs. 74 + or - 6 ng/dl, respectively). The plasma thyrotropin (TSH) concentration was elevated in the high-altitude-acclimated rats compared with controls (52 + or - 4 vs. 29 + or - 3 micrograms/dl, respectively). Gross anatomical (thyroid wt/body wt) and histological observations of thyroid tissue were consistent with elevated plasma TSH concentrations. These results suggest that the fall in the plasma concentrations of T4 and T3 during acclimation to severe hypoxia is due to a primary block of thyroid secretion and not to a fall in plasma TSH levels. (Author)

**A82-41208 Effect of heating rate on evaporative heat loss in the microwave-exposed mouse.** C. J. Gordon (U.S. Environmental Protection Agency, Experimental Biology Div., Research Triangle Park, NC). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Aug. 1982, p. 316-323. 28 refs.

Mice were exposed to microwave radiation at 2.450 MHz at varying intensities and heat loads to determine if the animals thermoregulate or temperature regulate in conditions of varying heat load. The mice were exposed to whole-body doses of microwave radiation and power not reflected back was regarded as absorbed by the mouse. Incident powers of three to six watts were used, resulting in specific absorption rates of 47.4-93.4 W/kg. Deep body temperatures and the evaporated heat loss were monitored, and results demonstrated that mice thermoregulate, i.e., dissipate heat loads through evaporative heat loss at a rate which is modeled numerically. It is concluded that a significant portion of the microwave energy is deposited internally. M.S.K.

**A82-41209 * Hindlimb immobilization - Length-tension and contractile properties of skeletal muscle.** F. A. Witzmann, D. H. Kim, and R. H. Fitts (Marquette University, Milwaukee, WI). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Aug. 1982, p. 335-345. 32 refs. Grant No. NIH-AM-22037; Contract No. NAS9-15711.

Casts were placed around rat feet in plantar flexion position to immobilize the soleus muscle in a shortened position, while the other foot was fixed in dorsal flexion to set the extensor digitorum longus in a shortened position. The total muscular atrophy and contractile properties were measured at 1, 2, 4, 7, 14, 21, 28, 35, and 42 days after immobilization, with casts being replaced every two weeks. The slow twitch soleus and the fast-twitch vastus lateralis and longus muscles were excised after termination of the experiment. The muscles were then stretched and subjected to electric shock to elicit peak tetanic tension and peak tetanic tension development. Force velocity features of the three muscles were assayed in a series of afterloaded contractions and fiber lengths were measured from subsequently macerated muscle. All muscles atrophied during immobilization, reaching a new steady state by day 21. Decreases in fiber and sarcomere lengths were also observed. M.S.K.

**A82-41210 Pulmonary stretch receptor discharge patterns in eupnea, hypercapnia, and hypoxia.** S. Iscoe (Queen's University, Kingston, Ontario, Canada). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Aug. 1982, p. 346-354. 31 refs. Research supported by the Medical Research Council of Canada.

**A82-41211 Leucine and urea metabolism in acute human cold exposure.** R. D. Goodenough, G. T. Royle, E. R. Nadel, M. H. Wolfe, and R. R. Wolfe (Harvard University; Massachusetts General Hospital; Shriners Burns Institute, Boston, MA; John B. Pierce Foundation, New Haven, CT). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Aug. 1982, p. 367-372. 25 refs. Grants No. NIH-GM-00455-03; No. NIH-GM-21700-07; No. NIH-GM-007-035.

Four healthy males voluntarily underwent acute cold exposure at 10 C. Metabolic rate doubled for the 100-min exposure. (1-carbon-13) leucine and (nitrogen-15) urea were used as tracers of protein metabolism via a primed constant infusion. Total and plasma transported leucine oxidation approximately doubled, but the oxidation of leucine derived from protein in the tissue where oxidation occurred ('intracellular oxidation') did not change as it did when the same subjects underwent mild exercise. Rate of appearance of urea and leucine in plasma were not significantly different between control and cold. Although the rate of protein synthesis calculated from the leucine data did not change, the rate of catabolism increased. Net protein catabolism based on the urea data agreed well with the leucine data at rest but did not exhibit a significant increase during exposure. However, net protein catabolism based on the leucine data did increase significantly during acute cold exposure. (Author)

**A82-41212 Effect of warm-up on left ventricular response to sudden strenuous exercise.** C. Foster, D. S. Dymond, J. Carpenter, and D. H. Schmidt (Wisconsin, University; Mount Sinai Medical Center, Milwaukee, WI). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Aug. 1982, p. 380-383. 22 refs.

Twenty male subjects divided into groups of ten performed bicycle exercise, one group using warm-up of an incremental work-load type, to determine if left ventricular ejection fraction (LVEF) could be normalized in its response to the onset of strenuous exercise. The subjects were monitored by ECG, for blood pressure, and with radionuclide angiography, and a variance analysis for a groups-by-trial design was performed with the data. The warm-ups were found to significantly affect the left ventricular response to sudden strenuous exercise (SSE), although the responses were never normalized. The ECG data is cited to demonstrate that the lack of complete normalization is due to ischemic responses to the SSE, which may be secondary to a delay in autoregulation of coronary blood flow during SSE. M.S.K.

**A82-41213 Neuromuscular adaptation in human thenar muscles following strength training and immobilization.** D. G. Sale, A. J. McComas, J. D. MacDougall, and A. R. M. Upton (McMaster University, Hamilton, Ontario, Canada). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Aug. 1982, p. 419-424. 30 refs. Research supported by the Muscular Dystrophy Association of Canada.

The effects of strength training and limb immobilization on the human thenar muscles were investigated in 11 healthy subjects. One group (n = 6) trained prior to immobilization and a second group (n = 5) underwent immobilization prior to training. Measurements made in the control condition and following the two experimental conditions included voluntary isometric strength, motor-unit counts, motor nerve conduction velocity, reflex potentiation, and isometric twitch-contraction properties. When the results of both groups were combined an average of 5 wk of immobilization was found to cause a significant decrease in voluntary strength (42%, P less than 0.05) and reflex potentiation (37%, P less than 0.01) in relation to the control condition. Training caused an increase (40%, P less 0.05) in voluntary strength and a decrease in twitch tension (25%, p less than 0.01) and contraction time (8%, P less than 0.05). Training prior to immobilization provided a reserve of neuromuscular function, which attenuated the effect of immobilization in relation to the control condition. It was concluded that neural as well as muscular adaptation occurred in response to immobilization. (Author)

**A82-41214 In vivo and in vitro characteristics of eccrine sweating in patas and rhesus monkeys.** C. V. Gisolfi, K. Sato, P. T. Wall, and F. Sato (Iowa, University, Iowa City, IA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Aug. 1982, p. 425-431. 25 refs. Grant No. NIH-5-R01-NS-14745-03; Contract No. N00014-75-C-0597.

**A82-41215 Metabolic and cardiovascular adaptations in trained hypophysectomized rats.** J. G. Edwards, D. D. Lund, T. G. Bedford, C. M. Tipton, R. D. Matthes, and P. G. Schmid (U.S. Veterans Administration Medical Center; Iowa, University, Iowa City, IA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Aug. 1982, p. 448-454. 54 refs. Grants No. NIH-HL-21245-05; No. NIH-GM-07045-04.

Two groups of rats, one hypophysectomized, were exposed to progressive treadmill training for 14-17 weeks. The rats were monitored for blood pressure before training and before sacrifice, muscarinic cholinergic receptor density in the heart, and cariovascular responses to lower body negative pressure. The hypophysectomized rats were found to have reduced maximum oxygen uptake and heart rate, both of which increased with endurance training. Blood pressure was lower before training and stayed lower in the rats with the pituitary removed, and decreases in cholinergic receptors were observed in the right atrium of the trained group. It is concluded that significant metabolic and cardiovascular adaptations occur in trained animals deprived of anterior pituitary hormones, but the exact mechanism for individual changes was not determined. M.S.K.

**A82-41216 Relationship between muscle QO2 and fatigue during repeated isokinetic contractions.** J. L. Ivy, W. M. Shermen, J. M. Miller, B. D. Maxwell, and D. L. Costill (Ball State University, Muncie, IN). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Aug. 1982, p. 470-474. 31 refs. Grant No. NIH-HL-20408-02.

Two biopsy samples were taken from the vastus lateralis muscles of 13 male subjects, who then performed isokinetic exercizes of lifting a weight through a 90 deg arc using apparatus on a leg exercise bench. Data was gathered on thigh volumes, fatigue limits, the distribution of fast- and slow-twitch muscles in the biopsied muscles, and the muscle respiratory capacities (RC). Subjects with RC above a 2472 microliter O2/hr mean value displayed slower fatigue onset than subjects with RC values below the mean. The maximum aerobic power was correlated with the percent of maximum power and power/ml of fat-free thigh volume. The results indicated that muscle capacity for aerobic metabolism influences the rate of fatigue development, while a correlation between fiber type and fatigue onset was not found. M.S.K.

**A82-41217 Protection from O2 toxicity by preexposure to hypoxia - Lung antioxidant enzyme role.** L. Frank (U.S. Veterans Administration Hospital; Miami, University, Miami, FL). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Aug. 1982, p. 475-482. 45 refs. Research supported by the U.S. Veterans Administration; Grants No. NIH-HL-26029; No. NIH-HL-20366; No. NIH-HL-22333; No. NIH-HL-07382.

Adult rats, mice, and hamsters were exposed to hypoxic conditions, examined for lung antioxidant enzyme responses to the hypoxia, and tested for tolerance in atmospheres of greater than 95% O2. The animals were initially placed in a 14% O2 environment, with gradual decreases over a 24 hr interval to 10%. Comparisons were made of hypoxia preexposed animals and nonpreexposed animals in terms of lung concentrations of superoxide dismutase (SOD), Protein, and DNA, and the enzymes catalase, glutathione peroxidase, glucose-6-phosphate dehydrogenase. Statistical analyses indicated an increase in lung antioxidant enzyme activities in rats following an exposure to hypoxic conditions, resulting in a tolerance to hyperoxic atmosphere. A further test involving injection of an SOD blocker eliminated the tolerance in rats. Mice and hamsters experienced no increase in hyperoxic tolerance following hypoxic exposure. M.S.K.

**A82-41218 Effect of induced erythrocythemia on hypoxia tolerance during physical exercise.** R. J. Robertson, R. Gilcher, K. F. Metz, G. S. Skrinar, T. G. Allison, H. T. Bahnson, R. A. Abbott, R. Becker, and J. E. Falkel (Pittsburgh, University, Pittsburgh, PA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Aug. 1982, p. 490-495. 33 refs.

Five male mountain climbers participated in treadmill exercizes after submitting to phlebotomies for the extraction of red blood cells totaling four units over a 32 wk period. The cells were frozen while the blood plasma was reinjected. The subjects were supplied with 300 mg of ferrous glucanate until reinjected with the stored red blood cells over a two-day period. The subjects then performed treadmill trials while breathing either a normoxic mixture or a hypoxic gas simulating a 3566.2 m altitude. Monitoring comprised heart rate, expired ventilation, ventilatory flow, respiratory rate, and breath O2 and CO2 content, as well as treadmill performance, hematocrit, and hemoglobin blood concentration. The induced erythrocythemia was found to increase normoxic performance by 15.8% and altitude hypoxia exercise output by 8.9%, while both conditions produced a maximal oxygen uptake increase of at least 12%. M.S.K.

**A82-41219 Acid-base, metabolic, and ventilatory responses to repeated bouts of exercise.** M. J. Buono and F. B. Roby (Arizona, University, Tucson, AZ). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Aug. 1982, p. 436-439. 28 refs.

Acid-base, metabolic, and ventilatory responses to sequences of short term, high intensity exercise were examined in ten male subjects performing at a maximal rate on a bicycle ergometer. Maximal work load levels were determined for each subject in alternating 3 min peddling, 3 min rest cycles until exhaustion. Parameters which were monitored included the O2 uptake, CO2 production, respiratory exchange rate, minute ventilation, heart rate, and blood pH, CO2 partial pressure, and lactate content. Dual five minute maximal tests were then run with a 25 min rest between sessions. The 5 min trials revealed that a reciprocal relationship exists between the blood lactate removal rate and bicarbonate build-up during the rest period, and the second trial resulted in lower lactate levels than the first. It is concluded that a period of high intensity exercise can alter acid-base and metabolic responses in succeeding exercizes. M.S.K.

**A82-41230 A nonlinear model combining pulmonary mechanics and gas concentration dynamics.** K. R. Lutchen (Case Western Reserve University, Cleveland, OH), F. P. Primiano, Jr. (Case Western Reserve University; Rainbow Babies and Children's Hospital, Cleveland, OH), and G. M. Saidel (Case Western Reserve University; U.S. Veterans Administration Medical Center, Cleveland, OH). *IEEE Transactions on Biomedical Engineering*, vol. BME-29, Sept. 1982, p. 629-641. 19 refs. Research supported by the U.S. Veterans Administration; Grants No. NIH-HL-07414; No. NIH-AM-08305.

A nonlinear mathematical model is presented which describes the functional relations between pulmonary mechanics and gas concentration dynamics during breathing at various frequencies and volume operating points. Various combinations of parameters are chosen, including cases in which the model is mechanically uniform (normal) and nonuniform (obstructive). Clinical measures of mechanical uniformity and gas concentration inhomogeneity are evaluated along with unobservable indexes. It is shown that for the nonuniform model, the gas is distributed more inhomogeneously at higher frequencies and lower lung volumes; the distribution of initial dead space gas to the compartments as well as pendelluft tend to decrease this inhomogeneity. Dynamic compliance for the nonuniform model is found to be frequency dependent at each of the three volume points investigated, whereas the semilog nitrogen washout curve is essentially linear for some frequencies and volumes and nonlinear for others. V.L.

**A82-41324 Evolution of early mechanisms of translation of genetic information into polypeptides.** H. Kuhn (Max-Planck-Institut für biophysikalische Chemie, Göttingen, West Germany) and J. Waser. *Nature*, vol. 298, Aug. 5, 1982, p. 585, 586. 11 refs.

A model for the development of enzymes from the interactions between helices of hairpin-loop adaptor RNA molecules aligned in parallel in a sequence complementarity to another messenger RNA to promote polypeptide synthesis is presented. Hydrogen bonds from between nucleotides in the hairpin loop and complementary nucleotides in an extended RNA filament, which is attached to another hairpin loop, etc., to form a picket fence arrangement. Hairpin RNAs are precursors to tRNA and the filament is a precursor to mRNA. Primeval conditions are assumed, including the presence of activated nucleotides and amino acids, the existence of periodic temperature changes, and a structurally diversified environment such as porous rocks. Aggregate groups forming in small pores could move to large pores, with growth proceedings by the linkages of the twisted hairpin loops to collector strands. M.S.K.

**A82-41334 † A new hypothesis for the mechanism of muscle contraction (Novaia gipoteza mekhanizma myshechnogo sokrashcheniia).** N. S. Miroshnichenko (Kievskii Gosudarstvennyi Universitet, Kiev, Ukrainian SSR). *Akademiia Nauk SSSR, Doklady*, vol. 265, no. 3, 1982, p. 735, 736. 7 refs. In Russian.

The contraction mechanism of a cross-striated muscle is explained in terms of a new model which involves screw-like motion of a thick protofibril inside six hexagonally arranged thin protofibrils whereby the thin protofibrils are turned onto the thick protofibril in the same way as a nut onto a screw. Experimental data which support this hypothesis are briefly discussed. In particular, the proposed hypothesis accounts for the presence of two identical heads in the myosin molecule. V.L.

**A82-41445 # Mode of mutual influence of stimulation-characteristics in the visual processing system (Art und Ort der gegenseitigen Beeinflussung von Reizmerkmalen in der visuellen Informationsverarbeitung - Ein empirischer Vergleich der Modelle von Estes sowie Shiffrin und Geisler).** D. Lange. *Braunschweig, Technische Universität, Naturwissenschaftliche Fakultät, Doktor der Naturwissenschaften Dissertation, 1980.* 145 p. 31 refs. In German.

The results of an investigation of perceptual independence of stimulation characteristics in the human visual system are presented. The sensory models of Estes (1972) and of Shiffrin and Geisler (1973) are presented and their validity tested. The study takes into account independent variables such as similarity, separation, and position as well as dependent ones and analyzes stimulative material. The independence of the statistical findings from the independent variables is evaluated. C.D.

**A82-41450 # On the observability of electrical cardiac sources.** A. A. H. Damen. Eindhoven, Technische Hogeschool, Doctor in de technische Wetenschappen Dissertation, 1980. 259 p. 184 refs. Research supported by the Nederlandse Hartstichting.

The observability of electrical cardiac sources is investigated based on noninvasive measurements, focusing on the identification of pericardial potentials which can be used to formulate the fundamental field-theory constraints caused by the geometrical configuration in order to provide a proper modelling of the system. As an initial approximation of the skin potential patterns, the torso is modelled as being homogeneous, and a simple simulation of the electrical heart action is developed and analyzed experimentally. The distribution of the electrode positions on the skin is optimized by means of spherical projection methods, resulting in a balanced plot of equipotentials. Both the simulated data and the actual measurements are used to identify the corresponding sources by means of three approaches: multiple dipoles, the multipolar approach, and a singular value decomposition. Of the three models tested, only the singular value decomposition provides sufficient, unambiguous estimations of the transfer relating pericardial potentials to skin potentials. Using this approach, about 66 patterns on the pericard are obtained, which form a complete set for all possible potential distributions. In addition, the observable skin patterns are found to have a high correlation with the principal components of the measured skin potential distribution. N.B.

**A82-41458 † The potential of radionuclide diagnosis of acute myocardial infarction (Vozmozhnosti radionuklidnoi diagnostiki ostrogo infarkta miokarda).** V. N. Zakharov, V. K. Sychev, N. M. Sukhanova, and V. V. Kovalev. *Sovetskaia Meditsina*, no. 6, 1982, p. 3-6. 16 refs. In Russian.

Clinical tests have been conducted to evaluate the effectiveness of Tc-99-pyrophosphate scintigraphy in diagnosing acute myocardial infarction. Results indicate that this technique is useful in complicated cases involving arrhythmias and conductivity disturbances as well as atypical infarctions with negative ECG picture. The method is found to be of particular value in diagnosing transmural and large-focus myocardial infarctions. V.L.

**nykh v ostrom periode infarkta miokarda).** I. M. Korochkin, I. I. Chukaeva, S. S. Kirzon, and I. I. Selivanov (II Moskovskii Meditsinskii Institut, Moscow, USSR). *Sovetskaia Meditsina,* no. 6, 1982, p. 6-9. 11 refs. In Russian.

**A82-41460 † Diurnal dynamics of the indicators of the capacity for physical work and of physiological functions (Vnutrisutochnaia dinamika pokazatelei fizicheskoi rabotosposobnosti i fiziologicheskikh funktsii).** L. Ia. Glybin (Vladivostokskii Meditsinskii Institut, Vladivostok, USSR). *Sovetskaia Meditsina,* no. 6, 1982, p. 10-13. 13 refs. In Russian.

It is pointed out that no clear notion exists of the periodicity during the day of the physiological processes that determine the time dependence of a person's capacity for work. Experiments are carried out on 111 subjects (78 men and 33 women) ranging in age from 18 to 45. Work capacity is evaluated with a dynamometer that measures the strength of a hand squeeze. Endurance is evaluated by measuring the time that a given strength of squeeze can be maintained. These indicators of the capacity for physical work are found to reach a maximum at the following times of day: 5 a.m., noon, 4 p.m., 8 p.m., and midnight. These are also the optimum times for the indicators of such physiological factors as arterial pressure, body temperature, frequency of heart contractions, frequency of respiration, breathing capcity, and time between inhalation and exhalation. C.R.

**A82-41461 † Dyspnea - What is it (Chto takoe odyshka).** A. G. Dembo (Institut Fizicheskoi Kul'tury, Leningrad, USSR). *Sovetskaia Meditsina,* no. 6, 1982, p. 53-56. 26 refs. In Russian.

It is contended that subjective criteria by themselves are insufficient for a diagnosis. Individual responses may differ and a person who has become accustomed to the condition will be less sensitive to it. In some cases, however, dyspnea actually is purely subjective, there being no actual impairment of respiration; in others the condition is present without the person's awareness. Dyspnea is defined here as labored and/or altered breathing, the first being manifested through a sensation, the second through actual changes in the indicators of external respiration. In most cases, the two occur together. A distinction is drawn between physiological and pathological dyspnea. C.R.

**A82-41462 † Hygienic evaluation of an 8-mm-wave electromagnetic field (Gigienicheskaia otsenka elektromagnitnogo polia 8-millimetrovykh voln).** Iu. D. Dumanskii and L. A. Tomashevskaia (Kievskii Nauchno-Issledovatel'skii Institut Obshchei i Kommunal'noi Gigieny, Kiev, Ukrainian SSR). *Gigiena i Sanitariia,* June 1982, p. 18-20. In Russian.

A study has been carried out to investigate the effect of 8-mm-wave electromagnetic fields of 140, 100, and 60 microwatt/sq cm produced by meteorological radars on certain metabolic functions in animals. A relationship is established between metabolic disturbances, on the one hand, and the energy flux density and exposure time, on the other hand. It is recommended to use the findings of the study as the basis for hygienic regulation of electromagnetic fields in residential areas. V.L.

**A82-41463 † Tritium oxide distribution and excretion kinetics in the exposure of animals to noise (Raspredelenie i kinetika vyvedeniia okisi tritiia pri vozdeistvii shuma na organizm zhivotnykh).** M. M. Tsapkov and N. S. Kaliazina. *Gigiena i Sanitariia,* June 1982, p. 29-31. In Russian.

The effect of noise (100-103 dB, 500 Hz) on the uptake of tritium oxide in various tissues of rats, as well as the kinetics of tritium oxide excretion, is investigated. The experimental animals are intraperitoneally administered single injections of tritium oxide, and exposed to noise for three hours each day for up to 256 days, and the isotope content in the aqueous phases of the brain, lungs, muscles, skin, and blood is determined. Results show that the isotope content in all of the tissues studied is higher after 2, 4, 64, 128, and 256 days of exposure to noise than for control groups not exposed to noise. By the 256th day of exposure to noise, the levels of tritium in these organs are two to four times higher than in the corresponding organs of the control animals. In addition, the rate of isotope excretion from the aqueous phase and dry residue of the test organs is found to be slower for the experimental animals than for the control ones. N.B.

**A82-41464 † A hygienic evaluation of the biological effects of nonionizing microwave radiation (K gigienicheskoi otsenke biologicheskogo deistviia neioniziruiushchikh mikrovolnovykh izluchenii).** V. S. Belokrinitskii (Kievskii Nauchno-Issledovatel'skii Institut Obshchei i Kommunal'noi Gigieny, Kiev, Ukrainian SSR). *Gigiena i Sanitariia,* June 1982, p. 32-34. 7 refs. In Russian.

The effects of nonionizing microwave radiation of various intensities and durations are investigated for rats, dogs, and cats. Analyses of histochemical indices (such as the content of glycogen, neutral fats, nucleic acids, chromatin, and the activities of the enzymes succinic dehydrogenase, malate dehydrogenase, lactate dehydrogenase, and glucose-6-phosphate dehydrogenase) and ultrastructural changes in cells of the brain and spinal cord, heart, and kidneys show that the animals studied have a high sensitivity to microwave radiation with wavelengths of about 12.6 cm. In addition, it is determined that the changes in the histochemical indices and the ultrastructural alterations are correlated with the intensity and duration of the microwave radiation, as well as with the tissue assay period and the specific functions of the cells studied. Attention is also given to the limits of the histochemical and structural transformations in the cells, tissues, and organs which show morphological changes under the influence of microwave radiation. N.B.

**A82-41465 † The assimilation of vitamin C in seamen during voyages at high latitudes (C-vitaminnaia obespechennost' organizma moriakov pri plavanii v vysokikh shirotakh).** V. S. Novikov and V. P. Petrov. *Gigiena i Sanitariia,* June 1982, p. 78, 79. In Russian.

The tissue saturation of vitamin C in seamen is investigated, along with the effect of increased doses of ascorbic acid during voyages at high latitudes in the spring and fall. Seamen whose tissue saturation before the voyage is good or satisfactory do not suffer a decrease in the amount of vitamin C absorbed into the tissue in voyages during the spring. In the fall, the content of the vitamin in the tissues is found to fall off in proportion to the length of the voyage. Additional doses of vitamin C are recommended for voyages in the fall. The Rotter (1937) method is used for determining vitamin content. C.R.

**A82-41466 † The effect of the natural and climatic conditions of the Far North on the human cardiovascular system (Vliianie prirodno-klimaticheskikh faktorov Krainego Severa na sostoianie serdechno-sosudistoi sistemy cheloveka).** I. I. Dedenko, B. V. Ustiushin, B. M. Stolbun, and O. G. Novikova (Moskovskii Nauchno-Issledovatel'skii Institut Gigieny, Moscow, USSR). *Gigiena i Sanitariia,* June 1982, p. 79-81. 12 refs. In Russian.

**A82-41467 † The incorporation of P-32 into various sections of the brain upon exposure to intermittent noise of low intensity (Vkliuchenie 32R v razlichnye otdely golovnogo mozga pri vozdeistvii preryvistogo shuma maloi intensivnosti).** N. F. Svadkovskaia (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Gigiena i Sanitariia,* June 1982, p. 87, 88. In Russian.

White male rats are subjected to intermittent noise for two hours each day for 18, 54, and 90 days. The two-hour session comprises alternating 15-minute periods of noise and silence. The intensity of the noise is 60 dB, and the frequency is in the range 50-5000 Hz. The number of sections of the brain in which an increase is observed in the coefficient of isotope accumulation and the coefficient of relative organ activity is found to depend on the total time of exposure to the noise. When P-32 is introduced before the two-hour session, a significant accumulation of the isotope is observed in various sections of the brain. The more pronounced shifts observed when the isotope is introduced before the noise are seen as suggesting that the changes occur principally through the direct action of the noise. C.R.

**A82-41468 † Biochemical aspects of the mechanism by which cholinolyptics affect the brain (Biokhimicheskie aspekty mekhanizma deistviia kholinolitikov na mozg).** S. S. Krylov and E. V. Semenov (Ministerstvo Zdravookhraneniia SSSR, Institut Toksikologii, Leningrad, USSR). *Uspekhi Sovremennoi Biologii,* vol. 93, May-June 1982, p. 397-408. 116 refs. In Russian.

It is shown that the blocking of postsynaptic choline receptors produces changes in neuromediator metabolism, ion transport, and ferment activity. It is emphasized that one of the essential factors determining the effect of cholinolytics on the presynaptic structures of the brain nerve endings is a change in the permeability of the membranes with respect to electrolytes. It is suggested that liberation and retention of neuromediators in tissue in the presence of cholinolytics and due to the effect of neuromediators and their mimetics (agonists) are largely determined by the ratio of Ca(2+) and Mg(2+). V.L.

**A82-41469 † Myosatellocytes and cambial properties of skeletal and muscular tissue (Miosatellitotsity i problema kambial'nosti skeletonomyshechnoi tkani).** R. K. Danilov and A. A. Klishov (Kuibyshevskii Meditsinskii Institut, Kuibyshev, USSR). *Uspekhi Sovremennoi Biologii,* vol. 93, May-June 1982, p. 409-420. 85 refs. In Russian.

**A82-41470 † The structure and function of macrophages (Struktura i funktsii makrofagov).** Iu. I. Afanas'ev, V. I. Nozdrin, M. Z. Bakhshinian, and V. L. Goriachkina (I Moskovskii Meditsinskii Institut, Moscow, USSR; Erevanskii Meditsinskii Institut, Yerevan, Armenian SSR). *Uspekhi Sovremennoi Biologii,* vol. 93, May-June 1982, p. 421-432. 139 refs. In Russian.

Macrophages are defined as mononuclear myeloid cells whose cytoplasm is characterized by a moderately developed synthesizing apparatus and a well-developed complex of lysosomes. The cells typically have a well-developed periphery that provides for phagocytosis, pinocytosis, secretion, and motion. The population of macrophages is not uniform, differing in functional and morphological respects. This heterogeneity is a reflection of the different stages of the cells in the life cycle. The principal biological function of macrophages is to support, together with other cells, immune homeostasis. C.R.

**A82-41471 † Microcalorimetry in biomedical investigations (Mikrokalorimetriia v mediko-biologicheskikh issledovaniiakh).** A. Sh. Zaichik and L. P. Churilov (Ministerstvo Zdravookhraneniia RSFSR, Leningradskii Pediatricheskii Meditsinskii Institut, Leningrad, USSR). *Uspekhi Sovremennoi Biologii,* vol. 93, May-June 1982, p. 448-465. 210 refs. In Russian.

The principles, achievements, and prospects of the biological-reaction microcalorimetry used in investigating biochemical systems, cells, organs, and immunological reactions are surveyed. Attention is given to microcalorimetric investigations on the cellular level and to the calorimetry of subcellular structures. C.R.

**A82-41472 † Optimization of medicinal electrophoresis (Vorrosy optimizatsii lekarstvennogo elektroforeza).** I. E. Oranskii, L. I. Baichorova, and V. S. Ulashchik (Belorusskii Institut Usovershenstvovaniia Vrachei, Minsk, Belorussian SSR; Sverdlovskii Nauchno-Issledovatel'skii Institut Kurortologii i Fizioterapii, Sverdlovsk, USSR). *Voprosy Kurortologii, Fizioterapii i Lechebnoi Fizicheskoi Kul'tury,* May-June 1982, p. 9-12. 6 refs. In Russian.

Methods for increasing the efficiency of medicinal electrophoresis are briefly discussed. In particular, attention is given to techniques for increasing skin permeability, the use of pulsed current (particularly, sinusoidal current), biological synchronization, and parametric optimization. V.L.

**A82-41473 † The use of an audio-frequency magnetic field in certain diseases (Primenenie magnitnogo polia zvukovogo diapazona pri nekotorykh zabolevaniiakh).** A. G. Kakuliia, L. A. Abuladze, L. G. Glonti, M. N. Melikishvili, and L. S. Urpanishvili (Nauchno-Issledovatel'skii Institut Kurortologii i Fizioterapii, Tbilisi, Georgian SSR). *Voprosy Kurortologii, Fizioterapii i Lechebnoi Fizicheskoi Kul'tury,* May-June 1982, p. 18-21. In Russian.

Clinical data on 60 patients suffering from obliterating atherosclerosis of the lower extremities and 30 patients with osteoarthrosis deformans indicate that a course of treatment with an audio-frequency magnetic field can be effective in such cases. Apart from general clinical improvement, the treatment normalizes lipid metabolism and improves peripheral circulation and muscular function of the extremities in obliterating atherosclerosis, and normalizes the total content of chondroitin sulfate and its fractions in patients with osteoarthrosis deformans. V.L.

**A82-41474 † Thermal pulsation - Techniques, demonstration, and clinical application (Teplovaia pul'satsiia - Metodiki, obosnovaniia i primenenie v klinike).** V. A. Likhtenshtein (Dagestanskii Meditsinskii Institut, Makhachkala, USSR). *Voprosy Kurortologii, Fizioterapii i Lechebnoi Fizicheskoi Kul'tury,* May-June 1982, p. 21-25. 10 refs. In Russian.

Devices for generating thermal pulses and techniques used in thermal pulsation therapy are briefly reviewed. Data demonstrating the clinical effectiveness of thermal pulsation applied to the nasolabial reflexogenic area are presented and physiological mechanisms underlaying the effect of thermal pulsation are discussed. V.L.

**A82-41475 † Application of laser therapy to patients with osteoarthrosis deformans (Primeneniie lazernoi terapii bol'nykh deformiruiushchim osteoartrozom).** I. L. Pshetakovskii, T. V. Shutova, and Z. G. Ostashkova (Odesskii Institut Kurortologii, Odessa, Ukrainian SSR). *Voprosy Kurortologii, Fizioterapii i Lechebnoi Fizicheskoi Kul'tury,* May-June 1982, p. 25-29. 8 refs. In Russian.

Clinical and immunologic studies on patients with primary osteoarthrosis deformans have shown that laser therapy employing an 6-mm, 25-mW He-Ne laser (632 A) produces clinical improvement along with favorable changes in muscular function, peripheral hemodynamics, vegetovascular reactions, and immunologic reactivity. In two thirds of the patients observed, the improvement lasted for 6-12 months following the treatment; in one third of the patients, it lasted for 13-18 months. In most cases, the therapeutic effect became particularly noticeable 1-3 months after the treatment. V.L.

The effect of the implantation of a resolving magnetic field source on blood vessels and surrounding tissue during the autoplasty of the carotid artery is studied. In experiments carried out on dogs, it is found that the resolving field source (collagen sponge) prevents activation of blood clotting. The changes that occur in the blood strengthen the body's defensive reactions. C.R.

**(Vliianie dietilaminovogo analoga etmozina na funktsional'noe sostoianie miokarda /Kliniko-eksperimental'noe issledovanie/).** L. V. Rozenshtraukh, N. V. Kaverina, E. P. Aniukhovskii, S. A. Dremin, G. G. Beloshapko, and Kh. Kh. Shugushev (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Kardiologiia*, vol. 22, June 1982, p. 72-78. 23 refs. In Russian.

Diethylamine analog of ethmozine (DAA ethmozine) administered intravenously in doses of 0.5-1 mg/kg, which result in marked antiarrhythmic effects under both clinical and experimental conditions, is found to have little effect on arterial pressure and myocardial contractility, while producing statistically insignificant depression of the automatism of the sinus node and conductive system fibers. DAA ethmozine increased the duration of the refractory periods of the atria and atrioventricular node by 20-30%; it also increased the time of stimulation conduction at all levels of the heart conductive system. It is concluded that the drug might be effective in the treatment of cardiac arrhythmias. V.L.

**A82-41489** † **The rate of coronary perfusion as a factor determining the extent to which the contractile function of the heart is decreased in energy formation disorders (Skorost' koronarnoi perfuzii kak faktor, opredeliaiushchii stepen' umen'sheniia sokratitel'noi funktsii serdtsa pri narushenii energoobrazovaniia).** N. A. Novikova, E. S. Solomatina, and V. I. Kapel'ko (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Kardiologiia*, vol. 22, June 1982, p. 78-82. 17 refs. In Russian.

Experiments on the isolated hearts of guinea pigs show that administration of dinitrophenol in concentrations of 0.01-0.10 mmol produce a decrease in the pressure of a latex balloon placed into the left ventricle and an increase in the shift of the ST segment of the ECG. It is shown that the extent to which the contractile function of the heart is depressed in energy formation disorders and restored during reoxygenation is largely determined by the coronary flow rate. This effect is explained in terms of changes in the concentration of extracellular K(+) and other metabolites. V.L.

**A82-41499** † **The role of the energy transport system in changes of the contractile function of the heart in the case of the measured limitation of coronary blood flow (Rol' sistemy transporta energii v izmenenii sokratitel'noi funktsii serdtsa pri dozirovannom ogranichenii koronarnogo krovotoka).** R. A. Frol'kis, G. S. Voronkov, and N. N. Orlova (Ukrainskii Nauchno-Issledovatel'skii Institut Kardiologii, Kiev, Ukrainian SSR). *Kardiologiia*, vol. 22, June 1982, p. 111-113. 7 refs. In Russian.

Experimental results are presented on the relationship between the characteristics of the heart's contractile function and changes of energy-transport indices in the case of measured limitation of the coronary blood flow to 70 and 90%. It is shown that changes in the makeup and activity of individual components of the energy-transport system play a considerable role in the formation of pathological and compensatory shifts in the contractile function of the damaged and conditionally intact myocardium in the early period of the partial limitation of coronary blood flow. A hypokinetic model has been developed which attempts to simulate the weightlessness experienced during space flight. Male rats were suspended from the model with a head-down tilt for a two-week period. Total mechanical unloading of the hind limbs and partial unloading of the fore limbs occurred. In comparison to pair-fed control rats, the skeletal alterations in the proximal tibial and humeral metaphyses of suspended rats were determined to be a diminished rate of longitudinal bone growth, a reduced mass of mineralized tissue, and an accumulation of marrow fat. Also, suspended rats exhibited decreased numbers of osteoblasts and increased numbers of osteoclasts immediately adjacent to the growth plate-metaphyseal junction at both skeletal sites. Although the reduction in mineralized tissue and the fat accumulation were more marked in the tibia, the skeletal changes in the proximal tibial and humeral metaphyses were generally comparable. The observed abnormalities may be due to mechanical unloading and/or a hypersecretion of corticosteroids. (Author)

**A82-41551** * **Telemetry methods for monitoring physiological parameters.** T. B. Fryer and H. Sandler (NASA, Ames Research Center, Moffett Field, CA). In: Hypertension research; Methods and models. New York, Marcel Dekker, Inc., 1982, p. 45-82. 73 refs.

The use of telemetry to monitor various physiological functions is discussed. The advantages of the technique and the parameters that it can monitor are assessed, and the main telemetry systems, including pressure telemetry, flow telemetry, and multichannel telemetry, are detailed. Human applications of implanted flow transducers, total implant versus backpack telemetry, the use of power sources and integrated circuits in telemetry, and the future prospects of the technique in hypertension treatment and research are discussed. **DOMESTIC SWINE IN PHYSIOLOGICAL RESEARCH. 3: BLOOD GAS AND ACID-BASE VALUES OF ARTERIAL AND VENOUS BLOOD FROM YOUNG ANESTHETIZED PIGS MAINTAINED UNDER STEADY-STATE VENTILATORY CONDITIONS Interim Report, Jun. - Dec. 1981**
John P. Hannon and William Y. Moores Feb. 1982 35 p refs
(DA Proj. 3M1-61102-BS-10)
(AD-A111834; LAIR-113) Avail: NTIS HC A03/MF A01 CSCL 06/16

The arterial and venous blood gas and acid-base characteristics of anesthetized, young domestic swine were determined under steady-state ventilatory conditions designed to establish arterial P O2 at 100 torr and pH at 7.40. Under these circumstances, mean (N = 15) femoral artery values were: P O2, 97 torr; S O2, 94%; C O2, 15.4 ml/dl; pH, 7.399; P CO2, 47 torr; (HCO3), 27.6 mEq/1; and (B.E.), 2.8 mEq/1. Values for pulmonary artery, mixed venous blood were: P O2, 36 torr; SaO2, 51%; C O2, 8.5 ml/dl; pH, 7.335; P CO2, 57 torr (HCO3), 29.6 mEq/1; and (B.E.), 3.9 mEq/1. Comparisons of venous values obtained from various vascular sites (pulmonary artery, anterior vena cava, posterior vena cava, internal jugular vein, femoral vein and coronary sinus) revealed numerous between-vessel differences in blood gas and acid-base status. The arterial characteristics of this anesthetized preparation differed from those of the conscious pig; the anesthetized animal had lower pH, (HCO3) and (B.E.) values and higher P O2 and P CO2 values than the conscious animal. Anesthesia with mechanical ventilation appeared to produce defects in alveolar-arterial gas exchange similar to those reported for other species. The anesthetized pig, nevertheless, can serve as an effective biomedical model for human oriented research. Author (GRA)

Although present laser safety standards are based on an adequate data base for acute viewing situations, they are limited in predicting the type of change in visual function that might be induced from prolonged or repetitive viewing of laser sources. Viewing requirements in holography, laser display systems, and in general, repeated exposure to low levels of laser radiation require a more complete data base for optimizing the environmental protection of individuals who will be required to work in such environments. In these studies, we have simulated very low-level radiation environments and determined the effects of repetitive prolonged exposure on the visual function of the of the Rhesus. Our data suggest that prolonged viewing of such sources, even though they are well below present laser safety standards, can produce permanent changes in visual processes that underline normal human day (photopic) and night (scotopic) vision. Studies of morphology have shown possible subtle morphological correlate. The coherency of laser light is implicated as a significant factor in inducing these effects. It is recommended that individuals required to work in these situations be frequently evaluated for changes in visual function by presently available clinical instruments for assessment of visual function. Further confirmation of these studies will determine the impact of these research findings on present laser safety standards. GRA

**OTEC BIOFOULING, CORROSION, AND MATERIALS STUDY FROM A MOORED PLATFORM AT PUNTA TUNA, PUERTO RICO**
D. S. Sasscer, T. R. Tosteson, and T. O. Morgan Aug. 1981 126 p refs Prepared for ANL, Ill.
(Contract W-31-109-eng-38)
(DE82-007037; ANL/OTEC-BCM-023) Avail: NTIS HC A07/MF A01

A biofouling test of periodically cleaned, OTEC evaporator tubes was conducted. The fouling resistance, total surface carbon and nitrogen content, ATP, and the wet film thickness (WFT) were determined throughout the test. Visual observations of the fouling film were made by light sectioning and scanning microscopy, and at the end of the test, a study was made of the macrofouling of the flow system. The results of the tests indicate that a base layer of bacteria and exudated polysaccharides enhance microbial adhesion and thereby create an environment conducive to rapid film growth. Fouling rates for aluminum were generally higher than for titanium but they were linear for both materials. Excellent correlation was found to exist between R/sub f and WFT which supports the hypothesis that it is the stagnant film of water entrapped by bacteria which is largely responsible for the insulating properties of the biofilm. The macrofouling study identified 61 species of benthic invertebrates representing ten phyla growing in those parts of the flow system, where flow was less than 3 fps but no macrofouling where the flow velocity significantly exceeded 3 fps. **PROBLEM OF ACCELERATIONS IN AVIATION MEDICINE**

P. V. Vasilyev and S. A. Gozulov *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 16, No. 3, May - Jun. 1982 2 Jul. 1982 p 1-6 (JPRS 81197) refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (USSR), v. 16, no. 3, May - Jun. 1982 p 4-7

Avail: NTIS HC A08

The problem of effects of accelerations on an organism, particularly on a pilot's work capacity is discussed. Further increase in the body's resistance to accelerations and, consequently, increase of pilot's work capacity are emphasized. The increasing diversity of inflight tasks and complexity of interaction in the pilot-aircraft-environment system make it imperative to examine many physiological questions from the standpoint of the systems approach and with consideration of ergonomic aspects of this problem. The accelerations inherent in aircraft flights are divided into two main types: prolonged (piloting), which occur when maneuvering the aircraft, and impact, which occur during ejection, opening of the parachute, landing of the pilot, as well as forced ('rough') landings of the aircraft. The effects of these accelerations on pilots differ appreciably. S.L.

**N82-28951#** Joint Publications Research Service, Arlington, Va.

**SLEEP, CIRCADIAN CYCLES OF PHYSIOLOGICAL FUNCTIONS AND PARAMETERS OF HUMAN WORK CAPACITY ON FIRST DAY AFTER CHANGING FROM ALTERED TO USUAL SLEEP-WAKING CYCLE**

A. N. Litsov *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 16, No. 3, May - Jun. 1982 (JPRS-81197) 2 Jul. 1982 p 7-14 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (USSR), v. 16, no. 3, May - Jun. 1982 p 8-13

Avail: NTIS HC A08

Twelve male test subjects, aged 28 to 40, took part in studies, in which a normal work-rest cycle was preceded by three types of an altered cycle, to investigate their adaptation reactions. The return to the normal work-rest cycle was accompanied by slight changes in physiological functions, work capacity and sleep patterns. The level of these changes was correlated with the type of altered work-rest cycles and with the degree of men's adaptation to them. The return to the normal work-rest cycle proceeded more readily, if adaptation to an altered cycle was incomplete. The required level of work capacity of men that have to vary their work-rest cycles frequently can be maintained by short term (for 1 to 3 days) cycle alterations. S.L.

**ROLE OF HORMONAL COMPOUNDS IN REGULATION OF ELECTROLYTE METABOLISM IN THE PRESENCE OF EMOTIONAL STRESS**

B. B. Afonin, L. L. Orlov, N. F. Kalita, T. A. Viting, and R. A. Tigranyan *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 16, No. 3, May - Jun. 1982 (JPRS-81197) 2 Jul. 1982 p 15-19 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (USSR), v. 16, no. 3, May - Jun. 1982 p 13-16

Avail: NTIS HC A08

The emotional stress simulated by examinations taken by medical students led to a decrease of socium concentration in blood. A simultaneous increase of mineralocorticoids and a decrease of glucocorticoids was responsible for the sodium concentration in the blood. Both inhibition of glucocorticoids and stimulation of mineralocorticoids were associated with a high activity of plasma renin and a low concentration of adrenocorticotropic hormone. S.L.

**METABOLIC DISTINCTIONS RELATED TO INTAKE OF LOW-CALORIE 'SURVIVAL' RATIONS CONSISTING ONLY OF READILY ASSIMILATED CARBOHYDRATES**

I. G. Popov, P. A. Lozinskiy, A. A. Latskevich, and I. A. Romanova *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 16, No. 3, May - Jun. 1982 (JPRS-81197) 2 Jul. 1982 p 20-31 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (USSR), v. 16, no. 3, May - Jun. 1982 p 16-25

Avail: NTIS HC A08

Carbohydrate, mineral, amino acid, nitrogen metabolism, nutritional status and general health condition of test subjects were studied. In the case of an emergency landing in an area with a temperate climate, a contingency diet consisting of 300 g of readily assimilable disaccharides can be consumed for 5 days. S.L.

**N82-28954#** Joint Publications Research Service, Arlington, Va.

**DYNAMICS OF LEFT VENTRICULAR SYSTOLIC PHASE STRUCTURE DURING LONG-TERM (140-185 DAYS) SPACEFLIGHTS**

A. P. Polyakova, A. D. Yegorov, and I. V. Alferova *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 16, No. 3, May - Jun. 1982 (JPRS-81197) 2 Jul. 1982 p 32-38 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (USSR), v. 16, no. 3,. May - Jun. 1982 p 25-30

Avail: NTIS HC A08

Kinetocardiographic studies of the left ventricular systolic time intervals at rest in spaceflights of 140, 175, and 185 days in duration revealed functional changes reflecting cardiovascular adaptation to weightlessness. The typical changes were: shortening of isometric contraction, decrease of the tension index, irregular decline of the ejection time, and a slight increase in the intrasystolic index. These changes in the systolic time intervals are indicative of an enhanced strength of cardiac contraction. This may in turn be associated with cephalad fluid shifts and reduced activity of the peripheral muscular heart. S.L.

**N82-28955#** Joint Publications Research Service, Arlington, Va.

**SLOW WAVES OF CARDIAC RHYTHM IN HEALTHY MAN UNDER DIFFERENT CONDITIONS**

A. N. Karpov and L. A. Zinovyeva *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 16, No. 3, May - Jun. 1982 (JPRS-8197) 2 Jul. 1982 p 39-42 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (USSR), v. 16, no. 3, May - Jun. 1982 p 30-32

Avail: NTIS HC A08

The slow waves of the cardiac rhythm were investigated at rest and under emotional and physical stress. In most test subjects emotional stress led to the generation of the first order slow waves of 0.04-0.09 cps, whereas exercises inhibited slow waves of the above frequency range. Heart rate increased in response to both emotional and physical stress. The slow wave responses are used to evaluate the emotional status and to differentiate emotional and physical stress. S.L.

**SYNCHRONIZATION OF CARDIOVASCULAR ACCIDENTS WITH PHYSICAL CLOCKS**

R. M. Arslanova, V. N. Benevolenskiy, N. G. Ptitsyna, and K. A. Trukhanov *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 16, No. 3, May - Jun. 1982 (JPRS-81197) 2 Jul. 1982 p 43-47 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (USSR), v. 16, no. 3, May - Jun. 1982 p 32-34

Avail: NTIS HC A08

The frequency of cardiovascular catastrophes (daily mortality rate of patients with ischemic heart disease), heliogeomagnetic activity (solar radiation in the wave band 10.7 cm, H, D and Z components of the geomagnetic field), synchronization and desynchronization of circaseptidian rhythms, and total number of cardiovascular catastrophes in different seasons are correlated. The raw data sets were treated with due account of the discrete pattern of random sequences and noise in the medical data set, finite analysis interval and informativity of the derivatives of the parameters used. The occurrence of cardiovascular catastrophes showed circaseptidian rhythms whose level depend on the above three factors. The results obtained are discussed with respect to possible synchronization and desynchronization of endogerious biorhythms by time cues, relating them to the mechanism of human adaptation to the environment. S.L.

**N82-28957#** Joint Publications Research Service, Arlington, Va.

**REGULATION OF CEREBRAL CIRCULATION IN ERECT POSITION**

V. S. Shubin, V. L. Anzimirov, Ya. K. Gasanov, and V. N. Korniyenko *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 16, No. 3, May - Jun. 1982 (JPRS-81197) 2 Jul. 1982 p 48-55 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (USSR), v. 16, no. 3, May - Jun. 1982 p 35-40

Avail: NTIS HC A08

The functional mechanisms responsible for orthostatic tolerance of cerebral circulation in the normal man and in ambulatory and bedridden neurosurgical patients were investigated, using the following methods: cerebral serial angiography, measurement of cerebral blood flow by means of xenon 133 clearance, measurement of brain perfusion pressure, ventricular pressure, acid base equilibrium in the blood flowing in and out of the brain, determination of cardiac output and stroke volume, electroencephaloraphy, and rheography of cerebral and peripheral vessels. In the normal men and patients with compensated neurosurgical pathologies, the transfer into the head up position induced small changes in the systemic and cerebral regional circulation. This was associated with complex reactions of the vascular system triggered by the receptors of the sinocarotid area. S.L.

### ENDURANCE OF +Gz G FORCES BY MIDDLE-AGED PEOPLE BEFORE AND AFTER 7-DAY IMMERSION

A. R. Kotovskaya, I. F. VilVilyams, V. I. Zborovskaya, V. G. Andreyeva, O. L. Golovkina, T. N. Krupina, Kh. Kh. Yarullin, and N. P. Artamonova *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 16, No. 3, May - Jun. 1982 (JPRS 81197) 2 Jul. 1982 p 56-60 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (USSR), v. 16, no. 3, May - Jun. 1982 p 40-43

Avail: NTIS HC A08

Before and after 7 day immersion G sub z for 60 sec in a centrifuge with an arm of 7.25 m. The runs were repeated 12 times. The test subjects tolerated the exposure before and after immersion. However, after immersion the physiological systems functioned in a more stressful manner than prior to immersion. This is attributed to the deconditioning caused by simulated weightlessness. The comparison of the experimental findings with the literature data gives evidence that the pattern and level of physiological changes induced by an exposure to +3 G sub z for 60 sec in the test subjects, aged 41 to 43, do not differ significantly from those in younger (aged 23 to 36) people. S.L.

**N82-28959#** Joint Publications Research Service, Arlington, Va.

### HUMAN EXTERNAL RESPIRATION AND GAS EXCHANGE IN ACUTE PERIOD OF ADAPTATION TO IMMERSION IN WATER

O. L. Golovkina *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 16, No. 3, May - Jun. 1082 (JPRS 81197) 2 Jul. 1982 p 61-65 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (USSR), v. 16, no. 3, May - Jun. 1982 p 43-46

Avail: NTIS HC A08

Responses of respiration and gas exchange of 6 test subjects to 3-day dry immersion were investigated. It was found that an exposure to immersion was accompanied by decreases in respiratory volume, vital lung capacity, maximum pulmonary ventilation, and breathing time retention during inhalation and expiration. These changes were paralleled by an increase in the portion of the functional dead space and a decrease in the portion of the efficient alveolar volume. The permeability of respiratory tracts remained unchanged. These changes seem to be of the type of total respiratory insufficiency induced by circulatory disorders. This may be one of the factors responsible for a decline in human tolerance to exercises and acceleration applied after an exposure to simulated weightlessness. Author

### EFFICACY OF KAVINTON IN PREVENTION OF MOTION SICKNESS

D. Bodo, A. R. Kotovskaya, R. R. Galle, L. N. Gavrilova, G. A. Gusakova, and V. A. Smirnov *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 16, No. 3, May - Jun. 1982 (JPRS-81197) 2 Jul. 1982 p 71-74 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (USSR), v. 16, no. 3, May - Jun. 1982 p 49-51

Avail: NTIS HC A08

During the study 8 motion sickness susceptible test subjects were kept in a chamber rotating at a rate of 6 rpm for 5 hours. The effectiveness of the drug taken regularly during the exposure was compared with that of scopolamine and placebo taken as a single dose. The results obtained are suggestive of a positive effect of kavinton as an antimotion drug. T.M.

**N82-28962#** Joint Publications Research Service, Arlington, Va.

### NYSTAGMOMETRY OF OPTOVESTIBULAR INTERACTION

M. M. Levashov and A. I. Tumakov *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 16, No. 3, May - Jun. 1982 (JPRS 81197) 2 Jul. 1982 p 75-80 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (USSR), v. 16, no. 3, May - Jun. 1982 p 51-55

Avail: NTIS HC A08

Nystagmograms recorded in healthy people (270 ENG from 30 children, aged 3 to 7) were analyzed quantitatively. The velocity of the slow component of the vestibular nystagmus during caloric tests, optokinetic nystagmus in response to stimul applied at 20 and 10 deg/sec, as well as vestibulooptokinetic nystagmus resulting from modulation of he optokinetic nydtagmus due to the inhibitory or enhancing effect of caloric stimulation, were measured. The modulation level, i.e., the change of the velocity of the slow component that accompanied the transition of the optokinetic nystagmus to the vestibulo-optokinetic nystagmus, was always less than that of the vestibular nystagmus. This disagrees with the concept about algebraic summation of intensities of the reactions. The modulation level showed a low correlation with the vestibular nystagmus slow component velocity and depended on the optokinetic nystagmus velocity. Author

### EFFECT OF CALORIC STIMULATION OF VESTIBULAR SYSTEM ON HEARING

G. P. Tsurikova *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 16, No. 3, May - Jun. 1982 (JPRS-81197) 2 Jul. 1982 p 81-86 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (USSR), v. 16, no. 3, May - Jun. 1982 p 55-58

Avail: NTIS HC A08

Changes of bone-conduction thresholds for tonal signals (250 and 2000 Hz) in each ear due to caloric vestibular tests were studied in 60 healthy test subjects (32 men and 28 women). These changes were found in 48 subjects. In most cases perceptual thresholds decreased (by 7.3 dB on the average) and in few cases increased (by 8.3 dB on the average). The sign of alteration was independent of the tonal signal frequency or the side exposed to the vestibular test or the number of examinations. The threshold returned to the norm for a long time (30 min or more). These findings suggest that the interaction may be governed by the principles that function in other sensory systems. It is recommended to carry out audiological examinations prior to vestibular tests in order to avoid distortions of the results. Author

### POSSIBLE IMPAIRMENT OF RESPIRATORY REGULATION UNDER HYPERBARIC NITROGEN NARCOSIS

L. A. Bryantseva, A. V. Suvorov, and I. S. Breslav *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 16, No. 3, May - Jun. 1982 (JPRS 81197) 2 Jul. 1982 p 87-90 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (USSR), v. 16, no. 3, May - Jun. 1982 p 59-61

Avail: NTIS HC A08

Nitrogen narcosis was simulated by nitrous oxide. The ventilation increment was measured as a function of an increase of the hypercapnic stimulus. A combination of high degree of hypercapnia and the narcotic effect may lead to ventilation inhibition and respiration disturbance. T.M.

**N82-28965#** Joint Publications Research Service, Arlington, Va.

### MITOTIC ACTIVITY AND VOLUME OF EPITHELIAL CELL NUCLEI OF RAT CORNEA FOLLOWING SPACEFLIGHTS IN BIOSATELLITES

F. V. Sushkov, S. V. Rudneva, N. G. Sepetova, and Z. Ye. Vnukova *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 16, No. 3, May - Jun. 1982 (JPRS-81197) 2 Jul. 1982 p 91-98 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (USSR), v. 16, no. 3, May - Jun. 1982 p 61-66

Avail: NTIS HC A08

The following parameters of the epithelial mitosis were studied: mitotic index, ratio of mitotic phases, number of abnormalities of cell division, and number of chromosome aberrations in anaphases. These parameters are considered to be indicators of physiological regeneration. The nuclear volume of cells of two inner epithelial layers was measured, using a modified karyometric technique that yielded representative data. The lack of significant changes in the above mitotic parameters can be attributed either to the absence of a strong stress-reaction of rats postflight or to the discrepancy between the time of animal sacrifice and the time of the maximum post-stressor inhibition of mitotic activity. T.M.

### CATECHOLAMINES AND ENZYMES OF THEIR METABOLISM IN RAT MYOCARDIUM AFTER FLIGHT ABOARD THE COSMOS-936 BIOSATELLITE

R. Kwetnianski, R. A. Tigranyan, and T. Torda *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 16, No. 3 May - Jun. 1982 (JPRS 81197) 2 Jul. 1982 p 99-102 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (USSR), v. 16, no. 3, May - Jun. 1982 p 66-68

Avail NTIS HC A08

In the myocardium of the weightless and contrifuged rats flown for 18.5 days onboard the biosatellite Cosmos-936 the catecholamine concentration and activity of enzymes involved in their synthesis and degradation, dopamine-beta-hydroxylase, monoamine oxidase and catechol-O-methyl transferase, were measured. The catecholamine concentration in the myocardium of both flight groups significantly increased, and the enzyme activity did not change. These results suggest that an exposure to space flight increases the catecholamine concentration and exerts no effect on their synthesis and degradation in the rat myocardium. Author

**N82-28967#** Joint Publications Research Service, Arlington, Va.

### NITROGEN COMPOUND LEVELS IN TISSUES OF RAT CEREBRAL HEMISPHERES AND CEREBELLUM AFTER FLIGHT ABOARD COSMOS-1129 BIOSATELLITE

L. M. Kurkina and R. A. Tigranyan *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 16, No. 3, May - Jun. 1982 (JPRS 81197) 2 Jul. 1982 p 103-106 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (USSR), v. 16, no. 3, May - Jun. 1982 p 68-70

Avail: NTIS HC A08

The content of ammonia, glutamine, urea, glutamic acid, aspartic acid, and GABA was measured to study nitrogen metabolism. Soon after recovery (6-10 hours after recovery) the content of the above compounds in brain tissues increased, except for GABA whose content decreased. Similar but more marked changes were seen in the brain of control rats exposed to a repeated immobilization stress-effect. These changes were still greater in the flight rats exposed to a repeated immobilization stress-effect postflight. It is suggested that the postflight changes of the above parameters of nitrogen metabolism are induced by stress-agents inherent in space flight and recovery. Author

**N82-28969#** Joint Publications Research Service, Arlington, Va.

### CONDITION OF RATS CONNECTIVE TISSUE DURING LONG-TERM HYPOKINESIA AND IN RECOVERY PERIOD

P. P. Potapov *In its* USSR Rept: Space Biol. and Aerospace Med., V. 16, No. 3, May - Jun. 1982 (JPRS-81197) 2 Jul. 1982 p 112-116 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (USSR), v. 16, no. 3, May - Jun. 1982 p 73-76

Avail: NTIS HC A08

Changes in the content of collagen in hydroxyproline, total aminopolysaccharides hexosamines, and acid glycosaminoglycans in hexuronic acids in the skin and tendons of white rats were determined on the 15, 30 and 19th hypolinetic days and on the 15, 30 and 90th days of posthypokinesia recovery. It was found that the hydroxyproline content in the skin and tendons did not change, the content of hexosamines and hexuronic acid decreased in tendons on hypokinetic days 15 and 90 and in the skin on day 15. The content of hexosamines in the skin increased on day 90, the content of hexosamines and hexuronic acids in the skin and tendons increased on recovery day 15 and remained unaltered on day 90. E.A.K.

### OSTEOPOROSIS IN UNSUPPORTED EXTREMITIES

A. I. Volozhin, G. P. Stupakov, A. N. Polyakov, S. M. Remizov, N. N. Pavlova, and I. Ye. Didenko *In its* USSR Rept: Space Biol. and Aerospace Med., V. 16, No. 3, May - Jun. 1982 (JPRS-81197) 2 Jul. 1982 p 117-125 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (USSR), v. 16, no. 3, May - Jun. 1982 p 76-82

Avail: NTIS HC A08

Dystrophic changes in bone tissue, classified as osteoporosis, were demonstrated under the influence of spaceflight factors and model experiments where the bearing function of bones was eliminated. The lower part of the right extremities was amputated in dogs thus generating a support free state of the femur. On day 90 after the amputation bone resorption reached a high level and by the end of the year declined. The mature bone microstructures showed a higher degree of mineralization, whereas the young bone microstructures which were in predominance in the support free femur displayed a lower degree of mineralization. In bone, the content of Ca decreased, that of K increased, while the content of Na and P remained unchanged. It is concluded that the development of osteoporosis in the support free femur does not involve only quantitative variations in the mineral components. E.A.K.

### METHODOLOGICAL ASPECTS OF TESTING ERYTHROCYTE BALANCE BY COUNTING INCUBATED RETICULOCYTES

A. V. Llykhin, T. Ye. Burkovskaya, A. V. Shafirkin, and N. V. Klyuchanskaya *In its* USSR Rept: Space Biol. and Aerospace Med., V. 16, No. 3, May - Jun. 1982 (JPRS-81197) 2 Jul. 1982 p 132-136 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (USSR), v. 16, no. 3, May - Jun. 1982 p 86-88

Avail: NTIS HC A08

The mechanisms, causing erythrocyte deficiency are discussed. The correlations between cytokinetic parameters of erythrocyte balance was investigated to assess functional activity.

reserve potential and mechanisms of development of various disturbances in the erythron system. Quantitative evaluation of erythrocyte balance are made by cytokinetic methods for examining erythropoiesis and dieresis. Techniques involving intravital labeling of erythrocytes with radioactive isotopes are reliable but not indifferent to the body. It is found that determination of erythrocyte life span by in vitro maturation rate of reticulocytes is least disturbing to the patient and suitable for space research purposes. E.A.K.

**EFFECTS OF LOW-INTENSITY ELECTROMAGNETIC FIELDS ON HUMAN AND ANIMAL ERYTHROCYTES**

V. P. Shabayev *In its* USSR Rept: Space Biol. and Aerospace Med., V. 16, No. 3, May - Jun. 1982 (JPRS-81197) 2 Jul. 1982 p 140-142 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (USSR), v. 16, no. 3, May - Jun. 1982 p 91-92

Avail: NTIS HC A08

The balancing of Locke-Ringer solution and human and albino rat blood erythrocyte suspensions (50% hematocrit) prepared with this solution was studied. Changes in oxygen concentration and pH served as parameters characterizing the state of the aqueous medium. Permeability of erythrocyte membranes to water according to hemolysis was assessed. A tent which outer wall was made of ferromagnetic material, served as a shield to attenuate the electromagnetic field of Earth. Specimens were exposed for 3 hours in the ungrounded shield and ordinary conditions. The effect of the shield was assessed. The aqueous Locke-Ringer solutions stored under electromagnetic shields contain 8% more oxygen than control. It is found that with the use of the shield there is a large amount of hemoglobin and two other proteins in the intercellular region which are in the space near the cathode in electrophoresis. E.A.K.

**EFFECT OF HIGH AMBIENT TEMPERATURE ON CARBOHYDRATE METABOLISM IN RAT LIVER AND SKELETAL MUSCLES**

R. Akhmedov and A. M. Nasyrova *In its* USSR Rept: Space Biol. and Aerospace Med., V. 16, No. 3, May - Jun. 1982 (JPRS-81197) 2 Jul. 1982 p 143-146 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (USSR), v. 16, no. 3, May - Jun. 1982 p 92-94

Avail: NTIS HC A08

Brief and prolonged exposure to high and low ambient temperatures which leads to substantial changes in physiological reactions that maintain temperature homeostasis in organisms was studied. Adaptive changes in physiological functions are based on adaptive shifts in intensity of metabolism and energy. Organic, tissular and cellular mechanisms of change in metabolism, the significant of the different elements of metabolism in different physiological systems of the body involved in maintaining temperature homeostasis with a changing ambient temperature are investigated. Changes in carbohydrate metabolism in the liver and skeletal muscles related to exposure to high ambient temperatures, are demonstrated. E.A.K.

**N82-28976#** Joint Publications Research Service, Arlington, Va.

**VIBRATION AND ASSESSMENT OF THIS FLIGHT FACTOR BY PILOTS**

Yu. N. Kamenskiy *In its* USSR Rept: Space Biol. and Aerospace Med., V. 16, No. 3, May - Jun. 1982 (JPRS-81197) 2 Jul. 1982 p 147-151 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (USSR), v. 16, no. 3, May - Jun. 1982 p 94-96

Avail: NTIS HC A08

Vibration on active factors in the pilot-helicoper encironment system is discussed. The effect of this factor on pilot performance and its source of information on the status of the helicoper and its systems is emphasized. The role of noninstrument information (angular and longitudinal accelerations, vibration, noise) in piloting an aircraft (higher precision of control, recognition of emergency situations) is confirmed. Special purpose pilot training in the use of such negative flight factors as vibration, buffeting as information about the status of the vehicle to be controlled is recommended standardized and their practical use are considered. E.A.K.

**MICROORGANISMS USED TO MONITOR ENVIRONMENTAL POLLUTION**

G. A. Bagdasaryan and K. V. Geniatulin *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci., No. 16 (JPRS-80789) 12 May 1982 p 1-4 refs Transl. into ENGLISH from Gig. Sanit. (USSR), no. 11, Nov. 1981 p 11-13

Copyright. Avail: NTIS HC A05

The use of microorganisms to measure environmental pollution is discussed. Criteria for the selection of specific microorganisms depend on metabolic and genetic changes of the microorganism under the influence of pollution. Development of standardization and metrology of measurements with the required reproducibility and accuracy is considered. Mathematical methods for choosing test systems for microorganisms and their parameters for demonstration of pollutants and processing measurement results are discussed. J.D.

The development of methodological and experimental approaches to the study of the mechanisms of action of low molecular peptide hormones and kinins is described. Principles of information theory were applied to studies of complex stochastic systems, and the modeling method was used with extrapolation of results from one complex system to another. The principles that determine ligand-receptor interaction in the formation of complexes of trypsin group enzymes with certain protease inhibitors are analyzed. Common, universal principles which determine peptide-protein and protein-protein interaction are outlined. The selective design and laboratory synthesis of cyclic analogs of hormones and other peptide-protein bioregulators which are more selective and have longer action than their natural prototypes are described. J.D.

**CULTIVATION OF INSECTS AS NEW BRANCH OF ENTOMOLOGY - INDUSTRIAL ENTOMOLOGY**
N. A. Tamarina *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci., No. 16 (JPRS-80789) 12 May 1982 p 16-26 refs Transl. into ENGLISH from Zool. Zh. (USSR), v. 60, no. 11, Nov. 1981 p 1605-1613
Copyright. Avail: NTIS HC A05

The general principles and methods of cultivating insects are formulated as a new branch of applied entomology (technical entomology) whose methodology is the systems approach and optimization theory based on modern computer technology. Cultivation of insects is viewed as the development of artificial populations with specified properties. The process of creating cultures is divided into three periods: (1) the introduction of species into the laboratory; (2) the development and standardization of cultures of different types; and (3) the creation of mass scale cultures with specified properties. The tasks and methods of each period are discussed. A new classification is offered for insect cultures. J.D.

**ORIENTING AND EXPLORATORY BEHAVIOR OF GRAY RAT IN OPEN FIELD. ZOOPSYCHOLOGICAL ANALYSIS**
N. N. Meshkova *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci., No. 16 (JPRS-80789) 12 May 1982 p 32-41 refs Transl. into ENGLISH from Byull. Mosk. Obshch. Ispyt. Prir., Otd. Biol. (USSR), v. 86, no. 6, Nov. - Dec. 1981 p 22-29
Copyright. Avail: NTIS HC A05

The orienting and exploratory behavior of gray rats in an open field environment was observed to contain the following behavior elements: spatial orienting stances, movement, inspection of objects, and actions referable to the category of shifted activity. Each of these elements is readily distinguished in the continuum of behavior and serves a specific role in the familiarization of animals with a new terrain. The process of becoming familiar with an open field is broken down into four stages characterizing different degrees of conformity of rate behavior to the distinctions of the terrain. The animal begins to orient itself with regard to the properties of the field on the basis of its individual experience at the start of the first stage, and a complete image of the surroundings is formed at the fourth stage of exploration. J.D.

**TESTOSTERONE ENHANCES [C-14] 2-DEOXYGLUCOSE UPTAKE BY STRIATED MUSCLE**
James Toop and Stephen R. Max [1982] 22 p refs
(Grants NAG2-100; NS-15766)
(NASA-CR-169101; NAS 1.26:169101) Avail: NTIS HC A02/MF A01 CSCL 06P

The effect of testosterone propionate (TP) on C-14 2-deoxyglucose (C-14 2DG) uptake was studied in the rat levator ani muscle in vivo using the autoradiographic technique. Following a delay of 1 to 3 h after injecting TP, the rate of C-14 2DG uptake in experimental animals began to increase and continued to increase for at least 20 h. The label, which corresponds to C-14 2-deoxyglucose 6-phosphate, as demonstrated by chromatographic analysis of muscle extracts, was uniformly distributed over the entire muscle and was predominantly in muscle fibers, although nonmuscular elements were also labeled. The 1 to 3 h time lag suggests that the TP effect may be genomic, acting via androgen receptors, rather than directly on muscle membranes. Acceleration of glucose uptake may be an important early event in the anabolic response of the rat levator ani muscle to androgens. S.L.

**A PROCEDURE FOR THE ANALYSIS OF NYSTAGMUS AND OTHER EYE MOVEMENTS**
Graham R. Barnes 23 Jun. 1981 21 p refs Prepared in cooperation with the Royal Air Force Inst. of Aviation Medicine
(M0933PN004; MR0410103)
(AD-A112603; NAMRL-1280) Avail: NTIS HC A02/MF A01 CSCL 06/16

A new procedure was developed to analyze oculomotor responses to many forms of vestibular and/or visual stimuli used in experimental work and in clinical practice. The main advantage of the procedure lies in the simplicity of the basic algorithm which enables fairly rapid data analysis of a variety of response forms on a medium-speed computer working in a high-level language. For slow phase analysis, detection of saccades is carried out by a simple threshold procedure based upon the expected response form, and regression procedures are used to obtain stimulus-response correlation and slope (gain) measures. The procedure provides measures of gain, phase, and directional preponderance for responses to sinusoidal stimuli. Author (GRA)

Avail: NTIS HC A03/MF A01 CSCL 05/9

This report summarizes the research projects for which Canyon Research Group, Inc. has a major responsibility under the Visual Technology Research Simulator (VTRS) Human Performance Research Contract. The basic research approach has been multifactor and much of the experimental preparations involved demonstration of the feasibility of efficient multifactor designs. Multifactor performance and transfer studies have been completed. Other work has involved the investigation of unconventional visual displays for flight training, automatic freeze techniques for carrier landing instruction, and descent rate cuing as an aid to glideslope tracking for carrier landings. Work has also continued on the development of performance measurement and statistical analysis capabilities. Common emphases of the experimental program were that disparate and generally costly equipment features were studied experimentally in pilots making carrier landings. The general findings were that: practice effects were small; main effects of equipment features modest; some display principles improve performance; and individual differences were reliable and large. The importance of fidelity for other purposes (e.g., pilot acceptance, realism) is problematic. GRA

**SIMULATION OF THE MOTION OF THE CENTER OF MASS OF AN OCCUPANT UNDER EJECTION ACCELERATIONS Final Report**

Louis A. DAuderio and George D. Frisch (Naval Biodynamics Lab., New Orleans) Sep. 1981 46 p refs
(WF4140000)
(AD-A113806; NADC-81305-60) Avail: NTIS
HC A03/MF A01 CSCL 06/19

The development of highly sophisticated and complex ejection seats to provide safe egress from aircraft during low altitude, high speed and adverse attitude ejections addresses the need for a reliable computer simulation capability to determine the trajectory of the seat and occupant under these conditions. The occupant response to increasingly severe acceleration profiles must, therefore, be addressed if the simulation model is to be able to evaluate the behavior of the seat/occupant system. Traditionally, the seat and occupant have been treated in combination as a rigid body for purposes of trajectory analysis. However, experience with ejection seat tests has demonstrated a considerable amount of relative motion between the occupant (typically an anthropomorphic dummy) and the seat itself. This report presents a lumped mass, spring-damper mathematical computer model to simulate the motion of the occupant's C.G. with respect to the seat under a dynamic ejection environment. The analysis of anthropomorphic dummy results and of computer generated biodynamic simulation data used in the evaluation of the model will be discussed. Author (GRA)

### THE BIOLOGICAL EFFECTS OF REPEATED BLASTS Final Report, 30 Apr. 1980 - 30 Apr. 1981

Donald R. Richmond, John T. Yelverton, and E. Royce Fletcher 30 Apr. 1981 42 p refs
(Contract DNA IACRO 81-832; DNA Proj. U99-QAXMK000)
(AD-A113113; AD-E300951) Avail: NTIS HC A03/MF A01 CSCL 06/21

The results of investigations on the biological effects of repeated blasts were reviewed. Sheep and swine were subjected to mulitple blasts at a rate of one per minute in 100-percent mortality in 1 hour. Blast injuries to the organs in the neck (larynx, pharynx, and trachea) and the gastrointestinal tract occurred at blast overpressure levels lower than those necessary for lung hemorrhage for both single and multiple exposures. Curves estimating the LD1 for man as a function of incident overpressure and number of blasts were compiled. For a standing man the LD1 incident overpressure was 27 psi (186 KPa) for a single blast and 18 psi (124 kPa) for five blasts. The overpressures from one or five blasts required to inflict selected injuries in man were presented. Author

### PHYSIOLOGICAL STUDIES OF HEAT STRESS ACCLIMATION DURING A SPECIFIC EXERCISE REGIMEN Final Report

Leland F. Morgans 20 Oct. 1981 7 p Submitted for publication
(Grant AF-AFOSR-0098-81; AF Proj. 2312)
(AD-A111897; AFOSR-82-0091TR) Avail: NTIS
HC A02/MF A01 CSCL 06/19

Eleven subjects were used to determine the effects of racquetball on core temperature, skin temperature, sweat production, and weight loss. The results indicated that an hour of racquetball play produced a significant increase in core temperature, a significant decrease in skin temperature, a high level of sweating and a weight loss. It was concluded that the exercise regimen of racquetball can act as a good heat stress acclimator by virtue of finding that it produced a significantly high level of hyperthermia. Author (GRA)

### DETERMINING VISUAL ACUITY THRESHOLDS: A SIMULATION STUDY OF STIMULUS PRESENTATION STRATEGIES

David J. Blower Aug. 1981 24 p refs
(ZF51524004)
(AD-A111821; NAMRL-1282) Avail: NTIS HC A02/MF A01 CSCL 05/10

An accurate and economical method for determining visual acuity thresholds was necessary for many tests in the Vision Test Battery (VTB). There were certain unanswered questions as to how the classical up and down method of presenting stimuli would perform in this regard with a four alternative forced choice task. To answer these questions computer simulation runs of the up and down method were carried out. A model of the psychometric function relating probability of correct detection to stimulus gap size was based on the cumulative normal distribution. The parameters of this model were chosen to characterize one of the acuity tests in the VTB. The intent of the simulation with this model was to generate a large sample of acuity thresholds, and, from this sample, form an estimate of the average acuity threshold and its variability for any given number of trials. An alternative method of presenting stimuli in a sequential manner was also studied via simulation. This method, called the bracket method, proved to be superior to the up and down method in calculating an average estimate of threshold acuity. The error attached to the threshold acuity estimate was also smaller in the bracket method. When the slope of the psychometric curve was varied over a large range, the bracket method retained these advantages over the up and down method. Author (GRA)

### AN INDUSTRIAL HYGIENE EVALUATION OF AIRCRAFT REFUELING INSIDE CLOSED AIRCRAFT SHELTERS AT ELEVATED AMBIENT TEMPERATURES Final Report, Aug. - Sep. 1981

Joseph A. Martone Oct. 1981 26 p refs
(AD-A114396; BEES(W)-81-42) Avail: NTIS
HC A03/MF A01 CSCL 01/3

This report presents results of three in-shelter aircraft refueling tests with ambient temperatures of 30 C or higher. For the specific situations studied, refuel crew personnel were exposed to total fuel vapor concentrations approaching permissible exposure limits. Exposure to benzene and other selected fuel vapor components were well below permissible exposure limits. The data were normalized to predict that personnel exposures above 50 percent of the short term exposure limit for fuel vapors would occur in both first and modified first generation shelters at elevated temperatures. The data support temperature limitations for in-shelter refueling with JP-4 in first and modified first generation shelters. No such limitations were found necessary for second or third generation shelters as they provide nearly three times the dilution volume of first generation shelters. To permit in-shelter refueling above the recommended temperature limits, restrictions on the amount of fuel transferred are suggested. Special consideration is given to the F-111 aircraft because of its large fuel capacity. GRA

**N82-28995#** Oak Ridge National Lab., Tenn.

### WHAT IS ALARA

J. A. Auxier 1981 12 p refs Presented at Edison Elec. Inst. Health Phys. Comm. Meeting, Hartford, 10 Sep. 1981
(DE81-030814; CONF-810968-1) Avail: NTIS
HC A02/MF A01

The history of ALARA and what it seemingly means to different interest groups is discussed. A balanced viewpoint that health physicists should adopt is presented. The as-low-as-reasonably-achievable (ALARA) philosophy as it applies to personnel radiation exposure is outlined. The essential tenets of this philosophy surfaced early in the history of the Manhattan Project. Although the terminology has suffered through various translations, the principles remain valid. Some regulatory agencies claim ALARA as their newfound miracle drug and that application according to their prescriptions will result in endless rounds of cyclical improvement in radiation protection practices. Advantage is taken of the popularity of ALARA and the philosophy is standardized to mean whatever is expedient for their purposes.

**UNCONVENTIONAL VISUAL DISPLAYS FOR FLIGHT TRAINING Interim Technical Report, 1 May 1980 - 30 Nov. 1981**
Robert T. Hennessy (NAS-NRC), Gavan Lintern, and Stanley C. Collyer (Naval Training Equipment Center) Orlando, Fla. Naval Training Equipment Center Nov. 1981 66 p refs
(Contract N61339-78-C-014)
(AD-A111392; TR-81-014; NAVTRAEQUIPC-TR-81-014) Avail: NTIS HC A04/MF A01 CSCL 05/9

Use of simulators for flight instruction has typically followed the pattern of using similar instructional approaches to those that have traditionally been used for in-flight instruction. However, there is a growing awareness that a simulator permits radical departures from the traditional methods. Some of these may be less expensive or even more effective in terms of acquiring the skill. The general purpose of the research reported here was to examine training effectiveness for basic flight tasks of radically different methods of displaying the information that is necessary to support learning of the tasks. Four different visual displays were evaluated for their effectiveness in the acquisition of flight tasks in a simulator. The control condition had a wide field-of-view, a horizon and a checkerboard ground plane that obeyed laws of motion and perspective. The experimental displays were: (1) a narrow field-of-view with horizon and checkerboard ground plane; (2) an outside viewpoint of an aircraft; and (3) a display that consisted only of normal flight instruments. Flight-naive subjects were taught to fly straight-and-level for twenty trials with either the control or one of the experimental displays and then tested for twenty trials on the control display. Training, transfer, and differential transfer performance was examined. GRA

**TASK ANALYSIS AND THE ABILITY REQUIREMENTS OF TASKS: COLLECTED PAPERS**
R. H. Shannon and Robert C. Carter Sep. 1981 27 p refs
(AD-A111181; NBDL-81R009) Avail: NTIS HC A03/MF A01 CSCL 05/9

This is a collection of papers on the topic of using task analysis to identify the abilities required for jobs. Identification of ability requirements is a first step in the process of assembling performance tests that are related to a particular job. Once assembled such tests could be used for many purposes. One use would be selection of personnel who are especially gifted with the required attributes. The use to which the authors' efforts are directed is environmental research. Environmental research is the study of human performance in unusual environments (e.g., vibration, ship motion, impact) in order to determine whether and to what degree the environment affects performance. Such research is more relevant to the Navy when the human performance studied is related to Navy jobs. Author (GRA)

**THE RANKING OF DISPLAYS BASED ON TRANSINFORMATION [DIE BEWERTUNG VON ANZEIGEN DURCH DEN TRANSINFORMATIONSFLUSS]**
K.R. Kimmel Nov. 1981 56 p refs In GERMAN; ENGLISH summary
(FB-52) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 10

Transinformation as a means to discriminate between alternative display configuration with a compensatory control task was investigated. Root-mean-square (rms) control error was used for comparison purposes. The dynamics of the controlled elements and the bandwidths of the stochastic disturbance functions served as independent parameters in the experiment. Results from both measures, in general, show good agreement, being somewhat more consistent with transinformation, the superiority of which can clearly be seen when an additional auditory of visual discrete supervisory task is added. Control rms did not permit the construction of a unitary total performance measure in multiple task situations. Transinformation, on the other hand, confirmed the rankings of the different display configurations which were obtained for the pure analog compensatory manual control task. Author (ESA)

(AD-A113036; CSIE-82-5) Avail: NTIS HC A05/MF A01 CSCL 09/2

An implementation of a rule-based language related to PROLOG for the specification of human-computer interfaces is described. It is based not upon von Neumann computer architectures but rather upon Post production systems or Markov algorithms, which are the foundations of computer science. Author

**N82-29008#** Naval Submarine Medical Research Lab., Groton, Conn.
**COLD WEATHER GOGGLES. 2: PERFORMANCE EVALUATION Interim Report**
S. M. Luria 23 Mar. 1982 17 p refs
(M0095PN001)
(AD-A114067; NSMRL-978) Avail: NTIS HC A02/MF A01 CSCL 06/17

The performance of various tasks of importance to the Marines was compared when the subjects were wearing different goggles designed to protect the eyes from the cold. Color perception through yellow goggles and riflery through the most distorted goggles were degraded, but there were no significant impairments in acuity, depth perception, or vision through binoculars. The optical standards adhered to in the manufacture of commercial goggles appears to permit the satisfactory performance of practical tasks. Author (GRA)

**N82-29009#** Naval Biodynamics Lab., New Orleans, La.
**BIOMECHANICAL ANALYSIS OF TASKS INVOLVING MANUAL MATERIALS HANDLING**
Richard H. Shannon Feb. 1982 27 p refs
(AD-A113955; NBDL-82R001) Avail: NTIS HC A03/MF A01 CSCL 05/5

Biomechanics and their relationships with manual materials handling, sex differences and training are discussed. A factor analytic model of lifting in the floor knuckle and knuckle shoulder regimens under experimental conditions is considered. Sixteen subjects were divided equally into four groups of males trained/untrained and females trained/untrained. Results indicated that (1) there were different motion patterns among the four groups, (2) male movements approximated the trained and female movements the untrained conditions, and (3) trained individuals demonstrated more efficient and coordinated lifts. Training programs are recommended in the working environment if women are expected to lift moderately heavy loads because of their lower physical fitness and coordination when compared to men. This statement is further supported by the second paper, which conducted a critical incident technique of 484 strain/sprain/overexertion injuries of naval civilian government workers was conducted. Results indicated that males had significantly more injuries to the back, to craftsmen/operatives/laborers, using heavy/very heavy weight. GRA

The adaptability of industrial methods for setting job and time standards to workload assessment requirements was investigated. Methods considered included direct and indirect time study, synthetic time systems, standard data systems, information content analysis, work sampling and job evaluation. Conventional methods were found to be deficient in accounting for task time variability, divided-attention effects, and cognitive demands which are regarded as critical to effective air crew workload assessment. A combination of synthetic time and standard data system methodologies was proposed as an effective approach to the problem. Three experiments were conducted to evaluate the feasibility of developing a Synthetic Data System(SDS) consistent with workload assessment needs. Swithing, communication and perceptual-mediational tasks were paired with tracking to create divided-attention demands characteristic of pilot workloads. Regression analyses showed that significant amounts of variance in task time requirements and error rates could be accounted for in terms of task and man-machine interface design variables. Development of an SDS on the basis of the performance of aircrew members in aircraft simulators is recommended. GRA

The Air Force is frequently placed in a situation where a large quantity of goods must be transported between various locations in a specified time period by Air Force personnel. The goods are of different and interrelated types; thus, the sequence of missions is specified to maintain a proper balance of goods at each location. In addition to aircraft maintenance, health and alertness maintenance for pilots and personnel is a vital consideration in scheduling. Nevertheless, economy in operations needs to be demonstrated. Thus, the problem addressed in this paper is one of minimizing the number of crews used in the airlift, subject to crew rest requirements and the completion of all missions within the specified time frame. This is a report on transport category airplane flight crew workload measurement techniques as used in cockpit development and aircraft certification tests by major U.S. airframe manufacturers. It reviews the fundamentals of: crew size certification; workload measures and criteria; workload studies made during aircraft design; and workload studies made after the design has been established, including those used in flight test. Certain documentation practices are identified. The limitations of the currently used practices and the needs for improved workload measurement techniques are addressed. Author (GRA)

(AD-A111711; USARIEM-M-15/82) Avail: NTIS HC A02/MF A01 CSCL 06/19

To investigate the hypothesis that circulating glucose levels may affect exercise performance and the severity of hyperthermic injury, rats were made hypoglycemic (IV insulin, 4U) or hyperglycemic (IP glucose, 750mg) before exercise in the heat to hyperthermic exhaustion (Tre = 42.5 -43 C). The endurance capacity of rats administered glucose was significantly greater than that of insulin treated, while neither was different from saline treated controls. Hematocrit levels were unaffected by exercise in control and insulin treated rats, but were significantly increased in the glucose treated. Lactate levels were increased postrun in all groups, and these increments were exacerbated in glucose treated rats. Glucose levels prerun were decreased by insulin and increased by glucose, and remained depressed postrun in the insulin treated group. Potassium concentrations were reduced by insulin administration. Creatine phosphokinase, urea nitrogen, and creatinine were increased postrun in all groups. Mortality rates following heat/exercise injury were unaffected by glucose levels. We concluded that while hyperglycemic rats had increased endurance when compared to hypoglycemic animals, the severity of the hyperthermic injury was unaffected by circulating glucose levels. To reduce or eliminate biofouling by microorganisms, seawater entering heat exchangers is sterilized (or at least sanitized) by UV radiation at 253.7 nm. The feasibility of applying this technology to OTEC is examined. Calculations based on the Lambert-Beer equation and reasonable assumptions about seawater quality and the intensity of irradiation obtainable from a UV lamp suggest seawater is transparent enough to a collimated beam of UV light to deliver effective germicidal doses to nearly 150 cm under some conditions. However, the practical limit on the depth of effective radiation from commercial lamps is severely restricted by many factors including the natural divergence of light, absorption and scattering in the media, intensity of radiation from the light source and so forth. Even under very favorable conditions a common design allowing UV light to penetrate 30 cm of water would have to permit the water at that distance to be in contact with the light for 20 seconds or so to deliver the germicidal effect of high quality sanitization but not necessarily sterilization. DOE

The two methods of study used for the light reactions of photosynthesis are orientation dependent spectroscopy and picosecond resolution of the fluorescence decay kinetics. Analysis of spectroscopic measurements on complex partially ordered ensembles, such as photosynthetic systems, is usually limited by knowledge of the orientational distribution function. A new method of parametrically representing the distribution function using a physical model of the partially ordered ensemble is described. The parametric representation of the distribution function is the density of states function. Many formulas are included which can be used to calculate density of state functions for a large range of problems. Fluorescence decay kinetics in chloroplasts from green plants and algae are investigated using a synchronously pumped, mode-locked dye laser as an excitation source. DOE

P. Kazymbetov *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci., No. 17 (JPRS-81419) 2 Aug. 1982 p 76-79 refs Transl. into ENGLISH from Med. Radiol. (USSR), v. 27, no. 3, Mar. 1982 p 60-62

Avail: NTIS HC A06/MF A01
The range of modification of radiosensitivity by acute hypoxia (6% oxygen) in animals adapted to high altitudes was investigated. Experiments were conducted on mongrel white rats and mice kept at an altitude of 3340 m above sea level for 40 days and on a control group kept at 800 m above sea level. The animals were irradiated in air and under hypoxic conditions. Animal survival for 30 days after irradiation and quantity of bone marrow cells in one thigh on the third postirradiation day served as criteria of radiosensitivity. The toxicity of acute hypoxia for control and adapted animals was also tested. The attenuation of radioprotective effects of acute hypoxia was demonstrated. It was also demonstrated that the diminished effect of acute hypoxia persists for several days after adaptation. Also, results show that adapted animals were twice as resistant to acute hypoxia as control animals. J.M.S.

**THEORETICAL AND PRACTICAL ASPECTS OF USING ACOUSTIC REPELLANTS TO SCARE BIRDS. PART 1: INTERSPECIFICITY AND GEOGRAPHIC (REGIONAL) DISTINCTIONS OF ACOUSTIC REPELLANTS**
A. V. Tikhonov and V. S. Shevyakov *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci., No. 18 (JPRS-81428) 3 Aug. 1982 p 43-48 refs Transl. into ENGLISH from Biol. Nauki (USSR), no. 1, Jan. 1982 p 45-49

Avail: Issuing Activity
The interspecificity of alarm and distress signal effects on Larines, Corvidae and starlings was investigated as well as geographic aspects of using these signals as acoustic repellants. It was established that repellant reactions are induced in birds by signals not only of closely related species, but of systematically distant groups that are biocenotically close neighbors. The interspecificity of repellant signals is manifested the most during the nesting period. Author

**SIGNIFICANCE OF MINUTE VOLUME PARAMETERS TO EVALUATION OF VESTIBULAR STABILITY**
A. S. Gusarov *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci., No. 18 (JPRS-18428) 3 Aug. 1982 p 88-91 Transl. into ENGLISH from Voyenno-Med. Zh. (USSR), no. 8, Aug. 1981 p 48-50

Avail: Issuing Activity
Respiration rate, minute volume, heart rate, and EKG were recorded in 100 men between 22 and 35 years of age using an automatic vestibular chair to which was connected a Fizilog instrument with Reservy unit, a digital printer, and a 12 channel magnetoelectric oscillograph. A 5 minute test for endurance of cumulative Coriolis accelerations with intermittent exposure was used to study vestibulovegetative reflexes. Subjects were grouped according to: (1) high vestibulovegetative reactions; (2) moderate stability; and (3) poor motion tolerance. More than 3,000 vestibulovegetative reactions were recorded. Results show that the first group of subjects endured the 5 min test without complaints or external vestibulovegetative manifestations. The second group presented moderate pallor, perspiration and nausea, mainly in the 3d-5th min before stopping and after stops. Marked autonomic reactions were (pallor, cold sweat, nausea, vomiting) were observed in the third group either immediately after stopping the first time, or after the second-third time. A.R.H.

Avail: Issuing Activity
The influence of the heat factor and, in particular, ambient temperature on the appearance and dynamics of GSR in different parts of the human body both in a state of relative rest and with graded mental emotional and physical loads was studied. Results obtained using 1140 subjects of both sexes, ranging in age from 18 to 86 years, show that the dynamics of development of the galvanic skin response presents distinct phases which depend on ambient temperature, and emotional and physical tension. It was established that GSR dynamics undergo five phases with rapid elevation of temperature. A.R.H.

An acoustic oral hygiene unit is described that uses acoustic energy to oscillate mild abrasive particles in a water suspension which is then directed in a low pressure stream onto the teeth. The oscillating abrasives scrub the teeth clean removing food particles, plaque, calculous, and other foreign material from tooth surfaces, interproximal areas, and tooth-gingiva interface more effectively than any previous technique. The relatively low power output and the basic design makes the invention safe and convenient for everyday use in the home without special training. This invention replaces all former means of home dental prophylaxis, and requires no augmentation to fulfill all requirements for daily oral hygienic care.

**NEUROCHEMICAL BACKGROUND AND APPROACHES IN THE UNDERSTANDING OF MOTION SICKNESS Final Report**

Randall Lee Kohl Washington NASA Jul. 1982 54 p refs
(Contract NAS9-14880)
(NASA-CR-3569; NAS 1.26:3569; S-515) Avail: NTIS HC A04/MF A01 CSCL 06P

The problems and nature of space motion sickness were defined. The neurochemical and neurophysiological bases of vestibular system function and of the expression of motion sickness were reviewed. Emphasis was given to the elucidation of the neuropharmacological mechanisms underlying the effects of scopolamine and amphetamine on motion sickness. Characterization of the ascending reticular activating system and the limbic system provided clues to the etiology of the side effects of scopolamine. The interrelationship between central cholinergic pathways and the peripheral (autonomic) expression of motion sickness was described. A correlation between the stress of excessive motion and a variety of hormonal responses to that stress was also detailed. The cholinergic system is involved in the efferent modulation of the vestibular hair cells, as an afferent modulator of the vestibular nuclei, in the activation of cortical and limbic structures, in the expression of motion sickness symptoms and most likely underscores a number of the hormonal changes that occur in stressful motion environments. The role of lecithin in the regulation of the levels of neurotransmitters was characterized as a possible means by which cholinergic neurochemistry can be modulated. Author

**DETERMINATION OF MAXIMAL AEROBIC POWER DURING UPPER BODY EXERCISE**

Michael N. Sawka, Michael E. Foley, Nancy A. Pimental, Michael M. Toner, and Kent B. Pandolf 3 Feb. 1982 26 p refs
(AD-A111712; USARIEM-M-14/82) Avail: NTIS HC A03/MF A01 CSCL 06/19

The purpose of this investigation was to evaluate four protocols for their effectiveness in eliciting maximal aerobic power (peak VO2) during arm crank exercise. Comparisons were made between: (1) a continuous (CON) and an intermittent (INT) protocol (both employed a crank rate of 50 rpm), and (2) the CON protocol employing crank rates of either 30, 50, or 70 rpm. For the first group of experiments no significant differences were found between the Con and INT protocols for peak VO2, maximal pulmonary ventilation (VEmax), maximal heart rate (HRmax) or maximal blood lactate (LAmax) responses. For the second group of experiments, the CON-50 was compared to the CON-30 and CON-70 protocols. In comparison to the CON-50, significantly higher peak VO2 (+10%) and VEmax (+14%) responses were elicited by the CON-70 protocol, whereas significantly lower peak VO2 (-11%), VEmax (-23%), HRmax (-8%), and LAmax (-29%) responses were elicited by the CON-30 protocol. These data indicate that for arm crank exercise the combination of a continuous design and a crank rate of 70 rpm provides the most effective protocol to elicit peak VO2 values. Author (GRA)

**ALCOHOL-INDUCED PHYSIOLOGICAL DISPLACEMENTS AND THEIR EFFECTS ON FLIGHT RELATED FUNCTIONS**

Michael T. Lategola, Peggy J. Lyne, and Mary J. Burr Mar. 1982 22 p refs
(AD-A114919; FAA-AM-82-3) Avail: NTIS HC A02/MF A01 CSCL 06/19

Tolerances of human subjects for orthostasis and physical work were determined at a simulated altitude of 3,048 m. Orthostasis was induced with a lower body negative pressure (LBNP) device and physical work was done on a pedal ergometer. Altitude was simulated in a hypobaric chamber. Tests were carried out under two experimental conditions: (1) after subjects drank an alcoholic beverage, or (2) after subjects drank a placebo beverage (no alcohol). The alcoholic beverage produced blood alcohol concentrations (BAC's) of about 90 mg/100 ml of blood (90 mg percent). At altitude, arterial oxyhemoglobin saturation (HbO2) remained adequately compensated but was lower after alcohol than after placebo intake. Arithmetic and eye/hand coordination performances were both significantly decreased after school. Ergometry, after alcohol, was well tolerated despite some decreased cardiorespiratory efficiency. The LBNP applied around peak BAC at altitude was tolerated without subjectively adverse symptoms despite significant decreases in several cardiovascular parameters. Cardiovascular adequacy along with maintained plasma volume around peak BAC appeared to be temporarily protective against orthostatic incapacitation during LBNP. Reversal of this temporary orthostatic protection during BAC recession is possible. Author (GRA)

**SEGMENTATION AND ANALYSIS OF STEREOPHOTOMETRIC BODY SURFACE DATA Final Report**

L. Douglas Baughman Wright-Patterson AFB, Ohio AMRL Apr. 1982 193 p refs
(Contract F33615-78-C-0504; AF Proj. 7231)
(AD-A114916; UDR-TR-81-51; AFAMRL-TR-81-96) Avail: NTIS HC A09/MF A01 CSCL 06/2

A stereophotometric data set, describing the body surface of a subject, was segmented into nineteen groups of stereophotometric data, the data in each group describing the surface of a body segment. The process was repeated for a total of 59 such data sets. The data resulting from each of these segmentation processes were then analyzed for inertial properties and location and orientation of both anatomical and principal axis systems. The accumulated body volume as a function of vertical distance from the floor was also tabulated for all the data sets.

C. Kleitz and R. P. Delahaye *In its* Physiopathol. and Pathol. of Spinal Injuries in Aerospace Med. Feb. 1982 p 9-28

Avail: NTIS HC A15/MF A01

The embryology of the spine; general and special regional characteristics of vertebrae; interconnections and articulations, the spine as a whole, and the spine in the seated position are depicted in anatomical drawings and described. A.R.H.

**N82-29872#** Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).

### BIOMECHANICS OF THE SPINE

C. Kleitz and R. P. Delahaye *In its* Physiopathol. and Pathol. of Spinal Injuries in Aerospace Med. Feb. 1982 p 29-45

Avail: NTIS HC A15/MF A01

The spine has at least three basic biomechanical functions: (1) transmit the weight and the flexing movements of the head and the trunk to the pelvis; (2) allow physiological movement between the head, trunk, and pelvis; and (3) protect the spinal cord from trauma caused by forces and movements. The functional biomechanics of the intervertebral disk, the intervertebral ligaments, the vertebrae, and the spinal column are illustrated and discussed. The role of the thoracic cage and muscles is also examined. A.R.H.

**N82-29873#** Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).

### SPINAL STRESSES IN FLIGHT

R. Auffret and H. Vieillefond *In its* Physiopathol. and Pathol. of Spinal Injuries in Aerospace Med. Feb. 1982 p 47-54

Avail: NTIS HC A15/MF A01

The spine of a pilot is subjected to two types of stresses: those inherent in flight which are of relatively low intensity and are related to the time for which they act; and those which are uncommon but of very high intensity whose effects are related to the mechanical strength of the spinal column and can lead to fractures. The former represent the problem of fatigue of materials; the latter the problem of the strength of materials. The physiological effects of aircraft acceleration and vibration during flight are analyzed. The mechanical effects on the human body of the very high accelerations (impacts) associated with ejection from high performance aircraft at high speed and during crash landings away from prepared runways are examined.
A.R.H.

### THEORIES OF THE PATHOGENESIS OF FRACTURES OF THE SPINE

R. P. Delahaye and P. J. Metges *In its* Physiopathol. and Pathol. of Spinal Injuries in Aerospace Med. Feb. 1982 p 57-59

Avail: NTIS HC A15/MF A01

The mechanisms of fractures of the thoraco-lumbar spine and of the cervical spine are distinguished. The different aetiological circumstances in which traumatic lesions occur (crash, parachuting, ejection, accidents in flight, accidents on centrifuges and sleds) are examined. Clinical studies and practical methods of examination that are often neglected are considered. Radiology must be carried out early, using optimal techniques to yield radiographs that, with the clinical examinations, can facilitate the establishment of an accurate inventory of the lesions. The numerous after-effects of trauma must be detailed, for they produce a very special clinical and radiological picture with which every flight surgeon should be thoroughly familiar. A.R.H.

**N82-29875#** Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).

### AETIOLOGY AND PATHOGENESIS

R. P. Delahaye and R. Auffret *In its* Physiopathol. and Pathol. of Spinal Injuries in Aerospace Med. Feb. 1982 p 60-65

Avail: NTIS HC A15/MF A01

Records of accident investigations of light civil aircraft, gliders, military aircraft, and civil and military transport aircraft show that the pathogenesis of fractures of the vertebral column and the associated lesions resulting from crashes is almost identical. The localization of spinal fractures in crashes, the forces and accelerations in crashes, and the effect of deceleration when the body is restrained by an abdominal belt are considered.
A.R.H.

**N82-29876#** Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).

### HELICOPTER ACCIDENTS

B. Vettes and R. P. Delahaye *In its* Physiopathol. and Pathol. of Spinal Injuries in Aerospace Med. Feb. 1982 p 66-71

Avail: NTIS HC A15/MF A01

The uses of helicopters in civil and military operations are reviewed and it is shown that the advantages of maneuverability, vertical take-off and landing, hovering, and the need for unsophisticated ground base contribute to the frequent, often serious accidents of these aircraft. Statistical studies of civil and military helicopters, and the distribution of vertebral fractures in helicopter accidents are discussed. The schematic division of crashes into ground impact in autorotation and crash with loss of control of aircraft corresponds to a distinction between crashes with the possibility of survival and unsurvivable crashes. The pathogenesis of vertebral lesions is discussed for crashes in which the impact is purely vertical (accident in autorotation) and crashes with a significant horizontal impact component (poor chance of survival). Case histories of crash injuries are used to show that the risk of fatal accidents, which is 0.34 per 10,000 flying hours, must be reduced. A.R.H.

**N82-29877#** Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).

### EJECTION OF PILOTS FROM COMBAT AIRCRAFT

R. P. Delahaye, R. Auffret, and B. Vettes *In its* Physiopathol. and Pathol. of Spinal Injuries in Aerospace Med. Feb. 1982 p 72-96
Avail: NTIS HC A15/MF A01

The history of scientific studies of pilot escape, especially at high speeds from combat aircraft, is reviewed and the principles of the ejection seat are examined. The different phases of ejection (initiation; seat firing and egress from the aircraft; separation of the seat; landing; survival; and rescue) are described. Normal configurations, abnormal configurations and the extraction (YANKEE system) are discussed as well as the overall results of ejection and the results as a function of in-flight factors. The distribution of ejection lesions, and the pathogenic mechanisms of spinal fractures during ejection are examined. Parachute opening shock and pathological factors associated with landing are also considered. A.R.H.

**N82-29878#** Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).

**PARACHUTING**
A. Leger and R. P. Delahaye *In its* Physiopathol. and Pathol. of Spinal Injuries in Aerospace Med. Feb. 1982 p 97-121

Avail: NTIS HC A15/MF A01
The physiopathology and etiology of parachute descents are examined during (1) leaving the aircraft to parachute opening; (2) parachute opening; and (3) descent on the deployed parachute. Military parachuting techniques and training of military parachutists; and fracture and trauma of the spine during parachuting as a means of transport are examined. Other lesions and traumatic sequelae of parachuting are described. General conditions of parachuting as a sport, the equipment used, and spinal trauma in sport parachuting are also covered. Hang gliding and the limits of human tolerance for impacts in free fall are discussed. A.R.H.

**N82-29879#** Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).
**LIMITS OF HUMAN TOLERANCE FOR IMPACTS IN FREE FALL**
*In its* Physiopathol. and Pathol. of Spinal Injuries in Aerospace Med. Feb. 1982 p 122-126

Avail: NTIS HC A15/MF A01
Various techniques used to study the degree of human resistance to impact during an unimpeded fall, jump, or dive from a known point to a know point are described. The physical factors which influence the nature, size, and severity of the lesions received are amplitude, direction of forces, distribution of forces, area of application, and duration. Biological factors (physical condition) are also closely related to impact tolerance. Injuries resulting from impacts into water and at terminal velocity are reported from case histories. A.R.H.

**N82-29880#** Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).
**FRACTURES OF THE SPINE IN FLIGHT**
R. P. Delahaye and R. Auffret *In its* Physiopathol. and Pathol. of Spinal Injuries in Aerospace Med. Feb. 1982 p 127-131

Avail: NTIS HC A15/MF A01
Case histories show that fractures of the spine can occur in the pilot of combat aircraft during rapid vibrational phenomena (induced oscillation) and with inadvertent unlocking of the seat, an event which produces additional accelerations which lead to a sudden compression of the vertebral column. During turbulence, a flight attendant thrown against the wall or the seats of an aircraft sometimes receives a fracture of the spine. More rarely, cervical sprains occur during aerobatics. A.R.H.

**N82-29881#** Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).
**ACCIDENTS IN CENTRIFUGES AND EXPERIMENTS (EJECTION SEAT TRAINING TOWERS, SLEDS)**
R. P. Delahaye and R. Auffret *In its* Physiopathol. and Pathol. of Spinal Injuries in Aerospace Med. Feb. 1982 p 132-135

Avail: NTIS HC A15/MF A01
The performance characteristics of the centifuge at CEV (Bretigny) are described as well as the protocol used. Results of studies at 6.5 G, 9 G, 11.5 G and 13.5 G are examined to indicate the types of injuries that occurred. Factors responsible for the low incidence of injuries on ejection seat training rigs and rocket sleds are mentioned. A.R.H.

**N82-29882#** Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).
**CLINICAL EXAMINATION OF SPINAL INJURIES**
P. Doury and G. Leguay *In its* Physiopathol. and Pathol. of Spinal Injuries in Aerospace Med. Feb. 1982 p 136-138

Avail: NTIS HC A15/MF A01
Manipulation of the subject in the erect, sitting, or lying position occurs following history taking and precedes radiology. In case of severe injury, clinical examination must always be cautious, usually with the patient lying on his back. In the upright position, the patient is examined from the front, back, and side as well as while walking on the toes and heels. Procedures for examining the seated, supine, and prone patient should be followed by neurological and gynecological examination. The identification of thoraco lumbar and cervical fractures is described. It is indicated that simple fractures of the spine are clinically silent in 15% to 20% of cases and that the most searching examination cannot provide sufficient evidence to eliminate with certainty the fracture of the spinal column. A.R.H.

**N82-29883#** Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).
**RADIOLOGY OF SPINAL TRAUMA IN AVIATION MEDICINE**
R. P. Delahaye and P. J. Metges *In its* Physiopathol. and Pathol. of Spinal Injuries in Aerospace Med. Feb. 1982 p 139-186

Avail: NTIS HC A15/MF A01
Radiological examination of the spine in aerospace medicine is the same as that of any recent spinal trauma, and it obeys the same principles. The examination is carried out as soon as possible after an aviation accident. The entire spine is X-rayed segmentally, with frontal and lateral films. The examination consists of diagnostic radiography and complementary radiological assessment (localized and oblique views, tomography, dynamic films, examinations with the contrast media, scanning). S.L.

**N82-29884#** Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).
**ANALYTICAL STUDY OF TRAUMATIC LESIONS OF C3-C7**
*In its* Physiopathol. and Pathol. of Spinal Injuries in Aerospace Med. Feb. 1982 p 187-198

Avail: NTIS HC A15/MF A01
In a frontal view in a neutral position, the spines are aligned, and the distances between them are more or less equal. Any deviation of the line of the spines is evidence of a unilateral dislocation, and increase in the distance between two spines always indicates a dislocation. In a straight lateral view, the articular processes are superimposed. If they appear are separated at a given level when they are superimposed below, a fracture of the articular processes is sought. The separation indicates a rotation. Traumatic lesions of the cervical spine are often unstable. This instability is not always evident on standard X-rays. It is sometimes necessary to carry out careful dynamic examinations on a second occasion. S.L.

**N82-29885#** Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).
**RADIOLOGICAL STUDY OF FRACTURES OF C1 AND C2**
*In its* Physiopathol. and Pathol. of Spinal Injuries in Aerospace Med. Feb. 1982 p 199-210

Avail: NTIS HC A15/MF A01
Fractures of the axis and atlas of the C1 and C2 area represent 15 to 25% of the fractures of the cervical spine, and preferentially affect the odontoid. The angles from which the X-rays are taken must be strictly controlled. The frontal view can only be interpreted if the spinous process of C2 is projected on the center of the body atlas. In profile, in the normal state, the posterior border of the odontoid should lie on a straight line extended from that of the body. In contrast, the anterior border lies obliquely. The space between the anterior edge of the odontoid and the posterior border of the anterior arch of the atlas should not exceed 3 mm. The state of the soft tissues in front of the spine should always be carefully assessed. S.L.

**SEQUELAE OF VERTEBRAL FRACTURES AND TRAUMA**
R. P. Delahaye and P. J. Metges *In its* Physiopathol. and Pathol. of Spinal Injuries in Aerospace Med. Feb. 1982 p 211-223

Avail: NTIS HC A15/MF A01
The broad principles of treatment of traumatic lesions and fractures of the spine in aviation medicine are the same as those in general practice. A general scheme in accordance with the different philosophies of various schools of orthopaedic surgery, is presented and the very common thoraco-lumbar fractures of the spine are contrasted with the more severe fractures of the cervical spine. S.L.

**N82-29887#** Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).
**BACKACHE IN HELICOPTER PILOTS**
R. P. Delahaye, R. Auffret, P. J. Metges, J. L. Poirier, and B.

Vettes *In its* Physiopathol. and Pathol. of Spinal Injuries in Aerospace Med. Feb. 1982 p 225-260

Avail: NTIS HC A15/MF A01

Back pains in helicopter pilots are studied. These pains are usually caused by the vibrations of the helicopter. The picture is of a low grade, tiring, heavy ache localized in the lumber region, or sometimes lower. It extends laterally, often predominantly to one side, and may radiate to the buttocks, the iliac crests or, more rarely, the groin. This discomfort is brought on by flight, aggrevated by lifting effort of by long car journeys, and relieved by lying down and by physiotherapy. S.L.

**N82-29888#** Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).

**THE CERVICAL COLUMN OF PILOTS OF COMBAT AIRCRAFT**

R. P. Delahaye and R. Auffret *In its* Physiopathol. and Pathol. of Spinal Injuries in Aerospace Med. Feb. 1982 p 261-263

Avail: NTIS HC A15/MF A01

The pilots of high performance fighter aircraft sometimes complain of cervical pain during flight at low altitude. The level of vibrations is especially high and the pilot is often leaning forward in a fixed position. The character of the workload, notably in high performance combat aircraft (Mach 2) is considered in studying this problem. S.L.

**N82-29889#** Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).

**THE SPINE AND FITNESS FOR FLIGHT**

R. P. Delahaye, R. Auffret, G. Leguay, P. Doury, P. J. Metges, and C. Kleitz *In its* Physiopathol. and Pathol. of Spinal Injuries in Aerospace Med. Feb. 1982 p 264-289

Avail: NTIS HC A15/MF A01

The harmful effects of flight factors studied, and the analysis of different sets of statistics confirm that the vertebral column is subjected to a certain number of more or less severe stresses in the course of a flying career. It is necessary to define some criteria of fitness, as far as the spine is concerned, in relation to the type of aircraft. These conditions for fitness are considered from two very distinct aspects: fitness at the time of admission of flying personnel, and fitness upon reexamination and after air accidents. S.L.

**N82-29890#** Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).

**VERTEBRAL ARTHRITIS**

*In its* Physiopathol. and Pathol. of Spinal Injuries in Aerospace Med. Feb. 1982 p 290-295

Avail: NTIS HC A15/MF A01

Vertebral arthritis is a commonly encountered disorder that rarely affects the fitness of flying personnel. Factors that are considered are the roles in which the flying duties impose a stress upon the spine; these mainly comprise helicopter and combat pilots. The painful functional disturbance unrelated to radiological signs, radiogically, severe involvement of the discs, and therapeutic considerations, which under favorable conditions do not exclude surgery are also emphasized. S.L.

**N82-29891#** Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).

**ANKYLOSING SPONDYLITIS**

*In its* Physiopathol. and Pathol. of Spinal Injuries in Aerospace Med. Feb. 1982 p 296-300

Avail: NTIS HC A15/MF A01

The question of fitness of aircraft pilots in relation to the onset of ankylosing spondylitis is discussed. The clinical form of the disease and the nature of its course are considered. Factors emphasized are: specific roles, such as helicopters or combat aircraft, fixed rigidity of the spine and, even more, deformity, extraspinal involvement, severe inflammatory syndromes, the prospect of rapid development, the recognition of a specific aetiology, and the requirements of treatment. S.L.

**N82-29892#** Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).

**MEDICO-LEGAL ASPECT OF SPINAL DISORDERS IN AVIATION MEDICINE**

P. Doury, R. Auffret, and R. P. Delahaye *In its* Physiopathol. and Pathol. of Spinal Injuries in Aerospace Med Feb. 1982 p 301-307

Avail: NTIS HC A15/MF A01

Medico-legal aspects of spinal disorders in aviation medicine are discussed. Trauma and intervertebral arthritis, trauma and inflammatory rheumatic conditions, and spondylolisthesis and its association with trauma are considered. S.L.

Detailed records were made of instructor behavior in two Navy courses taught by means of individualized instruction. There were five specialized jobs in one course and six in the other. The jobs within each course differed considerably from one another in (1) the kinds and patterns of activities and (2) the total demands on the instructor. Most of the specialized jobs found in one course had nominal parallels in the other course, but the activities observed in these parallel jobs were frequently quite different. Author (GRA)

The performance and maturity of a preprototype, three-person capacity, automatically controlled and monitored, self-contained independent air revitalization subsystem were evaluated. The subsystem maintains the cabin partial pressure of oxygen at 22 kPa (3.2 psia) and that of carbon dioxide at 400 Pa (3 mm Hg) over a wide range of cabin air relative humidity conditions. Consumption of water vapor by the water vapor electrolysis module also provides partial humidity control of the cabin environment. During operation, the average carbon dioxide removal efficiency at baseline conditions remained constant throughout the test at 84%. The average electrochemical depolarized concentrator cell voltage at the end of the parametric/endurance test was 0.41 V, representing a very slowly decreasing average cell voltage. The average water vapor electrolysis cell voltage increased only at a rate of 20 mu/h from the initial level of 1.67 V to the final level of 1.69 V at conclusion of the testing. A.R.H.

Ephrath (Bell Telephone Labs., Inc., Piscataway, N.Y.) 21 Jan. 1982 17 p refs Presented at and AIAA Workshop on Flight Testing to Identify Pilot Workload and Pilot Dyn., Edward AFB, Calif., 19-21 Jan. 1982
(Contracts NcC1-23; NcC1-56)
(NASA-CR-169238; NAS 1.26:169238) Avail: NTIS HC A02/MF A01 CSCL 05H

The use of visual scanning behavior as an indicator of pilot workload is described. The relationship between level of performance on a constant piloting task under simulated IFR conditions, the skill of the pilot the level of mental workload induced by an additional verbal task imposed on the basic control task, and visual scanning behavior is investigated. An increase in fixation dwell times, especially on the primary instrument with increased mental loading is indicated. Skilled subjects 'stared' less under increased loading than did novice pilots. Sequences of instrument fixations were also examined. The percentage occurrence of the subject's most used sequences decreased with increased task difficulty for novice subjects but not for highly skilled subjects. Entropy rate (bits/sec) of the sequence of fixations was also used to quantify the scan pattern. It consistently decreased for most subjects as the four loading levels used increased. S.L.

(AD-A114969; CMU-RI-TR-82-4) Avail: NTIS HC A03/MF A01 CSCL 13/9

A direct-drive arm is a new mechanical arm in which the shafts of articulated joints are directly coupled to the rotors of high performance torque motors. Since the arm does not contain any gears or transmission mechanisms between the motors and their loads, the drive systems have no backlash, small friction and high mechanical stiffness, all of which are desirable for fast, accurate and versatile robots. This paper presents the characteristic analysis and the design of the control system. GRA

Avail: Issuing Activity

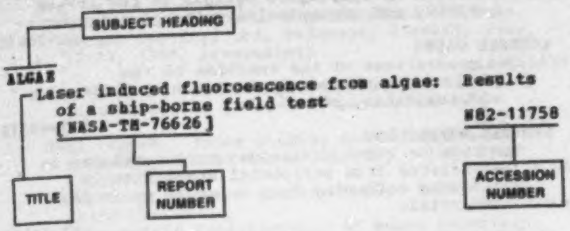
The results of the Kislorod/Oxygen experiment are presented. The partial intracutaneous oxygen pressure (PIOP) was determined polarographically. The measurement probe used was an uncovered platinum puncture electrode. In the spaceship engineer, the PIOP during space flight had dropped by 19 mm Hg and local oxygen utilization had gone down by 4 mm Hg. During the hyperventilation test, during the first few days after the space flight, the spaceship commander only had a minor increase while the engineer and no increase in the PIOP. The results are preliminary. They agree well with the measurements on other spaceship crews. Author

# SUBJECT INDEX

**AEROSPACE MEDICINE AND BIOLOGY** / *A Continuing Bibliography (Suppl. 238)* **NOVEMBER 1982**

## Typical Subject Index Listing



The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

## A

**ABILITIES**
- On models and methods for performance measurement [AD-A113578] N82-28998

**ABIOGENESIS**
- Abiogenic synthesis of the peptide bond. II A82-39426
- Abiogenic synthesis of the peptide bond. I A82-39448
- The radiolysis of aqueous propionitrile - Compounds of interest to chemical evolution studies A82-41197
- Formation of the thioester, N-acetyl, S-lactoylcysteine, by reaction of N-acetylcysteine with pyruvaldehyde in aqueous solution --- in prebiotic evolution A82-41200

**ABSORPTIVITY**
- An attempt at the classification of 'patient pharmacokinetic capacities' A82-38562

**ACCELERATION STRESSES (PHYSIOLOGY)**
- Aerobatics in light aircraft - Sensations and stresses experienced by the pilot A82-38848
- Medico-physiological aspects of stunt-flying A82-38849
- In-flight incapacitation and pathology for the light aircraft stunt-flyer A82-38851
- Vestibular screening of cosmonauts A82-38853
- Proceedings of a Meeting of the IUPS Commission on Gravitational Physiology --- Book A82-40649
- Receptors signaling gravity orientation in an insect A82-40668
- Cardiovascular responses of the chronically instrumented monkey during simulated space flight A82-40670
- Effects of high-G on ventilation/perfusion in the domestic fowl A82-40672
- The effects of +G2 acceleration stress on right ventricular pressures in conscious miniature swine. A82-40676
- The effect of G sub z acceleration on pulmonary perfusion in the miniature swine A82-40681
- Instantaneous stroke volume in man during lower body negative pressure /LBNP/ A82-40683
- Simulated gravitational field influences on the aging process A82-40685
- Relations between respiratory and circulatory control during gravitational load in man A82-40714
- Some of biochemical parameters in rat brain during +Gz acceleration A82-40717
- Alterations in heat loss and heat production mechanisms in rat exposed to hypergravic fields A82-40718
- Involuntary and voluntary mechanisms for preventing cerebral ischemia due to positive /Gz/ acceleration A82-40747
- Embryonic development during chronic acceleration A82-40755
- Cardiac and cerebral vascular adaptation to gravitational stresses in man A82-40765
- Chronic acceleration and brain density A82-40769
- Temperature and behavioral responses of squirrel monkeys to 2Gz acceleration A82-40774
- USSR report. Space biology and aerospace medicine, volume 16, no. 3, May - June 1982 [JPRS-81197] N82-28949
- Problem of accelerations in aviation medicine N82-28950
- Endurance of +Gz G forces by middle-aged people before and after 7-day immersion N82-28958
- Spinal stresses in flight N82-29873
- Ejection of pilots from combat aircraft N82-29877
- Fractures of the spine in flight N82-29880
- Accidents in centrifuges and experiments (ejection seat training towers, sleds) N82-29881

**ACCELERATION TOLERANCE**
- Study of high-g effects in animals A82-40651
- Effect of physical training in cool and hot environments on +Gz acceleration tolerance in women A82-40664
- Effect of baroreceptor denervation on +G sub z tolerance in dogs A82-40675
- Gravitational adaptation of animals A82-40716
- Effect of sustained Gz acceleration on lung fluid balance - An ultrastructural study A82-40761
- Cardiac and cerebral vascular adaptation to gravitational stresses in man A82-40765

**ACCIDENTS**
- Central nervous dysfunctions after near-miss accidents in diving A82-40443

**ACID BASE EQUILIBRIUM**
- Acid-base, metabolic, and ventilatory responses to repeated bouts of exercise A82-41219

Domestic swine in physiological research. 3: Blood gas and acid-base values of arterial and venous blood from young anesthetized pigs maintained under steady-state ventilatory conditions
[AD-A111834] N82-28945

**ACIDS**
A comparison between the protonophoric and separating functions of weak dibasic acids --- in mitochondrial respiration
A82-38590

**ACROBATICS**
Aerobatics in light aircraft - Sensations and stresses experienced by the pilot
A82-38848
Medico-physiological aspects of stunt-flying
A82-38849
In-flight incapacitation and pathology for the light aircraft stunt-flyer
A82-38851

**ACTIVATED CARBON**
The utilization of macromolecules in blood purification systems
[NRC/CNR-TT-2021] N82-29864

**ACTIVATION (BIOLOGY)**
The effect of hyperactivation of the anterior amygdaloid nucleus on heart activity during states of altered reactivity
A82-40454
Human lymphocyte activation is depressed at low-g and enhanced at high-g
A82-40658
Effect of spaceflight on lymphocyte stimulation
A82-40700

**ACTIVITY (BIOLOGY)**
Functional properties of T-lymphocytes in patients with acute myocardial infarction
A82-41459
Myosatellocytes and cambial properties of skeletal and muscular tissue
A82-41469

**ACTIVITY CYCLES (BIOLOGY)**
Biorhythms of rats during and after space flight
A82-40692

**ADAPTATION**
Changes in man's constant electric field in the course of adaptation to hypokinesia
A82-38595
Rapid perceptual adaptation to high gravitoinertial force levels Evidence for context-specific adaptation
A82-40436
State of adaptation in patients with hypertension
A82-40476
Aspects of cardiovascular adaptation to gravitational stresses
A82-40687
Adaptation to weightlessness and its physiological mechanisms - Results of animal experiments aboard biosatellites
A82-40688
Physiological mechanisms of adaptation of rat skeletal muscles to weightlessness and similar functional requirements
A82-40689
Weightlessness effects on resistance and reactivity of animals
A82-40690
Gravitational adaptation of animals
A82-40716
Metabolic and cardiovascular adaptations in trained hypophysectomized rats
A82-41215
Sleep, circadian cycles of physiological functions and parameters of human work capacity on first day after changing from altered to usual sleep-waking cycle
N82-28951
Human external respiration and gas exchange in acute period of adaptation to immersion in water
N82-28959
Adapative motivation theory
[AD-A111195] N82-28997
Attenuation of radioprotective effects of acute hypoxia on animals adapted to high altitudes
N82-29855

**ADENOSINE TRIPHOSPHATE**
The absence of the magnetic-field effect on Na/+/, K/+/-dependent ATPase
A82-38591
Specificity of action of monovalent cations on the ATPase activity of myosin HMM-S-1
A82-38594
Acridine orange inhibition of the ATPase activity of myosin and its fragments
A82-38613
Reactions of O-18 exchange in the myosin systems of skeletal, cardiac, and smooth muscles
A82-38614
The effect of monovalent cations on the ATPase activity and superprecipitation of actomyosin
A82-38615

**ADRENAL GLAND**
The gradualness of the reaction of the pituitary-adrenocortical system to activating and inhibiting signals
A82-40315

**ADRENAL METABOLISM**
The rate at which exogeneous hydrocortisone is eliminated from peripheral blood flow in patients suffering from an acute myocardial infarction
A82-41498

**ADRENERGICS**
The effect of hypokinesia on the resistance of the heart to hypoxia
A82-40502

**ADRENOCORTICOTROPIN (ACTH)**
Role of hormonal compounds in regulation of electrolyte metabolism in the presence of emotional stress
N82-28952

**ADSORBENTS**
The utilization of macromolecules in blood purification systems
[NRC/CNR-TT-2021] N82-29864

**ADSORPTION**
Thermodynamic parameters characterizing interaction between polymer-absorbed ligand molecules
A82-38609

**AEROBES**
Evolution of major metabolic innovations in the Precambrian
A82-38121
Determination of maximal aerobic power during upper body exercise
[AD-A111712] N82-29866

**AEROEMBOLISM**
Vibration and decompression gas bubbles
A82-40729

**AEROSPACE ENVIRONMENTS**
Intracutaneous partial oxygen pressure (pO2 sub ic) in man during short-term space flights: Results of joint USSR-GDR space flight
N82-30278

**AEROSPACE MEDICINE**
The nature and rate of occurrence of medical emergencies on board Air France aircraft
A82-38841
Physiological stresses linked to flight on airliners
A82-38842
Medical emergencies in flight - Pathogenic aspects
A82-38843
Medical emergencies on board an airliner - Procedures when a doctor is on board
A82-38844
Medical emergencies on board airliners - Procedures in the absence of a doctor
A82-38845
Medical emergencies on board airliners - Ground management
A82-38846
Standards of physical condition for private pilots of aircraft and gliders
A82-38847
Medico-physiological aspects of stunt-flying
A82-38849
Physiological stresses in flying a sailplane
A82-38850
In-flight incapacitation and pathology for the light aircraft stunt-flyer
A82-38851

  The clinical selection of astronauts at the C.P.E.M.P.N
  A82-38852
  Vestibular screening of cosmonauts
  A82-38853
  Orthostatic tests during cosmonaut selection
  A82-38854
  Proceedings of a Meeting of the IUPS Commission on Gravitational Physiology --- Book
  A82-40649
  Methodological aspects of future cardiovascular research in space
  A82-40652
  International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980, Proceedings
  A82-40686
  Relations between respiratory and circulatory control during gravitational load in man
  A82-40714
  USSR report. Space biology and aerospace medicine, volume 16, no. 3, May - June 1982
  [JPRS-81197] N82-28949
  Biomedical research publications: 1980 - 1982
  [NASA-CR-3587] N82-29848
  Electrometric investigation of human gustatory analyzer under normal conditions and in simulated weightlessness
  N82-29859
  Neurochemical background and approaches in the understanding of motion sickness
  [NASA-CR-3569] N82-29865
  Physiopathology and pathology of spinal injuries in aerospace medicine
  [AGARD-AG-250(ENG)] N82-29870
  Medical-biological investigations under space conditions: Present and future significance
  N82-30275
  Twenty years of manned space flight from the viewpoint of space medicine
  N82-30276

**AFFERENT NERVOUS SYSTEMS**
  The effect of the electrical stimulation of afferent pathways on neurons in septal slices
  A82-40469
  Afferent associative and commissural projections of the cortical vestibular zone VI of cats
  A82-40495

**AGE FACTOR**
  On the mathematical modelling of microbial age dynamic and some control aspects of microbial growth processes
  A82-38823
  Age changes in the cerebral cortex of humans and cats /A comparative electron-microscopical investigation/
  A82-40496
  Endurance of +Gz G forces by middle-aged people before and after 7-day immersion
  N82-28958
  Airline pilot age, health, and performance: Scientific and medical considerations
  [PB82-161506] N82-29895

**AGING (BIOLOGY)**
  Aging and visual function of military pilots - A review
  A82-40435
  Simulated gravitational field influences on the aging process
  A82-40685
  Airline pilot age, health, and performance: Scientific and medical considerations
  [PB82-161506] N82-29895

**AIR CARGO**
  Aircraft and crew scheduling during airlift operations
  [AD-A114114] N82-29011

**AIR COOLING**
  Auxiliary cooling - Comparison of air-cooled vs. water-cooled vests in hot-dry and hot-wet environments
  A82-40440

**AIR LAW**
  Standards of physical condition for private pilots of aircraft and gliders
  A82-38847

**AIR PURIFICATION**
  Subjective response to negative air ion exposure
  A82-40446
  Modification of method for assaying ozone by the diacetyl dihydrolutidine reaction
  N82-28973

**AIR QUALITY**
  Modification of method for assaying ozone by the diacetyl dihydrolutidine reaction
  N82-28973
  Preprototype independent air revitalization subsystem
  [NASA-CR-167703] N82-29898

**AIRCRAFT ACCIDENTS**
  Human factor and flight safety
  A82-40885
  Theories of the pathogenesis of fractures of the spine
  N82-29874
  Aetiology and pathogenesis --- traumatic lesions of the spine
  N82-29875
  Helicopter accidents
  N82-29876
  Fractures of the spine in flight
  N82-29880
  Radiology of spinal trauma in aviation medicine
  N82-29883
  Analytical study of traumatic lesions of C3-C7
  N82-29884
  Radiological study of fractures of C1 and C2
  N82-29885
  Sequelae of vertebral fractures and trauma
  N82-29886

**AIRCRAFT CONTROL**
  Psychological investigation of pilot behavior during integration of control systems in the cockpit of passenger airliners --- German thesis
  A82-40560

**AIRCRAFT FUELS**
  An industrial hygiene evaluation of aircraft refueling inside closed aircraft shelters at elevated ambient temperatures
  [AD-A114396] N82-28994

**AIRCRAFT MANEUVERS**
  Aerobatics in light aircraft - Sensations and stresses experienced by the pilot
  A82-38848
  Medico-physiological aspects of stunt-flying
  A82-38849

**AIRCRAFT PILOTS**
  Standards of physical condition for private pilots of aircraft and gliders
  A82-38847
  Problem of accelerations in aviation medicine
  N82-28950
  Development of a methodology for assessing aircrew workloads
  [AD-A114364] N82-29010
  Ejection of pilots from combat aircraft
  N82-29877
  Fractures of the spine in flight
  N82-29880
  Backache in helicopter pilots
  N82-29887
  The cervical column of pilots of combat aircraft
  N82-29888
  The spine and fitness for flight
  N82-29889
  Vertebral arthritis
  N82-29890
  Ankylosing spondylitis
  N82-29891
  Medico-legal aspect of spinal disorders in aviation medicine
  N82-29892
  Airline pilot age, health, and performance: Scientific and medical considerations
  [PB82-161506] N82-29895
  Quantification of pilot workload via instrument scan
  [NASA-CR-169238] N82-29900

**ALDEHYDES**
  Selecting optimal conditions for heart conservation in weak aldehyde solutions by using mathematical methods of experimental design
  A82-38534

**ALDOSTERONE**
  Relevance of aldosterone on circulatory, renal and blood reactions during simulated weightlessness and on aerobic metabolic rate
  A82-40736

Role of hormonal compounds in regulation of electrolyte metabolism in the presence of emotional stress
N82-28952
ALGORITHMS
Increasing the efficiency of running on the basis of learning algorithms and information tools
A82-40488
ALTITUDE ACCLIMATIZATION
The characteristics of hemodynamic shifts under physical stress at mountain elevations
A82-38166
Study of RNA synthesis rate and DNA content in the myocardium of new-born rats during adaptation to high-altitude hypoxia
A82-38537
Prevention of heart function abnormalities during reoxygenation after ischemia by adaptation to altitude hypoxia
A82-40455
Altitude-induced changes in plasma thyroxine, 3,5,3 prime-triiodothyronine, and thyrotropin in rats
A82-41207
ALTITUDE SIMULATION
The effect of hypoxic and hypobaric exercises on the blood-brain barrier in rats
A82-40713
ALTITUDE TOLERANCE
The effect of hypokinesia on the resistance of the heart to hypoxia
A82-38170
The participation of the lymphatic system in the resistance of an organism to hypoxia
A82-39793
ALVEOLI
Changes in mineralized tissues in the case of calcitonin and somatotropic hormone injections under hypokinesia
A82-40503
AMBIENT TEMPERATURE
Task categorization and the limits of human performance in extreme heat
A82-40439
Skin temperature and thermal comfort in weightlessness
A82-40726
Effect of high ambient temperature on carbohydrate metabolism in rat liver and skeletal muscles
N82-28975
AMBIGUITY
Ambiguity and the evolution of the genetic code
A82-38120
AMINES
The effect of repeated episodes of emotional stress on heart activity and the content of monoamines in the heart
A82-38163
AMINO ACIDS
The changes in the concentration of free amino acids in muscles during exercise
A82-40314
Rhythms of electrolytes and hydroxyproline excretion in urine of rats after three weeks of weightlessness - Biosatellite Cosmos-1129
A82-40693
Molecular basis for the genetic code
A82-41195
AMOBARBITAL
An attempt at the classification of 'patient pharmacokinetic capacities'
A82-38562
AMPHETAMINES
Neurochemical background and approaches in the understanding of motion sickness
[NASA-CR-3569] N82-29865
ANAEROBES
Evolution of major metabolic innovations in the Precambrian
A82-38121
ANATOMY
Segmentation and analysis of stereophotometric body surface data
[AD-A114916] N82-29868
ANIMALS
Study of high-g effects in animals
A82-40651
ANTARCTIC REGIONS
Mycelial fungi, isolated from the ice sheet of the central Antarctic
A82-39428
The microflora of the central Antarctica glacier and control methods for the sterile isolation of an ice core for microbiological analyses
A82-39430
ANTHROPOMETRY
Simulation of the motion of the center of mass of an occupant under ejection accelerations
[AD-A113806] N82-28989
A functional video-based anthropometric measuring system
[NASA-CR-167637] N82-29896
ANTIBIOTICS
Effect of the combined administration of antibiotic-resistant bifidobacteria and the corresponding antibiotics on the survival of irradiated mice
A82-38581
The mechanism of the microwave effect on the conductivity of bilayer lipid membranes
A82-38587
Gramicidin A-induced conductance of the muscle fiber membrane
A82-38605
Occult bacterial persistence and resistance to colonization after antibiotic therapy
A82-40460
ANTIDIURETICS
ADH suppression under immersion combined with dehydration --- antidiuretic hormone secretion
A82-40776
ANTIFOULING
Technical assessment of the prevention of micro-fouling on OTEC heat-transfer surfaces through the use of ultraviolet radiation
[DE82-005489] N82-29850
ANTIHYPERTENSIVE AGENTS
The effect of Clonidine on peripheral vasomotor reactions during simulated zero gravity
A82-40763
Cardiovascular effects of Clonidine during 20 hours head down tilt /-5 deg/
A82-40764
ANTIOXIDANTS
Features of microcirculatory hemostasis and of the clotting and fibrinolytic properties of blood and the activity of the antioxidant system in people of various ABO blood groups
A82-38164
Protection from O2 toxicity by preexposure to hypoxia - Lung antioxidant enzyme role
A82-41217
ANXIETY
Adapting a scale for measuring competition anxiety
A82-40450
AORTA
RNA-content distribution of cells from the normal and atherosclerotic human aorta
A82-38535
Aortic and tibial bloodflow response to lower body negative pressure /LBNP/
A82-40727
AQUEOUS SOLUTIONS
Selecting optimal conditions for heart conservation in weak aldehyde solutions by using mathematical methods of experimental design
A82-38534
Attributing macroscopic fluctuations in aqueous solutions of proteins and other substances to the class of flicker noise
A82-38592
An investigation of the conformational stability of immunoglobulin G in the monolayers at the phase boundary between aqueous solutions of NaCl and octane
A82-38607
The radiolysis of aqueous propionitrile - Compounds of interest to chemical evolution studies
A82-41197
Formation of the thioester, N-acetyl, S-lactoylcysteine, by reaction of N-acetylcysteine with pyruvaldehyde in aqueous solution --- in prebiotic evolution
A82-41200

**ARCTIC REGIONS**
The effect of the natural and climatic conditions of the Far North on the human cardiovascular system
A82-41466

**ARM (ANATOMY)**
X-ray study of loaded skeletal portions in the upper extremities of athletes engaging in karate
A82-40490

Determination of maximal aerobic power during upper body exercise
[AD-A111712]
N82-29866

**AROUSAL**
The physiological mechanisms of the arousal response in animals under conditions of hypobiosis
A82-40311

**ARRHYTHMIA**
Diagnostics of disturbances of heart rhythm and conductance and their professional evaluation in flight personnel
A82-40309

The effect of diethylamine analog of ethmozine on the functional condition of myocardium /Clinical and experimental study/
A82-41488

**ARTERIES**
The influence of the speed of blood flow in the carotid artery on the hematocrit of the blood being delivered to the brain
A82-38550

Effect of baroreceptor denervation on +G sub z tolerance in dogs
A82-40675

**ARTERIOSCLEROSIS**
RNA-content distribution of cells from the normal and atherosclerotic human aorta
A82-38535

State of adaptation in patients with hypertension
A82-40476

The use of an audio-frequency magnetic field in certain diseases
A82-41473

Immunological reactions to lipoproteins and heparin in young men with a hereditary tendency to atherosclerosis
A82-41487

The use of biochemical monitoring methods in the ergometry of patients with atherosclerosis
A82-41494

**ARTHRITIS**
The use of an audio-frequency magnetic field in certain diseases
A82-41473

Application of laser therapy to patients with osteoarthrosis deformans
A82-41475

Vertebral arthritis
N82-29890

Medico-legal aspect of spinal disorders in aviation medicine
N82-29892

**ARTIFICIAL GRAVITY**
Artificial gravity in space flight
A82-40691

Effects of space flight factors and artificial gravity on deoxyribonucleoprotein in lymphoid organs of rats
A82-40723

**ARTIFICIAL INTELLIGENCE**
An overview of expert systems --- artificial intelligence
[NASA-CR-169197]
N82-29899

Workshop on the Design and Control of Dexterous Hands
[AD-A114973]
N82-29901

**ASCORBIC ACID**
The assimilation of vitamin C in seamen during voyages at high latitudes
A82-41465

**ASCORBIC ACID METABOLISM**
The effect of potassium orotate on the metabolism of certain vitamins in patients with fractures of the long tubular bones
A82-38563

**ASSOCIATION REACTIONS**
Higher integrative systems of the brain --- Russian book
A82-40642

**ASTRONAUT PERFORMANCE**
Gravitational scale effects --- moving organism performance as function of gravity and size
A82-40650

**ASTRONAUT TRAINING**
Selection and training of European astronauts
A82-39507

**ASTRONAUTS**
The clinical selection of astronauts at the C.P.E.M.P.N
A82-38852

Vestibular screening of cosmonauts
A82-38853

Orthostatic tests during cosmonaut selection
A82-38854

**ATHLETES**
Adapting a scale for measuring competition anxiety
A82-40450

An automated system for the collection and processing of cardiovascular information from athletes
A82-40484

Somatotypology and athletics
A82-40486

Psychic stress in athletic activity
A82-40489

Output and efficiency of the heart in young athletes as a function of the type of athletic training
A82-41497

Problems in the metrology of the training load of ski racers
A82-41502

Optimizing conditions for athletic activity with an allowance made for neurodynamic peculiarities /using bicycle sports as a model/
A82-41503

The speed of blood flow in athletes subjected to the combined action of a training regime and high-altitude climatic factors
A82-41505

Certain psychological and tactical aspects of athlete activities during competitions
A82-41506

**ATMOSPHERIC COMPOSITION**
Subjective response to negative air ion exposure
A82-40446

**ATROPHY**
Changes in mineralized tissues in the case of calcitonin and somatotropic hormone injections under hypokinesia
A82-40503

Effect of immobilization on the nonhistone protein composition in different types of skeletal muscles
A82-40711

Immobilization effects upon aerobic and anaerobic metabolism of the skeletal muscles
A82-40712

The effects of human growth hormone administration on the functional states of rat atrophied muscle following immobilization
A82-40715

Atrophy of rat skeletal muscles in simulated weightlessness
A82-40738

Hindlimb immobilization - Length-tension and contractile properties of skeletal muscle
A82-41209

**ATROPINE**
Vegetative reactions to the administration of atropine and propranolol in rats that exhibit different types of behavior
A82-40463

**ATTACK AIRCRAFT**
Ejection of pilots from combat aircraft
N82-29877

**ATTITUDE (INCLINATION)**
Contrast influence on perceived orientation --- of gratings obtained by dichoptic fusion of two monocular images
A82-38796

Gravity and the tilt aftereffect --- comparison between monocular, binocular and interocular exposures
A82-39440

Short term gravity effects on volume homeostasis in man Assessment of transvascular fluid shifts after graded tilt
A82-40760

AUDIO FREQUENCIES
The use of an audio-frequency magnetic field in certain diseases
A82-41473

AUDIOMETRY
Initial audiometric investigations in an orbital station
N82-30277

AUDITORY DEFECTS
Otoneurological symptoms and syndromes --- Russian book
A82-39286

AUDITORY PERCEPTION
Application of xylite for the detection of labyrinthine hydrops
A82-39243

An absolute threshold in psychoacoustics
A82-40448

Characteristics of human auditory evoked potentials during the lateralization of a 'moving' auditory image
A82-40465

AUDITORY SIGNALS
Theoretical and practical aspects of using acoustic repellants to scare birds. Part 1: Interspecificity and geographic (regional) distinctions of acoustic repellants
N82-29858

AUDITORY STIMULI
Characteristics of human auditory evoked potentials during the lateralization of a 'moving' auditory image
A82-40465

Core temperature and brainstem auditory evoked potentials as complimentary noninvasive measures of central neural function during exposure to hypergravic fields
A82-40772

Effect of caloric stimulation of vestibular system on hearing
N82-28963

AUTOMATIC CONTROL
An automated system for the collection and processing of cardiovascular information from athletes
A82-40484

AUTONOMIC NERVOUS SYSTEM
Autonomic reactions in labyrinthectomized rabbits during centrifuge acceleration
A82-40720

B

BACK INJURIES
Physiopathology and pathology of spinal injuries in aerospace medicine
[AGARD-AG-250(ENG)] N82-29870

Theories of the pathogenesis of fractures of the spine
N82-29874

Aetiology and pathogenesis --- traumatic lesions of the spine
N82-29875

Helicopter accidents
N82-29876

Ejection of pilots from combat aircraft
N82-29877

Parachuting
N82-29878

Fractures of the spine in flight
N82-29880

Accidents in centrifuges and experiments (ejection seat training towers, sleds)
N82-29881

Clinical examination of spinal injuries
N82-29882

Radiology of spinal trauma in aviation medicine
N82-29883

Analytical study of traumatic lesions of C3-C7
N82-29884

Radiological study of fractures of C1 and C2
N82-29885

Sequelae of vertebral fractures and trauma
N82-29886

Backache in helicopter pilots
N82-29887

The cervical column of pilots of combat aircraft
N82-29888

BACTERIA
Effect of the combined administration of antibiotic-resistant bifidobacteria and the corresponding antibiotics on the survival of irradiated mice
A82-38581

Is the CH4, H2 and CO venting from submarine hydrothermal systems produced by thermophilic bacteria
A82-39422

Occult bacterial persistence and resistance to colonization after antibiotic therapy
A82-40460

BACTERICIDES
Occult bacterial persistence and resistance to colonization after antibiotic therapy
A82-40460

BAILOUT
Limits of human tolerance for impacts in free fall
N82-29879

BARORECEPTORS
Baroreflex regulation of hemodynamics under orthostatic effects /an investigation with a mathematical model/
A82-38162

Effect of baroreceptor denervation on +G sub z tolerance in dogs
A82-40675

BED REST
Effects of prolonged bedrest in antiorthostatic position on rCBF measured by 133Xe inhalation technique - Effects of clonidine --- regional Cerebral Blood Flow
A82-40743

Cardiovascular effects of Clonidine during 20 hours head down tilt /-5 deg/
A82-40764

BEHAVIOR
Vegetative reactions to the administration of atropine and propranolol in rats that exhibit different types of behavior
A82-40463

Higher integrative systems of the brain --- Russian book
A82-40642

Temperature and behavioral responses of squirrel monkeys to 2Gz acceleration
A82-40774

USSR report. Life sciences biomedical and behavioral sciences, no. 16
[JPRS-80789] N82-28977

Orienting and exploratory behavior of gray rat in open field. Zoopsychological analysis
N82-28981

Theoretical and practical aspects of using acoustic repellants to scare birds. Part 1: Interspecificity and geographic (regional) distinctions of acoustic repellants
N82-29858

BENZENE POISONING
An industrial hygiene evaluation of aircraft refueling inside closed aircraft shelters at elevated ambient temperatures
[AD-A114396] N82-28994

BEVERAGES
The effectiveness of perspiration in a hot environment
A82-38178

BIBLIOGRAPHIES
Chemical evolution and the origin of life - Bibliography Supplement 1980
A82-38122

Biomedical research publications: 1980 - 1982
[NASA-CR-3587] N82-29848

Human/computer transaction tasks: An annotated bibliography
[AD-A114800] N82-29902

BINOCULAR VISION
Contrast influence on perceived orientation --- of gratings obtained by dichoptic fusion of two monocular images
A82-38796

Gravity and the tilt aftereffect --- comparison between monocular, binocular and interocular exposures
A82-39440

BIOACOUSTICS
Histoenzymological changes in experimental animals exposed to variable noise
A82-38577

BIOASSAY
An attempt at the classification of 'patient pharmacokinetic capacities'
A82-38562

Modification of method for assaying ozone by the diacetyl dihydrolutidine reaction
N82-28973

BIOASTRONAUTICS
Mechanical chemical and bio-hazards --- space-probe related planet and earth contaminations
A82-39159

Space gastroenterology --- Russian book
A82-40643

Proceedings of a Meeting of the IUPS Commission on Gravitational Physiology --- Book
A82-40649

Methodological aspects of future cardiovascular research in space
A82-40652

Dynamics of weight loss during prolonged spaceflight
A82-40673

Effect of simulated weightlessness on energy metabolism in the rat
A82-40677

Effect of space flight on bone strength
A82-40680

International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980, Proceedings
A82-40686

Biorhythms of rats during and after space flight
A82-40692

Ultrastructural qualitative and quantitative evaluation of cytoplasmatic structures of heart muscle of rats living aboard biosputnik Kosmos 936
A82-40694

International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, September 29-October 2, 1981, Proceedings
A82-40734

Results of investigations of weightlessness effects during prolonged manned space flights onboard Salyut-6
A82-40750

Mechanisms of the effects of weightlessness on the motor system of man
A82-40752

Evidence for arrested bone formation during spaceflight
A82-40767

BIOCHEMICAL OXYGEN DEMAND
Relationship between muscle Qo2 and fatigue during repeated isokinetic contractions --- respiratory capacities
A82-41216

BIOCHEMISTRY
Changes in the microelement content of muscles under denervation
A82-38598

Conditions leading to kinetic and thermodynamic isotopic effects in a cell
A82-38601

Histamine in biochemistry and physiology --- Russian book
A82-39290

Neurochemical mechanisms of learning and memory --- Russian book
A82-40646

Body composition of rats flown aboard Cosmos-1129
A82-40695

Biochemical aspects of the mechanism by which cholinolyptics affect the brain
A82-41468

The use of biochemical monitoring methods in the ergometry of patients with atherosclerosis
A82-41494

USSR report. Life sciences biomedical and behavioral sciences, no. 16
[JPRS-80789] N82-28977

Monograph on new direction of chemistry and biology of peptide and protein bioregulators reviewed
N82-28979

USSR report. Life sciences. Biomedical and behavioral sciences, no. 18
[JPRS-81428] N82-29857

BIOCLIMATOLOGY
The effect of the natural and climatic conditions of the Far North on the human cardiovascular system
A82-41466

BIOCONTROL SYSTEMS
The cortical regulation of human motion --- Russian book
A82-39283

Systemic mechanisms of homeostasis
A82-39417

BIODYNAMICS
Gravitational scale effects --- moving organism performance as function of gravity and size
A82-40650

Dynamics of weight loss during prolonged spaceflight
A82-40673

Simulation of the motion of the center of mass of an occupant under ejection accelerations
[AD-A113806] N82-28989

Task analysis and the ability requirements of tasks: Collected papers
[AD-A111181] N82-29000

Biomechanical analysis of tasks involving manual materials handling
[AD-A113955] N82-29009

Physiopathology and pathology of spinal injuries in aerospace medicine
[AGARD-AG-250(ENG)] N82-29870

Biomechanics of the spine
N82-29872

BIOELECTRIC POTENTIAL
Gramicidin A-induced conductance of the muscle fiber membrane
A82-38605

Changes in the human visually evoked cortical potential in response to chromatic modulation of a sinusoidal grating
A82-38795

Characteristics of human auditory evoked potentials during the lateralization of a 'moving' auditory image
A82-40465

Changes of intracellular rest potential and the length of isolated muscle under different loads
A82-40480

Core temperature and brainstem auditory evoked potentials as complimentary noninvasive measures of central neural function during exposure to hypergravic fields
A82-40772

On the observability of electrical cardiac sources --- Thesis
A82-41450

BIOELECTRICITY
The impulse activity of neurons in the nodose ganglion during acute hemodynamic and respiratory disorders
A82-38546

Ion currents through a neuron membrane during the injection of cyclic nucleotides
A82-38588

Changes in man's constant electric field in the course of adaptation to hypokinesia
A82-38595

The conductivity of model protein-lipid membranes
A82-38604

The incorporation of an erythrocyte membrane into planar bilayer lipid membranes
A82-38606

Statistical analysis of neuronal impulse activity in the diencephalon during immobilization-produced emotional stress in rats
A82-40467

The effect of the electrical stimulation of afferent pathways on neurons in septal slices
A82-40469

Dynamics of the brain electric activity in patients with cerebral insults under the effect of muscle stimulation with sinusoidal modulated currents
A82-41477

BIOINSTRUMENTATION
An improved apparatus for venous occlusion plethysmography
A82-38548

On the observability of electrical cardiac sources --- Thesis
A82-41450
Microcalorimetry in biomedical investigations
A82-41471
Sources of an artificial magnetic field for implantation /experimental study/
A82-41480
A device for producing the action of static magnetic fields on biological objects
A82-41482
Implantable electrical device [NASA-CASE-GSC-12560-1]
N82-29863

BIOLOGICAL EFFECTS
Nonthermal effect of nanosecond microwave pulses on the transepithelial transport of sodium ions
A82-38586
The flavin-dependent consumption of oxygen in mitochondria under illumination
A82-38589
A comparison between the protonophoric and separating functions of weak dibasic acids --- in mitochondrial respiration
A82-38590
Acridine orange inhibition of the ATPase activity of myosin and its fragments
A82-38613
Cytogenetic effect of 5-Fluoro-2desoxy uridine in the G2 phase on intact and X-irradiated crepis capillaris L cells
A82-40461
Research opportunities and limitations of protracted hypogravity simulations for plant gravitational physiology
A82-40653
Human lymphocyte activation is depressed at low-g and enhanced at high-g
A82-40658
Plasticity of fast and slow muscle myofibrillar proteins in model experiments simulating weightlessness
A82-40709
Effect of immobilization on the nonhistone protein composition in different types of skeletal muscles
A82-40711
Atrophy of rat skeletal muscles in simulated weightlessness
A82-40738
Suppression of osteoblast differentiation during weightlessness
A82-40756
Clinostat exposure and symmetrization of frog eggs
A82-40757
The intracellular responses of frog eggs to novel orientations to gravity
A82-40758
Tritium oxide distribution and excretion kinetics in the exposure of animals to noise
A82-41463
A hygienic evaluation of the biological effects of nonionizing microwave radiation
A82-41464
The biological effects of repeated blasts [AD-A113113]
N82-28990
Theoretical and practical aspects of using acoustic repellants to scare birds. Part 1: Interspecificity and geographic (regional) distinctions of acoustic repellants
N82-29858
Superior heat-transfer fluids for solar heating and cooling applications. Results of acute oral toxicity determinations [DE82-003071]
N82-29869

BIOLOGICAL EVOLUTION
Clay and the origin of life
A82-38115
Evolution of major metabolic innovations in the Precambrian
A82-38121
Chemical evolution and the origin of life - Bibliography Supplement 1980
A82-38122
Cellular aspects of gravitational biology
A82-40754
Embryonic development during chronic acceleration
A82-40755
Evolution of early mechanisms of translation of genetic information into polypeptides
A82-41324

BIOLOGICAL MODELS (MATHEMATICS)
Baroreflex regulation of hemodynamics under orthostatic effects /an investigation with a mathematical model/
A82-38162
Selecting optimal conditions for heart conservation in weak aldehyde solutions by using mathematical methods of experimental design
A82-38534
Thermodynamic parameters characterizing interaction between polymer-absorbed ligand molecules
A82-38609
Absorption characteristics of prolate spheroidal models exposed to the near fields of electrically small apertures
A82-38802
On the mathematical modelling of microbial age dynamic and some control aspects of microbial growth processes
A82-38823
Systemic mechanisms of homeostasis
A82-39417
Model of the accommodative mechanism in the human eye
A82-39432
Modeling and simulation in the study of certain biological systems
A82-39570
Increasing the efficiency of running on the basis of learning algorithms and information tools
A82-40488
Gravitational scale effects --- moving organism performance as function of gravity and size
A82-40650
A new rat model simulating some aspects of space flight
A82-40655
Running in circles --- track radius effects on human running speed
A82-40661
Gravity sensing, polar transport and cytoplasmic streaming in plant cells
A82-40667
A new rat model for studies of hypokinesia and antiorthostasis
A82-40706
Gravity perception and asymmetric growth in plants - A model derived from the grass pulvinus
A82-40775
A nonlinear model combining pulmonary mechanics and gas concentration dynamics
A82-41230

BIOMAGNETISM
The absence of the magnetic-field effect on Na/+/, K/+/-dependent ATPase
A82-38591
The influence of a constant magnetic field on the epileptogenic foci in the hippocampus of rabbits
A82-40466
Relation between physiological effects of gravitational forces and that of magnetic forces. II
A82-40771
The use of an audio-frequency magnetic field in certain diseases
A82-41473
Sources of an artificial magnetic field for implantation /experimental study/
A82-41480
Present-day magnetic-field sources, used in medical treatment
A82-41481

BIOMASS
On the mathematical modelling of microbial age dynamic and some control aspects of microbial growth processes
A82-38823

BIOMEDICAL DATA
An automated system for the collection and processing of cardiovascular information from athletes
A82-40484

BIOMETRICS
A method of evaluating the functional state of the central nervous system of a person performing work
A82-38579

Determination of blood-lipoproteid dimensions by optical methods A82-38593

An automated system for the collection and processing of cardiovascular information from athletes A82-40484

Somatotypology and athletics A82-40486

Problems in the metrology of the training load of ski racers A82-41502

Telemetry methods for monitoring physiological parameters A82-41551

BIONICS

Systemic mechanisms of homeostasis A82-39417

BIOPHYSICS

The thermal pulsation method in the study of several physiological mechanisms of the brain stem A82-38559

A study of the mechanism governing the different types of behavior exhibited by the spiral excitation wave period in auricle and ventricle A82-38597

A possible explanation for the fluctuations in reflectivity exhibited by bilayer lipid membranes excited during electrostriction A82-38602

Light curves for photosynthesis under intermittent illumination A82-38608

X-ray study of loaded skeletal portions in the upper extremities of athletes engaging in karate A82-40490

Ultra-high impact free-fall survival A82-40684

Hindlimb immobilization - Length-tension and contractile properties of skeletal muscle A82-41209

BIOSATELLITES

Adaptation to weightlessness and its physiological mechanisms - Results of animal experiments aboard biosatellites A82-40688

Rhythms of electrolytes and hydroxyproline excretion in urine of rats after three weeks of weightlessness - Biosatellite Cosmos-1129 A82-40693

Results of morphological investigations aboard biosatellites Cosmos A82-40697

BIOSYNTHESIS

The synthesis of nuclear and mitochondrial DNA and RNA, and the synthesis of heme and globin in rabbit bone marrow during the stimulation of erythropoiesis A82-38169

Study of RNA synthesis rate and DNA content in the myocardium of new-born rats during adaptation to high-altitude hypoxia A82-38537

The incorporation of an erythrocyte membrane into planar bilayer lipid membranes A82-38606

Abiogenic synthesis of the peptide bond. II A82-39426

Metabolism of the thermophilic hydrogenous bacterium Pseudomonas thermophila K-2 A82-39427

Abiogenic synthesis of the peptide bond. I A82-39448

The synthesis of nuclear and mitochondrial DNA and RNA, and the synthesis of heme and globin in rabbit bone marrow during the stimulation of erythropoiesis A82-40501

Evolution of early mechanisms of translation of genetic information into polypeptides A82-41324

BIOTECHNOLOGY

The microflora of the central Antarctica glacier and control methods for the sterile isolation of an ice core for microbiological analyses A82-39430

USSR report. Life sciences. Biomedical and behavioral sciences, no. 17 [JPRS-81419] N82-29853

USSR report. Life sciences. Biomedical and behavioral sciences, no. 18 [JPRS-81420] N82-29857

BIOTELEMETRY

Telemetry methods for monitoring physiological parameters A82-41551

BIRDS

Theoretical and practical aspects of using acoustic repellants to scare birds. Part 1: Interspecificity and geographic (regional) distinctions of acoustic repellants N82-29858

BLADDER

Electrical stimulation of the urinary bladder following radical surgery for cancer of the rectum A82-41479

BLAST LOADS

The biological effects of repeated blasts [AD-A113113] N82-28990

BLOOD

Migration kinetics of hemopoietic stem cells in mice after severe mechanical trauma A82-38541

Determination of blood-lipoproteid dimensions by optical methods A82-38593

The toxic properties of rabbit and dog sera under controlled hyperthermia A82-40458

Relevance of aldosterone on circulatory, renal and blood reactions during simulated weightlessness and on aerobic metabolic rate A82-40736

Domestic swine in physiological research. 3: Blood gas and acid-base values of arterial and venous blood from young anesthetized pigs maintained under steady-state ventilatory conditions [AD-A111834] N82-28945

The utilization of macromolecules in blood purification systems [NRC/CNR-TT-2021] N82-29864

BLOOD CIRCULATION

Antiorthostatic hypokinesia and circulation in the rat A82-40741

The effect of the natural and climatic conditions of the Far North on the human cardiovascular system A82-41466

The achievements of investigations carried out in the years 1976-1980 on the problem of insufficient blood circulation and heart rhythm disturbances A82-41501

Reaction to diminished circulating blood volume in individuals who are susceptible and insusceptible to motion sickness (seasickness) N82-28960

BLOOD COAGULATION

Features of microcirculatory hemostasis and of the clotting and fibrinolytic properties of blood and the activity of the antioxidant system in people of various ABO blood groups A82-38164

Evidence of an immune mechanism of enzyme-hemostasis regulation A82-38552

BLOOD FLOW

Local cerebral blood flow dynamics during experimental ischemia A82-38544

The influence of the speed of blood flow in the carotid artery on the hematocrit of the blood being delivered to the brain A82-38550

Prostoglandins and regulation of cerebral circulation under conditions of the altered gaseous composition of the blood A82-38561

The response of the venous walls in the extremities to a disturbed venous outflow A82-40493

The effect of G sub z acceleration on pulmonary perfusion in the miniature swine A82-40681

Aortic and tibial bloodflow response to lower body negative pressure /LBNP/
A82-40727

Reduction in renal artery blood flow impedance during upright tilt in man
A82-40735

Vestibular effects of water immersion and Clonidine
A82-40762

The rate at which exogeneous hydrocortisone is eliminated from peripheral blood flow in patients suffering from an acute myocardial infarction
A82-41498

The role of the energy transport system in changes of the contractile function of the heart in the case of the measured limitation of coronary blood flow
A82-41499

**BLOOD PLASMA**

A measurement of the size distribution of lipoproteins in the plasma of human blood
A82-38603

Space flight effects upon plasma and tissue lipids in rats
A82-40722

Short term gravity effects on volume homeostasis in man Assessment of transvascular fluid shifts after graded tilt
A82-40760

ADH suppression under immersion combined with dehydration --- antidiuretic hormone secretion
A82-40776

Altitude-induced changes in plasma thyroxine, 3,5,3 prime-triiodothyronine, and thyrotropin in rats
A82-41207

**BLOOD PRESSURE**

Effects of a weightlessness simulation on the velocity curves measured by Doppler sonography at the level of the carotid system
A82-40656

The effects of +G2 acceleration stress on right ventricular pressures in conscious miniature swine.
A82-40676

**BLOOD VESSELS**

The effect of leienkephalin and thyrosine on the lymphatic and blood microvessels
A82-41490

**BLOOD VOLUME**

Changes in blood volume and response to vaso-active drugs in horizontally casted primates
A82-40657

Effects of lower body negative pressure on the reliability of cardiovascular system using X-ray kymograms
A82-40728

Reaction to diminished circulating blood volume in individuals who are susceptible and insusceptible to motion sickness (seasickness)
N82-28960

**BODY COMPOSITION (BIOLOGY)**

The concentration of adenyl nucleotides and creatine phosphate in the cerebral hemispheres during different manifestations of stress
A82-38560

Dynamics of weight loss during prolonged spaceflight
A82-40673

Plasticity of fast and slow muscle myofibrillar proteins in model experiments simulating weightlessness
A82-40709

Protein composition of mRNA containing 18S-40S subribosomal particles in soleus muscle before and after immobilization
A82-40742

Response of rat body composition to simultaneous exercise and centrifugation at 3.14g
A82-40766

Tritium oxide distribution and excretion kinetics in the exposure of animals to noise
A82-41463

**BODY FLUIDS**

Computer simulations of postural change, water immersion and bedrest - An integrative approach for understanding the spaceflight response
A82-40659

Effect of sustained Gz acceleration on lung fluid balance - An ultrastructural study
A82-40761

Effects of low-intensity electromagnetic fields on human and animal erythrocytes
N82-28974

**BODY SIZE (BIOLOGY)**

Gravitational scale effects --- moving organism performance as function of gravity and size
A82-40650

Gravity, metabolic rate and body size of mammals
A82-40678

**BODY SWAY TEST**

Postural control related to the different tilting body positions
A82-40732

**BODY TEMPERATURE**

Circadian changes in resting heart rate and body temperature, maximal oxygen consumption and perceived exertion
A82-38268

Thermoregulation and the menstrual cycle
A82-40441

Alterations in heat loss and heat production mechanisms in rat exposed to hypergravic fields
A82-40718

Core temperature and brainstem auditory evoked potentials as complimentary noninvasive measures of central neural function during exposure to hypergravic fields
A82-40772

Temperature and behavioral responses of squirrel monkeys to 2Gz acceleration
A82-40774

**BODY VOLUME (BIOLOGY)**

Short term gravity effects on volume homeostasis in man Assessment of transvascular fluid shifts after graded tilt
A82-40760

Output and efficiency of the heart in young athletes as a function of the type of athletic training
A82-41497

**BODY WEIGHT**

Dynamics of weight loss during prolonged spaceflight
A82-40673

Response of rat body composition to simultaneous exercise and centrifugation at 3.14g
A82-40766

**BONE DEMINERALIZATION**

Effect of space flight on bone strength
A82-40680

Evidence for arrested bone formation during spaceflight
A82-40767

**BONE MARROW**

The synthesis of nuclear and mitochondrial DNA and RNA, and the synthesis of heme and globin in rabbit bone marrow during the stimulation of erythropoiesis
A82-38169

Separation of bone marrow cells in mice by free-flow electrophoresis
A82-38536

The effect of long-wave ultraviolet radiation on cyclophosphamide-induced levels of chromosome aberrations in the bone marrow cells of mice
A82-38556

The circadian rhythm of the sensitivity of the chromosome apparatus of mice to the mutagenic effect of measles
A82-40462

The synthesis of nuclear and mitochondrial DNA and RNA, and the synthesis of heme and globin in rabbit bone marrow during the stimulation of erythropoiesis
A82-40501

**BONE MINERAL CONTENT**

Bone growth and composition in weanling and mature rats exposed to chronic centrifugation
A82-40669

Otoconial complexes as ion reservoirs in endolymph
A82-40674

**BONES**

The effect of potassium orotate on the metabolism of certain vitamins in patients with fractures of the long tubular bones
A82-38563

Changes in mineralized tissues in the case of calcitonin and somatotropic hormone injections under hypokinesia
A82-40503

Altered bone turnover during spaceflight
A82-40679

Bone resorption and calcium absorption in rats during spaceflight
A82-40704

Bone growth in the rat mandible during space flight
A82-40705

Adaptation of the rat skeleton to weightlessness and its physiological mechanisms - Results of animal experiments aboard the Cosmos-1129 biosatellite
A82-40753

Suppression of osteoblast differentiation during weightlessness
A82-40756

Application of laser therapy to patients with osteoarthrosis deformans
A82-41475

**BRADYCARDIA**

The effect of repeated episodes of emotional stress on heart activity and the content of monoamines in the heart
A82-38163

Alterations in heart work rhythm during hyperactivation of the anterior amygdaline nucleus
A82-38545

**BRAIN**

The protective role of the forebrain with respect to pathological cardiac reflexes
A82-38543

Alterations in heart work rhythm during hyperactivation of the anterior amygdaline nucleus
A82-38545

The thermal pulsation method in the study of several physiological mechanisms of the brain stem
A82-38559

The content of cAMP and cGMP in brain tissues during adaptation to ischemia
A82-40310

A factor of resistance to emotional stress in the brain of rats
A82-40452

The anti-stress role of the gamma-aminobutyric acid system of the brain
A82-40468

Higher integrative systems of the brain --- Russian book
A82-40642

Neurochemical mechanisms of learning and memory --- Russian book
A82-40646

Effect of prolonged weightlessness on certain aspects of brain metabolism of the rat
A82-40699

Chronic acceleration and brain density
A82-40769

The incorporation of P-32 into various sections of the brain upon exposure to intermittent noise of low intensity
A82-41467

Biochemical aspects of the mechanism by which cholinolyptics affect the brain
A82-41468

Nitrogen compound levels in tissues of rat cerebral hemispheres and cerebellum after flight aboard Cosmos-1129 biosatellite
N82-28967

**BRAIN CIRCULATION**

The influence of the speed of blood flow in the carotid artery on the hematocrit of the blood being delivered to the brain
A82-38550

Diagnosis and organization of the therapy of patients with disorders of blood circulation in the brain
A82-38554

Prostoglandins and regulation of cerebral circulation under conditions of the altered gaseous composition of the blood
A82-38561

State of adaptation in patients with hypertension
A82-40476

Effects of a weightlessness simulation on the velocity curves measured by Doppler sonography at the level of the carotid system
A82-40656

The effect of hypoxic and hypobaric exercises on the blood-brain barrier in rats
A82-40713

Effects of prolonged bedrest in antiorthostatic position on rCBF measured by 133Xe inhalation technique - Effects of clonidine --- regional Cerebral Blood Flow
A82-40743

Involuntary and voluntary mechanisms for preventing cerebral ischemia due to positive /Gz/ acceleration
A82-40747

Cardiac and cerebral vascular adaptation to gravitational stresses in man
A82-40765

Regulation of cerebral circulation in erect position
N82-28957

**BRAIN DAMAGE**

Intrahemispherical relations of EEG slow-wave components in patients with local brain lesions
A82-40472

Some of biochemical parameters in rat brain during +Gz acceleration
A82-40717

Dynamics of the brain electric activity in patients with cerebral insults under the effect of muscle stimulation with sinusoidal modulated currents
A82-41477

**BRAIN STEM**

Core temperature and brainstem auditory evoked potentials as complimentary noninvasive measures of central neural function during exposure to hypergravic fields
A82-40772

**BREATHING APPARATUS**

A respirator for training in conditions of changeable respiratory mixture
A82-40485

**BREEDING (REPRODUCTION)**

Cultivation of insects as new branch of entomology - industrial entomology
N82-28980

**BURNS (INJURIES)**

Ultrasonic determination of thermodynamic threshold parameters for irreversible cutaneous burns
A82-41122

# C

**CALCIUM**

Proof of the existence of Ca/2+/-induced structural changes in stems of myosin-containing filaments of vertebrate skeletal muscles
A82-38599

**CALCIUM ISOTOPES**

Otoconial complexes as ion reservoirs in endolymph
A82-40674

**CALCIUM METABOLISM**

Changes in electrically neutral Ca/2+/-H/+/ exchange in rat liver mitochondria following gamma irradiation
A82-38151

Two phases of the inotropic effect of adrenaline - The calcium dependence
A82-38549

The regulation of calcium exchange in the cells of different regions of the warm-blooded animal heart
A82-40313

Altered bone turnover during spaceflight
A82-40679

Effect of space flight on bone strength
A82-40680

Effect of immobilization on the ATPase activities and Ca-uptake of sarcoplasmic reticulum in different types of muscles
A82-40708

Osteoporosis in unsupported extremities
N82-28970

**CALORIC REQUIREMENTS**

Energy requirements of workers at an oil field in western Siberia
A82-40481

**CALORIC STIMULI**
Nystagmometry of optovestibular interaction N82-28962
Effect of caloric stimulation of vestibular system on hearing N82-28963

**CALORIMETERS**
Microcalorimetry in biomedical investigations A82-41471

**CANCER**
Electrical stimulation of the urinary bladder following radical surgery for cancer of the rectum A82-41479

**CARBOHYDRATE METABOLISM**
Studies of specific hepatic enzymes involved in the conversion of carbohydrates to lipids in rats exposed to prolonged spaceflight aboard Cosmos 1129 A82-40698
Metabolic distinctions related to intake of low-calorie 'survival' rations consisting only of readily assimilated carbohydrates N82-28953
Effect of high ambient temperature on carbohydrate metabolism in rat liver and skeletal muscles N82-28975

**CARBON DIOXIDE**
Prostoglandins and regulation of cerebral circulation under conditions of the altered gaseous composition of the blood A82-38561

**CARBON DIOXIDE LASERS**
Sword and scalpel --- laser surgery A82-38564

**CARBON ISOTOPES**
Conditions leading to kinetic and thermodynamic isotopic effects in a cell A82-38601

**CARBON MONOXIDE POISONING**
The combined effect of carbon monoxide and total-body vibration on the organism A82-40475

**CARDIAC VENTRICLES**
Two phases of the inotropic effect of adrenaline - The calcium dependence A82-38549
A study of the mechanism governing the different types of behavior exhibited by the spiral excitation wave period in auricle and ventricle A82-38597
Echocardiographic characterization of heart hypertension A82-40307
The effect of inotropic factors on the postexercise characteristics of the heart A82-40451
The effects of +G2 acceleration stress on right ventricular pressures in conscious miniature swine. A82-40676
Effect of warm-up on left ventricular response to sudden strenuous exercise A82-41212
The significance of postextrasystolic potentiation in the preoperative assessment of the reversal of left-ventricle asynergy in patients with ischemic heart disease A82-41483
An evaluation of the informativeness of EKG parameters in diagnosing a myocardial infarction of the back wall of the left ventricle A82-41493
A comparison of echo- and kinetocardiographic indicators of the myocardial contractility of the left ventricle in patients suffering from various forms of ischemic heart disease A82-41496
Dynamics of left ventricular systolic phase structure during long-term (140-185 days) spaceflights N82-28954

**CARDIOGRAPHY**
A modification of Souns' method of selective coronarography A82-41485
A comparison of echo- and kinetocardiographic indicators of the myocardial contractility of the left ventricle in patients suffering from various forms of ischemic heart disease A82-41496

**CARDIOLOGY**
On the observability of electrical cardiac sources --- Thesis A82-41450

**CARDIOVASCULAR SYSTEM**
The characteristics of hemodynamic shifts under physical stress at mountain elevations A82-38166
The detection of premorbid states and cardiovascular diseases during medical examinations of seamen A82-38553
Investigation of the cardiovascular system during prolonged space flights on board the Salyut space stations A82-39429
An automated system for the collection and processing of cardiovascular information from athletes A82-40484
Methodological aspects of future cardiovascular research in space A82-40652
Cardiovascular responses to isometric exercise during simulated zero gravity A82-40662
Cardiovascular responses of the chronically instrumented monkey during simulated space flight A82-40670
Aspects of cardiovascular adaptation to gravitational stresses A82-40687
Body composition of rats flown aboard Cosmos-1129 A82-40695
Autonomic reactions in labyrinthectomized rabbits during centrifuge acceleration A82-40720
Effects of lower body negative pressure on the reliability of cardiovascular system using X-ray kymograms A82-40728
Orthostatic tolerance and exercise response before and after 7 days simulated weightlessness A82-40731
Analysis of transient cardiovascular response to orthostatic stress using noninvasive methods A82-40740
Effects of prolonged bedrest in antiorthostatic position on rCBF measured by 133Xe inhalation technique - Effects of clonidine --- regional Cerebral Blood Flow A82-40743
Cardiovascular effects of Clonidine during 20 hours head down tilt /-5 deg/ A82-40764
Cardiac and cerebral vascular adaptation to gravitational stresses in man A82-40765
Effect of warm-up on left ventricular response to sudden strenuous exercise A82-41212
The effect of the natural and climatic conditions of the Far North on the human cardiovascular system A82-41466
The effect of ultrasound and phonophoresis of ganglioblockers on the cardiovascular system in patients with cervical osteochondrosis A82-41476
Sources of an artificial magnetic field for implantation /experimental study/ A82-41480

**CAROTID SINUS BODY**
Effects of a weightlessness simulation on the velocity curves measured by Doppler sonography at the level of the carotid system A82-40656

**CAROTID SINUS REFLEX**
Changes in the hemodynamics and efferent activity in the renal nerve with acute hypoxic hypoxia under the stabilization of perfusion pressure in carotid sinuses A82-38161

Baroreflex regulation of hemodynamics under orthostatic effects /an investigation with a mathematical model/
A82-38162

**CATABOLISM**
Immobilization effects upon aerobic and anaerobic metabolism of the skeletal muscles
A82-40712

**CATALYTIC ACTIVITY**
Reactions of O-18 exchange in the myosin systems of skeletal, cardiac, and smooth muscles
A82-38614

**CATECHOLAMINE**
Catecholamines and enzymes of their metabolism in rat myocardium after flight aboard the Cosmos-936 biosatellite
N82-28966

**CATEGORIES**
Task categorization and the limits of human performance in extreme heat
A82-40439

**CATHETERIZATION**
A modification of Souns' method of selective coronarography
A82-41485

**CATIONS**
Specificity of action of monovalent cations on the ATPase activity of myosin HMM-S-1
A82-38594

The effect of monovalent cations on the ATPase activity and superprecipitation of actomyosin
A82-38615

**CELL DIVISION**
Diurnal changes in the duration of the S and G2 phases of the mitotic cycle in mononuclear and binuclear hepatocytes of normal and thyroxine-treated rats
A82-40459

The synthesis of nuclear and mitochondrial DNA and RNA, and the synthesis of heme and globin in rabbit bone marrow during the stimulation of erythropoiesis
A82-40501

Morphogenesis of a higher plant from cultured cells and embryos in space
A82-40666

Suppression of osteoblast differentiation during weightlessness
A82-40756

Myosatellocytes and cambial properties of skeletal and muscular tissue
A82-41469

**CELLS (BIOLOGY)**
Optimization of the conditions of modified cell irradiation
A82-38154

Radiation damage and recovery of mouse T-cells. IV - Elimination of radiation-induced migration abnormalities in T-lymphocytes
A82-38156

Effects of cAMP accumulation activators on certain stages of genome expression in cells upon acute radiation damage to the organism. III Comparative study of the properties of RNA synthesized in a system of isolated liver and spleen cell nuclei from irradiated rats and animals having been treated with serotonin prior to irradiation
A82-38157

The dynamics of quantitative changes of RNA in rat cerebellum Purkinje cells in different functional states
A82-38538

The concentration of adenyl nucleotides and creatine phosphate in the cerebral hemispheres during different manifestations of stress
A82-38560

Temperature characteristics of the ouabain-insensitive sodium flux in frog muscles
A82-38600

Conditions leading to kinetic and thermodynamic isotopic effects in a cell
A82-38601

F-actin is a helix with a random variable twist
A82-38694

The regulation of calcium exchange in the cells of different regions of the warm-blooded animal heart
A82-40313

The toxic properties of rabbit and dog sera under controlled hyperthermia
A82-40458

Changes of intracellular rest potential and the length of isolated muscle under different loads
A82-40480

Some of biochemical parameters in rat brain during +Gz acceleration
A82-40717

Changes of periodic protoplasmic movements on the fast clinostat
A82-40725

Root cell gravireaction - Hormone interaction
A82-40745

Cellular aspects of gravitational biology
A82-40754

The intracellular responses of frog eggs to novel orientations to gravity
A82-40758

Gravity sensing system formation in tadpoles /Rana temporaria/ developed in weightlessness simulation
A82-40759

Response of cultured cells to hyper- and hypogravity
A82-40773

A hygienic evaluation of the biological effects of nonionizing microwave radiation
A82-41464

**CENTER OF GRAVITY**
Simulation of the motion of the center of mass of an occupant under ejection accelerations [AD-A113806]
N82-28989

**CENTIMETER WAVES**
A hygienic evaluation of the biological effects of nonionizing microwave radiation
A82-41464

**CENTRAL NERVOUS SYSTEM**
A method of evaluating the functional state of the central nervous system of a person performing work
A82-38579

Otoneurological symptoms and syndromes --- Russian book
A82-39286

Central nervous dysfunctions after near-miss accidents in diving
A82-40443

The correlations of the central nervous system and thyroid functions in conditions of chronic emotional stress
A82-40453

Relation between sensoric and motoric function of Wistar rats after space flight by biosatellite Cosmos 1129
A82-40737

**CENTRIFUGING STRESS**
Study of high-g effects in animals
A82-40651

Bone growth and composition in weanling and mature rats exposed to chronic centrifugation
A82-40669

Centrifuge high-g effects on temperature regulation in unanesthetized rats
A82-40671

Artificial gravity in space flight
A82-40691

Stress in space flight - Metabolic aspects
A82-40696

Gravitational adaptation of animals
A82-40716

Some of biochemical parameters in rat brain during +Gz acceleration
A82-40717

Autonomic reactions in labyrinthectomized rabbits during centrifuge acceleration
A82-40720

Effect of sustained Gz acceleration on lung fluid balance - An ultrastructural study
A82-40761

Response of rat body composition to simultaneous exercise and centrifugation at 3.14g
A82-40766

Accidents in centrifuges and experiments (ejection seat training towers, sleds)
N82-29881

**CEREBELLUM**
The dynamics of quantitative changes of RNA in rat cerebellum Purkinje cells in different functional states
A82-38538

Spatial organization of the vestibular influences on the cerebellar fastigial neurons of cats
A82-40312

Nitrogen compound levels in tissues of rat cerebral hemispheres and cerebellum after flight aboard Cosmos-1129 biosatellite
N82-28967

CEREBRAL CORTEX
Local cerebral blood flow dynamics during experimental ischemia
A82-38544

The cholinergic nature of hypothalamo-cortical excitatory influence
A82-38551

Ultrastructural changes in the brains of rats subjected to acute emotional stress
A82-38558

Prostoglandins and regulation of cerebral circulation under conditions of the altered gaseous composition of the blood
A82-38561

Changes in the human visually evoked cortical potential in response to chromatic modulation of a sinusoidal grating
A82-38795

The cortical regulation of human motion --- Russian book
A82-39283

Neurons in cat visual cortex tuned to the direction of motion in depth - Effect of positional disparity
A82-39434

Participation of the prefrontal cortex in delayed spatial choice and differentiation of time intervals in rhesus monkeys
A82-40470

Afferent associative and commissural projections of the cortical vestibular zone VI of cats
A82-40495

Age changes in the cerebral cortex of humans and cats /A comparative electron-microscopical investigation/
A82-40496

CEREBRAL VASCULAR ACCIDENTS
State of adaptation in patients with hypertension
A82-40476

CEREBRUM
The role of central gray matter in the activation of antipain systems of the rat's brain under stress
A82-38547

The concentration of adenyl nucleotides and creatine phosphate in the cerebral hemispheres during different manifestations of stress
A82-38560

CHEMICAL EVOLUTION
Clay and the origin of life
A82-38115

Formation of cyanate and carbamyl phosphate by electric discharges of model primitive gas
A82-38116

Uracil synthesis via HCN oligomerization --- chemical evolution of biomolecules in primitive earth
A82-38117

Polynucleotide replication coupled to protein synthesis A possible mechanism for the origin of life
A82-38119

Ambiguity and the evolution of the genetic code
A82-38120

Chemical evolution and the origin of life - Bibliography Supplement 1980
A82-38122

Ligation of oligonucleotides by pyrimidine dimers - A missing 'link' in the origin of life
A82-39423

Chemical evolution. XL - Clay-mediated oxidation of diaminomaleonitrile
A82-41196

The radiolysis of aqueous propionitrile - Compounds of interest to chemical evolution studies
A82-41197

A model for the origin of life
A82-41198

Acceleration of HCN oligomerization by formaldehyde and related compounds - Implications for prebiotic syntheses
A82-41199

Formation of the thioester, N-acetyl, S-lactoylcysteine, by reaction of N-acetylcysteine with pyruvaldehyde in aqueous solution --- in prebiotic evolution
A82-41200

CHEMICAL REACTIONS
Clay and the origin of life
A82-38115

Mechanical chemical and bio-hazards --- space-probe related planet and earth contaminations
A82-39159

Formation of the thioester, N-acetyl, S-lactoylcysteine, by reaction of N-acetylcysteine with pyruvaldehyde in aqueous solution --- in prebiotic evolution
A82-41200

CHEMORECEPTORS
Biochemical aspects of the mechanism by which cholinolyptics affect the brain
A82-41468

CHEMOTHERAPY
An attempt at the classification of 'patient pharmacokinetic capacities'
A82-38562

CHLOROPHYLLS
Orientation and energy-transfer studies on chlorophyll in the photosynthetic membrane [DE82-010180]
N82-29852

CHOLESTEROL
A measurement of the size distribution of lipoproteins in the plasma of human blood
A82-38603

CHOLINE
Biochemical aspects of the mechanism by which cholinolyptics affect the brain
A82-41468

CHOLINERGICS
Early reaction of the hemopoietic organs depending on the condition of the peripheral M-cholinergic systems
A82-38168

The cholinergic nature of hypothalamo-cortical excitatory influence
A82-38551

The effect of hypokinesia on the resistance of the heart to hypoxia
A82-40502

CHROMOSOMES
The effect of long-wave ultraviolet radiation on cyclophosphamide-induced levels of chromosome aberrations in the bone marrow cells of mice
A82-38556

The circadian rhythm of the sensitivity of the chromosome apparatus of mice to the mutagenic effect of measles
A82-40462

CHRONIC CONDITIONS
Evaluation of vestibular function in flight personnel with chronic diseases during stable remission
A82-38179

Bone growth and composition in weanling and mature rats exposed to chronic centrifugation
A82-40669

Embryonic development during chronic acceleration
A82-40755

Chronic acceleration and brain density
A82-40769

The ultrastructure of the myocardium in the restorative period following aorto-coronary shunting in patients with chronic ischemic heart disease
A82-41484

CIRCADIAN RHYTHMS
Some characteristics of the diurnal rhythm of physiological functions of sailors in the tropics
A82-38180

Circadian changes in resting heart rate and body temperature, maximal oxygen consumption and perceived exertion
A82-38268

Rotating shift work schedules that disrupt sleep are improved by applying circadian principles
A82-38325

Diurnal changes in the duration of the S and G2 phases of the mitotic cycle in mononuclear and binuclear hepatocytes of normal and thyroxine-treated rats
A82-40459

The circadian rhythm of the sensitivity of the chromosome apparatus of mice to the mutagenic effect of measles
A82-40462

Influences of horizontal hypokinesia on performance and circadian physiological rhythms in female humans
A82-40682

Biorhythms of rats during and after space flight
A82-40692

Rhythms of electrolytes and hydroxyproline excretion in urine of rats after three weeks of weightlessness - Biosatellite Cosmos-1129
A82-40693

Diurnal dynamics of the indicators of the capacity for physical work and of physiological functions
A82-41460

USSR report. Space biology and aerospace medicine, volume 16, no. 3, May - June 1982
[JPRS-81197] N82-28949

Sleep, circadian cycles of physiological functions and parameters of human work capacity on first day after changing from altered to usual sleep-waking cycle
N82-28951

Synchronization of cardiovascular accidents with physical clocks
N82-28956

CIRCULATORY SYSTEM

A study of temporary absences from work arising from disorders of the circulatory system
A82-38555

Relevance of aldosterone on circulatory, renal and blood reactions during simulated weightlessness and on aerobic metabolic rate
A82-40736

CIVIL AVIATION

Physiological stresses linked to flight on airliners
A82-38842

Medical emergencies on board an airliner - Procedures when a doctor is on board
A82-38844

Medical emergencies on board airliners - Procedures in the absence of a doctor
A82-38845

Medical emergencies on board airliners - Ground management
A82-38846

CLAYS

Clay and the origin of life
A82-38115

Chemical evolution. IL - Clay-mediated oxidation of diaminomaleonitrile
A82-41196

CLINICAL MEDICINE

The potential of radionuclide diagnosis of acute myocardial infarction
A82-41458

Optimization of medicinal electrophoresis --- enhancement of cutaneous penetration
A82-41472

Present-day magnetic-field sources, used in medical treatment
A82-41481

The significance of postextrasystolic potentiation in the preoperative assessment of the reversal of left-ventricle asynergy in patients with ischemic heart disease
A82-41483

A modification of Soens' method of selective coronarography
A82-41485

The achievements of investigations carried out in the years 1976-1980 on the problem of insufficient blood circulation and heart rhythm disturbances
A82-41501

Clinical examination of spinal injuries
N82-29882

CLOSED ECOLOGICAL SYSTEMS

Evaluation of engineering foods for closed Ecological Life Support System (CELSS)
[NASA-CR-167626] N82-29003

Nutrition and food technology for a Controlled Ecological Life Support System (CELSS)
[NASA-CR-167392] N82-29004

Evaluation of engineering foods for Controlled Ecological Life Support Systems (CELSS)
[NASA-CR-166359] N82-29006

An approach to the preliminary evaluation of Closed Ecological Life Support System (CELSS) scenarios and control strategies
[NASA-CR-166368] N82-29897

CLOTTING

Features of microcirculatory hemostasis and of the clotting and fibrinolytic properties of blood and the activity of the antioxidant system in people of various ABO blood groups
A82-38164

COCHLEA

Pathomorphological investigation of the mechanism of cochlear damage caused by noise
A82-39241

COCKPITS

Flight crewmember workload evaluation
[AD-A114167] N82-29012

COGNITIVE PSYCHOLOGY

Mode of mutual influence of stimulation-characteristics in the visual processing system --- German thesis
A82-41445

COLD ACCLIMATIZATION

The physiological mechanisms of the arousal response in animals under conditions of hypobiosis
A82-40311

Trace reactions of the frog tissue metabolism on changes of ambient temperature in the frog Rana ridibunda Pall
A82-40316

The role of nutrition in the changes of energy metabolism during stress
A82-40482

Leucine and urea metabolism in acute human cold exposure
A82-41211

The effect of the natural and climatic conditions of the Far North on the human cardiovascular system
A82-41466

COLD WEATHER

Effect of physical training in cool and hot environments on +Gz acceleration tolerance in women
A82-40664

COLLAGENS

The temperature dependence of the H-1 NMR spectrum of hydrated collagen
A82-38611

Condition of rats connective tissue during long-term hypokinesia and in recovery period
N82-28969

COLOR VISION

Changes in the human visually evoked cortical potential in response to chromatic modulation of a sinusoidal grating
A82-38795

Color vision in the peripheral retina under photopic conditions
A82-38798

Field sensitivity of the 'red' mechanism derived from primate local electroretinogram
A82-39431

Effect of chromatic adaptation on the achromatic locus - The role of contrast, luminance and background color
A82-39433

Discrimination and detection thresholds - The effect of observer criterion on the spatial properties of chromatic and achromatic mechanisms
A82-39438

Detection/discrimination in the long-wavelength pathways --- human color vision tests
A82-39439

COMPETITION

Adapting a scale for measuring competition anxiety
A82-40450

Certain psychological and tactical aspects of athlete activities during competitions
A82-41506

COMPUTER ASSISTED INSTRUCTION
Potential applications of computer-assisted instruction to P-3 aircrew training
[AD-A113491] N82-29893
Instructor's role in individualized training: A survey of two computer managed courses
[AD-A114917] N82-29894
COMPUTERIZED SIMULATION
Modeling and simulation in the study of certain biological systems
A82-39570
Computer simulations of postural change, water immersion and bedrest - An integrative approach for understanding the spaceflight response
A82-40659
Simulation of the motion of the center of mass of an occupant under ejection accelerations
[AD-A113806] N82-28989
CONCENTRATION (COMPOSITION)
Nitrogen compound levels in tissues of rat cerebral hemispheres and cerebellum after flight aboard Cosmos-1129 biosatellite
N82-28967
CONDITIONED REFLEXES
Dynamics of a stabilized motor defensive conditioned reflex for different levels of motivation in irradiated rats
A82-40464
Participation of the prefrontal cortex in delayed spatial choice and differentiation of time intervals in rhesus monkeys
A82-40470
CONFERENCES
Proceedings of a Meeting of the IUPS Commission on Gravitational Physiology --- Book
A82-40649
International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980, Proceedings
A82-40686
International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, September 29-October 2, 1981, Proceedings
A82-40734
The organizing of conferences
[PB82-142696] N82-28948
CONNECTIVE TISSUE
Condition of rats connective tissue during long-term hypokinesia and in recovery period
N82-28969
CONSERVATION
Selecting optimal conditions for heart conservation in weak aldehyde solutions by using mathematical methods of experimental design
A82-38534
CONTAMINANTS
The consequences of hydrazine exposition and its treatment
[NBL-1981-2] N82-28996
CONTAMINATION
Mechanical chemical and bio-hazards --- space-probe related planet and earth contaminations
A82-39159
CONTROL
A design methodology for nonlinear systems containing parameter uncertainty: Application to nonlinear controller design
[NASA-CR-166358] N82-29005
CORIOLIS EFFECT
Vestibular screening of cosmonauts
A82-38853
CORNEA
Mitotic activity and volume of epithelial cell nuclei of rat cornea following spaceflights in biosatellites
N82-28965
CORONARY CIRCULATION
Diagnostics of disturbances of heart rhythm and conductance and their professional evaluation in flight personnel
A82-40309
The rate of coronary perfusion as a factor determining the extent to which the contractile function of the heart is decreased in energy formation disorders
A82-41485
The role of the energy transport system in changes of the contractile function of the heart in the case of the measured limitation of coronary blood flow
A82-41499
CORROSION
OTEC-1 power system test program: Biofouling and corrosion monitoring on OTEC-1
[DE82-007035] N82-29851
CORTI ORGAN
Alterations of histochemical organization in the organ of Corti under the influence of chronic noise
A82-39242
CORTICOSTEROIDS
The rate at which exogeneous hydrocortisone is eliminated from peripheral blood flow in patients suffering from an acute myocardial infarction
A82-41498
CORTISONE
The gradualness of the reaction of the pituitary-adrenocortical system to activating and inhibiting signals
A82-40315
COSMIC RAYS
Medical-biological investigations under space conditions: Present and future significance
N82-30275
COSMONAUTS
Orthostatic tests during cosmonaut selection
A82-38854
Investigation of the cardiovascular system during prolonged space flights on board the Salyut space stations
A82-39429
As if in weightlessness --- simulation through hypnosis
A82-40478
Space gastroenterology --- Russian book
A82-40643
Mechanisms of the effects of weightlessness on the motor system of man
A82-40752
COSMOS SATELLITES
Adaptation to weightlessness and its physiological mechanisms - Results of animal experiments aboard biosatellites
A82-40688
Results of morphological investigations aboard biosatellites Cosmos
A82-40697
COSMOS 936 SATELLITE
Ultrastructural qualitative and quantitative evaluation of cytoplasmatic structures of heart muscle of rats living aboard biosputnik Kosmos 936
A82-40694
COSMOS 1129 SATELLITE
Study of contractile properties and composition of myofibrillar proteins of skeletal muscles in the Cosmos-1129 experiment
A82-40701
CRASH INJURIES
Spinal stresses in flight
N82-29873
Theories of the pathogenesis of fractures of the spine
N82-29874
Aetiology and pathogenesis --- traumatic lesions of the spine
N82-29875
Helicopter accidents
N82-29876
Radiology of spinal trauma in aviation medicine
N82-29883
Analytical study of traumatic lesions of C3-C7
N82-29884
Radiological study of fractures of C1 and C2
N82-29885
Sequelae of vertebral fractures and trauma
N82-29886
Medico-legal aspect of spinal disorders in aviation medicine
N82-29892
CREATINE
The concentration of adenyl nucleotides and creatine phosphate in the cerebral hemispheres during different manifestations of stress
A82-38560

CROP GROWTH
Interaction of gravitic and mechanical stimuli in tropic and nastic responses in beans
A82-40665
Morphogenesis of a higher plant from cultured cells and embryos in space
A82-40666
Gravity perception and asymmetric growth in plants - A model derived from the grass pulvinus
A82-40775

CULTIVATION
USSR report. Life sciences biomedical and behavioral sciences, no. 16
[JPRS-80789] N82-28977
Cultivation of insects as new branch of entomology - industrial entomology
N82-28980

CULTURE TECHNIQUES
Occult bacterial persistence and resistance to colonization after antibiotic therapy
A82-40660
Morphogenesis of a higher plant from cultured cells and embryos in space
A82-40666

CURVES (GEOMETRY)
Segmentation and analysis of stereophotometric body surface data
[AD-A114916] N82-29868

CYANATES
Formation of cyanate and carbamyl phosphate by electric discharges of model primitive gas
A82-38116

CYANIDES
Chemical evolution. XL - Clay-mediated oxidation of diaminomaleonitrile
A82-41196

CYANO COMPOUNDS
Acceleration of HCN oligomerization by formaldehyde and related compounds - Implications for prebiotic syntheses
A82-41199

CYCLIC COMPOUNDS
Ion currents through a neuron membrane during the injection of cyclic nucleotides
A82-38580

CYTOGENESIS
Cytogenetic effect of 5-fluoro-2deoxy uridine in the G2 phase on intact and X-irradiated crepis capillaris L cells
A82-40461
The circadian rhythm of the sensitivity of the chromosome apparatus of mice to the mutagenic effect of measles
A82-40462
Cytoarchitectonics of the epidermis and the epidermal proliferative units /EPU/
A82-40491
Suppression of osteoblast differentiation during weightlessness
A82-40756
Methodological aspects of testing erythrocyte balance by counting incubated reticulocytes
N82-28972
Cytogenetic analysis of peripheral blood lymphocytes of individuals exposed to low doses of ionizing radiation
N82-29856

CYTOLOGY
Optimization of the conditions of modified cell irradiation
A82-38154
Radiation damage and recovery of mouse T-cells. IV - Elimination of radiation-induced migration abnormalities in T-lymphocytes
A82-38156
Effects of cAMP accumulation activators on certain stages of genome expression in cells upon acute radiation damage to the organism. III Comparative study of the properties of RNA synthesized in a system of isolated liver and spleen cell nuclei from irradiated rats and animals having been treated with serotonin prior to irradiation
A82-38157
DNA-content distribution of cells from the normal and atherosclerotic human aorta
A82-38535
Conditions leading to kinetic and thermodynamic isotopic effects in a cell
A82-38601
Light curves for photosynthesis under intermittent illumination
A82-38608
Approaches to the study of the hypothalamus-pituitary gland relationship
A82-39569
Cellular aspects of gravitational biology
A82-40754
The structure and function of macrophages
A82-41470

CYTOPLASM
The dynamics of quantitative changes of RNA in rat cerebellum Purkinje cells in different functional states
A82-38538
Gravity sensing, polar transport and cytoplasmic streaming in plant cells
A82-40667
Ultrastructural qualitative and quantitative evaluation of cytoplasmatic structures of heart muscle of rats living aboard biosputnik Kosmos 936
A82-40694

D

DARK ADAPTATION
Color vision in the peripheral retina under photopic conditions
A82-38798

DATA ACQUISITION
An automated system for the collection and processing of cardiovascular information from athletes
A82-40484
A functional video-based anthropometric measuring system
[NASA-CR-167637] N82-29896

DECISION MAKING
A test for the prediction of risk-taking attitude in operators
A82-40449
An overview of expert systems --- artificial intelligence
[NASA-CR-169197] N82-29899

DECOMPRESSION SICKNESS
Vibration and decompression gas bubbles
A82-40729

DEHYDRATION
ADH suppression under immersion combined with dehydration --- antidiuretic hormone secretion
A82-40776

DEHYDROGENATION
The effect of urea and heat on the activity of lactate dehydrogenase and glucose 6-phosphate dehydrogenase
A82-38612

DENSITY (MASS/VOLUME)
Chronic acceleration and brain density
A82-40769

DENTISTRY
Acoustic tooth cleaner
[NASA-CASE-LAR-12471-1] N82-29862

DEOXYRIBONUCLEIC ACID
Changes in the relations of pyrimidine blocks in DNA of the hematopoietic system immediately following gamma irradiation of the animal
A82-38152
The synthesis of nuclear and mitochondrial DNA and RNA, and the synthesis of heme and globin in rabbit bone marrow during the stimulation of erythropoiesis
A82-38169
Study of RNA synthesis rate and DNA content in the myocardium of new-born rats during adaptation to high-altitude hypoxia
A82-38537
Ligation of oligonucleotides by pyrimidine dimers - A missing 'link' in the origin of life
A82-39423
The synthesis of nuclear and mitochondrial DNA and RNA, and the synthesis of heme and globin in rabbit bone marrow during the stimulation of erythropoiesis
A82-40501

DEPRESSANTS
Effects of space flight factors and artificial gravity on deoxyribonucleoprotein in lymphoid organs of rats
A82-40723

DEPRESSANTS
Vegetative reactions to the administration of atropine and propranolol in rats that exhibit different types of behavior
A82-40463

DESIGN ANALYSIS
Control of a direct-drive arm
[AD-A114969] N82-29903

DETECTION
Detection/discrimination in the long-wavelength pathways --- human color vision tests
A82-39439

DIAGNOSIS
Diagnosis and organization of the therapy of patients with disorders of blood circulation in the brain
A82-38554
Application of xylite for the detection of labyrinthine hydrops
A82-39243
Diagnostics of disturbances of heart rhythm and conductance and their professional evaluation in flight personnel
A82-40309
The use of hyperoxic mixtures for the diagnosis of latent disturbances in the external respiration system
A82-40457
The diagnostic value of phonoenterography in acute renal failure
A82-40478
The potential of radionuclide diagnosis of acute myocardial infarction
A82-41458
Functional properties of T-lymphocytes in patients with acute myocardial infarction
A82-41459
A modification of Sones' method of selective coronarography
A82-41485
An evaluation of the informativeness of EKG parameters in diagnosing a myocardial infarction of the back wall of the left ventricle
A82-41493

DIBASIC COMPOUNDS
A comparison between the protonophoric and separating functions of weak dibasic acids --- in mitochondrial respiration
A82-38590

DIENCEPHALON
Statistical analysis of neuronal impulse activity in the diencephalon during immobilization-produced emotional stress in rats
A82-40467

DIFFERENTIATION (BIOLOGY)
Cytoarchitectronics of the epidermis and the epidermal proliferative units /EPU/
A82-40491
Suppression of osteoblast differentiation during weightlessness
A82-40756

DIGESTIVE SYSTEM
The reaction of simulated and true weightlessness on digestive tract of rats
A82-40733

DIGITAL DATA
A functional video-based anthropometric measuring system
[NASA-CR-167637] N82-29896

DIMERIZATION
Ligation of oligonucleotides by pyrimidine dimers - A missing 'link' in the origin of life
A82-39423

DISEASES
Application of xylite for the detection of labyrinthine hydrops
A82-39243
Alterations in the labyrinth receptors after laser irradiation as detected by electron microscopy
A82-39244
The circadian rhythm of the sensitivity of the chromosome apparatus of mice to the mutagenic effect of measles
A82-40462

DISPLACEMENT MEASUREMENT
Effects of reference lines on displacement thresholds at various durations of movement --- in human visual perception
A82-38797

DISPLAY DEVICES
Visual Technology Research Simulator (VTRS) human performance research: Phase 3
[AD-A112475] N82-28988
Unconventional visual displays for flight training
[AD-A111392] N82-28999

DISTRIBUTION (PROPERTY)
On the mathematical modelling of microbial age dynamic and some control aspects of microbial growth processes
A82-38823

DIVING (UNDERWATER)
Central nervous dysfunctions after near-miss accidents in diving
A82-40443

DOSIMETERS
Neutron radiation dosimetry in high altitude flight personnel
A82-40444

DRINKING
The effectiveness of perspiration in a hot environment
A82-38178

DROSOPHILA
Radiation-induced shortening of the life span of D. melanogaster. II - Sensitizing effects of 5-bromo-2-deoxyuridine
A82-38155

DRUGS
Experimental and clinical study of a new immunoregulatory preparation - thymalin
A82-38177
The influence of the GABA-receptor blocker bicuculline on the effects of fenibut and diazepam
A82-38539
The effect of potassium orotate on the metabolism of certain vitamins in patients with fractures of the long tubular bones
A82-38563
Application of xylite for the detection of labyrinthine hydrops
A82-39243
Participation of the prefrontal cortex in delayed spatial choice and differentiation of time intervals in rhesus monkeys
A82-40470
In vivo and in vitro characteristics of eccrine sweating in patas and rhesus monkeys
A82-41214
The effect of diethylamine analog of ethmozine on the functional condition of myocardium /Clinical and experimental study/
A82-41488
The effect of leienkephalin and thyrosine on the lymphatic and blood microvessels
A82-41490

DRY HEAT
Auxiliary cooling - Comparison of air-cooled vs. water-cooled vests in hot-dry and hot-wet environments
A82-40440

DYES
Acridine orange inhibition of the ATPase activity of myosin and its fragments
A82-38613

DYNAMIC CHARACTERISTICS
Dynamics of left ventricular systolic phase structure during long-term (140-185 days) spaceflights
N82-28954

DYNAMIC RESPONSE
Simulation of the motion of the center of mass of an occupant under ejection accelerations
[AD-A113806] N82-28989

DYSPNEA
Dyspnea - What is it
A82-41461

E

EAR
Preparation of labyrinthectomied animals for flight aboard Cosmos-936 biosatellite
N82-28971

**EARTH (PLANET)**
Chemical evolution. XL - Clay-mediated oxidation of diaminomaleonitrile
A82-41196

**ECHOCARDIOGRAPHY**
Echocardiographic characterization of heart hypertension
A82-40307

The amplitude of the R wave and the contractile function of the left ventricle in patients with ischemic heart disease
A82-41486

A comparison of echo- and kinetocardiographic indicators of the myocardial contractility of the left ventricle in patients suffering from various forms of ischemic heart disease
A82-41496

**ECOLOGY**
A design methodology for nonlinear systems containing parameter uncertainty: Application to nonlinear controller design
[NASA-CR-166358] N82-29005

**EDEMA**
Causes of high-altitude acute pulmonary edema
A82-38167

The cause of high-altitude acute pulmonary edema
A82-40498

**EDUCATION**
Output and efficiency of the heart in young athletes as a function of the type of athletic training
A82-41497

Instructor's role in individualized training: A survey of two computer managed courses
[AD-A114917] N82-29894

**EFFECTIVENESS**
Efficacy of kavinton in prevention of motion sickness
N82-28961

**EFFERENT NERVOUS SYSTEMS**
Changes in the hemodynamics and efferent activity in the renal nerve with acute hypoxic hypoxia under the stabilization of perfusion pressure in carotid sinuses
A82-38161

The cortical regulation of human motion --- Russian book
A82-39283

Mechanisms of the effects of weightlessness on the motor system of man
A82-40752

**EGGS**
Clinostat exposure and symmetrization of frog eggs
A82-40757

**EJECTION INJURIES**
Spinal stresses in flight
N82-29873

Theories of the pathogenesis of fractures of the spine
N82-29874

Ejection of pilots from combat aircraft
N82-29877

**EJECTION SEATS**
Simulation of the motion of the center of mass of an occupant under ejection accelerations
[AD-A113806] N82-28989

**EJECTION TRAINING**
Accidents in centrifuges and experiments (ejection seat training towers, sleds)
N82-29881

**ELECTRIC DISCHARGES**
Formation of cyanate and carbamyl phosphate by electric discharges of model primitive gas
A82-38116

**ELECTRIC STIMULI**
Alterations in heart work rhythm during hyperactivation of the anterior amygdaline nucleus
A82-38545

The cholinergic nature of hypothalamo-cortical excitatory influence
A82-38551

The gradualness of the reaction of the pituitary-adrenocortical system to activating and inhibiting signals
A82-40315

The effect of the electrical stimulation of afferent pathways on neurons in septal slices
A82-40469

Dynamics of the brain electric activity in patients with cerebral insults under the effect of muscle stimulation with sinusoidal modulated currents
A82-41477

Electrical stimulation of the urinary bladder following radical surgery for cancer of the rectum
A82-41479

**ELECTROANESTHESIA**
The use of electrovacuum therapy in certain diseases of the peripheral nervous system
A82-41470

**ELECTROCARDIOGRAPHY**
On the observability of electrical cardiac sources --- Thesis
A82-41450

An evaluation of the informativeness of ECG parameters in diagnosing a myocardial infarction of the back wall of the left ventricle
A82-41493

**ELECTROCONDUCTIVITY**
The mechanism of the microwave effect on the conductivity of bilayer lipid membranes
A82-38587

The conductivity of model protein-lipid membranes
A82-38604

**ELECTRODES**
Microelectronic electrode probe for testing brain electrical activity
N82-28982

**ELECTRODIALYSIS**
The utilization of macromolecules in blood purification systems
[NRC/CNR-TT-2021] N82-29864

**ELECTROENCEPHALOGRAPHY**
A study of the mechanism governing the different types of behavior exhibited by the spiral excitation wave period in auricle and ventricle
A82-38597

The cortical regulation of human motion --- Russian book
A82-39283

Intrahemispherical relations of EEG slow-wave components in patients with local brain lesions
A82-40472

Characteristics of night sleep disorders in the case of myocardial infarction according to polygraphic data
A82-41491

**ELECTROLYTE METABOLISM**
Rhythms of electrolytes and hydroxyproline excretion in urine of rats after three weeks of weightlessness - Biosatellite Cosmos-1129
A82-40693

Biochemical aspects of the mechanism by which cholinolytics affect the brain
A82-41460

Role of hormonal compounds in regulation of electrolyte metabolism in the presence of emotional stress
N82-28952

**ELECTROMAGNETIC ABSORPTION**
Absorption characteristics of prolate spheroidal models exposed to the near fields of electrically small apertures
A82-38802

**ELECTROMAGNETIC FIELDS**
Hygienic evaluation of an 8-mm-wave electromagnetic field
A82-41462

Effects of low-intensity electromagnetic fields on human and animal erythrocytes
N82-28974

**ELECTROMETERS**
Electrometric investigation of human gustatory analyzer under normal conditions and in simulated weightlessness
N82-29859

**ELECTROMYOGRAPHY**
The physiological mechanisms of the arousal response in animals under conditions of hypobiosis
A82-40311

**ELECTRON MICROSCOPY**
Alterations in the labyrinth receptors after laser irradiation as detected by electron microscopy
A82-39244

**ELECTRONYSTAGMOGRAPHY**
Nystagmometry of optovestibular interaction
N82-28962

ELECTROPHORESIS
Separation of bone marrow cells in mice by free-flow electrophoresis
A82-38536
Effect of immobilization on the nonhistone protein composition in different types of skeletal muscles
A82-40711
Optimization of medicinal electrophoresis --- enhancement of cutaneous penetration
A82-41472
The use of electrovacuum therapy in certain diseases of the peripheral nervous system
A82-41478

ELECTROPHYSIOLOGY
The role of central gray matter in the activation of antipain systems of the rat's brain under stress
A82-38547
Changes in the human visually evoked cortical potential in response to chromatic modulation of a sinusoidal grating
A82-38795
USSR report. Life sciences biomedical and behavioral sciences, no. 16 [JPRS-80789]
N82-28977
Microelectronic electrode probe for testing brain electrical activity
N82-28982

ELECTRORETINOGRAPHY
Field sensitivity of the 'red' mechanism derived from primate local electroretinogram
A82-39431

ELECTROSTRICTION
A possible explanation for the fluctuations in reflectivity exhibited by bilayer liped membranes excited during electrostriction
A82-38602

EMBRYOS
Embryonic development during chronic acceleration
A82-40755

EMERGENCIES
The nature and rate of occurrence of medical emergencies on board Air France aircraft
A82-38841
Medical emergencies in flight - Pathogenic aspects
A82-38843
Medical emergencies on board airliners - Procedures in the absence of a doctor
A82-38845

EMERGENCY LIFE SUSTAINING SYSTEMS
USSR report. Space biology and aerospace medicine, volume 16, no. 3, May - June 1982 [JPRS-81197]
N82-28949
Metabolic distinctions related to intake of low-calorie 'survival' rations consisting only of readily assimilated carbohydrates
N82-28953

EMOTIONAL FACTORS
The effect of repeated episodes of emotional stress on heart activity and the content of monoamines in the heart
A82-38163
Ultrastructural changes in the brains of rats subjected to acute emotional stress
A82-38558
A factor of resistance to emotional stress in the brain of rats
A82-40452
The correlations of the central nervous system and thyroid functions in conditions of chronic emotional stress
A82-40453
Statistical analysis of neuronal impulse activity in the diencephalon during immobilization-produced emotional stress in rats
A82-40467
Functional condition of the heart mitochondria in the dynamics of emotional and pain stress
A82-41500
USSR report. Space biology and aerospace medicine, volume 16, no. 3, May - June 1982 [JPRS-81197]
N82-28949
Role of hormonal compounds in regulation of electrolyte metabolism in the presence of emotional stress
N82-28952
Slow waves of cardiac rhythm in healthy man under different conditions
N82-28955

ENDOCRINE SYSTEMS
Delayed effects of the internal irradiation of endocrine system in female rats
A82-38582
Results of morphological investigations aboard biosatellites Cosmos
A82-40697

ENDOLYMPH
Otoconial complexes as ion reservoirs in endolymph
A82-40674

ENDOTHELIUM
The response of the venous walls in the extremities to a disturbed venous outflow
A82-40493

ENERGY TRANSFER
The role of the energy transport system in changes of the contractile function of the heart in the case of the measured limitation of coronary blood flow
A82-41499
Orientation and energy-transfer studies on chlorophyll in the photosynthetic membrane [DE82-010180]
N82-29852

ENTOMOLOGY
Cultivation of insects as new branch of entomology - industrial entomology
N82-28980

ENVIRONMENT EFFECTS
Mechanical chemical and bio-hazards --- space-probe related planet and earth contaminations
A82-39159

ENVIRONMENT SIMULATORS
Research opportunities and limitations of protracted hypogravity simulations for plant gravitational physiology
A82-40653

ENVIRONMENTAL ENGINEERING
An industrial hygiene evaluation of aircraft refueling inside closed aircraft shelters at elevated ambient temperatures [AD-A114396]
N82-28994

ENVIRONMENTAL LABORATORIES
Cardiovascular responses of the chronically instrumented monkey during simulated space flight
A82-40670

ENVIRONMENTAL MONITORING
USSR report. Life sciences biomedical and behavioral sciences, no. 16 [JPRS-80789]
N82-28977
Microorganisms used to monitor environmental pollution
N82-28978

ENZYME ACTIVITY
State of the lactate dehydrogenase reaction in the muscular tissue of irradiated animals
A82-38158
Enzymes that detoxify active forms of oxygen and lipoperoxide in experimental ischemia and myocardial infarction
A82-38540
Evidence of an immune mechanism of enzyme-hemostasis regulation
A82-38552
The absence of the magnetic-field effect on Na/+/, K/+/-dependent ATPase
A82-38591
Specificity of action of monovalent cations on the ATPase activity of myosin HMM-S-1
A82-38594
The effect of urea and heat on the activity of lactate dehydrogenase and glucose 6-phosphate dehydrogenase
A82-38612
The effect of monovalent cations on the ATPase activity and superprecipitation of actomyosin
A82-38615
The histochemistry of enzymes in specific skin glands of the European hedgehog /Erinaceus europeaus/ during hibernation
A82-39792
ATPase activity and the potassium ion permeability of erythrocyte membranes in the presence of serotonin and radiation
A82-40479
Changes in neurons of the spinal cord and spinal ganglia under hypokinesia /neuromorphological and histochemical investigation/
A82-40494

Stress in space flight - Metabolic aspects A82-40696

Effect of prolonged weightlessness on certain aspects of brain metabolism of the rat A82-40699

Na/+/-K/+/ dependent ATP-ase modifications of skeletal muscle and myocardium of hypokinetic rats A82-40707

Effect of immobilization on the ATPase activities and Ca-uptake of sarcoplasmic reticulum in different types of muscles A82-40708

Immobilization effects upon aerobic and anaerobic metabolism of the skeletal muscles A82-40712

Some of biochemical parameters in rat brain during +Gz acceleration A82-40717

Protection from O2 toxicity by preexposure to hypoxia - Lung antioxidant enzyme role A82-41217

Catecholamines and enzymes of their metabolism in rat myocardium after flight aboard the Cosmos-936 biosatellite N82-28966

**ENZYMES**

Evolution of major metabolic innovations in the Precambrian A82-38121

Similar genes for a mitochondrial ATPase subunit in the nuclear and mitochondrial genomes of Neurospora crassa A82-38698

Monograph on new direction of chemistry and biology of peptide and protein bioregulators reviewed N82-28979

**ENZYMOLOGY**

Histoenzymological changes in experimental animals exposed to variable noise A82-38577

**EPIDERMIS**

Cytoarchitectronics of the epidermis and the epidermal proliferative units /EPU/ A82-40491

**EPILEPSY**

The influence of a constant magnetic field on the epileptogenic foci in the hippocampus of rabbits A82-40466

**EPINEPHRINE**

Two phases of the inotropic effect of adrenaline - The calcium dependence A82-38549

The effect of hyperactivation of the anterior amygdaloid nucleus on heart activity during states of altered reactivity A82-40454

**EPITHELIUM**

Nonthermal effect of nanosecond microwave pulses on the transepithelial transport of sodium ions A82-38586

Cytoarchitectronics of the epidermis and the epidermal proliferative units /EPU/ A82-40491

Gravity sensing system formation in tadpoles /Rana temporaria/ developed in weightlessness simulation A82-40759

Mitotic activity and volume of epithelial cell nuclei of rat cornea following spaceflights in biosatellites N82-28965

**ERGOMETERS**

The significance of the bicycle ergometer test for evaluating the work capacity in patients with hypertension A82-40477

The use of biochemical monitoring methods in the ergometry of patients with atherosclerosis A82-41494

**ERYTHROCYTES**

The synthesis of nuclear and mitochondrial DNA and RNA, and the synthesis of heme and globin in rabbit bone marrow during the stimulation of erythropoiesis A82-38169

A measurement of the size distribution of lipoproteins in the plasma of human blood A82-38603

The incorporation of an erythrocyte membrane into planar bilayer lipid membranes A82-38606

ATPase activity and the potassium ion permeability of erythrocyte membranes in the presence of serotonin and radiation A82-40479

The effect of products erythrocyte destruction on immunological processes A82-40500

The synthesis of nuclear and mitochondrial DNA and RNA, and the synthesis of heme and globin in rabbit bone marrow during the stimulation of erythropoiesis A82-40501

Effect of induced erythrocythemia on hypoxia tolerance during physical exercise A82-41218

Methodological aspects of testing erythrocyte balance by counting incubated reticulocytes N82-28972

Effects of low-intensity electromagnetic fields on human and animal erythrocytes N82-28974

**ESTERS**

Formation of the thioester, N-acetyl, S-lactoylcysteine, by reaction of N-acetylcysteine with pyruvaldehyde in aqueous solution --- in prebiotic evolution A82-41200

**ETHYL ALCOHOL**

Alcohol-induced physiological displacements and their effects on flight related functions [AD-A114919] N82-29867

**ETIOLOGY**

The conditions attending muscular strain in work involving only a few types of movements A82-38569

Aetiology and pathogenesis --- traumatic lesions of the spine N82-29875

**EUROPEAN SPACE AGENCY**

Selection and training of European astronauts A82-39507

**EVAPORATIVE COOLING**

Effect of heating rate on evaporative heat loss in the microwave-exposed mouse A82-41208

**EVAPORATORS**

OTEC biofouling, corrosion, and materials study from a moored platform at Punta Tuna, Puerto Rico [DE82-007037] N82-28947

**EVOKED RESPONSE (PSYCHOPHYSIOLOGY)**

Changes in the human visually evoked cortical potential in response to chromatic modulation of a sinusoidal grating A82-38795

Gravity only dependent receptor field of the vestibular sensors Its significance in orbital flight A82-40770

**EXAMINATION**

Clinical examination of spinal injuries N82-29882

**EXCRETION**

Rhythms of electrolytes and hydroxyproline excretion in urine of rats after three weeks of weightlessness - Biosatellite Cosmos-1129 A82-40693

Tritium oxide distribution and excretion kinetics in the exposure of animals to noise A82-41463

**EXERCISE PHYSIOLOGY**

Circadian changes in resting heart rate and body temperature, maximal oxygen consumption and perceived exertion A82-38268

The changes in the concentration of free amino acids in muscles during exercise A82-40314

Effect of warm-up on left ventricular response to sudden strenuous exercise A82-41212

Metabolic and cardiovascular adaptations in trained hypophysectomized rats A82-41215

Effect of induced erythrocythemia on hypoxia tolerance during physical exercise A82-41218

Acid-base, metabolic, and ventilatory responses to repeated bouts of exercise
A82-41219

Output and efficiency of the heart in young athletes as a function of the type of athletic training
A82-41497

Problems in the metrology of the training load of ski racers
A82-41502

Optimizing conditions for athletic activity with an allowance made for neurodynamic peculiarities /using bicycle sports as a model/
A82-41503

Physiological studies of heat stress acclimation during a specific exercise regimen
[AD-A111897] N82-28991

Hypo-and hyperglycemia in rats: Effects on the ability to work in the heat
[AD-A111711] N82-29849

Determination of maximal aerobic power during upper body exercise
[AD-A111712] N82-29866

**EXOBIOLOGY**

Mechanical chemical and bio-hazards --- space-probe related planet and earth contaminations
A82-39159

Lockheed involvement in Shuttle life sciences flight experiments
A82-39541

Effects of space flight factors and artificial gravity on deoxyribonucleoprotein in lymphoid organs of rats
A82-40723

Changes of periodic protoplasmic movements on the fast clinostat
A82-40725

Biomedical research publications: 1980 - 1982
[NASA-CR-3587] N82-29848

Medical-biological investigations under space conditions: Present and future significance
N82-30275

Twenty years of manned space flight from the viewpoint of space medicine
N82-30276

**EXPERIMENTAL DESIGN**

Selecting optimal conditions for heart conservation in weak aldehyde solutions by using mathematical methods of experimental design
A82-38534

**EXPLORATION**

USSR report. Life sciences biomedical and behavioral sciences, no. 16
[JPRS-80789] N82-28977

Orienting and exploratory behavior of gray rat in open field. Zoopsychological analysis
N82-28981

**EXPOSURE**

Leucine and urea metabolism in acute human cold exposure
A82-41211

Long-term and progressive changes in Rhesus spectral sensitivity after low-level coherent light (514nm exposure) --- effects of laser exposure on visual function
[AD-A111639] N82-28946

An industrial hygiene evaluation of aircraft refueling inside closed aircraft shelters at elevated ambient temperatures
[AD-A114396] N82-28994

What is ALARA
[DE81-030814] N82-28995

The consequences of hydrazine exposition and its treatment
[MBL-1981-2] N82-28996

**EXTRAVEHICULAR ACTIVITY**

Twenty years of manned space flight from the viewpoint of space medicine
N82-30276

**EYE (ANATOMY)**

Model of the accommodative mechanism in the human eye
A82-39432

**EYE MOVEMENTS**

Current problems concerning the vestibulo-ocular interaction
A82-39416

Retinal location and visual localization during pursuit eye movement
A82-39436

A procedure for the analysis of nystagmus and other eye movements
[AD-A112603] N82-28987

**EYE PROTECTION**

Cold weather goggles. 2: Performance evaluation
[AD-A114067] N82-29008

## F

**FACE (ANATOMY)**

Respiratory movements of the facial muscles and respiratory resistance
A82-40456

**FEEDBACK CONTROL**

Control of a direct-drive arm
[AD-A114969] N82-29903

**FEMALES**

Twenty years of manned space flight from the viewpoint of space medicine
N82-30276

**FIBRINOGEN**

Features of microcirculatory hemostasis and of the clotting and fibrinolytic properties of blood and the activity of the antioxidant system in people of various ABO blood groups
A82-38164

**FIGHTER AIRCRAFT**

The cervical column of pilots of combat aircraft
N82-29888

**FILAMENTS**

F-actin is a helix with a random variable twist
A82-38694

**FIRST AID**

Diagnosis and organization of the therapy of patients with disorders of blood circulation in the brain
A82-38554

Medical emergencies on board an airliner - Procedures when a doctor is on board
A82-38844

Medical emergencies on board airliners - Procedures in the absence of a doctor
A82-38845

**FLIGHT CREWS**

Diagnostics of disturbances of heart rhythm and conductance and their professional evaluation in flight personnel
A82-40309

Development of a methodology for assessing aircrew workloads
[AD-A114364] N82-29010

Aircraft and crew scheduling during airlift operations
[AD-A114114] N82-29011

**FLIGHT FITNESS**

Standards of physical condition for private pilots of aircraft and gliders
A82-38847

Aging and visual function of military pilots - A review
A82-40435

**FLIGHT SAFETY**

Human factor and flight safety
A82-40885

**FLIGHT SIMULATORS**

Visual Technology Research Simulator (VTRS) human performance research: Phase 3
[AD-A112475] N82-28988

**FLIGHT STRESS (BIOLOGY)**

Physiological stresses linked to flight on airliners
A82-38842

Medical emergencies in flight - Pathogenic aspects
A82-38843

Aerobatics in light aircraft - Sensations and stresses experienced by the pilot
A82-38848

Medico-physiological aspects of stunt-flying
A82-38849

Physiological stresses in flying a sailplane
A82-38850

In-flight incapacitation and pathology for the light aircraft stunt-flyer
A82-38851

Body composition of rats flown aboard Cosmos-1129
A82-40695

Reduction in renal artery blood flow impedance during upright tilt in man
A82-40735

Spinal stresses in flight
N82-29873

Fractures of the spine in flight
N82-29880

The spine and fitness for flight
N82-29889

FLIGHT TRAINING
Unconventional visual displays for flight training
[AD-A111392] N82-28999
Potential applications of computer-assisted instruction to P-3 aircrew training
[AD-A113491] N82-29893

FLOW DISTRIBUTION
The effect of G sub z acceleration on pulmonary perfusion in the miniature swine
A82-40681

FLOW RESISTANCE
Reduction in renal artery blood flow impedance during upright tilt in man
A82-40735

FLOW VELOCITY
The influence of the speed of blood flow in the carotid artery on the hematocrit of the blood being delivered to the brain
A82-38550
The speed of blood flow in athletes subjected to the combined action of a training regime and high-altitude climatic factors
A82-41505

FLUCTUATION THEORY
Attributing macroscopic fluctuations in aqueous solutions of proteins and other substances to the class of flicker noise
A82-38592

FLUID FLOW
Gravity sensing, polar transport and cytoplasmic streaming in plant cells
A82-40667

FLUORINE ORGANIC COMPOUNDS
Cytogenetic effect of 5-fluoro-2desoxy uridine in the G2 phase on intact and X-irradiated crepis capillaris L cells
A82-40461

FLYING PERSONNEL
Evaluation of vestibular function in flight personnel with chronic diseases during stable remission
A82-38179
Neutron radiation dosimetry in high altitude flight personnel
A82-40444

FOKKER-PLANCK EQUATION
Conformational dynamics of proteins and simplest molecular 'machines'
A82-38610

FOOD PROCESSING
Evaluation of engineering foods for closed Ecological Life Support System (CELSS)
[NASA-CR-167626] N82-29003
Evaluation of engineering foods for Controlled Ecological Life Support Systems (CELSS)
[NASA-CR-166359] N82-29006

FORMALDEHYDE
Acceleration of HCN oligomerization by formaldehyde and related compounds - Implications for prebiotic syntheses
A82-41199

FOULING
OTEC biofouling, corrosion, and materials study from a moored platform at Punta Tuna, Puerto Rico
[DE82-007037] N82-28947
OTEC-1 power system test program: Biofouling and corrosion monitoring on OTEC-1
[DE82-007035] N82-29851

FREE FALL
Ultra-high impact free-fall survival
A82-40684
Limits of human tolerance for impacts in free fall
N82-29879

FREON
Superior heat-transfer fluids for solar heating and cooling applications. Results of acute oral toxicity determinations
[DE82-003071] N82-29869

FREQUENCY DISTRIBUTION
Attributing macroscopic fluctuations in aqueous solutions of proteins and other substances to the class of flicker noise
A82-38592

FROGS
Clinostat exposure and symmetrization of frog eggs
A82-40757

FUNGI
Mycelial fungi, isolated from the ice sheet of the central Antarctic
A82-39428

G

GALVANIC SKIN RESPONSE
Phase analysis of dynamics of galvanic skin responses in man
N82-29861

GANGLIA
The impulse activity of neurons in the nodose ganglion during acute hemodynamic and respiratory disorders
A82-38546

GARMENTS
Thermal garment
[NASA-CASE-MSC-03694-1] N82-29002

GAS COMPOSITION
Prostoglandins and regulation of cerebral circulation under conditions of the altered gaseous composition of the blood
A82-38561
The use of hyperoxic mixtures for the diagnosis of latent disturbances in the external respiration system
A82-40457
Domestic swine in physiological research. 3: Blood gas and acid-base values of arterial and venous blood from young anesthetized pigs maintained under steady-state ventilatory conditions
[AD-A111834] N82-28945

GAS DYNAMICS
A nonlinear model combining pulmonary mechanics and gas concentration dynamics
A82-41230

GAS EVOLUTION
Is the CH4, H2 and CO venting from submarine hydrothermal systems produced by thermophilic bacteria
A82-39422

GAS EXCHANGE
The effect of helium on gas exchange and tissue respiration
A82-38165
The use of hyperoxic mixtures for the diagnosis of latent disturbances in the external respiration system
A82-40457
Human external respiration and gas exchange in acute period of adaptation to immersion in water
N82-28959

GAS MIXTURES
Formation of cyanate and carbamyl phosphate by electric discharges of model primitive gas
A82-38116
Study of the radioprotective effectiveness of an hypoxic gas mixture during combined radiation and thermal injuries to rats
A82-38159
The use of hyperoxic mixtures for the diagnosis of latent disturbances in the external respiration system
A82-40457
A respirator for training in conditions of changeable respiratory mixture
A82-40485

GASTROINTESTINAL SYSTEM
Sword and scalpel --- laser surgery
A82-38564
The diagnostic value of phonoenterography in acute renal failure
A82-40478
Space gastroenterology --- Russian book
A82-40643

GENETIC CODE
Ambiguity and the evolution of the genetic code
A82-38120

Molecular basis for the genetic code A82-41195

Evolution of early mechanisms of translation of genetic information into polypeptides A82-41324

GENETICS

Similar genes for a mitochondrial ATPase subunit in the nuclear and mitochondrial genomes of Neurospora crassa A82-38698

Natural and social determination of human psyche N82-28983

GEOMAGNETISM

Synchronization of cardiovascular accidents with physical clocks N82-28956

GEOTROPISM

Interaction of gravitic and mechanical stimuli in tropic and nastic responses in beans A82-40665

Initiation of nutation in sunflower hypocotyls A82-40724

The effect of gravity on the distribution of plant growth substances in plant tissues A82-40746

Gravity perception and asymmetric growth in plants - A model derived from the grass pulvinus A82-40775

GLACIERS

The microflora of the central Antarctica glacier and control methods for the sterile isolation of an ice core for microbiological analyses A82-39430

GLANDS (ANATOMY)

The histochemistry of enzymes in specific skin glands of the European hedgehog /Erinaceus europeaus/ during hibernation A82-39792

In vivo and in vitro characteristics of eccrine sweating in patas and rhesus monkeys A82-41214

GLIDERS

Physiological stresses in flying a sailplane A82-38850

GLOBULINS

An investigation of the conformational stability of immunoglobulin G in the monolayers at the phase boundary between aqueous solutions of NaCl and octane A82-38607

GLUCOSE

Testosterone enhances C-14 2-deoxyglucose uptake by striated muscle --- sex hormones and muscle [NASA-CR-169101] N82-28986

Hypo-and hyperglycemia in rats: Effects on the ability to work in the heat [AD-A111711] N82-29849

GLUCOSIDES

Condition of rats connective tissue during long-term hypokinesia and in recovery period N82-28969

GOGGLES

Cold weather goggles. 2: Performance evaluation [AD-A114067] N82-29008

GRASSES

Gravity perception and asymmetric growth in plants - A model derived from the grass pulvinus A82-40775

GRATINGS

Contrast influence on perceived orientation --- of gratings obtained by dichoptic fusion of two monocular images A82-38796

GRAVIRECEPTORS

Gravity sensing, polar transport and cytoplasmic streaming in plant cells A82-40667

Receptors signaling gravity orientation in an insect A82-40668

Otoconial complexes as ion reservoirs in endolymph A82-40674

Gravity sensing system formation in tadpoles /Rana temporaria/ developed in weightlessness simulation A82-40759

Gravity only dependent receptor field of the vestibular sensors Its significance in orbital flight A82-40770

GRAVITATIONAL EFFECTS

Gravity and the tilt aftereffect --- comparison between monocular, binocular and interocular exposures A82-39440

Lockheed involvement in Shuttle life sciences flight experiments A82-39541

Rapid perceptual adaptation to high gravitoinertial force levels Evidence for context-specific adaptation A82-40436

Proceedings of a Meeting of the IUPS Commission on Gravitational Physiology --- Book A82-40649

Gravitational scale effects --- moving organism performance as function of gravity and size A82-40650

Study of high-g effects in animals A82-40651

Methodological aspects of future cardiovascular research in space A82-40652

Research opportunities and limitations of protracted hypogravity simulations for plant gravitational physiology A82-40653

Human lymphocyte activation is depressed at low-g and enhanced at high-g A82-40658

Interaction of gravitic and mechanical stimuli in tropic and nastic responses in beans A82-40665

Gravity sensing, polar transport and cytoplasmic streaming in plant cells A82-40667

Gravity, metabolic rate and body size of mammals A82-40678

Simulated gravitational field influences on the aging process A82-40685

International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980, Proceedings A82-40686

Aspects of cardiovascular adaptation to gravitational stresses A82-40687

Artificial gravity in space flight A82-40691

Effect of spaceflight on lymphocyte stimulation A82-40700

Variability of physiological properties of rat skeletal muscles at different gravity levels A82-40702

Gravitational adaptation of animals A82-40716

Alterations in heat loss and heat production mechanisms in rat exposed to hypergravic fields A82-40718

Labyrinth plugging as a model of suspended vestibular sensory input A82-40721

Initiation of nutation in sunflower hypocotyls A82-40724

Relation between physiological effects of gravitational forces and that of magnetic forces A82-40730

Postural control related to the different tilting body positions A82-40732

International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, September 29-October 2, 1981, Proceedings A82-40734

Reduction in renal artery blood flow impedance during upright tilt in man A82-40735

Root cell gravireaction - Hormone interaction A82-40745

The effect of gravity on the distribution of plant growth substances in plant tissues A82-40746

Results of biosatellite studies of gravity-dependent changes in the musculo-skeletal system of mammals A82-40751

Cellular aspects of gravitational biology A82-40754

Clinostat exposure and symmetrization of frog eggs
A82-40757

The intracellular responses of frog eggs to novel orientations to gravity
A82-40758

Short term gravity effects on volume homeostasis in man Assessment of transvascular fluid shifts after graded tilt
A82-40760

Cardiac and cerebral vascular adaptation to gravitational stresses in man
A82-40765

Gravity only dependent receptor field of the vestibular sensors Its significance in orbital flight
A82-40770

Relation between physiological effects of gravitational forces and that of magnetic forces. II
A82-40771

Core temperature and brainstem auditory evoked potentials as complimentary noninvasive measures of central neural function during exposure to hypergravic fields
A82-40772

Response of cultured cells to hyper- and hypogravity
A82-40773

Gravity perception and asymmetric growth in plants - A model derived from the grass pulvinus
A82-40775

Endurance of +Gz G forces by middle-aged people before and after 7-day immersion
N82-28958

GROUND CREWS
Image orientation for RPV ground station crew
A82-39743

GROUND STATIONS
Image orientation for RPV ground station crew
A82-39743

Human factors of an RPV ground control station
A82-39749

GROUND SUPPORT SYSTEMS
Medical emergencies on board airliners - Ground management
A82-38846

GROWTH
Bone growth and composition in weanling and mature rats exposed to chronic centrifugation
A82-40669

Bone growth in the rat mandible during space flight
A82-40705

The effect of gravity on the distribution of plant growth substances in plant tissues
A82-40746

Evidence for arrested bone formation during spaceflight
A82-40767

Response of cultured cells to hyper- and hypogravity
A82-40773

H

HAND (ANATOMY)
The effect of certain characteristics of work motions on the tolerance of hand muscles to static exertions
A82-38568

The conditions attending muscular strain in work involving only a few types of movements
A82-38569

Workshop on the Design and Control of Dexterous Hands
[AD-A114973]
N82-29901

HAZARDS
Mechanical chemical and bio-hazards --- space-probe related planet and earth contaminations
A82-39159

HEAD MOVEMENT
Dynamics of subjective discomfort in motion sickness as measured with a magnitude estimation method
A82-40438

Gravity only dependent receptor field of the vestibular sensors Its significance in orbital flight
A82-40770

HEALTH
An industrial hygiene evaluation of aircraft refueling inside closed aircraft shelters at elevated ambient temperatures
[AD-A114396]
N82-28994

Airline pilot age, health, and performance: Scientific and medical considerations
[PB82-161506]
N82-29895

HEARING
Effect of caloric stimulation of vestibular system on hearing
N82-28963

HEART
The regulation of calcium exchange in the cells of different regions of the warm-blooded animal heart
A82-40313

On the observability of electrical cardiac sources --- Thesis
A82-41450

HEART DISEASES
The protective role of the forebrain with respect to pathological cardiac reflexes
A82-38543

The impulse activity of neurons in the nodose ganglion during acute hemodynamic and respiratory disorders
A82-38546

The detection of premorbid states and cardiovascular diseases during medical examinations of seamen
A82-38553

A study of temporary absences from work arising from disorders of the circulatory system
A82-38555

Diagnostics of disturbances of heart rhythm and conductance and their professional evaluation in flight personnel
A82-40309

The significance of postextrasystolic potentiation in the preoperative assessment of the reversal of left-ventricle asynergy in patients with ischemic heart disease
A82-41483

A modification of Soums' method of selective coronarography
A82-41485

The rate of coronary perfusion as a factor determining the extent to which the contractile function of the heart is decreased in energy formation disorders
A82-41489

The achievements of investigations carried out in the years 1976-1980 on the problem of insufficient blood circulation and heart rhythm disturbances
A82-41501

Synchronization of cardiovascular accidents with physical clocks
N82-28956

HEART FUNCTION
The effect of repeated episodes of emotional stress on heart activity and the content of monoamines in the heart
A82-38163

The effect of hypokinesia on the resistance of the heart to hypoxia
A82-38170

Alterations in heart work rhythm during hyperactivation of the anterior amygdaline nucleus
A82-38545

Morphological and functional factors contributing to a hypertonic heart
A82-38557

A study of the mechanism governing the different types of behavior exhibited by the spiral excitation wave period in auricle and ventricle
A82-38597

The effect of inotropic factors on the postexercise characteristics of the heart
A82-40451

Prevention of heart function abnormalities during reoxygenation after ischemia by adaptation to altitude hypoxia
A82-40455

The effect of hypokinesia on the resistance of the heart to hypoxia
A82-40502

Effects of lower body negative pressure on the reliability of cardiovascular system using X-ray kymograms
A82-40728
The amplitude of the R wave and the contractile function of the left ventricle in patients with ischemic heart disease
A82-41486
The effect of diethylamine analog of ethmozine on the functional condition of myocardium /Clinical and experimental study/
A82-41488
A comparison of echo- and kinetocardiographic indicators of the myocardial contractility of the left ventricle in patients suffering from various forms of ischemic heart disease
A82-41496
Output and efficiency of the heart in young athletes as a function of the type of athletic training
A82-41497
The role of the energy transport system in changes of the contractile function of the heart in the case of the measured limitation of coronary blood flow
A82-41499
Functional condition of the heart mitochondria in the dynamics of emotional and pain stress
A82-41500

HEART IMPLANTATION
Selecting optimal conditions for heart conservation in weak aldehyde solutions by using mathematical methods of experimental design
A82-38534

HEART RATE
Circadian changes in resting heart rate and body temperature, maximal oxygen consumption and perceived exertion
A82-38268
Two phases of the inotropic effect of adrenaline - The calcium dependence
A82-38549
The effect of hyperactivation of the anterior amygdaloid nucleus on heart activity during states of altered reactivity
A82-40454
Vegetative reactions to the administration of atropine and propranolol in rats that exhibit different types of behavior
A82-40463
Increasing the efficiency of running on the basis of learning algorithms and information tools
A82-40488
Instantaneous stroke volume in man during lower body negative pressure /LBNP/
A82-40683
Ventilatory and heart rate responses to hypoxia and hypercapnia during sleep in adults
A82-41206
Slow waves of cardiac rhythm in healthy man under different conditions
N82-28955

HEAT ACCLIMATIZATION
The effectiveness of perspiration in a hot environment
A82-38178
Physiological studies of heat stress acclimation during a specific exercise regimen
[AD-A111897] N82-28991
Acclimatization to dry heat: Active men versus active women
[AD-A111708] N82-28993

HEAT EXCHANGERS
OTEC biofouling, corrosion, and materials study from a moored platform at Punta Tuna, Puerto Rico
[DE82-007037] N82-28947
Technical assessment of the prevention of micro-fouling on OTEC heat-transfer surfaces through the use of ultraviolet radiation
[DE82-005489] N82-29850

HEAT FLUX
Effect of heating rate on evaporative heat loss in the microwave-exposed mouse
A82-41208

HEAT MEASUREMENT
Microcalorimetry in biomedical investigations
A82-41471

HEAT TOLERANCE
Task categorization and the limits of human performance in extreme heat
A82-40439
Acclimatization to dry heat: Active men versus active women
[AD-A111708] N82-28993
Hypo-and hyperglycemia in rats: Effects on the ability to work in the heat
[AD-A111711] N82-29849

HEAT TRANSFER
OTEC-1 power system test program: Biofouling and corrosion monitoring on OTEC-1
[DE82-007035] N82-29851
Superior heat-transfer fluids for solar heating and cooling applications. Results of acute oral toxicity determinations
[DE82-003071] N82-29869

HELICOPTERS
Vibration and assessment of this flight factor by pilots
N82-28976
Helicopter accidents
N82-29876
Backache in helicopter pilots
N82-29887

HELIUM
The effect of helium on gas exchange and tissue respiration
A82-38165

HEMATOCRIT
The influence of the speed of blood flow in the carotid artery on the hematocrit of the blood being delivered to the brain
A82-38550

HEMATOCRIT RATIO
Methodological aspects of testing erythrocyte balance by counting incubated reticulocytes
N82-28972
Effects of low-intensity electromagnetic fields on human and animal erythrocytes
N82-28974

HEMATOPOIETIC SYSTEM
Changes in the relations of pyrimidine blocks in DNA of the hematopoietic system immediately following gamma irradiation of the animal
A82-38152
Early reaction of the hemopoietic organs depending on the condition of the peripheral M-cholinergic systems
A82-38168
The early reaction of the hemopoietic organs to stress, depending on the condition of the peripheral M-cholinergic systems
A82-40499

HEMOCYTES
Separation of bone marrow cells in mice by free-flow electrophoresis
A82-38536

HEMODYNAMIC RESPONSES
The characteristics of hemodynamic shifts under physical stress at mountain elevations
A82-38166
The impulse activity of neurons in the nodose ganglion during acute hemodynamic and respiratory disorders
A82-38546
Effect of the Circutone seat on hemodynamic, subjective, and thermal responses to prolonged sitting
A82-40442
The effect of inotropic factors on the postexercise characteristics of the heart
A82-40451
The response of the venous walls in the extremities to a disturbed venous outflow
A82-40493
Effects of a weightlessness simulation on the velocity curves measured by Doppler sonography at the level of the carotid system
A82-40656
Changes in blood volume and response to vaso-active drugs in horizontally casted primates
A82-40657
Cardiovascular responses to isometric exercise during simulated zero gravity
A82-40662

Cardiovascular responses of the chronically instrumented monkey during simulated space flight
A82-40670

Effect of baroreceptor denervation on +G sub z tolerance in dogs
A82-40675

Instantaneous stroke volume in man during lower body negative pressure /LBNP/
A82-40683

Aspects of cardiovascular adaptation to gravitational stresses
A82-40687

Relations between respiratory and circulatory control during gravitational load in man
A82-40714

Aortic and tibial bloodflow response to lower body negative pressure /LBNP/
A82-40727

Effect of warm-up on left ventricular response to sudden strenuous exercise
A82-41212

Metabolic and cardiovascular adaptations in trained hypophysectomized rats
A82-41215

The effect of the natural and climatic conditions of the Far North on the human cardiovascular system
A82-41466

The effect of ultrasound and phonophoresis of ganglioblockers on the cardiovascular system in patients with cervical osteochondrosis
A82-41476

The amplitude of the R wave and the contractile function of the left ventricle in patients with ischemic heart disease
A82-41486

The rate of coronary perfusion as a factor determining the extent to which the contractile function of the heart is decreased in energy formation disorders
A82-41489

The influence of psychological and somatic factors on the symptomatics of hypertension
A82-41492

**HEMODYNAMICS**

Changes in the hemodynamics and efferent activity in the renal nerve with acute hypoxic hypoxia under the stabilization of perfusion pressure in carotid sinuses
A82-38161

Baroreflex regulation of hemodynamics under orthostatic effects /an investigation with a mathematical model/
A82-38162

The dynamics of quantitative changes of RNA in rat cerebellum Purkinje cells in different functional states
A82-38538

Comparative study of systemic hemodynamics in normotensive and hypertensive rats
A82-38542

The microcirculatory bed of the lungs after an effect exerted on the right vagus nerve
A82-40497

The achievements of investigations carried out in the years 1976-1980 on the problem of insufficient blood circulation and heart rhythm disturbances
A82-41501

The speed of blood flow in athletes subjected to the combined action of a training regime and high-altitude climatic factors
A82-41505

Regulation of cerebral circulation in erect position
N82-28957

Reaction to diminished circulating blood volume in individuals who are susceptible and insusceptible to motion sickness (seasickness)
N82-28960

**HEMOGLOBIN**

The synthesis of nuclear and mitochondrial DNA and RNA, and the synthesis of heme and globin in rabbit bone marrow during the stimulation of erythropoiesis
A82-38169

The combined effect of carbon monoxide and total-body vibration on the organism
A82-40475

**HEMOLYSIS**

Effects of low-intensity electromagnetic fields on human and animal erythrocytes
N82-29974

**HEMOSTATICS**

Features of microcirculatory hemostasis and of the clotting and fibrinolytic properties of blood and the activity of the antioxidant system in people of various ABO blood groups
A82-38164

Evidence of an immune mechanism of enzyme-hemostasis regulation
A82-38552

**HEPARINS**

Immunological reactions to lipoproteins and heparin in young men with a hereditary tendency to atherosclerosis
A82-41487

**HEREDITY**

Immunological reactions to lipoproteins and heparin in young men with a hereditary tendency to atherosclerosis
A82-41487

**HEURISTIC METHODS**

An overview of expert systems --- artificial intelligence
[NASA-CR-169197] N82-29899

**HEXOSES**

Condition of rats connective tissue during long-term hypokinesia and in recovery period
N82-28969

**HIBERNATION**

The histochemistry of enzymes in specific skin glands of the European hedgehog /Erinaceus europeaus/ during hibernation
A82-39792

The physiological mechanisms of the arousal response in animals under conditions of hypobiosis
A82-40311

**HIGH ALTITUDE**

Neutron radiation dosimetry in high altitude flight personnel
A82-40444

Attenuation of radioprotective effects of acute hypoxia on animals adapted to high altitudes
N82-29855

Alcohol-induced physiological displacements and their effects on flight related functions
[AD-A114919] N82-29867

**HIGH ALTITUDE BREATHING**

Changes in the hemodynamics and efferent activity in the renal nerve with acute hypoxic hypoxia under the stabilization of perfusion pressure in carotid sinuses
A82-38161

Altitude-induced changes in plasma thyroxine, 3,5,3 prime-triiodothyronine, and thyrotropin in rats
A82-41207

**HIGH ALTITUDE ENVIRONMENTS**

The characteristics of hemodynamic shifts under physical stress at mountain elevations
A82-38166

Causes of high-altitude acute pulmonary edema
A82-38167

The accuracy of venturi masks at altitude
A82-40445

The cause of high-altitude acute pulmonary edema
A82-40498

The speed of blood flow in athletes subjected to the combined action of a training regime and high-altitude climatic factors
A82-41505

**HIGH GRAVITY ENVIRONMENTS**

Human lymphocyte activation is depressed at low-g and enhanced at high-g
A82-40658

Centrifuge high-g effects on temperature regulation in unanesthetized rats
A82-40671

Core temperature and brainstem auditory evoked potentials as complimentary noninvasive measures of central neural function during exposure to hypergravic fields
A82-40772

Response of cultured cells to hyper- and hypogravity
A82-40773

**HIGH PRESSURE**
Possible impairment of respiratory regulation under hyperbaric nitrogen narcosis
N82-28964

**HIGH TEMPERATURE ENVIRONMENTS**
The effectiveness of perspiration in a hot environment
A82-38178
Task categorization and the limits of human performance in extreme heat
A82-40439
Thermoregulation and the menstrual cycle
A82-40441
Effect of physical training in cool and hot environments on +Gz acceleration tolerance in women
A82-40664

**HIPPOCAMPUS**
The influence of a constant magnetic field on the epileptogenic foci in the hippocampus of rabbits
A82-40466
The effect of the electrical stimulation of afferent pathways on neurons in septal slices
A82-40469

**HISTAMINES**
Histamine in biochemistry and physiology --- Russian book
A82-39290

**HISTOCHEMICAL ANALYSIS**
Histoenzymological changes in experimental animals exposed to variable noise
A82-38577
Alterations of histochemical organization in the organ of Corti under the influence of chronic noise
A82-39242
The histochemistry of enzymes in specific skin glands of the European hedgehog /Erinaceus europeaus/ during hibernation
A82-39792
Changes in neurons of the spinal cord and spinal ganglia under hypokinesia /neuromorphological and histochemical investigation/
A82-40494
A hygienic evaluation of the biological effects of nonionizing microwave radiation
A82-41464

**HOMEOSTASIS**
Evidence of an immune mechanism of enzyme-hemostasis regulation
A82-38552
Systemic mechanisms of homeostasis
A82-39417
Short term gravity effects on volume homeostasis in man Assessment of transvascular fluid shifts after graded tilt
A82-40760
Effect of high ambient temperature on carbohydrate metabolism in rat liver and skeletal muscles
N82-28975

**HORIZONTAL ORIENTATION**
Changes in blood volume and response to vaso-active drugs in horizontally casted primates
A82-40657
Influences of horizontal hypokinesia on performance and circadian physiological rhythms in female humans
A82-40682

**HORMONE METABOLISMS**
Experimental and clinical study of a new immunoregulatory preparation - thymalin
A82-38177
Delayed effects of the internal irradiation of endocrine system in female rats
A82-38582
Stress in space flight - Metabolic aspects
A82-40696
ADH suppression under immersion combined with dehydration --- antidiuretic hormone secretion
A82-40776
Altitude-induced changes in plasma thyroxine, 3,5,3 prime-triiodothyronine, and thyrotropin in rats
A82-41207
Metabolic and cardiovascular adaptations in trained hypophysectomized rats
A82-41215

**HORMONES**
The regulation of calcium exchange in the cells of different regions of the warm-blooded animal heart
A82-40313
Changes in mineralized tissues in the case of calcitonin and somatotropic hormone injections under hypokinesia
A82-40503
Root cell gravireaction - Hormone interaction
A82-40745
The effect of gravity on the distribution of plant growth substances in plant tissues
A82-40746
Monograph on new direction of chemistry and biology of peptide and protein bioregulators reviewed
N82-28979
Testosterone enhances C-14 2-deoxyglucose uptake by striated muscle --- sex hormones and muscle
[NASA-CR-169101] N82-28986

**HOT WEATHER**
Effect of physical training in cool and hot environments on +Gz acceleration tolerance in women
A82-40664

**HUMAN BEHAVIOR**
A test for the prediction of risk-taking attitude in operators
A82-40449
Certain psychological and tactical aspects of athlete activities during competitions
A82-41506

**HUMAN BEINGS**
A method of evaluating the functional state of the central nervous system of a person performing work
A82-38579
Model of the accommodative mechanism in the human eye
A82-39432
Natural and social determination of human psyche
N82-28983

**HUMAN BODY**
Changes in man's constant electric field in the course of adaptation to hypokinesia
A82-38595
As if in weightlessness --- simulation through hypnosis
A82-40474
Somatotypology and athletics
A82-40486
Peculiarities of the relief of the trabecular surface of the spongy substance of the human vertebrae
A82-40492
Segmentation and analysis of stereophotometric body surface data
[AD-A114916] N82-29868
Anatomy of the spine
N82-29871
Biomechanics of the spine
N82-29872

**HUMAN FACTORS ENGINEERING**
Achievements and possibilities in the research being carried out to protect workers in the 11th five-year plan from noise and vibration
A82-38573
Human factors of an RPV ground control station
A82-39749
From a man-machine system to a social-engineering system
A82-40447
Psychological investigation of pilot behavior during integration of control systems in the cockpit of passenger airliners --- German thesis
A82-40560
Human factor and flight safety
A82-40885
Vibration and assessment of this flight factor by pilots
N82-28976
Thermal garment
[NASA-CASE-XMS-03694-1] N82-29002
Cold weather goggles. 2: Performance evaluation
[AD-A114067] N82-29008
Flight crewmember workload evaluation
[AD-A114167] N82-29012

**HUMAN PATHOLOGY**
The protective role of the forebrain with respect to pathological cardiac reflexes A82-38543
Diagnosis and organization of the therapy of patients with disorders of blood circulation in the brain A82-38554
A study of temporary absences from work arising from disorders of the circulatory system A82-38555
Use of the thermovision method in the prophylactic examination of polar workers A82-38565
Central nervous dysfunctions after near-miss accidents in diving A82-40443
The achievements of investigations carried out in the years 1976-1980 on the problem of insufficient blood circulation and heart rhythm disturbances A82-41501
Physiopathology and pathology of spinal injuries in aerospace medicine [AGARD-AG-250(ENG)] N82-29870

**HUMAN PERFORMANCE**
Factors of the natural resistance of the body and methods for studying them A82-40308
Task categorization and the limits of human performance in extreme heat A82-40439
Thermoregulation and the menstrual cycle A82-40441
Physical activity and human requirements for energy and food substances A82-40487
Running in circles --- track radius effects on human running speed A82-40661
Mode of mutual influence of stimulation-characteristics in the visual processing system --- German thesis A82-41445
The assimilation of vitamin C in seamen during voyages at high latitudes A82-41465
Adapative motivation theory [AD-A111195] N82-28997
On models and methods for performance measurement [AD-A113578] N82-28998
Task analysis and the ability requirements of tasks: Collected papers [AD-A111181] N82-29000
The ranking of displays based on transinformation --- as a measure of tracking performance [FB-52] N82-29001

**HUMAN REACTIONS**
Physiological and hygienic analysis of the response of young truck drivers to their work load A82-38567
Changes in the human visually evoked cortical potential in response to chromatic modulation of a sinusoidal grating A82-38795
Dynamics of subjective discomfort in motion sickness as measured with a magnitude estimation method A82-40438
Psychic stress in athletic activity A82-40489
Certain psychological and tactical aspects of athlete activities during competitions A82-41506
Human external respiration and gas exchange in acute period of adaptation to immersion in water N82-28959
Reaction to diminished circulating blood volume in individuals who are susceptible and insusceptible to motion sickness (seasickness) N82-28960

**HUMAN TOLERANCES**
The effect of certain characteristics of work motions on the tolerance of hand muscles to static exertions A82-38568
Dynamics of subjective discomfort in motion sickness as measured with a magnitude estimation method A82-40438
Subjective response to negative air ion exposure A82-40446
Ultra-high impact free-fall survival A82-40684
The tolerance to physical loads in women during menopause complicated by climacteric neurosis with cardialgia A82-41495
Spinal stresses in flight N82-29873
Parachuting N82-29878
Limits of human tolerance for impacts in free fall N82-29879

**HUMIDITY**
Auxiliary cooling - Comparison of air-cooled vs. water-cooled vests in hot-dry and hot-wet environments A82-40440

**HYDRATION**
The temperature dependence of the H-1 NMR spectrum of hydrated collagen A82-38611

**HYDRAZINES**
The consequences of hydrazine exposition and its treatment [MBL-1981-2] N82-28996

**HYDROCYANIC ACID**
Uracil synthesis via HCN oligomerization --- chemical evolution of biomolecules in primitive earth A82-38117
Acceleration of HCN oligomerization by formaldehyde and related compounds - Implications for prebiotic syntheses A82-41199

**HYDROGEN BONDS**
The temperature dependence of the H-1 NMR spectrum of hydrated collagen A82-38611

**HYDROGENATION**
Metabolism of the thermophilic hydrogenous bacterium Pseudomonas thermophila K-2 A82-39427

**HYDROLYSIS**
Uracil synthesis via HCN oligomerization --- chemical evolution of biomolecules in primitive earth A82-38117

**HYDROTHERMAL SYSTEMS**
Is the CH4, H2 and CO venting from submarine hydrothermal systems produced by thermophilic bacteria A82-39422

**HYGIENE**
Physiological and hygienic analysis of the response of young truck drivers to their work load A82-38567
Setting hygienic standards to be applied to environmental standards pertaining to the rolling stock of railroads and subway systems A82-38570

**HYOSCINE**
Antimotion-sickness efficacy of scopolamine 12 and 72 hours after transdermal administration A82-40437
Neurochemical background and approaches in the understanding of motion sickness [NASA-CR-3569] N82-29865

**HYPERCAPNIA**
The accuracy of venturi masks at altitude A82-40445
Ventilatory and heart rate responses to hypoxia and hypercapnia during sleep in adults A82-41206
Pulmonary stretch receptor discharge patterns in eupnea, hypercapnia, and hypoxia A82-41210
Possible impairment of respiratory regulation under hyperbaric nitrogen narcosis N82-28964

**HYPERGLYCEMIA**
Hypo-and hyperglycemia in rats: Effects on the ability to work in the heat [AD-A111711] N82-29849

HYPEROXIA
Enzymes that detoxify active forms of oxygen and lipoperoxide in experimental ischemia and myocardial infarction
A82-38540
The use of hyperoxic mixtures for the diagnosis of latent disturbances in the external respiration system
A82-40457
Protection from O2 toxicity by preexposure to hypoxia - Lung antioxidant enzyme role
A82-41217

HYPERTENSION
Comparative study of systemic hemodynamics in normotensive and hypertensive rats
A82-38542
A study of temporary absences from work arising from disorders of the circulatory system
A82-38555
Morphological and functional factors contributing to a hypertonic heart
A82-38557
Echocardiographic characterization of heart hypertension
A82-40307
State of adaptation in patients with hypertension
A82-40476
The significance of the bicycle ergometer test for evaluating the work capacity in patients with hypertension
A82-40477
The influence of psychological and somatic factors on the symptomatics of hypertension
A82-41492
Telemetry methods for monitoring physiological parameters
A82-41551

HYPERTHERMIA
The effect of serotonin on the development of acute hyperthermia in rats
A82-38583
The toxic properties of rabbit and dog sera under controlled hyperthermia
A82-40458

HYPNOSIS
As if in weightlessness --- simulation through hypnosis
A82-40478

HYPODYNAMIA
Effect of athletic training on physical fitness under hypodynamics
A82-40663

HYPOGLYCEMIA
Hypo-and hyperglycemia in rats: Effects on the ability to work in the heat
[AD-A111711] N82-29849

HYPOKINESIA
Early reaction of the hemopoietic organs depending on the condition of the peripheral N-cholinergic systems
A82-38168
The effect of hypokinesia on the resistance of the heart to hypoxia
A82-38170
Serotonin content of peripheral organs and tissues in rats under normal conditions and under stress during postnatal development
A82-38584
Changes in man's constant electric field in the course of adaptation to hypokinesia
A82-38595
The anti-stress role of the gamma-aminobutyric acid system of the brain
A82-40468
Changes in neurons of the spinal cord and spinal ganglia under hypokinesia /neuromorphological and histochemical investigation/
A82-40494
The early reaction of the hemopoietic organs to stress, depending on the condition of the peripheral N-cholinergic systems
A82-40499
The effect of hypokinesia on the resistance of the heart to hypoxia
A82-40502
Changes in mineralized tissues in the case of calcitonin and somatotropic hormone injections under hypokinesia
A82-40503
Influences of horizontal hypokinesia on performance and circadian physiological rhythms in female humans
A82-40682
A new rat model for studies of hypokinesia and antiorthostasis
A82-40706
Na/+/-K/+/ dependent ATP-ase modifications of skeletal muscle and myocardium of hypokinetic rats
A82-40707
Effect of immobilization on the ATPase activities and Ca-uptake of sarcoplasmic reticulum in different types of muscles
A82-40708
Plasticity of fast and slow muscle myofibrillar proteins in model experiments simulating weightlessness
A82-40709
Effect of immobilization of the excitatory parameters of different type skeletal muscle
A82-40710
The effect of hypokinesis and hypoxia on the function of muscles
A82-40739
Antiorthostatic hypokinesia and circulation in the rat
A82-40741
Suspension restraint - Induced hypokinesia and antiorthostasis as a simulation of weightlessness
A82-40744
Restraint of animals in space research
A82-40748
Hindlimb immobilization - Length-tension and contractile properties of skeletal muscle
A82-41209
Skeletal abnormalities in rats induced by simulated weightlessness
A82-41540
Condition of rats connective tissue during long-term hypokinesia and in recovery period
N82-28969

HYPOTHALAMUS
The protective role of the forebrain with respect to pathological cardiac reflexes
A82-38543
The cholinergic nature of hypothalamo-cortical excitatory influence
A82-38551
Approaches to the study of the hypothalamus-pituitary gland relationship
A82-39569

HYPOXIA
Study of the radioprotective effectiveness of an hypoxic gas mixture during combined radiation and thermal injuries to rats
A82-38159
Changes in the hemodynamics and efferent activity in the renal nerve with acute hypoxic hypoxia under the stabilization of perfusion pressure in carotid sinuses
A82-38161
The characteristics of hemodynamic shifts under physical stress at mountain elevations
A82-38166
The effect of hypokinesia on the resistance of the heart to hypoxia
A82-38170
Study of RNA synthesis rate and DNA content in the myocardium of new-born rats during adaptation to high-altitude hypoxia
A82-38537
The participation of the lymphatic system in the resistance of an organism to hypoxia
A82-39793
Prevention of heart function abnormalities during reoxygenation after ischemia by adaptation to altitude hypoxia
A82-40455
The synthesis of nuclear and mitochondrial DNA and RNA, and the synthesis of heme and globin in rabbit bone marrow during the stimulation of erythropoiesis
A82-40501
The effect of hypokinesia on the resistance of the heart to hypoxia
A82-40502
The effect of hypoxic and hypobaric exercises on the blood-brain barrier in rats
A82-40713

The effect of hypokinesis and hypoxia on the function of muscles A82-40739

Ventilatory and heart rate responses to hypoxia and hypercapnia during sleep in adults A82-41206

Altitude-induced changes in plasma thyroxine, 3,5,3 prime-triiodothyronine, and thyrotropin in rats A82-41207

Pulmonary stretch receptor discharge patterns in eupnea, hypercapnia, and hypoxia A82-41210

Protection from O2 toxicity by preexposure to hypoxia - Lung antioxidant enzyme role A82-41217

Effect of induced erythrocythemia on hypoxia tolerance during physical exercise A82-41218

The rate of coronary perfusion as a factor determining the extent to which the contractile function of the heart is decreased in energy formation disorders A82-41489

Attenuation of radioprotective effects of acute hypoxia on animals adapted to high altitudes N82-29855

I

ILLUMINATING

The flavin-dependent consumption of oxygen in mitochondria under illumination A82-38589

IMAGE CONTRAST

Changes in the human visually evoked cortical potential in response to chromatic modulation of a sinusoidal grating A82-38795

Contrast influence on perceived orientation --- of gratings obtained by dichoptic fusion of two monocular images A82-38796

Effect of chromatic adaptation on the achromatic locus - The role of contrast, luminance and background color A82-39433

IMAGE ENHANCEMENT

Image orientation for RPV ground station crew A82-39783

IMMOBILIZATION

Ultrastructural changes in the brains of rats subjected to acute emotional stress A82-38558

Statistical analysis of neuronal impulse activity in the diencephalon during immobilization-produced emotional stress in rats A82-40467

The early reaction of the hemopoietic organs to stress, depending on the condition of the peripheral M-cholinergic systems A82-40499

Effect of immobilization on the ATPase activities and Ca-uptake of sarcoplasmic reticulum in different types of muscles A82-40708

Effect of immobilization of the excitatory parameters of different type skeletal muscle A82-40710

Immobilization effects upon aerobic and anaerobic metabolism of the skeletal muscles A82-40712

The effects of human growth hormone administration on the functional status of rat atrophied muscle following immobilization A82-40715

Protein composition of mRNA containing 18S-40S subribosomal particles in soleus muscle before and after immobilization A82-40742

Hindlimb immobilization - Length-tension and contractile properties of skeletal muscle A82-41209

Neuromuscular adaptation in human thenar muscles following strength training and immobilization A82-41213

IMMUNITY

Experimental and clinical study of a new immunoregulatory preparation - thymalin A82-38177

Migration kinetics of hemopoietic stem cells in mice after severe mechanical trauma A82-38541

Evidence of an immune mechanism of enzyme-hemostasis regulation A82-38552

The influence of a deficit of vitamins on immunity /A review of the literature/ A82-41504

IMMUNOLOGY

An investigation of the conformational stability of immunoglobulin G in the monolayers at the phase boundary between aqueous solutions of NaCl and octane A82-38607

Factors of the natural resistance of the body and methods for studying them A82-40308

The effect of products erythrocyte destruction on immunological processes A82-40500

Weightlessness effects on resistance and reactivity of animals A82-40690

Effect of spaceflight on lymphocyte stimulation A82-40700

Functional properties of T-lymphocytes in patients with acute myocardial infarction A82-41459

The structure and function of macrophages A82-41470

Immunological reactions to lipoproteins and heparin in young men with a hereditary tendency to atherosclerosis A82-41487

IMPACT ACCELERATION

Problem of accelerations in aviation medicine N82-28950

IMPACT DAMAGE

Ultra-high impact free-fall survival A82-40684

IMPACT TOLERANCES

Limits of human tolerance for impacts in free fall N82-29879

IMPLANTED ELECTRODES (BIOLOGY)

Implantable electrical device [NASA-CASE-GSC-12560-1] N82-29863

INDUSTRIAL SAFETY

Setting safety standards for ionizing radiation A82-38580

INERTIA

Rapid perceptual adaptation to high gravitoinertial force levels Evidence for context-specific adaptation A82-40436

INFORMATION DISSEMINATION

The organizing of conferences [PB82-142696] N82-28948

INFORMATION THEORY

The ranking of displays based on transinformation --- as a measure of tracking performance [FB-52] N82-29001

INJURIES

The effect of potassium orotate on the metabolism of certain vitamins in patients with fractures of the long tubular bones A82-38563

Limits of human tolerance for impacts in free fall N82-29879

INSECTS

USSR report. Life sciences biomedical and behavioral sciences, no. 16 [JPRS-80789] N82-28977

Cultivation of insects as new branch of entomology - industrial entomology N82-28980

INSTRUCTORS

Instructor's role in individualized training: A survey of two computer managed courses [AD-A114917] N82-29894

INTELLECT

USSR report. Life sciences biomedical and behavioral sciences, no. 16 [JPRS-80789] N82-28977

Natural and social determination of human psyche
N82-28983

An overview of expert systems --- artificial intelligence
[NASA-CR-169197] N82-29899

**INTERVERTEBRAL DISKS**
Validation of a new method for studying the effects of vibration on the primate spine
A82-40768

Biomechanics of the spine
N82-29872

**ION CONCENTRATION**
The effect of monovalent cations on the ATPase activity and superprecipitation of actomyosin
A82-38615

**ION CURRENTS**
Ion currents through a neuron membrane during the injection of cyclic nucleotides
A82-38588

**ION EXCHANGE MEMBRANE ELECTROLYTES**
The mechanism of the microwave effect on the conductivity of bilayer lipid membranes
A82-38587

ATPase activity and the potassium ion permeability of erythrocyte membranes in the presence of serotonin and radiation
A82-40479

**ION EXCHANGING**
Changes in electrically neutral Ca/2+/-H/+/ exchange in rat liver mitochondria following gamma irradiation
A82-38151

Na/+/-K/+/ dependent ATP-ase modifications of skeletal muscle and myocardium of hypokinetic rats
A82-40707

**IONIC MOBILITY**
Nonthermal effect of nanosecond microwave pulses on the transepithelial transport of sodium ions
A82-38586

Temperature characteristics of the ouabain-insensitive sodium flux in frog muscles
A82-38600

**IONIZING RADIATION**
Study of the radioprotective effectiveness of an hypoxic gas mixture during combined radiation and thermal injuries to rats
A82-38159

Equivalent doses, dose rates and times of chronic exposure to ionizing radiation for various mammals
A82-38160

Setting safety standards for ionizing radiation
A82-38580

Dynamics of a stabilized motor defensive conditioned reflex for different levels of motivation in irradiated rats
A82-40464

Cytogenetic analysis of peripheral blood lymphocytes of individuals exposed to low doses of ionizing radiation
N82-29856

**IRRADIATION**
Optimization of the conditions of modified cell irradiation
A82-38154

**ISCHEMIA**
Enzymes that detoxify active forms of oxygen and lipoperoxide in experimental ischemia and myocardial infarction
A82-38540

Local cerebral blood flow dynamics during experimental ischemia
A82-38544

A study of temporary absences from work arising from disorders of the circulatory system
A82-38555

The content of cAMP and cGMP in brain tissues during adaptation to ischemia
A82-40310

Prevention of heart function abnormalities during reoxygenation after ischemia by adaptation to altitude hypoxia
A82-40455

Involuntary and voluntary mechanisms for preventing cerebral ischemia due to positive /Gz/ acceleration
A82-40747

The significance of postextrasystolic potentiation in the preoperative assessment of the reversal of left-ventricle asynergy in patients with ischemic heart disease
A82-41483

The ultrastructure of the myocardium in the restorative period following aorto-coronary shunting in patients with chronic ischemic heart disease
A82-41484

The amplitude of the R wave and the contractile function of the left ventricle in patients with ischemic heart disease
A82-41486

A comparison of echo- and kinetocardiographic indicators of the myocardial contractility of the left ventricle in patients suffering from various forms of ischemic heart disease
A82-41496

Synchronization of cardiovascular accidents with physical clocks
N82-28956

**ISOTOPE EFFECT**
Conditions leading to kinetic and thermodynamic isotopic effects in a cell
A82-38601

## J

**JUDGMENTS**
An overview of expert systems --- artificial intelligence
[NASA-CR-169197] N82-29899

## K

**KIDNEY DISEASES**
The diagnostic value of phonoenterography in acute renal failure
A82-40478

**KIDNEYS**
Changes in the hemodynamics and efferent activity in the renal nerve with acute hypoxic hypoxia under the stabilization of perfusion pressure in carotid sinuses
A82-38161

Reduction in renal artery blood flow impedance during upright tilt in man
A82-40735

**KINEMATICS**
Workshop on the Design and Control of Dexterous Hands
[AD-A114973] N82-29901

**KNOWLEDGE**
An overview of expert systems --- artificial intelligence
[NASA-CR-169197] N82-29899

## L

**LABYRINTH**
Application of xylite for the detection of labyrinthine hydrops
A82-39243

Labyrinth plugging as a model of suspended vestibular sensory input
A82-40721

Preparation of labyrinthectomied animals for flight aboard Cosmos-936 biosatellite
N82-28971

**LABYRINTHECTOMY**
Alterations in the labyrinth receptors after laser irradiation as detected by electron microscopy
A82-39244

Autonomic reactions in labyrinthectomized rabbits during centrifuge acceleration
A82-40720

Preparation of labyrinthectomied animals for flight aboard Cosmos-936 biosatellite
N82-28971

**LACTATES**
State of the lactate dehydrogenase reaction in the muscular tissue of irradiated animals
A82-38158

**LAND ICE**
Mycelial fungi, isolated from the ice sheet of the central Antarctic
A82-39428

**LASER APPLICATIONS**

Sword and scalpel --- laser surgery A82-38564

The effect of laser radiation on lipid synthesis in yeast A82-38585

Alterations in the labyrinth receptors after laser irradiation as detected by electron microscopy A82-39244

Application of laser therapy to patients with osteoarthrosis deformans A82-41475

**LASER DAMAGE**

Long-term and progressive changes in Rhesus spectral sensitivity after low-level coherent light (514nm exposure) --- effects of laser exposure on visual function [AD-A111639] N82-28946

**LASER SPECTROSCOPY**

A measurement of the size distribution of lipoproteins in the plasma of human blood A82-38603

**LATERAL STABILITY**

Workshop on the Design and Control of Dexterous Hands [AD-A114973] N82-29901

**LEARNING**

Increasing the efficiency of running on the basis of learning algorithms and information tools A82-40488

Neurochemical mechanisms of learning and memory --- Russian book A82-40646

Adapative motivation theory [AD-A111195] N82-28997

Instructor's role in individualized training: A survey of two computer managed courses [AD-A114917] N82-29894

An overview of expert systems --- artificial intelligence [NASA-CR-169197] N82-29899

**LEG (ANATOMY)**

Osteoporosis in unsupported extremities N82-28970

**LEGUMINOUS PLANTS**

Interaction of gravitic and mechanical stimuli in tropic and nastic responses in beans A82-40665

**LENSES**

Model of the accommodative mechanism in the human eye A82-39432

**LESIONS**

Intrahemispherical relations of EEG slow-wave components in patients with local brain lesions A82-40472

Limits of human tolerance for impacts in free fall N82-29879

**LEUCINE**

The radiolysis and racemization of leucine on proton irradiation A82-38118

Leucine and urea metabolism in acute human cold exposure A82-41211

**LIFE SCIENCES**

Lockheed involvement in Shuttle life sciences flight experiments A82-39541

USSR report. Life sciences. Biomedical and behavioral sciences, no. 18 [JPRS-81428] N82-29857

**LIFE SPAN**

Radiation-induced shortening of the life span of D. melanogaster. II - Sensitizing effects of 5-bromo-2-deoxyuridine A82-38155

**LIFE SUPPORT SYSTEMS**

Nutrition and food tecanology for a Controlled Ecological Life Support System (CELSS) [NASA-CR-167392] N82-29004

A design methodology for nonlinear systems containing parameter uncertainty: Application to nonlinear controller design [NASA-CR-166358] N82-29005

Preprototype independent air revitalization subsystem [NASA-CR-167703] N82-29898

**LIGANDS**

Thermodynamic parameters characterizing interaction between polymer-absorbed ligand molecules A82-38609

Ligation of oligonucleotides by pyrimidine dimers - A missing 'link' in the origin of life A82-39423

**LIGHT ADAPTATION**

Effect of chromatic adaptation on the achromatic locus - The role of contrast, luminance and background color A82-39433

**LIGHT AIRCRAFT**

Aerobatics in light aircraft - Sensations and stresses experienced by the pilot A82-38848

In-flight incapacitation and pathology for the light aircraft stunt-flyer A82-38851

**LIGHT CURVE**

Light curves for photosynthesis under intermittent illumination A82-38608

**LIGHT EMITTING DIODES**

An LED system for the formation of visual stimuli A82-40471

**LIMBS (ANATOMY)**

Osteoporosis in unsupported extremities N82-28970

**LINE OF SIGHT**

Unconventional visual displays for flight training [AD-A111392] N82-28999

**LINES (GEOMETRY)**

Effects of reference lines on displacement thresholds at various durations of movement --- in human visual perception A82-38797

**LIPID METABOLISM**

Study of the relation between the number of sulfhydryl groups and the level of lipid antioxidant activity in the organs of individual animals of different species A82-38153

Studies of specific hepatic enzymes involved in the conversion of carbohydrates to lipids in rats exposed to prolonged spaceflight aboard Cosmos 1129 A82-40698

Space flight effects upon plasma and tissue lipids in rats A82-40722

**LIPIDS**

The effect of laser radiation on lipid synthesis in yeast A82-38585

The mechanism of the microwave effect on the conductivity of bilayer lipid membranes A82-38587

A comparison between the protonophoric and separating functions of weak dibasic acids --- in mitochondrial respiration A82-38590

A possible explanation for the fluctuations in reflectivity exhibited by bilayer liped membranes excited during electrostriction A82-38602

The incorporation of an erythrocyte membrane into planar bilayer lipid membranes A82-38606

**LIPOPROTEINS**

Determination of blood-lipoproteid dimensions by optical methods A82-38593

A measurement of the size distribution of lipoproteins in the plasma of human blood A82-38603

The conductivity of model protein-lipid membranes A82-38604

Immunological reactions to lipoproteins and heparin in young men with a hereditary tendency to atherosclerosis A82-41487

**LIQUID COOLING**

Auxiliary cooling - Comparison of air-cooled vs. water-cooled vests in hot-dry and hot-wet environments A82-40440

LIQUID-LIQUID INTERFACES
An investigation of the conformational stability of immunoglobulin G in the monolayers at the phase boundary between aqueous solutions of NaCl and octane
A82-38607

LIVER
Changes in electrically neutral Ca/2+/-H/+/ exchange in rat liver mitochondria following gamma irradiation
A82-38151

Diurnal changes in the duration of the S and G2 phases of the mitotic cycle in mononuclear and binuclear hepatocytes of normal and thyroxine-treated rats
A82-40459

LONG DURATION SPACE FLIGHT
Dynamics of weight loss during prolonged spaceflight
A82-40673

Effect of prolonged weightlessness on certain aspects of brain metabolism of the rat
A82-40699

Dynamics of left ventricular systolic phase structure during long-term (140-185 days) spaceflights
N82-28954

LONG WAVE RADIATION
The effect of long-wave ultraviolet radiation on cyclophosphamide-induced levels of chromosome aberrations in the bone marrow cells of mice
A82-38556

LOWER BODY NEGATIVE PRESSURE
Cardiovascular responses of the chronically instrumented monkey during simulated space flight
A82-40670

Instantaneous stroke volume in man during lower body negative pressure /LBNP/
A82-40683

Aortic and tibial bloodflow response to lower body negative pressure /LBNP/
A82-40727

Effects of lower body negative pressure on the reliability of cardiovascular system using X-ray kymograms
A82-40728

LUMINANCE
Hyperacuity for luminance phase angle in the human visual system
A82-38799

Effect of chromatic adaptation on the achromatic locus - The role of contrast, luminance and background color
A82-39433

LUNG MORPHOLOGY
The cause of high-altitude acute pulmonary edema
A82-40498

LUNGS
The microcirculatory bed of the lungs after an effect exerted on the right vagus nerve
A82-40497

Effect of sustained Gz acceleration on lung fluid balance - An ultrastructural study
A82-40761

A nonlinear model combining pulmonary mechanics and gas concentration dynamics
A82-41230

LYMPH
The participation of the lymphatic system in the resistance of an organism to hypoxia
A82-39793

The effect of leienkephalin and thyrosine on the lymphatic and blood microvessels
A82-41490

LYMPHOCYTES
Radiation damage and recovery of mouse T-cells. IV - Elimination of radiation-induced migration abnormalities in T-lymphocytes
A82-38156

Experimental and clinical study of a new immunoregulatory preparation - thymalin
A82-38177

Migration kinetics of hemopoietic stem cells in mice after severe mechanical trauma
A82-38541

Human lymphocyte activation is depressed at low-g and enhanced at high-g
A82-40658

Effect of spaceflight on lymphocyte stimulation
A82-40700

Gravitational adaptation of animals
A82-40716

Response of cultured cells to hyper- and hypogravity
A82-40773

Functional properties of T-lymphocytes in patients with acute myocardial infarction
A82-41459

Cytogenetic analysis of peripheral blood lymphocytes of individuals exposed to low doses of ionizing radiation
N82-29856

M

MACROPHAGES
The structure and function of macrophages
A82-41470

MACROSCOPIC EQUATIONS
Attributing macroscopic fluctuations in aqueous solutions of proteins and other substances to the class of flicker noise
A82-38592

MAGNETIC EFFECTS
The absence of the magnetic-field effect on Na/+/, K/+/-dependent ATPase
A82-38591

Relation between physiological effects of gravitational forces and that of magnetic forces
A82-40730

Relation between physiological effects of gravitational forces and that of magnetic forces. II
A82-40771

The use of an audio-frequency magnetic field in certain diseases
A82-41473

Present-day magnetic-field sources, used in medical treatment
A82-41481

MAGNETIC FIELDS
Sources of an artificial magnetic field for implantation /experimental study/
A82-41480

Present-day magnetic-field sources, used in medical treatment
A82-41481

A device for producing the action of static magnetic fields on biological objects
A82-41482

MAGNETS
Sources of an artificial magnetic field for implantation /experimental study/
A82-41480

A device for producing the action of static magnetic fields on biological objects
A82-41482

MAMMALS
Low-G simulation in mammalian research
A82-40654

Gravity, metabolic rate and body size of mammals
A82-40678

Restraint of animals in space research
A82-40748

MAN MACHINE SYSTEMS
Experimentally determined pilot models using hovering VTOL flight data
[AIAA PAPER 82-1294] A82-40277

From a man-machine system to a social-engineering system
A82-40447

Rule-based programming for human-computer interface specification
[AD-A113036] N82-29007

An overview of expert systems --- artificial intelligence
[NASA-CR-169197] N82-29899

Human/computer transaction tasks: An annotated bibliography
[AD-A114800] N82-29902

MANIPULATORS
Robotics: Problems and prospects
A82-40473

MANNED ORBITAL LABORATORIES
Initial audiometric investigations in an orbital station
N82-30277

MANNED SPACE FLIGHT
Space gastroenterology --- Russian book
A82-40643

Results of investigations of weightlessness effects during prolonged manned space flights onboard Salyut-6 A82-40750

Nutrition and food technology for a Controlled Ecological Life Support System (CELSS) [NASA-CR-167392] N82-29004

An approach to the preliminary evaluation of Closed Ecological Life Support System (CELSS) scenarios and control strategies [NASA-CR-166368] N82-29897

Twenty years of manned space flight from the viewpoint of space medicine N82-30276

MANUAL CONTROL

Biomechanical analysis of tasks involving manual materials handling [AD-A113955] N82-29009

MAPPING

Training of personnel specialized in cartography N82-29669

MARINE BIOLOGY

Is the CH4, H2 and CO venting from submarine hydrothermal systems produced by thermophilic bacteria A82-39422

MARINE ENVIRONMENTS

The assimilation of vitamin C in seamen during voyages at high latitudes A82-41465

MARKOV PROCESSES

Rule-based programming for human-computer interface specification [AD-A113036] N82-29007

MASSAGING

Effect of the Circutone seat on hemodynamic, subjective, and thermal responses to prolonged sitting A82-40442

MATERIALS HANDLING

Biomechanical analysis of tasks involving manual materials handling [AD-A113955] N82-29009

MATHEMATICAL MODELS

A model for the origin of life A82-41198

On models and methods for performance measurement [AD-A113578] N82-28998

MECHANICAL DRIVES

Control of a direct-drive arm [AD-A114969] N82-29903

MECHANICAL PROPERTIES

Effect of space flight on bone strength A82-40680

MECHANICAL SHOCK

Interaction of gravitic and mechanical stimuli in tropic and nastic responses in beans A82-40665

MEDICAL EQUIPMENT

Thermal pulsation - Techniques, demonstration, and clinical application A82-41474

Present-day magnetic-field sources, used in medical treatment A82-41481

A device for producing the action of static magnetic fields on biological objects A82-41482

USSR report. Life sciences biomedical and behavioral sciences, no. 16 [JPRS-80789] N82-28977

Microelectronic electrode probe for testing brain electrical activity N82-28982

Acoustic tooth cleaner [NASA-CASE-LAR-12471-1] N82-29862

MEDICAL PHENOMENA

Microcalorimetry in biomedical investigations A82-41471

MEDICAL SCIENCE

USSR report. Life sciences. Biomedical and behavioral sciences, no. 17 [JPRS-81419] N82-29853

USSR report. Life sciences. Biomedical and behavioral sciences, no. 18 [JPRS-81420] N82-29857

MEDICAL SERVICES

Medical emergencies on board airliners - Ground management A82-38846

MEMBRANES

Ion currents through a neuron membrane during the injection of cyclic nucleotides A82-38588

A possible explanation for the fluctuations in reflectivity exhibited by bilayer liped membranes excited during electrostriction A82-38602

The conductivity of model protein-lipid membranes A82-38604

Gramicidin A-induced conductance of the muscle fiber membrane A82-38605

The incorporation of an erythrocyte membrane into planar bilayer lipid membranes A82-38606

The utilization of macromolecules in blood purification systems [NRC/CNR-TT-2021] N82-29864

MEMORY

Neurochemical mechanisms of learning and memory --- Russian book A82-40646

MENSTRUATION

Thermoregulation and the menstrual cycle A82-40441

The tolerance to physical loads in women during menopause complicated by climacteric neurosis with cardialgia A82-41495

MENTAL PERFORMANCE

Task analysis and the ability requirements of tasks: Collected papers [AD-A111181] N82-29000

Airline pilot age, health, and performance: Scientific and medical considerations [PB82-161506] N82-29895

Quantification of pilot workload via instrument scan [NASA-CR-169238] N82-29900

METABOLIC DISEASES

Hygienic evaluation of an 8-mm-wave electromagnetic field A82-41462

METABOLISM

Evolution of major metabolic innovations in the Precambrian A82-38121

Metabolism of the thermophilic hydrogenous bacterium Pseudomonas thermophila K-2 A82-39427

Trace reactions of the frog tissue metabolism on changes of ambient temperature in the frog Rana ridibunda Pall A82-40316

The role of nutrition in the changes of energy metabolism during stress A82-40482

Effect of simulated weightlessness on energy metabolism in the rat A82-40677

Gravity, metabolic rate and body size of mammals A82-40678

Acid-base, metabolic, and ventilatory responses to repeated bouts of exercise A82-41219

Tritium oxide distribution and excretion kinetics in the exposure of animals to noise A82-41463

METAL IONS

The absence of the magnetic-field effect on Na/+/, K/+/-dependent ATPase A82-38591

METHYL COMPOUNDS

The radiolysis of aqueous propionitrile - Compounds of interest to chemical evolution studies A82-41197

METROLOGY

Problems in the metrology of the training load of ski racers A82-41502

MICROBIOLOGY
On the mathematical modelling of microbial age dynamic and some control aspects of microbial growth processes
A82-38023
Mycelial fungi, isolated from the ice sheet of the central Antarctic
A82-39428
The microflora of the central Antarctica glacier and control methods for the sterile isolation of an ice core for microbiological analyses
A82-39430

MICROELECTRONICS
Robotics: Problems and prospects
A82-40473

MICROINSTRUMENTATION
Microcalorimetry in biomedical investigations
A82-41471

MICROORGANISMS
The microflora of the central Antarctica glacier and control methods for the sterile isolation of an ice core for microbiological analyses
A82-39430
USSR report. Life sciences biomedical and behavioral sciences, no. 16
[JPRS-80789]
N82-28977
Microorganisms used to monitor environmental pollution
N82-28978

MICROSTRUCTURE
Peculiarities of the relief of the trabecular surface of the spongy substance of the human vertebrae
A82-40492

MICROWAVES
Nonthermal effect of nanosecond microwave pulses on the transepithelial transport of sodium ions
A82-38586
The mechanism of the microwave effect on the conductivity of bilayer lipid membranes
A82-38587
Effect of heating rate on evaporative heat loss in the microwave-exposed mouse
A82-41208

MILLIMETER WAVES
Hygienic evaluation of an 8-mm-wave electromagnetic field
A82-41462

MINERAL METABOLISM
Chronic central vascular expansion induces hypokalemia in conscious primates
A82-40719
Osteoporosis in unsupported extremities
N82-28970

MITOCHONDRIA
Changes in electrically neutral Ca/2+/-H/+/ exchange in rat liver mitochondria following gamma irradiation
A82-38151
The synthesis of nuclear and mitochondrial DNA and RNA, and the synthesis of hemo and globin in rabbit bone marrow during the stimulation of erythropoiesis
A82-38169
The flavin-dependent consumption of oxygen in mitochondria under illumination
A82-38589
A comparison between the protonophoric and separating functions of weak dibasic acids --- in mitochondrial respiration
A82-38590
Similar genes for a mitochondrial ATPase subunit in the nuclear and mitochondrial genomes of Neurospora crassa
A82-38698
Some of biochemical parameters in rat brain during +Gz acceleration
A82-40717
Functional condition of the heart mitochondria in the dynamics of emotional and pain stress
A82-41500

MITOSIS
Mitotic activity and volume of epithelial cell nuclei of rat cornea following spaceflights in biosatellites
N82-28965

MOLECULAR BIOLOGY
Clay and the origin of life
A82-38115
Uracil synthesis via HCN oligomerization --- chemical evolution of biomolecules in primitive earth
A82-38117
Polynucleotide replication coupled to protein synthesis A possible mechanism for the origin of life
A82-38119
An investigation of the conformational stability of immunoglobulin G in the monolayers at the phase boundary between aqueous solutions of NaCl and octane
A82-38607
Thermodynamic parameters characterizing interaction between polymer-absorbed ligand molecules
A82-38609
Conformational dynamics of proteins and simplest molecular 'machines'
A82-38610
Molecular basis for the genetic code
A82-41195
A new hypothesis for the mechanism of muscle contraction
A82-41334

MOLECULAR DIFFUSION
Conformational dynamics of proteins and simplest molecular 'machines'
A82-38610

MOLECULAR SPECTRA
The temperature dependence of the H-1 NMR spectrum of hydrated collagen
A82-38611

MOLECULAR STRUCTURE
The radiolysis and racemization of leucine on proton irradiation
A82-38118
F-actin is a helix with a random variable twist
A82-38694

MOLECULES
The utilization of macromolecules in blood purification systems
[NRC/CNR-TT-2021]
N82-29864

MONOCULAR VISION
Gravity and the tilt aftereffect --- comparison between monocular, binocular and interocular exposures
A82-39440

MONTMORILLONITE
Chemical evolution. XL - Clay-mediated oxidation of diaminomaleonitrile
A82-41196

MORPHOLOGY
Somatotypology and athletics
A82-40486
Cytoarchitectronics of the epidermis and the epidermal proliferative units /EPU/
A82-40491
The response of the venous walls in the extremities to a disturbed venous outflow
A82-40493
Ultrastructural qualitative and quantitative evaluation of cytoplasmatic structures of heart muscle of rats living aboard biosputnik Kosmos 936
A82-40694
Results of morphological investigations aboard biosatellites Cosmos
A82-40697
The ultrastructure of the myocardium in the restorative period following aorto-coronary shunting in patients with chronic ischemic heart disease
A82-41484

MOTION
Retinal location and visual localization during pursuit eye movement
A82-39436

MOTION AFTEREFFECTS
Gravity and the tilt aftereffect --- comparison between monocular, binocular and interocular exposures
A82-39440

MOTION PERCEPTION
Effects of reference lines on displacement thresholds at various durations of movement --- in human visual perception
A82-38797

Neurons in cat visual cortex tuned to the direction of motion in depth - Effect of positional disparity A82-39434

Characteristics of human auditory evoked potentials during the lateralization of a 'moving' auditory image A82-40465

MOTION SICKNESS

Antimotion-sickness efficacy of scopolamine 12 and 72 hours after transdermal administration A82-40437

Dynamics of subjective discomfort in motion sickness as measured with a magnitude estimation method A82-40438

Vestibular effects of water immersion and Clonidine A82-40762

Reaction to diminished circulating blood volume in individuals who are susceptible and insusceptible to motion sickness (seasickness) N82-28960

Significance of minute volume parameters to evaluation of vestibular stability N82-29860

Neurochemical background and approaches in the understanding of motion sickness [NASA-CR-3569] N82-29865

MOTION SICKNESS DRUGS

Efficacy of kaviton in prevention of motion sickness N82-28961

MOTIVATION

Dynamics of a stabilized motor defensive conditioned reflex for different levels of motivation in irradiated rats A82-40464

Adapative motivation theory [AD-A111195] N82-28997

MUSCLES

State of the lactate dehydrogenase reaction in the muscular tissue of irradiated animals A82-38158

Changes in the microelement content of muscles under denervation A82-38598

Temperature characteristics of the ouabain-insensitive sodium flux in frog muscles A82-38600

Gramicidin A-induced conductance of the muscle fiber membrane A82-38605

The effect of urea and heat on the activity of lactate dehydrogenase and glucose 6-phosphate dehydrogenase A82-38612

Acridine orange inhibition of the ATPase activity of myosin and its fragments A82-38613

Reactions of O-18 exchange in the myosin systems of skeletal, cardiac, and smooth muscles A82-38614

The changes in the concentration of free amino acids in muscles during exercise A82-40314

The effect of denervation and tendotomy on oxidative phosphorylation in the skeletal muscles of the rabbit and on the resistance of phosphorylation to uncoupling agents A82-40504

Morphometric analysis of rat muscle fibers following space flight and hypogravity A82-40703

Na/+/-K/+/ dependent ATP-ase modifications of skeletal muscle and myocardium of hypokinetic rats A82-40707

Effect of immobilization on the ATPase activities and Ca-uptake of sarcoplasmic reticulum in different types of muscles A82-40708

Effect of immobilization of the excitatory parameters of different type skeletal muscle A82-40710

Protein composition of mRNA containing 18S-40S subribosomal particles in soleus muscle before and after immobilization A82-40742

Testosterone enhances C-14 2-deoxyglucose uptake by striated muscle --- sex hormones and muscle [NASA-CR-169101] N82-28986

MUSCULAR FATIGUE

The effect of certain characteristics of work motions on the tolerance of hand muscles to static exertions A82-38568

The conditions attending muscular strain in work involving only a few types of movements A82-38569

Physiological mechanisms of adaptation of rat skeletal muscles to weightlessness and similar functional requirements A82-40689

Relationship between muscle Qo2 and fatigue during repeated isokinetic contractions --- respiratory capacities A82-41216

MUSCULAR FUNCTION

Proof of the existence of Ca/2+/-induced structural changes in stems of myosin-containing filaments of vertebrate skeletal muscles A82-38599

Current problems concerning the vestibulo-ocular interaction A82-39416

Respiratory movements of the facial muscles and respiratory resistance A82-40456

Changes of intracellular rest potential and the length of isolated muscle under different loads A82-40480

Running in circles --- track radius effects on human running speed A82-40661

Cardiovascular responses to isometric exercise during simulated zero gravity A82-40662

Study of contractile properties and composition of myofibrillar proteins of skeletal muscles in the Cosmos-1129 experiment A82-40701

Variability of physiological properties of rat skeletal muscles at different gravity levels A82-40702

The effects of human growth hormone administration on the functional status of rat atrophied muscle following immobilization A82-40715

The effect of hypokinesis and hypoxia on the function of muscles A82-40739

Validation of a new method for studying the effects of vibration on the primate spine A82-40768

Hindlimb immobilization - Length-tension and contractile properties of skeletal muscle A82-41209

Relationship between muscle Qo2 and fatigue during repeated isokinetic contractions --- respiratory capacities A82-41216

A new hypothesis for the mechanism of muscle contraction A82-41334

Dynamics of the brain electric activity in patients with cerebral insults under the effect of muscle stimulation with sinusoidal modulated currents A82-41477

Condition of rats connective tissue during long-term hypokinesia and in recovery period N82-28969

MUSCULAR STRENGTH

The effect of inotropic factors on the postexercise characteristics of the heart A82-40451

Atrophy of rat skeletal muscles in simulated weightlessness A82-40738

Neuromuscular adaptation in human thenar muscles following strength training and immobilization A82-41213

**MUSCULOSKELETAL SYSTEM**
The effect of denervation and tendotomy on oxidative phosphorylation in skeletal muscles of the rabbit and the resistance of phosphorylation to uncoupling agents A82-38171
Proof of the existence of Ca/2+/-induced structural changes in stems of myosin-containing filaments of vertebrate skeletal muscles A82-38599
Somatotypology and athletics A82-40486
X-ray study of loaded skeletal portions in the upper extremities of athletes engaging in karate A82-40490
Physiological mechanisms of adaptation of rat skeletal muscles to weightlessness and similar functional requirements A82-40689
Body composition of rats flown aboard Cosmos-1129 A82-40695
Results of morphological investigations aboard biosatellites Cosmos A82-40697
Study of contractile properties and composition of myofibrillar proteins of skeletal muscles in the Cosmos-1129 experiment A82-40701
Variability of physiological properties of rat skeletal muscles at different gravity levels A82-40702
Plasticity of fast and slow muscle myofibrillar proteins in model experiments simulating weightlessness A82-40709
Effect of immobilization on the nonhistone protein composition in different types of skeletal muscles A82-40711
Immobilization effects upon aerobic and anaerobic metabolism of the skeletal muscles A82-40712
Atrophy of rat skeletal muscles in simulated weightlessness A82-40738
Results of biosatellite studies of gravity-dependent changes in the musculo-skeletal system of mammals A82-40751
Adaptation of the rat skeleton to weightlessness and its physiological mechanisms - Results of animal experiments aboard the Cosmos-1129 biosatellite A82-40753
Hindlimb immobilization - Length-tension and contractile properties of skeletal muscle A82-41209
Myosatellocytes and cambial properties of skeletal and muscular tissue A82-41469
Skeletal abnormalities in rats induced by simulated weightlessness A82-41548
Effect of high ambient temperature on carbohydrate metabolism in rat liver and skeletal muscles N82-28975
Anatomy of the spine N82-29871

**MUTAGENS**
The circadian rhythm of the sensitivity of the chromosome apparatus of mice to the mutagenic effect of measles A82-40462

**MUTATIONS**
The effect of long-wave ultraviolet radiation on cyclophosphamide-induced levels of chromosome aberrations in the bone marrow cells of mice A82-38556

**MYOCARDIAL INFARCTION**
Enzymes that detoxify active forms of oxygen and lipoperoxide in experimental ischemia and myocardial infarction A82-38540
The potential of radionuclide diagnosis of acute myocardial infarction A82-41458
Functional properties of T-lymphocytes in patients with acute myocardial infarction A82-41459
Characteristics of night sleep disorders in the case of myocardial infarction according to polygraphic data A82-41491
An evaluation of the informativeness of EKG parameters in diagnosing a myocardial infarction of the back wall of the left ventricle A82-41493
A comparison of echo- and kinetocardiographic indicators of the myocardial contractility of the left ventricle in patients suffering from various forms of ischemic heart disease A82-41496
The rate at which exogeneous hydrocortisone is eliminated from peripheral blood flow in patients suffering from an acute myocardial infarction A82-41498

**MYOCARDIUM**
Study of RNA synthesis rate and DNA content in the myocardium of new-born rats during adaptation to high-altitude hypoxia A82-38537
Two phases of the inotropic effect of adrenaline - The calcium dependence A82-38549
Ultrastructural qualitative and quantitative evaluation of cytoplasmatic structures of heart muscle of rats living aboard biosputnik Kosmos 936 A82-40698
Na/+/-K/+/ dependent ATP-ase modifications of skeletal muscle and myocardium of hypokinetic rats A82-40707
The ultrastructure of the myocardium in the restorative period following aorto-coronary shunting in patients with chronic ischemic heart disease A82-41484
The effect of diethylamine analog of ethmozine on the functional condition of myocardium /Clinical and experimental study/ A82-41488
Catecholamines and enzymes of their metabolism in rat myocardium after flight aboard the Cosmos-936 biosatellite N82-28966

**N**

**NARCOSIS**
Possible impairment of respiratory regulation under hyperbaric nitrogen narcosis N82-28964

**NASA PROGRAMS**
Animal models for simulating weightlessness A82-40749

**NEAR FIELDS**
Absorption characteristics of prolate spheroidal models exposed to the near fields of electrically small apertures A82-38802

**NECK (ANATOMY)**
Anatomy of the spine N82-29871
Clinical examination of spinal injuries N82-29882

**NEGATIVE IONS**
Subjective response to negative air ion exposure A82-40446

**NERVES**
The effect of denervation and tendotomy on oxidative phosphorylation in skeletal muscles of the rabbit and the resistance of phosphorylation to uncoupling agents A82-38171
The microcirculatory bed of the lungs after an effect exerted on the right vagus nerve A82-40497
Implantable electrical device [NASA-CASE-GSC-12560-1] N82-29863

**NEURITIS**
Evaluation of vestibular function in flight personnel with chronic diseases during stable remission A82-38179
The use of electrovacuum therapy in certain diseases of the peripheral nervous system A82-41478

**NEUROLOGY**
Otoneurological symptoms and syndromes --- Russian book A82-39286
Implantable electrical device [NASA-CASE-GSC-12560-1] N82-29863

**NEUROMUSCULAR TRANSMISSION**
Current problems concerning the vestibulo-ocular interaction A82-39416
Neuromuscular adaptation in human thenar muscles following strength training and immobilization A82-41213

**NEURONS**
Ultrastructural changes in the brains of rats subjected to acute emotional stress A82-38558
Ion currents through a neuron membrane during the injection of cyclic nucleotides A82-38588
Neurons in cat visual cortex tuned to the direction of motion in depth - Effect of positional disparity A82-39434
Spatial organization of the vestibular influences on the cerebellar fastigial neurons of cats A82-40312
Changes in neurons of the spinal cord and spinal ganglia under hypokinesia /neuromorphological and histochemical investigation/ A82-40494

**NEUROPHYSIOLOGY**
The impulse activity of neurons in the nodose ganglion during acute hemodynamic and respiratory disorders A82-38546
A method of evaluating the functional state of the central nervous system of a person performing work A82-38579
Spatial organization of the vestibular influences on the cerebellar fastigial neurons of cats A82-40312
Central nervous dysfunctions after near-miss accidents in diving A82-40443
The correlations of the central nervous system and thyroid functions in conditions of chronic emotional stress A82-40453
Statistical analysis of neuronal impulse activity in the diencephalon during immobilization-produced emotional stress in rats A82-40467
Changes in neurons of the spinal cord and spinal ganglia under hypokinesia /neuromorphological and histochemical investigation/ A82-40494
Age changes in the cerebral cortex of humans and cats /A comparative electron-microscopical investigation/ A82-40496
Higher integrative systems of the brain --- Russian book A82-40642
Neurochemical mechanisms of learning and memory --- Russian book A82-40646
Optimizing conditions for athletic activity with an allowance made for neurodynamic peculiarities /using bicycle sports as a model/ A82-41503
Phase analysis of dynamics of galvanic skin responses in man N82-29861
Neurochemical background and approaches in the understanding of motion sickness [NASA-CR-3569] N82-29865

**NEUROSES**
The tolerance to physical loads in women during menopause complicated by climacteric neurosis with cardialgia A82-41495

**NEUROSPORA**
Similar genes for a mitochondrial ATPase subunit in the nuclear and mitochondrial genomes of Neurospora crassa A82-38698

**NEUTRON IRRADIATION**
Neutron radiation dosimetry in high altitude flight personnel A82-40844

**NITRILES**
The radiolysis of aqueous propionitrile - Compounds of interest to chemical evolution studies A82-41197

**NITROGEN COMPOUNDS**
Nitrogen compound levels in tissues of rat cerebral hemispheres and cerebellum after flight aboard Cosmos-1129 biosatellite N82-28967

**NITROGEN METABOLISM**
Nitrogen compound levels in tissues of rat cerebral hemispheres and cerebellum after flight aboard Cosmos-1129 biosatellite N82-28967

**NITROUS OXIDES**
Possible impairment of respiratory regulation under hyperbaric nitrogen narcosis N82-28964

**NOISE INJURIES**
Pathomorphological investigation of the mechanism of cochlear damage caused by noise A82-39241

**NOISE INTENSITY**
Histoenzymological changes in experimental animals exposed to variable noise A82-38577
Alterations of histochemical organization in the organ of Corti under the influence of chronic noise A82-39242

**NOISE SPECTRA**
Attributing macroscopic fluctuations in aqueous solutions of proteins and other substances to the class of flicker noise A82-38592

**NOISE TOLERANCE**
Achievements and possibilities in the research being carried out to protect workers in the 11th five-year plan from noise and vibration A82-38573
The combined effect of carbon monoxide and total-body vibration on the organism A82-40475
Tritium oxide distribution and excretion kinetics in the exposure of animals to noise A82-41463
The incorporation of P-32 into various sections of the brain upon exposure to intermittent noise of low intensity A82-41467

**NONLINEAR SYSTEMS**
A design methodology for nonlinear systems containing parameter uncertainty: Application to nonlinear controller design [NASA-CR-166358] N82-29005

**NONUNIFORM MAGNETIC FIELDS**
The influence of a constant magnetic field on the epileptogenic foci in the hippocampus of rabbits A82-40466

**NUCLEAR MAGNETIC RESONANCE**
The temperature dependence of the H-1 NMR spectrum of hydrated collagen A82-38611

**NUCLEIC ACIDS**
Effects of space flight factors and artificial gravity on deoxyribonucleoprotein in lymphoid organs of rats A82-40723

**NUCLEOTIDES**
Ambiguity and the evolution of the genetic code A82-38120
The concentration of adenyl nucleotides and creatine phosphate in the cerebral hemispheres during different manifestations of stress A82-38560
Ion currents through a neuron membrane during the injection of cyclic nucleotides A82-38588
Similar genes for a mitochondrial ATPase subunit in the nuclear and mitochondrial genomes of Neurospora crassa A82-38698

Ligation of oligonucleotides by pyrimidine dimers - A missing 'link' in the origin of life A82-39423
The content of cAMP and cGMP in brain tissues during adaptation to ischemia A82-40310
Molecular basis for the genetic code A82-41195

NUTATION
Initiation of nutation in sunflower hypocotyls A82-40724

NUTRITION
The influence of a deficit of vitamins on immunity /A review of the literature/ A82-41504
Evaluation of engineering foods for Controlled Ecological Life Support Systems (CELSS) [NASA-CR-166359] N82-29006

NUTRITIONAL REQUIREMENTS
Energy requirements of workers at an oil field in western Siberia A82-40481
The role of nutrition in the changes of energy metabolism during stress A82-40482
Physical activity and human requirements for energy and food substances A82-40487
USSR report. Space biology and aerospace medicine, volume 16, no. 3, May - June 1982 [JPRS-81197] N82-28949
Metabolic distinctions related to intake of low-calorie 'survival' rations consisting only of readily assimilated carbohydrates N82-28953

NYSTAGMUS
Nystagmometry of optovestibular interaction N82-28962
A procedure for the analysis of nystagmus and other eye movements [AD-A112603] N82-28987

O

OBSERVABILITY (SYSTEMS)
On the observability of electrical cardiac sources --- Thesis A82-41450

OCEAN THERMAL ENERGY CONVERSION
OTEC biofouling, corrosion, and materials study from a moored platform at Punta Tuna, Puerto Rico [DE82-007037] N82-28947
Technical assessment of the prevention of micro-fouling on OTEC heat-transfer surfaces through the use of ultraviolet radiation [DE82-005489] N82-29850
OTEC-1 power system test program: Biofouling and corrosion monitoring on OTEC-1 [DE82-007035] N82-29851

OCTANES
An investigation of the conformational stability of immunoglobulin G in the monolayers at the phase boundary between aqueous solutions of NaCl and octane A82-38607

OCULOMOTOR NERVES
The cholinergic nature of hypothalamo-cortical excitatory influence A82-38551

OFFSHORE PLATFORMS
OTEC-1 power system test program: Biofouling and corrosion monitoring on OTEC-1 [DE82-007035] N82-29851

OIL FIELDS
Energy requirements of workers at an oil field in western Siberia A82-40481

OPERATOR PERFORMANCE
Physiological and hygienic analysis of the response of young truck drivers to their work load A82-38567

OPERATORS (PERSONNEL)
Some characteristics of the diurnal rhythm of physiological functions of sailors in the tropics A82-38180
The detection of premorbid states and cardiovascular diseases during medical examinations of seamen A82-38553
Achievements and possibilities in the research being carried out to protect workers in the 11th five-year plan from noise and vibration A82-38573
Setting hygienic standards to be applied to environmental standards pertaining to the rolling stock of railroads and subway systems A82-38578

OPTICAL MEASUREMENT
Determination of blood-lipoproteid dimensions by optical methods A82-38593

ORAL HYGIENE
Acoustic tooth cleaner [NASA-CASE-LAR-12471-1] N82-29862

ORGANISMS
Systemic mechanisms of homeostasis A82-39417

ORGANIZING
The organizing of conferences [PB82-142696] N82-28946

ORTHOSTATIC TOLERANCE
Baroreflex regulation of hemodynamics under orthostatic effects /an investigation with a mathematical model/ A82-38162
Orthostatic tests during cosmonaut selection A82-38854
Changes in blood volume and response to vaso-active drugs in horizontally casted primates A82-40657
A new rat model for studies of hypokinesia and antiorthostasis A82-40706
Orthostatic tolerance and exercise response before and after 7 days simulated weightlessness A82-40731
Postural control related to the different tilting body positions A82-40732
Analysis of transient cardiovascular response to orthostatic stress using noninvasive methods A82-40740
Antiorthostatic hypokinesia and circulation in the rat A82-40741
Suspension restraint - Induced hypokinesia and antiorthostasis as a simulation of weightlessness A82-40744
Regulation of cerebral circulation in erect position N82-28957

OSTEOPOROSIS
Skeletal abnormalities in rats induced by simulated weightlessness A82-41548
Osteoporosis in unsupported extremities N82-28970

OTOLOGY
Otoneurological symptoms and syndromes --- Russian book A82-39206

OXIDATION
The effect of denervation and tendotomy on oxidative phosphorylation in skeletal muscles of the rabbit and the resistance of phosphorylation to uncoupling agents A82-38171
Chemical evolution. XL - Clay-mediated oxidation of diaminomaleonitrile A82-41196

OXYGEN CONSUMPTION
Circadian changes in resting heart rate and body temperature, maximal oxygen consumption and perceived exertion A82-38268
The flavin-dependent consumption of oxygen in mitochondria under illumination A82-38509
Metabolic and cardiovascular adaptations in trained hypophysectomized rats A82-41215

OXYGEN MASKS
The accuracy of venturi masks at altitude A82-40845

OXYGEN METABOLISM
Reactions of O-18 exchange in the myosin systems of skeletal, cardiac, and smooth muscles A82-38614

The participation of the lymphatic system in the resistance of an organism to hypoxia
A82-39793
Immobilization effects upon aerobic and anaerobic metabolism of the skeletal muscles
A82-40712
Relationship between muscle QO2 and fatigue during repeated isokinetic contractions --- respiratory capacities
A82-41216
Effects of low-intensity electromagnetic fields on human and animal erythrocytes
N82-28974
Intracutaneous partial oxygen pressure (pO2 sub ic) in men during short-term space flights: Results of joint USSR-GDR space flight
N82-30278

OXYGEN PRODUCTION
Determination of maximal aerobic power during upper body exercise
[AD-A111712] N82-29866

OXYGEN TENSION
Effects of high-G on ventilation/perfusion in the domestic fowl
A82-40672

OXYGEN 18
Reactions of O-18 exchange in the myosin systems of skeletal, cardiac, and smooth muscles
A82-38614

OXYGENATION
Prevention of heart function abnormalities during reoxygenation after ischemia by adaptation to altitude hypoxia
A82-40455

OZONE
Modification of method for assaying ozone by the diacetyl dihydrolutidine reaction
N82-28973

OZONOMETRY
Modification of method for assaying ozone by the diacetyl dihydrolutidine reaction
N82-28973

P

P-3 AIRCRAFT
Potential applications of computer-assisted instruction to P-3 aircrew training
[AD-A113491] N82-29893

PAIN
Functional condition of the heart mitochondria in the dynamics of emotional and pain stress
A82-41500

PAIN SENSITIVITY
The role of central gray matter in the activation of antipain systems of the rat's brain under stress
A82-38547

PARABOLIC FLIGHT
Rapid perceptual adaptation to high gravitoinertial force levels Evidence for context-specific adaptation
A82-40436

PARACHUTE DESCENT
Parachuting
N82-29878

PARACHUTING INJURY
Theories of the pathogenesis of fractures of the spine
N82-29874
Ejection of pilots from combat aircraft
N82-29877
Parachuting
N82-29878

PARTICLE SIZE DISTRIBUTION
A measurement of the size distribution of lipoproteins in the plasma of human blood
A82-38603

PASSENGER AIRCRAFT
The nature and rate of occurrence of medical emergencies on board Air France aircraft
A82-38841
Psychological investigation of pilot behavior during integration of control systems in the cockpit of passenger airliners --- German thesis
A82-40560

PASSENGERS
Setting hygienic standards to be applied to environmental standards pertaining to the rolling stock of railroads and subway systems
A82-38570

PATHOGENESIS
The detection of premorbid states and cardiovascular diseases during medical examinations of seamen
A82-38553
Pathomorphological investigation of the mechanism of cochlear damage caused by noise
A82-39241
Echocardiographic characterization of heart hypertension
A82-40307
The toxic properties of rabbit and dog sera under controlled hyperthermia
A82-40450
Application of laser therapy to patients with osteoarthrosis deformans
A82-41475
Aetiology and pathogenesis --- traumatic lesions of the spine
N82-29875

PATHOLOGICAL EFFECTS
Morphological and functional factors contributing to a hypertonic heart
A82-38557
Delayed effects of the internal irradiation of endocrine system in female rats
A82-38582

PATIENTS
Diagnosis and organization of the therapy of patients with disorders of blood circulation in the brain
A82-38554
The effect of potassium orotate on the metabolism of certain vitamins in patients with fractures of the long tubular bones
A82-38563
Intrahemispherical relations of EEG slow-wave components in patients with local brain lesions
A82-40472
The significance of the bicycle ergometer test for evaluating the work capacity in patients with hypertension
A82-40477

PELVIS
The response of the venous walls in the extremities to a disturbed venous outflow
A82-40493

PEPTIDES
Abiogenic synthesis of the peptide bond. II
A82-39426
Abiogenic synthesis of the peptide bond. I
A82-39440
The effect of leuenkephalin and thyrosine on the lymphatic and blood microvessels
A82-41490
USSR report. Life sciences biomedical and behavioral sciences, no. 16
[JPRS-80789] N82-28977
Monograph on new direction of chemistry and biology of peptide and protein bioregulators reviewed
N82-28979

PERFORMANCE PREDICTION
Robotics: Problems and prospects
A82-40473

PERFORMANCE TESTS
The accuracy of venturi masks at altitude
A82-40445

PERIPHERAL CIRCULATION
An improved apparatus for venous occlusion plethysmography
A82-38548
The effect of Clonidine on peripheral vasomotor reactions during simulated zero gravity
A82-40763
The rate at which exogeneous hydrocortisone is eliminated from peripheral blood flow in patients suffering from an acute myocardial infarction
A82-41498

**PERIPHERAL NERVOUS SYSTEM**
Early reaction of the hemopoietic organs depending on the condition of the peripheral N-cholinergic systems
A82-38168
The use of electrovacuum therapy in certain diseases of the peripheral nervous system
A82-41478
**PERIPHERAL VISION**
Color vision in the peripheral retina under photopic conditions
A82-38798
Global visual processing for saccadic eye movements
A82-39435
**PERMEABILITY**
Optimization of medicinal electrophoresis --- enhancement of cutaneous penetration
A82-41472
**PERSONNEL DEVELOPMENT**
Training of personnel specialized in cartography
N82-29669
**PERSONNEL SELECTION**
The clinical selection of astronauts at the C.P.E.M.P.N
A82-38852
Vestibular screening of cosmonauts
A82-38853
Orthostatic tests during cosmonaut selection
A82-38854
Selection and training of European astronauts
A82-39507
A test for the prediction of risk-taking attitude in operators
A82-40449
**PERSPIRATION**
The effectiveness of perspiration in a hot environment
A82-38178
In vivo and in vitro characteristics of eccrine sweating in patas and rhesus monkeys
A82-41214
**PH FACTOR**
Domestic swine in physiological research. 3: Blood gas and acid-base values of arterial and venous blood from young anesthetized pigs maintained under steady-state ventilatory conditions
[AD-A111834]
N82-28945
**PHARMACOLOGY**
An attempt at the classification of 'patient pharmacokinetic capacities'
A82-38562
Gramicidin A-induced conductance of the muscle fiber membrane
A82-38605
The effect of denervation and tendotomy on oxidative phosphorylation in the skeletal muscles of the rabbit and on the resistance of phosphorylation to uncoupling agents
A82-40504
The effect of Clonidine on peripheral vasomotor reactions during simulated zero gravity
A82-40763
Cardiovascular effects of Clonidine during 20 hours head down tilt /-5 deg/
A82-40764
The ultrastructure of the myocardium in the restorative period following aorto-coronary shunting in patients with chronic ischemic heart disease
A82-41484
**PHASE SHIFT**
Hyperacuity for luminance phase angle in the human visual system
A82-38799
**PHOSPHATES**
Formation of cyanate and carbamyl phosphate by electric discharges of model primitive gas
A82-38116
**PHOSPHORUS METABOLISM**
The concentration of adenyl nucleotides and creatine phosphate in the cerebral hemispheres during different manifestations of stress
A82-38560
**PHOSPHORUS 32**
The incorporation of P-32 into various sections of the brain upon exposure to intermittent noise of low intensity
A82-41467
**PHOSPHORYLATION**
The effect of denervation and tendotomy on oxidative phosphorylation in skeletal muscles of the rabbit and the resistance of phosphorylation to uncoupling agents
A82-38171
A comparison between the protonophoric and separating functions of weak dibasic acids --- in mitochondrial respiration
A82-38590
The effect of denervation and tendotomy on oxidative phosphorylation in the skeletal muscles of the rabbit and on the resistance of phosphorylation to uncoupling agents
A82-40504
**PHOTOCHEMICAL REACTIONS**
The flavin-dependent consumption of oxygen in mitochondria under illumination
A82-38589
**PHOTOSYNTHESIS**
Light curves for photosynthesis under intermittent illumination
A82-38608
Orientation and energy-transfer studies on chlorophyll in the photosynthetic membrane
[DE82-010180]
N82-29852
**PHYSICAL EXAMINATIONS**
The detection of premorbid states and cardiovascular diseases during medical examinations of seamen
A82-38553
The clinical selection of astronauts at the C.P.E.M.P.N
A82-38852
**PHYSICAL EXERCISE**
Diagnostics of disturbances of heart rhythm and conductance and their professional evaluation in flight personnel
A82-40309
The changes in the concentration of free amino acids in muscles during exercise
A82-40314
The effect of inotropic factors on the postexercise characteristics of the heart
A82-40451
The significance of the bicycle ergometer test for evaluating the work capacity in patients with hypertension
A82-40477
Physical activity and human requirements for energy and food substances
A82-40487
X-ray study of loaded skeletal portions in the upper extremities of athletes engaging in karate
A82-40490
Cardiovascular responses to isometric exercise during simulated zero gravity
A82-40662
Effect of athletic training on physical fitness under hypodynamics
A82-40663
Effect of physical training in cool and hot environments on +Gz acceleration tolerance in women
A82-40664
Aspects of cardiovascular adaptation to gravitational stresses
A82-40687
Orthostatic tolerance and exercise response before and after 7 days simulated weightlessness
A82-40731
Response of rat body composition to simultaneous exercise and centrifugation at 3.14g
A82-40766
Neuromuscular adaptation in human thenar muscles following strength training and immobilization
A82-41213
In vivo and in vitro characteristics of eccrine sweating in patas and rhesus monkeys
A82-41214
Relationship between muscle Qo2 and fatigue during repeated isokinetic contractions --- respiratory capacities
A82-41216
Effect of induced erythrocythemia on hypoxia tolerance during physical exercise
A82-41218

Acid-base, metabolic, and ventilatory responses to repeated bouts of exercise
A82-41219
The amplitude of the R wave and the contractile function of the left ventricle in patients with ischemic heart disease
A82-41486
Output and efficiency of the heart in young athletes as a function of the type of athletic training
A82-41497
Physiological studies of heat stress acclimation during a specific exercise regimen
[AD-A111897] N82-28991
Acclimatization to dry heat: Active men versus active women
[AD-A111708] N82-28993

PHYSICAL FITNESS
Effect of athletic training on physical fitness under hypodynamics
A82-40663
Problems in the metrology of the training load of ski racers
A82-41502
The speed of blood flow in athletes subjected to the combined action of a training regime and high-altitude climatic factors
A82-41505
Task analysis and the ability requirements of tasks: Collected papers
[AD-A111181] N82-29000
The spine and fitness for flight
N82-29889
Ankylosing spondylitis
N82-29891

PHYSICAL WORK
The effect of certain characteristics of work motions on the tolerance of hand muscles to static exertions
A82-38568
The conditions attending muscular strain in work involving only a few types of movements
A82-38569
Energy requirements of workers at an oil field in western Siberia
A82-40481
Diurnal dynamics of the indicators of the capacity for physical work and of physiological functions
A82-41460
The tolerance to physical loads in women during menopause complicated by climacteric neurosis with cardialgia
A82-41495
Slow waves of cardiac rhythm in healthy man under different conditions
N82-28955

PHYSICIANS
Medical emergencies on board an airliner - Procedures when a doctor is on board
A82-38844

PHYSIOCHEMISTRY
A factor of resistance to emotional stress in the brain of rats
A82-40452
The anti-stress role of the gamma-aminobutyric acid system of the brain
A82-40468
Increasing the efficiency of running on the basis of learning algorithms and information tools
A82-40488
Biochemical aspects of the mechanism by which cholinolyptics affect the brain
A82-41468
The use of biochemical monitoring methods in the ergometry of patients with atherosclerosis
A82-41494

PHYSIOLOGICAL ACCELERATION
Proceedings of a Meeting of the IUPS Commission on Gravitational Physiology --- Book
A82-40649
Study of high-g effects in animals
A82-40651
The effect of G sub z acceleration on pulmonary perfusion in the miniature swine
A82-40681
International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980, Proceedings
A82-40686
Physiological mechanisms of adaptation of rat skeletal muscles to weightlessness and similar functional requirements
A82-40689
Artificial gravity in space flight
A82-40691
Variability of physiological properties of rat skeletal muscles at different gravity levels
A82-40702
Morphometric analysis of rat muscle fibers following space flight and hypogravity
A82-40703
Gravitational adaptation of animals
A82-40716
Restraint of animals in space research
A82-40748
Effect of sustained Gz acceleration on lung fluid balance - An ultrastructural study
A82-40761

PHYSIOLOGICAL DEFENSES
Experimental and clinical study of a new immunoregulatory preparation - thymalin
A82-38177
The role of central gray matter in the activation of antipain systems of the rat's brain under stress
A82-38547
The participation of the lymphatic system in the resistance of an organism to hypoxia
A82-39793
Factors of the natural resistance of the body and methods for studying them
A82-40308
A factor of resistance to emotional stress in the brain of rats
A82-40452
Dynamics of a stabilized motor defensive conditioned reflex for different levels of motivation in irradiated rats
A82-40464
Weightlessness effects on resistance and reactivity of animals
A82-40690
Effect of spaceflight on lymphocyte stimulation
A82-40700

PHYSIOLOGICAL EFFECTS
The effect of helium on gas exchange and tissue respiration
A82-38165
Causes of high-altitude acute pulmonary edema
A82-38167
The effect of hypokinesia on the resistance of the heart to hypoxia
A82-38170
Some characteristics of the diurnal rhythm of physiological functions of sailors in the tropics
A82-38180
The influence of the GABA-receptor blocker bicuculline on the effects of fenibut and diazepam
A82-38539
Local cerebral blood flow dynamics during experimental ischemia
A82-38544
Alterations in heart work rhythm during hyperactivation of the anterior amygdaline nucleus
A82-38545
Ultrastructural changes in the brains of rats subjected to acute emotional stress
A82-38558
Achievements and possibilities in the research being carried out to protect workers in the 11th five-year plan from noise and vibration
A82-38573
Histoenzymological changes in experimental animals exposed to variable noise
A82-38577
Proof of the existence of Ca/2+/-induced structural changes in stems of myosin-containing filaments of vertebrate skeletal muscles
A82-38599
Pathomorphological investigation of the mechanism of cochlear damage caused by noise
A82-39241
Alterations of histochemical organization in the organ of Corti under the influence of chronic noise
A82-39242

Alterations in the labyrinth receptors after laser irradiation as detected by electron microscopy
A82-39244
Effect of the Circutone seat on hemodynamic, subjective, and thermal responses to prolonged sitting
A82-40442
The influence of a constant magnetic field on the epileptogenic foci in the hippocampus of rabbits
A82-40466
Statistical analysis of neuronal impulse activity in the diencephalon during immobilization-produced emotional stress in rats
A82-40467
The combined effect of carbon monoxide and total-body vibration on the organism
A82-40475
The cause of high-altitude acute pulmonary edema
A82-40498
Low-G simulation in mammalian research
A82-40654
A new rat model simulating some aspects of space flight
A82-40655
Effect of postural changes on minute ventilation, functional residual capacity and pulmonary N2 clearance
A82-40660
Effect of athletic training on physical fitness under hypodynamics
A82-40663
Effect of physical training in cool and hot environments on +Gz acceleration tolerance in women
A82-40664
Bone growth and composition in weanling and mature rats exposed to chronic centrifugation
A82-40669
Influences of horizontal hypokinesia on performance and circadian physiological rhythms in female humans
A82-40682
Adaptation to weightlessness and its physiological mechanisms - Results of animal experiments aboard biosatellites
A82-40688
Body composition of rats flown aboard Cosmos-1129
A82-40695
Studies of specific hepatic enzymes involved in the conversion of carbohydrates to lipids in rats exposed to prolonged spaceflight aboard Cosmos 1129
A82-40698
Bone resorption and calcium absorption in rats during spaceflight
A82-40704
Bone growth in the rat mandible during space flight
A82-40705
Space flight effects upon plasma and tissue lipids in rats
A82-40722
Changes of periodic protoplasmic movements on the fast clinostat
A82-40725
Skin temperature and thermal comfort in weightlessness
A82-40726
Relation between physiological effects of gravitational forces and that of magnetic forces
A82-40730
The reaction of simulated and true weightlessness on digestive tract of rats
A82-40733
Evidence for arrested bone formation during spaceflight
A82-40767
Validation of a new method for studying the effects of vibration on the primate spine
A82-40768
Chronic acceleration and brain density
A82-40769
Relation between physiological effects of gravitational forces and that of magnetic forces. II
A82-40771
Altitude-induced changes in plasma thyroxine, 3,5,3 prime-triiodothyronine, and thyrotropin in rats
A82-41207
Neuromuscular adaptation in human thenar muscles following strength training and immobilization
A82-41213
The effect of diethylamine analog of ethmozine on the functional condition of myocardium /Clinical and experimental study/
A82-41488
The effect of leienkephalin and thyrosine on the lymphatic and blood microvessels
A82-41490
Skeletal abnormalities in rats induced by simulated weightlessness
A82-41548
Endurance of +Gz G forces by middle-aged people before and after 7-day immersion
N82-28958
Effect of high ambient temperature on carbohydrate metabolism in rat liver and skeletal muscles
N82-28975
Biomedical research publications: 1980 - 1982
[NASA-CR-3587] N82-29848
Electrometric investigation of hrman gustatory analyzer under normal conditions and in simulated weightlessness
N82-29859
Phase analysis of dynamics of galvanic skin responses in man
N82-29861
Alcohol-induced physiological displacements and their effects on flight related functions
[AD-A114919] N82-29867

**PHYSIOLOGICAL FACTORS**
Diurnal dynamics of the indicators of the capacity for physical work and of physiological functions
A82-41460
Telemetry methods for monitoring physiological parameters
A82-41551
Parachuting
N82-29878

**PHYSIOLOGICAL RESPONSES**
Early reaction of the hemopoietic organs depending on the condition of the peripheral N-cholinergic systems
A82-38168
Physiological and hygienic analysis of the response of young truck drivers to their work load
A82-38567
Field sensitivity of the 'red' mechanism derived from primate local electroretinogram
A82-39431
Approaches to the study of the hypothalamus-pituitary gland relationship
A82-39569
The physiological mechanisms of the arousal response in animals under conditions of hypobiosis
A82-40311
The changes in the concentration of free amino acids in muscles during exercise
A82-40314
Antimotion-sickness efficacy of scopolamine 12 and 72 hours after transdermal administration
A82-40437
Task categorization and the limits of human performance in extreme heat
A82-40439
Thermoregulation and the menstrual cycle
A82-40441
The effect of hyperactivation of the anterior amygdaloid nucleus on heart activity during states of altered reactivity
A82-40454
Characteristics of human auditory evoked potentials during the lateralization of a 'moving' auditory image
A82-40465
The anti-stress role of the gamma-aminobutyric acid system of the brain
A82-40468
The effect of the electrical stimulation of afferent pathways on neurons in septal slices
A82-40469
Participation of the prefrontal cortex in delayed spatial choice and differentiation of time intervals in rhesus monkeys
A82-40470

Age changes in the cerebral cortex of humans and cats /A comparative electron-microscopical investigation/
A82-40496
The early reaction of the hemopoietic organs to stress, depending on the condition of the peripheral N-cholinergic systems
A82-40499
The effect of products erythrocyte destruction on immunological processes
A82-40500
Computer simulations of postural change, water immersion and bedrest - An integrative approach for understanding the spaceflight response
A82-40659
Receptors signaling gravity orientation in an insect
A82-40668
Effects of high-G on ventilation/perfusion in the domestic fowl
A82-40672
A new rat model for studies of hypokinesia and antiorthostasis
A82-40706
Effect of immobilization of the excitatory parameters of different type skeletal muscle
A82-40710
Alterations in heat loss and heat production mechanisms in rat exposed to hypergravic fields
A82-40718
Autonomic reactions in labyrinthectomized rabbits during centrifuge acceleration
A82-40720
International Union of Physiological Sciences, Annual Meeting, 3rd, Innsbruck, Austria, September 29-October 2, 1981, Proceedings
A82-40734
Analysis of transient cardiovascular response to orthostatic stress using noninvasive methods
A82-40740
Suspension restraint - Induced hypokinesia and antiorthostasis as a simulation of weightlessness
A82-40744
Results of investigations of weightlessness effects during prolonged manned space flights onboard Salyut-6
A82-40750
Mechanisms of the effects of weightlessness on the motor system of man
A82-40752
Cardiac and cerebral vascular adaptation to gravitational stresses in man
A82-40765
Response of rat body composition to simultaneous exercise and centrifugation at 3.14g
A82-40766
Temperature and behavioral responses of squirrel monkeys to 2Gz acceleration
A82-40774
Ventilatory and heart rate responses to hypoxia and hypercapnia during sleep in adults
A82-41206
Application of laser therapy to patients with osteoarthrosis deformans
A82-41475
Immunological reactions to lipoproteins and heparin in young men with a hereditary tendency to atherosclerosis
A82-41487
The use of biochemical monitoring methods in the ergometry of patients with atherosclerosis
A82-41494

PHYSIOLOGICAL TESTS
Morphological and functional factors contributing to a hypertonic heart
A82-38557
The effect of certain characteristics of work motions on the tolerance of hand muscles to static exertions
A82-38568
Detection/discrimination in the long-wavelength pathways --- human color vision tests
A82-39439
The gradualness of the reaction of the pituitary-adrenocortical system to activating and inhibiting signals
A82-40315
Trace reactions of the frog tissue metabolism on changes of ambient temperature in the frog Rana ridibunda Pall
A82-40316
Central nervous dysfunctions after near-miss accidents in diving
A82-40443
Diurnal changes in the duration of the S and G2 phases of the mitotic cycle in mononuclear and binuclear hepatocytes of normal and thyroxine-treated rats
A82-40459
An LED system for the formation of visual stimuli
A82-40471
The significance of the bicycle ergometer test for evaluating the work capacity in patients with hypertension
A82-40477
The effect of denervation and tendotomy on oxidative phosphorylation in the skeletal muscles of the rabbit and on the resistance of phosphorylation to uncoupling agents
A82-40504
Antiorthostatic hypokinesia and circulation in the rat
A82-40741
Restraint of animals in space research
A82-40748
Animal models for simulating weightlessness
A82-40749
The effect of Clonidine on peripheral vasomotor reactions during simulated zero gravity
A82-40763

PHYSIOLOGY
Histamine in biochemistry and physiology --- Russian book
A82-39290
Domestic swine in physiological research. 3: Blood gas and acid-base values of arterial and venous blood from young anesthetized pigs maintained under steady-state ventilatory conditions
[AD-A111834] N82-28945
USSR report. Life sciences. Biomedical and behavioral sciences, no. 18
[JPRS-81428] N82-29857
Physiopathology and pathology of spinal injuries in aerospace medicine
[AGARD-AG-250(ENG)] N82-29870

PIGMENTS
The flavin-dependent consumption of oxygen in mitochondria under illumination
A82-38589

PILOT PERFORMANCE
Physiological stresses in flying a sailplane
A82-38850
Experimentally determined pilot models using hovering VTOL flight data
[AIAA PAPER 82-1294] A82-40277
Aging and visual function of military pilots - A review
A82-40435
Psychological investigation of pilot behavior during integration of control systems in the cockpit of passenger airliners --- German thesis
A82-40560
The effect of G sub z acceleration on pulmonary perfusion in the miniature swine
A82-40681
Human factor and flight safety
A82-40885
Problem of accelerations in aviation medicine
N82-28950
Vibration and assessment of this flight factor by pilots
N82-28976
Quantification of pilot workload via instrument scan
[NASA-CR-169238] N82-29900

PILOT SELECTION
Evaluation of vestibular function in flight personnel with chronic diseases during stable remission
A82-38179

PILOT TRAINING
Vibration and assessment of this flight factor by pilots
N82-28976

PILOTS (PERSONNEL)
Alcohol-induced physiological displacements and their effects on flight related functions [AD-A114919] N82-29867

PIPETTES
Microelectronic electrode probe for testing brain electrical activity N82-28982

PITUITARY GLAND
Approaches to the study of the hypothalamus-pituitary gland relationship A82-39569
The gradualness of the reaction of the pituitary-adrenocortical system to activating and inhibiting signals A82-40315

PITUITARY HORMONES
The effects of human growth hormone administration on the functional status of rat atrophied muscle following immobilization A82-40715
Metabolic and cardiovascular adaptations in trained hypophysectomized rats A82-41215

PLANETARY ENVIRONMENTS
Mechanical chemical and bio-hazards --- space-probe related planet and earth contaminations A82-39159

PLANNING
The organizing of conferences [PB82-142696] N82-28948

PLANT ROOTS
Root cell gravireaction - Hormone interaction A82-40745

PLANT STRESS
Research opportunities and limitations of protracted hypogravity simulations for plant gravitational physiology A82-40653
Morphogenesis of a higher plant from cultured cells and embryos in space A82-40666
Gravity sensing, polar transport and cytoplasmic streaming in plant cells A82-40667
Gravity perception and asymmetric growth in plants - A model derived from the grass pulvinus A82-40775

PLANTS (BOTANY)
Initiation of nutation in sunflower hypocotyls A82-40724
The effect of gravity on the distribution of plant growth substances in plant tissues A82-40746

PLETHYSMOGRAPHY
An improved apparatus for venous occlusion plethysmography A82-38548

POLAR REGIONS
Use of the thermovision method in the prophylactic examination of polar workers A82-38565
The assimilation of vitamin C in seamen during voyages at high latitudes A82-41465

POLARIZED LIGHT
A possible explanation for the fluctuations in reflectivity exhibited by bilayer liped membranes excited during electrostriction A82-38602

POLAROGRAPHY
Intracutaneous partial oxygen pressure (pO2 sub ic) in man during short-term space flights: Results of joint USSR-GDR space flight N82-30278

POLLUTION MONITORING
USSR report. Life sciences. Biomedical and behavioral sciences, no. 17 [JPRS-81419] N82-29853

POLYMER CHEMISTRY
Thermodynamic parameters characterizing interaction between polymer-absorbed ligand molecules A82-38609

POLYNUCLEOTIDES
Polynucleotide replication coupled to protein synthesis A possible mechanism for the origin of life A82-38119

POLYPEPTIDES
Polynucleotide replication coupled to protein synthesis A possible mechanism for the origin of life A82-38119
Evolution of early mechanisms of translation of genetic information into polypeptides A82-41324

PORTABLE EQUIPMENT
A respirator for training in conditions of changeable respiratory mixture A82-40485

POSITION (LOCATION)
Neurons in cat visual cortex tuned to the direction of motion in depth - Effect of positional disparity A82-39434
Retinal location and visual localization during pursuit eye movement A82-39436
Orienting and exploratory behavior of gray rat in open field. Zoopsychological analysis N82-28981

POSTFLIGHT ANALYSIS
Relation between sensoric and motoric function of Wistar rats after space flight by biosatellite Cosmos 1129 A82-40737

POSTURE
Effect of postural changes on minute ventilation, functional residual capacity and pulmonary N2 clearance A82-40660
Postural control related to the different tilting body positions A82-40732

POTASSIUM
ATPase activity and the potassium ion permeability of erythrocyte membranes in the presence of serotonin and radiation A82-40479
Chronic central vascular expansion induces hypokalemia in conscious primates A82-40719
Osteoporosis in unsupported extremities N82-28970

POTASSIUM CHLORIDES
The effect of hyperactivation of the anterior amygdaloid nucleus on heart activity during states of altered reactivity A82-40454

PRECIPITATION (CHEMISTRY)
The effect of monovalent cations on the ATPase activity and superprecipitation of actomyosin A82-38615

PRESSURE EFFECTS
Baroreflex regulation of hemodynamics under orthostatic effects /an investigation with a mathematical model/ A82-38162

PRESSURIZED CABINS
Modification of method for assaying ozone by the diacetyl dihydrolutidine reaction N82-28973

PRIMATES
Validation of a new method for studying the effects of vibration on the primate spine A82-40768

PRIMITIVE EARTH ATMOSPHERE
Formation of cyanate and carbamyl phosphate by electric discharges of model primitive gas A82-38116

PROCEDURES
Medical emergencies on board an airliner - Procedures when a doctor is on board A82-38844
Medical emergencies on board airliners - Procedures in the absence of a doctor A82-38845

PROGRAMMERS
Human/computer transaction tasks: An annotated bibliography [AD-A114800] N82-29902

PROGRAMMING LANGUAGES
  Rule-based programming for human-computer interface specification [AD-A113036] N82-29007
PROLATE SPHEROIDS
  Absorption characteristics of prolate spheroidal models exposed to the near fields of electrically small apertures A82-38802
PROLONGATION
  Problem of accelerations in aviation medicine N82-28950
PROPHYLAXIS
  Use of the thermovision method in the prophylactic examination of polar workers A82-38565
PROSTAGLANDINS
  Prostoglandins and regulation of cerebral circulation under conditions of the altered gaseous composition of the blood A82-38561
PROSTHETIC DEVICES
  Systemic mechanisms of homeostasis A82-39417
PROTECTION
  Theoretical and practical aspects of using acoustic repellants to scare birds. Part 1: Interspecificity and geographic (regional) distinctions of acoustic repellants N82-29858
PROTECTIVE CLOTHING
  Auxiliary cooling - Comparison of air-cooled vs. water-cooled vests in hot-dry and hot-wet environments A82-40440
PROTEIN METABOLISM
  Acridine orange inhibition of the ATPase activity of myosin and its fragments A82-38613
  Reactions of O-18 exchange in the myosin systems of skeletal, cardiac, and smooth muscles A82-38614
  The effect of monovalent cations on the ATPase activity and superprecipitation of actomyosin A82-38615
  Neurochemical mechanisms of learning and memory --- Russian book A82-40646
  Effect of prolonged weightlessness on certain aspects of brain metabolism of the rat A82-40699
  Effect of immobilization on the nonhistone protein composition in different types of skeletal muscles A82-40711
  Effects of space flight factors and artificial gravity on deoxyribonucleoprotein in lymphoid organs of rats A82-40723
  Leucine and urea metabolism in acute human cold exposure A82-41211
PROTEIN SYNTHESIS
  Clay and the origin of life A82-38115
  Polynucleotide replication coupled to protein synthesis A possible mechanism for the origin of life A82-38119
  The effect of laser radiation on lipid synthesis in yeast A82-38585
  Similar genes for a mitochondrial ATPase subunit in the nuclear and mitochondrial genomes of Neurospora crassa A82-38698
  Abiogenic synthesis of the peptide bond. II A82-39426
  Abiogenic synthesis of the peptide bond. I A82-39448
  Protein composition of mRNA containing 18S-40S subribosomal particles in soleus muscle before and after immobilization A82-40742
  Molecular basis for the genetic code A82-41195
PROTEINS
  Attributing macroscopic fluctuations in aqueous solutions of proteins and other substances to the class of flicker noise A82-38592
  Specificity of action of monovalent cations on the ATPase activity of myosin HMM-S-1 A82-38594
  Proof of the existence of Ca/2+/-induced structural changes in stems of myosin-containing filaments of vertebrate skeletal muscles A82-38599
  Conformational dynamics of proteins and simplest molecular 'machines' A82-38610
  F-actin is a helix with a random variable twist A82-38694
  Study of contractile properties and composition of myofibrillar proteins of skeletal muscles in the Cosmos-1129 experiment A82-40701
  Plasticity of fast and slow muscle myofibrillar proteins in model experiments simulating weightlessness A82-40709
  A new hypothesis for the mechanism of muscle contraction A82-41334
  USSR report. Life sciences biomedical and behavioral sciences, no. 16 [JPRS-80789] N82-28977
  Monograph on new direction of chemistry and biology of peptide and protein bioregulators reviewed N82-28979
PROTOBIOLOGY
  Ambiguity and the evolution of the genetic code A82-38120
  Chemical evolution and the origin of life - Bibliography Supplement 1980 A82-38122
PROTON IRRADIATION
  The radiolysis and racemization of leucine on proton irradiation A82-38118
PSEUDOMONAS
  Metabolism of the thermophilic hydrogenous bacterium Pseudomonas thermophila K-2 A82-39427
PSYCHOACOUSTICS
  An absolute threshold in psychoacoustics A82-40448
PSYCHOLOGICAL EFFECTS
  Subjective response to negative air ion exposure A82-40446
  Biomedical research publications: 1980 - 1982 [NASA-CR-3587] N82-29848
PSYCHOLOGICAL FACTORS
  Dynamics of subjective discomfort in motion sickness as measured with a magnitude estimation method A82-40438
  Effect of the Circutone seat on hemodynamic, subjective, and thermal responses to prolonged sitting A82-40442
  Certain psychological and tactical aspects of athlete activities during competitions A82-41506
PSYCHOLOGICAL TESTS
  Effects of reference lines on displacement thresholds at various durations of movement --- in human visual perception A82-38797
  Effect of chromatic adaptation on the achromatic locus - The role of contrast, luminance and background color A82-39433
  Gravity and the tilt aftereffect --- comparison between monocular, binocular and interocular exposures A82-39440
  A test for the prediction of risk-taking attitude in operators A82-40449
PSYCHOLOGY
  Adaptive motivation theory [AD-A111195] N82-28997

**PSYCHOMETRICS**
A test for the prediction of risk-taking attitude in operators
A82-40449
Adapting a scale for measuring competition anxiety
A82-40450

**PSYCHOPHYSIOLOGY**
Circadian changes in resting heart rate and body temperature, maximal oxygen consumption and perceived exertion
A82-38268
The correlations of the central nervous system and thyroid functions in conditions of chronic emotional stress
A82-40453
An LED system for the formation of visual stimuli
A82-40471
Psychic stress in athletic activity
A82-40489
Higher integrative systems of the brain --- Russian book
A82-40642
Neurochemical mechanisms of learning and memory --- Russian book
A82-40646

**PSYCHOSOMATICS**
Vegetative reactions to the administration of atropine and propranolol in rats that exhibit different types of behavior
A82-40463
The influence of psychological and somatic factors on the symptomatics of hypertension
A82-41492
The tolerance to physical loads in women during menopause complicated by climacteric neurosis with cardialgia
A82-41495

**PUBLIC HEALTH**
Setting hygienic standards to be applied to environmental standards pertaining to the rolling stock of railroads and subway systems
A82-38578

**PULMONARY CIRCULATION**
The microcirculatory bed of the lungs after an effect exerted on the right vagus nerve
A82-40497
The effect of G sub z acceleration on pulmonary perfusion in the miniature swine
A82-40681
Effect of sustained Gz acceleration on lung fluid balance - An ultrastructural study
A82-40761

**PULMONARY FUNCTIONS**
Causes of high-altitude acute pulmonary edema
A82-38167
The cause of high-altitude acute pulmonary edema
A82-40498
Effect of postural changes on minute ventilation, functional residual capacity and pulmonary N2 clearance
A82-40660
Effects of high-G on ventilation/perfusion in the domestic fowl
A82-40672
Autonomic reactions in labyrinthectomized rabbits during centrifuge acceleration
A82-40720
Pulmonary stretch receptor discharge patterns in eupnea, hypercapnia, and hypoxia
A82-41210
A nonlinear model combining pulmonary mechanics and gas concentration dynamics
A82-41230

**PULSE GENERATORS**
Thermal pulsation - Techniques, demonstration, and clinical application
A82-41474

**PURSUIT TRACKING**
Retinal location and visual localization during pursuit eye movement
A82-39436

**PYRIMIDINES**
Changes in the relations of pyrimidine blocks in DNA of the hematopoietic system immediately following gamma irradiation of the animal
A82-38152
Ligation of oligonucleotides by pyrimidine dimers - A missing 'link' in the origin of life
A82-39423

## Q

**QUARTZ LAMPS**
Detection/discrimination in the long-wavelength pathways --- human color vision tests
A82-39439

## R

**RADIATION ABSORPTION**
Absorption characteristics of prolate spheroidal models exposed to the near fields of electrically small apertures
A82-38802

**RADIATION DAMAGE**
Radiation damage and recovery of mouse T-cells. IV - Elimination of radiation-induced migration abnormalities in T-lymphocytes
A82-38156
Effects of cAMP accumulation activators on certain stages of genome expression in cells upon acute radiation damage to the organism. III Comparative study of the properties of RNA synthesized in a system of isolated liver and spleen cell nuclei from irradiated rats and animals having been treated with serotonin prior to irradiation
A82-38157
The effect of long-wave ultraviolet radiation on cyclophosphamide-induced levels of chromosome aberrations in the bone marrow cells of mice
A82-38556

**RADIATION DOSAGE**
Equivalent doses, dose rates and times of chronic exposure to ionizing radiation for various mammals
A82-38160
Setting safety standards for ionizing radiation
A82-38580
Neutron radiation dosimetry in high altitude flight personnel
A82-40444
Dynamics of a stabilized motor defensive conditioned reflex for different levels of motivation in irradiated rats
A82-40464
A hygienic evaluation of the biological effects of nonionizing microwave radiation
A82-41464
What is ALARA
[DE81-030814] N82-28995
Cytogenetic analysis of peripheral blood lymphocytes of individuals exposed to low doses of ionizing radiation
N82-29856

**RADIATION EFFECTS**
The radiolysis and racemization of leucine on proton irradiation
A82-38118
Changes in electrically neutral Ca/2+/-H/+/ exchange in rat liver mitochondria following gamma irradiation
A82-38151
Changes in the relations of pyrimidine blocks in DNA of the hematopoietic system immediately following gamma irradiation of the animal
A82-38152
Radiation-induced shortening of the life span of D. melanogaster. II - Sensitizing effects of 5-bromo-2-deoxyuridine
A82-38155
State of the lactate dehydrogenase reaction in the muscular tissue of irradiated animals
A82-38158
Effect of the combined administration of antibiotic-resistant bifidobacteria and the corresponding antibiotics on the survival of irradiated mice
A82-38581
Delayed effects of the internal irradiation of endocrine system in female rats
A82-38582
The effect of laser radiation on lipid synthesis in yeast
A82-38585
Nonthermal effect of nanosecond microwave pulses on the transepithelial transport of sodium ions
A82-38586

The mechanism of the microwave effect on the conductivity of bilayer lipid membranes
A82-38507

ATPase activity and the potassium ion permeability of erythrocyte membranes in the presence of serotonin and radiation
A82-40479

The intracellular responses of frog eggs to novel orientations to gravity
A82-40758

Hygienic evaluation of an 8-mm-wave electromagnetic field
A82-41462

A hygienic evaluation of the biological effects of nonionizing microwave radiation
A82-41464

Long-term and progressive changes in Rhesus spectral sensitivity after low-level coherent light (514nm exposure) --- effects of laser exposure on visual function
[AD-A111639] N82-28946

**RADIATION PROTECTION**

Study of the radioprotective effectiveness of an hypoxic gas mixture during combined radiation and thermal injuries to rats
A82-38159

What is ALARA
[DE81-030814] N82-28995

Attenuation of radioprotective effects of acute hypoxia on animals adapted to high altitudes
N82-29855

**RADIATION SICKNESS**

Tritium oxide distribution and excretion kinetics in the exposure of animals to noise
A82-41463

**RADIATION THERAPY**

Application of laser therapy to patients with osteoarthrosis deformans
A82-41475

**RADIATION TOLERANCE**

Study of the relation between the number of sulfhydryl groups and the level of lipid antioxidant activity in the organs of individual animals of different species
A82-38153

**RADIOACTIVE ISOTOPES**

The potential of radionuclide diagnosis of acute myocardial infarction
A82-41458

**RADIOBIOLOGY**

Optimization of the conditions of modified cell irradiation
A82-38154

Radiation-induced shortening of the life span of D. melanogaster. II - Sensitizing effects of 5-bromo-2-deoxyuridine
A82-38155

Effects of cAMP accumulation activators on certain stages of genome expression in cells upon acute radiation damage to the organism. III Comparative study of the properties of RNA synthesized in a system of isolated liver and spleen cell nuclei from irradiated rats and animals having been treated with serotonin prior to irradiation
A82-38157

Equivalent doses, dose rates and times of chronic exposure to ionizing radiation for various mammals
A82-38160

Delayed effects of the internal irradiation of endocrine system in female rats
A82-38582

Absorption characteristics of prolate spheroidal models exposed to the near fields of electrically small apertures
A82-38802

Long-term and progressive changes in Rhesus spectral sensitivity after low-level coherent light (514nm exposure) --- effects of laser exposure on visual function
[AD-A111639] N82-28946

USSR report. Life sciences. Biomedical and behavioral sciences, no. 17
[JPRS-81419] N82-29853

USSR report. Life sciences. Biomedical and behavioral sciences, no. 18
[JPRS-81420] N82-29857

**RADIOGRAPHY**

Effects of lower body negative pressure on the reliability of cardiovascular system using X-ray kymograms
A82-40728

Analytical study of traumatic lesions of C3-C7
N82-29884

Radiological study of fractures of C1 and C2
N82-29885

**RADIOLOGY**

The potential of radionuclide diagnosis of acute myocardial infarction
A82-41458

Radiology of spinal trauma in aviation medicine
N82-29883

**RADIOLYSIS**

The radiolysis and racemization of leucine on proton irradiation
A82-38118

The radiolysis of aqueous propionitrile - Compounds of interest to chemical evolution studies
A82-41197

**RADIOPATHOLOGY**

Effect of the combined administration of antibiotic-resistant bifidobacteria and the corresponding antibiotics on the survival of irradiated mice
A82-38581

**RAIL TRANSPORTATION**

Setting hygienic standards to be applied to environmental standards pertaining to the rolling stock of railroads and subway systems
A82-38578

**RANKING**

The ranking of displays based on transinformation --- as a measure of tracking performance
[FB-52] N82-29001

**RAPID TRANSIT SYSTEMS**

Setting hygienic standards to be applied to environmental standards pertaining to the rolling stock of railroads and subway systems
A82-38578

**RATS**

Adaptation of the rat skeleton to weightlessness and its physiological mechanisms - Results of animal experiments aboard the Cosmos-1129 biosatellite
A82-40753

Mitotic activity and volume of epithelial cell nuclei of rat cornea following spaceflights in biosatellites
N82-28965

Catecholamines and enzymes of their metabolism in rat myocardium after flight aboard the Cosmos-936 biosatellite
N82-28966

Nitrogen compound levels in tissues of rat cerebral hemispheres and cerebellum after flight aboard Cosmos-1129 biosatellite
N82-28967

**REACTION TIME**

Rapid perceptual adaptation to high gravitoinertial force levels Evidence for context-specific adaptation
A82-40436

Participation of the prefrontal cortex in delayed spatial choice and differentiation of time intervals in rhesus monkeys
A82-40470

**RECEPTORS (PHYSIOLOGY)**

Early reaction of the hemopoietic organs depending on the condition of the peripheral N-cholinergic systems
A82-38168

The influence of the GABA-receptor blocker bicuculline on the effects of fenibut and diazepam
A82-38539

Alterations of histochemical organization in the organ of Corti under the influence of chronic noise
A82-39242

Alterations in the labyrinth receptors after laser irradiation as detected by electron microscopy
A82-39244

Pulmonary stretch receptor discharge patterns in eupnea, hypercapnia, and hypoxia
A82-41210

RECTUM
Electrical stimulation of the urinary bladder following radical surgery for cancer of the rectum A82-41479
REDUCED GRAVITY
Lockheed involvement in Shuttle life sciences flight experiments A82-39541
Research opportunities and limitations of protracted hypogravity simulations for plant gravitational physiology A82-40653
Low-G simulation in mammalian research A82-40654
Human lymphocyte activation is depressed at low-g and enhanced at high-g A82-40658
Cardiovascular responses to isometric exercise during simulated zero gravity A82-40662
Morphometric analysis of rat muscle fibers following space flight and hypogravity A82-40703
Relation between physiological effects of gravitational forces and that of magnetic forces A82-40730
Relation between physiological effects of gravitational forces and that of magnetic forces. II A82-40771
Response of cultured cells to hyper- and hypogravity A82-40773
REFLECTANCE
A possible explanation for the fluctuations in reflectivity exhibited by bilayer liped membranes excited during electrostriction A82-38602
REFLEXES
The protective role of the forebrain with respect to pathological cardiac reflexes A82-38543
Current problems concerning the vestibulo-ocular interaction A82-39416
Electrometric investigation of human gustatory analyzer under normal conditions and in simulated weightlessness N82-29859
Significance of minute volume parameters to evaluation of vestibular stability N82-29860
REFUELING
An industrial hygiene evaluation of aircraft refueling inside closed aircraft shelters at elevated ambient temperatures [AD-A114396] N82-28994
REGENERATION (ENGINEERING)
Preprototype independent air revitalization subsystem [NASA-CR-167703] N82-29898
REGENERATION (PHYSIOLOGY)
Implantable electrical device [NASA-CASE-GSC-12560-1] N82-29863
REMOTE SENSORS
Image orientation for RPV ground station crew A82-39743
REMOTELY PILOTED VEHICLES
Image orientation for RPV ground station crew A82-39743
Human factors of an RPV ground control station A82-39749
RENAL FUNCTION
The diagnostic value of phonoenterography in acute renal failure A82-40478
Reduction in renal artery blood flow impedance during upright tilt in man A82-40735
Relevance of aldosterone on circulatory, renal and blood reactions during simulated weightlessness and on aerobic metabolic rate A82-40736
RESEARCH AND DEVELOPMENT
Robotics: Problems and prospects A82-40473
RESISTANCE
Occult bacterial persistence and resistance to colonization after antibiotic therapy A82-40460
RESPIRATION
The effect of helium on gas exchange and tissue respiration A82-38165
A nonlinear model combining pulmonary mechanics and gas concentration dynamics A82-41230
Human external respiration and gas exchange in acute period of adaptation to immersion in water N82-28959
RESPIRATORS
A respirator for training in conditions of changeable respiratory mixture A82-40485
RESPIRATORY DISEASES
The impulse activity of neurons in the nodose ganglion during acute hemodynamic and respiratory disorders A82-38546
The use of hyperoxic mixtures for the diagnosis of latent disturbances in the external respiration system A82-40457
RESPIRATORY IMPEDANCE
Respiratory movements of the facial muscles and respiratory resistance A82-40456
RESPIRATORY PHYSIOLOGY
The thermal pulsation method in the study of several physiological mechanisms of the brain stem A82-38559
The cause of high-altitude acute pulmonary edema A82-40498
Effect of postural changes on minute ventilation, functional residual capacity and pulmonary N2 clearance A82-40660
Pulmonary stretch receptor discharge patterns in eupnea, hypercapnia, and hypoxia A82-41210
RESPIRATORY RATE
Relations between respiratory and circulatory control during gravitational load in man A82-40714
Ventilatory and heart rate responses to hypoxia and hypercapnia during sleep in adults A82-41206
Possible impairment of respiratory regulation under hyperbaric nitrogen narcosis N82-28964
Significance of minute volume parameters to evaluation of vestibular stability N82-29860
RESPIRATORY REFLEXES
Respiratory movements of the facial muscles and respiratory resistance A82-40456
REST
Circadian changes in resting heart rate and body temperature, maximal oxygen consumption and perceived exertion A82-38268
RETICULOCYTES
Methodological aspects of testing erythrocyte balance by counting incubated reticulocytes N82-28972
RHEUMATIC DISEASES
Ankylosing spondylitis N82-29891
Medico-legal aspect of spinal disorders in aviation medicine N82-29892
RIBONUCLEIC ACIDS
Polynucleotide replication coupled to protein synthesis A possible mechanism for the origin of life A82-38119
Effects of cAMP accumulation activators on certain stages of genome expression in cells upon acute radiation damage to the organism. III Comparative study of the properties of RNA synthesized in a system of isolated liver and spleen cell nuclei from irradiated rats and animals having been treated with serotonin prior to irradiation A82-38157

The synthesis of nuclear and mitochondrial DNA and RNA, and the synthesis of heme and globin in rabbit bone marrow during the stimulation of erythropoiesis
A82-38169
RNA-content distribution of cells from the normal and atherosclerotic human aorta
A82-38535
Study of RNA synthesis rate and DNA content in the myocardium of new-born rats during adaptation to high-altitude hypoxia
A82-38537
The dynamics of quantitative changes of RNA in rat cerebellum Purkinje cells in different functional states
A82-38538
The synthesis of nuclear and mitochondrial DNA and RNA, and the synthesis of heme and globin in rabbit bone marrow during the stimulation of erythropoiesis
A82-40501
Protein composition of mRNA containing 18S-40S subribosomal particles in soleus muscle before and after immobilization
A82-40742
Molecular basis for the genetic code
A82-41195

RISK
A test for the prediction of risk-taking attitude in operators
A82-40449

ROBOTS
Robotics: Problems and prospects
A82-40473
Control of a direct-drive arm
[AD-A114969] N82-29903

ROCKET PROPELLED SLEDS
Accidents in centrifuges and experiments (ejection seat training towers, sleds)
N82-29881

RUNNING
Increasing the efficiency of running on the basis of learning algorithms and information tools
A82-40488
Running in circles --- track radius effects on human running speed
A82-40661

S

SACCADIC EYE MOVEMENTS
Global visual processing for saccadic eye movements
A82-39435

SAFETY FACTORS
Setting safety standards for ionizing radiation
A82-38580

SALYUT SPACE STATION
Initial audiometric investigations in an orbital station
N82-30277

SAWTOOTH WAVEFORMS
Temporal sensitivities to square-wave gratings, sawtooth-wave gratings and their fundamentals - More evidence for multiple spatial frequency channels in human vision
A82-39437

SCALE EFFECT
Gravitational scale effects --- moving organism performance as function of gravity and size
A82-40650

SCANNERS
Quantification of pilot workload via instrument scan
[NASA-CR-169238] N82-29900

SCHEDULES
Rotating shift work schedules that disrupt sleep are improved by applying circadian principles
A82-38325

SCHEDULING
Aircraft and crew scheduling during airlift operations
[AD-A114114] N82-29011

SEA WATER
Technical assessment of the prevention of micro-fouling on OTEC heat-transfer surfaces through the use of ultraviolet radiation
[DE82-005489] N82-29850
OTEC-1 power system test program: Biofouling and corrosion monitoring on OTEC-1
[DE82-007035] N82-29851

SEATS
Effect of the Circutone seat on hemodynamic, subjective, and thermal responses to prolonged sitting
A82-40442

SEGMENTS
Segmentation and analysis of stereophotometric body surface data
[AD-A114916] N82-29868

SENSORIMOTOR PERFORMANCE
The cortical regulation of human motion --- Russian book
A82-39283
Rapid perceptual adaptation to high gravitoinertial force levels Evidence for context-specific adaptation
A82-40436
State of adaptation in patients with hypertension
A82-40476
Relation between sensoric and motoric function of Wistar rats after space flight by biosatellite Cosmos 1129
A82-40737
Mechanisms of the effects of weightlessness on the motor system of man
A82-40752

SENSORY DEPRIVATION
Labyrinth plugging as a model of suspended vestibular sensory input
A82-40721

SENSORY PERCEPTION
Vibration and assessment of this flight factor by pilots
N82-28976

SENSORY STIMULATION
Vegetative reactions to the administration of atropine and propranolol in rats that exhibit different types of behavior
A82-40463

SEROTONIN
Effects of cAMP accumulation activators on certain stages of genome expression in cells upon acute radiation damage to the organism. III Comparative study of the properties of RNA synthesized in a system of isolated liver and spleen cell nuclei from irradiated rats and animals having been treated with serotonin prior to irradiation
A82-38157
The effect of serotonin on the development of acute hyperthermia in rats
A82-38583
Serotonin content of peripheral organs and tissues in rats under normal conditions and under stress during postnatal development
A82-38584
ATPase activity and the potassium ion permeability of erythrocyte membranes in the presence of serotonin and radiation
A82-40479

SERUMS
The participation of the lymphatic system in the resistance of an organism to hypoxia
A82-39793
The toxic properties of rabbit and dog sera under controlled hyperthermia
A82-40458

SEX
Testosterone enhances C-14 2-deoxyglucose uptake by striated muscle --- sex hormones and muscle
[NASA-CR-169101] N82-28986

SHEEP
The biological effects of repeated blasts
[AD-A113113] N82-28990

SHELTERS
An industrial hygiene evaluation of aircraft refueling inside closed aircraft shelters at elevated ambient temperatures
[AD-A114396] N82-28994

SHIELDING
What is ALARA
[DE81-030814] N82-28995

SICKNESSES
The nature and rate of occurrence of medical emergencies on board Air France aircraft
A82-38841
Medical emergencies in flight - Pathogenic aspects
A82-38843

SIGNS AND SYMPTOMS
The detection of premorbid states and cardiovascular diseases during medical examinations of seamen A82-38553
Otoneurological symptoms and syndromes --- Russian book A82-39286
SINE WAVES
Changes in the human visually evoked cortical potential in response to chromatic modulation of a sinusoidal grating A82-38795
SITTING POSITION
Effect of the Circutone seat on hemodynamic, subjective, and thermal responses to prolonged sitting A82-40442
Postural control related to the different tilting body positions A82-40732
SIZE DETERMINATION
Determination of blood-lipoproteid dimensions by optical methods A82-38593
SKIN (ANATOMY)
The histochemistry of enzymes in specific skin glands of the European hedgehog /Erinaceus europeaus/ during hibernation A82-39792
Ultrasonic determination of thermodynamic threshold parameters for irreversible cutaneous burns A82-41122
SKIN RESISTANCE
Optimization of medicinal electrophoresis --- enhancement of cutaneous penetration A82-41472
SKIN TEMPERATURE (BIOLOGY)
Use of the thermovision method in the prophylactic examination of polar workers A82-38565
Skin temperature and thermal comfort in weightlessness A82-40726
Thermal pulsation - Techniques, demonstration, and clinical application A82-41474
SLEEP
Rotating shift work schedules that disrupt sleep are improved by applying circadian principles A82-38325
The thermal pulsation method in the study of several physiological mechanisms of the brain stem A82-38559
Ventilatory and heart rate responses to hypoxia and hypercapnia during sleep in adults A82-41206
Sleep, circadian cycles of physiological functions and parameters of human work capacity on first day after changing from altered to usual sleep-waking cycle N82-28951
SLEEP DEPRIVATION
Characteristics of night sleep disorders in the case of myocardial infarction according to polygraphic data A82-41491
SOCIAL FACTORS
From a man-machine system to a social-engineering system A82-40447
Natural and social determination of human psyche N82-28983
SODIUM
Nonthermal effect of nanosecond microwave pulses on the transepithelial transport of sodium ions A82-38586
Temperature characteristics of the ouabain-insensitive sodium flux in frog muscles A82-38600
SODIUM CHLORIDES
An investigation of the conformational stability of immunoglobulin G in the monolayers at the phase boundary between aqueous solutions of NaCl and octane A82-38607
SOLAR COOLING
Superior heat-transfer fluids for solar heating and cooling applications. Results of acute oral toxicity determinations [DE82-003071] N82-29869
SOLAR HEATING
Superior heat-transfer fluids for solar heating and cooling applications. Results of acute oral toxicity determinations [DE82-003071] N82-29869
SOLAR RADIATION
Synchronization of cardiovascular accidents with physical clocks N82-28956
SORPTION
Bone resorption and calcium absorption in rats during spaceflight A82-40704
SOUND PROPAGATION
The effect of ultrasound and phonophoresis of ganglioblockers on the cardiovascular system in patients with cervical osteochondrosis A82-41476
SOUND WAVES
Theoretical and practical aspects of using acoustic repellants to scare birds. Part 1: Interspecificity and geographic (regional) distinctions of acoustic repellants N82-29858
SPACE ENVIRONMENT SIMULATION
Cardiovascular responses of the chronically instrumented monkey during simulated space flight A82-40670
SPACE EXPLORATION
Mechanical chemical and bio-hazards --- space-probe related planet and earth contaminations A82-39159
SPACE FLIGHT FEEDING
Evaluation of engineering foods for closed Ecological Life Support System (CELSS) [NASA-CR-167626] N82-29003
Nutrition and food technology for a Controlled Ecological Life Support System (CELSS) [NASA-CR-167392] N82-29004
Evaluation of engineering foods for Controlled Ecological Life Support Systems (CELSS) [NASA-CR-166359] N82-29006
SPACE FLIGHT STRESS
Investigation of the cardiovascular system during prolonged space flights on board the Salyut space stations A82-39429
Low-G simulation in mammalian research A82-40654
A new rat model simulating some aspects of space flight A82-40655
Computer simulations of postural change, water immersion and bedrest - An integrative approach for understanding the spaceflight response A82-40659
Altered bone turnover during spaceflight A82-40679
Effect of space flight on bone strength A82-40680
International Union of Physiological Sciences, Annual Meeting, 2nd, Budapest, Hungary, July 13-19, 1980, Proceedings A82-40686
Aspects of cardiovascular adaptation to gravitational stresses A82-40687
Adaptation to weightlessness and its physiological mechanisms - Results of animal experiments aboard biosatellites A82-40688
Physiological mechanisms of adaptation of rat skeletal muscles to weightlessness and similar functional requirements A82-40689
Weightlessness effects on resistance and reactivity of animals A82-40690
Artificial gravity in space flight A82-40691
Biorhythms of rats during and after space flight A82-40692

Stress in space flight - Metabolic aspects
A82-40696
Results of morphological investigations aboard biosatellites Cosmos
A82-40697
Effect of prolonged weightlessness on certain aspects of brain metabolism of the rat
A82-40699
Effect of spaceflight on lymphocyte stimulation
A82-40700
Morphometric analysis of rat muscle fibers following space flight and hypogravity
A82-40703
Labyrinth plugging as a model of suspended vestibular sensory input
A82-40721
Space flight effects upon plasma and tissue lipids in rats
A82-40722
Effects of space flight factors and artificial gravity on deoxyribonucleoprotein in lymphoid organs of rats
A82-40723
The reaction of simulated and true weightlessness on digestive tract of rats
A82-40733
Relation between sensoric and motoric function of Wistar rats after space flight by biosatellite Cosmos 1129
A82-40737
Involuntary and voluntary mechanisms for preventing cerebral ischemia due to positive /Gz/ acceleration
A82-40747
Results of investigations of weightlessness effects during prolonged manned space flights onboard Salyut-6
A82-40750
Results of biosatellite studies of gravity-dependent changes in the musculo-skeletal system of mammals
A82-40751
Vestibular effects of water immersion and Clonidine
A82-40762
Evidence for arrested bone formation during spaceflight
A82-40767
Gravity only dependent receptor field of the vestibular sensors Its significance in orbital flight
A82-40770
USSR report. Space biology and aerospace medicine, volume 16, no. 3, May - June 1982
[JPRS-81197] N82-28949
Dynamics of left ventricular systolic phase structure during long-term (140-185 days) spaceflights
N82-28954
Biomedical research publications: 1980 - 1982
[NASA-CR-3587] N82-29848

SPACE FLIGHT TRAINING
Selection and training of European astronauts
A82-39507

SPACE PERCEPTION
Hyperacuity for luminance phase angle in the human visual system
A82-38799
Neurons in cat visual cortex tuned to the direction of motion in depth - Effect of positional disparity
A82-39434

SPACE SHUTTLE PAYLOADS
Lockheed involvement in Shuttle life sciences flight experiments
A82-39541

SPACEBORNE EXPERIMENTS
Lockheed involvement in Shuttle life sciences flight experiments
A82-39541
Morphogenesis of a higher plant from cultured cells and embryos in space
A82-40666
Studies of specific hepatic enzymes involved in the conversion of carbohydrates to lipids in rats exposed to prolonged spaceflight aboard Cosmos 1129
A82-40698
Bone resorption and calcium absorption in rats during spaceflight
A82-40704
Bone growth in the rat mandible during space flight
A82-40705
Space flight effects upon plasma and tissue lipids in rats
A82-40722
Skin temperature and thermal comfort in weightlessness
A82-40726
Results of biosatellite studies of gravity-dependent changes in the musculo-skeletal system of mammals
A82-40751
Initial audiometric investigations in an orbital station
N82-30277

SPACECRAFT CABIN ATMOSPHERES
Preprototype independent air revitalization subsystem
[NASA-CR-167703] N82-29898

SPACECRAFT ENVIRONMENTS
Methodological aspects of future cardiovascular research in space
A82-40652

SPACELAB PAYLOADS
Selection and training of European astronauts
A82-39507

SPATIAL DISTRIBUTION
Cytoarchitectronics of the epidermis and the epidermal proliferative units /EPU/
A82-40491

SPATIAL FILTERING
Temporal sensitivities to square-wave gratings, sawtooth-wave gratings and their fundamentals - More evidence for multiple spatial frequency channels in human vision
A82-39437

SPECTRAL SENSITIVITY
Field sensitivity of the 'red' mechanism derived from primate local electroretinogram
A82-39431
Discrimination and detection thresholds - The effect of observer criterion on the spatial properties of chromatic and achromatic mechanisms
A82-39438
Long-term and progressive changes in Rhesus spectral sensitivity after low-level coherent light (514nm exposure) --- effects of laser exposure on visual function
[AD-A111639] N82-28946

SPINAL CORD
Changes in neurons of the spinal cord and spinal ganglia under hypokinesia /neuromorphological and histochemical investigation/
A82-40494

SPINE
Validation of a new method for studying the effects of vibration on the primate spine
A82-40768
Physiopathology and pathology of spinal injuries in aerospace medicine
[AGARD-AG-250(ENG)] N82-29870
Anatomy of the spine
N82-29871
Biomechanics of the spine
N82-29872
Spinal stresses in flight
N82-29873
Theories of the pathogenesis of fractures of the spine
N82-29874
Aetiology and pathogenesis --- traumatic lesions of the spine
N82-29875
Helicopter accidents
N82-29876
Parachuting
N82-29878
Fractures of the spine in flight
N82-29880
Accidents in centrifuges and experiments (ejection seat training towers, sleds)
N82-29881
Clinical examination of spinal injuries
N82-29882
Radiology of spinal trauma in aviation medicine
N82-29883

Analytical study of traumatic lesions of C3-C7
N82-29884
Radiological study of fractures of C1 and C2
N82-29885
Sequelae of vertebral fractures and trauma
N82-29886
The cervical column of pilots of combat aircraft
N82-29888
The spine and fitness for flight
N82-29889
Ankylosing spondylitis
N82-29891
Medico-legal aspect of spinal disorders in aviation medicine
N82-29892

**SQUARE WAVES**
Temporal sensitivities to square-wave gratings, sawtooth-wave gratings and their fundamentals - More evidence for multiple spatial frequency channels in human vision
A82-39437

**STANDARDS**
Setting hygienic standards to be applied to environmental standards pertaining to the rolling stock of railroads and subway systems
A82-38578
Setting safety standards for ionizing radiation
A82-38580
What is ALARA
[DE81-030814] N82-28995
Development of a methodology for assessing aircrew workloads
[AD-A114364] N82-29010

**STATIC LOADS**
The effect of certain characteristics of work motions on the tolerance of hand muscles to static exertions
A82-38568

**STATISTICAL ANALYSIS**
A model for the origin of life
A82-41198

**STEREOPHOTOGRAPHY**
Segmentation and analysis of stereophotometric body surface data
[AD-A114916] N82-29868

**STEREOSCOPIC VISION**
Hyperacuity for luminance phase angle in the human visual system
A82-38799

**STERILIZATION**
The microflora of the central Antarctica glacier and control methods for the sterile isolation of an ice core for microbiological analyses
A82-39430

**STEROIDS**
Testosterone enhances C-14 2-deoxyglucose uptake by striated muscle --- sex hormones and muscle
[NASA-CR-169101] N82-28986

**STIMULANTS**
Temperature characteristics of the ouabain-insensitive sodium flux in frog muscles
A82-38600

**STIMULI**
A procedure for the analysis of nystagmus and other eye movements
[AD-A112603] N82-28987

**STOCHASTIC PROCESSES**
Conformational dynamics of proteins and simplest molecular 'machines'
A82-38610

**STRESS (PHYSIOLOGY)**
The characteristics of hemodynamic shifts under physical stress at mountain elevations
A82-38166
Early reaction of the hemopoietic organs depending on the condition of the peripheral M-cholinergic systems
A82-38168
Migration kinetics of hemopoietic stem cells in mice after severe mechanical trauma
A82-38541
The role of central gray matter in the activation of antipain systems of the rat's brain under stress
A82-38547
The concentration of adenyl nucleotides and creatine phosphate in the cerebral hemispheres during different manifestations of stress
A82-38560
A method of evaluating the functional state of the central nervous system of a person performing work
A82-38579
The effect of serotonin on the development of acute hyperthermia in rats
A82-38583
Serotonin content of peripheral organs and tissues in rats under normal conditions and under stress during postnatal development
A82-38584
Physiological stresses linked to flight on airliners
A82-38842
Physiological stresses in flying a sailplane
A82-38850
The anti-stress role of the gamma-aminobutyric acid system of the brain
A82-40468
The combined effect of carbon monoxide and total-body vibration on the organism
A82-40475
Changes of intracellular rest potential and the length of isolated muscle under different loads
A82-40480
The role of nutrition in the changes of energy metabolism during stress
A82-40482
Physical activity and human requirements for energy and food substances
A82-40487
X-ray study of loaded skeletal portions in the upper extremities of athletes engaging in karate
A82-40490
The early reaction of the hemopoietic organs to stress, depending on the condition of the peripheral M-cholinergic systems
A82-40499
The effect of hypoxic and hypobaric exercises on the blood-brain barrier in rats
A82-40713
Analysis of transient cardiovascular response to orthostatic stress using noninvasive methods
A82-40740
The use of biochemical monitoring methods in the ergometry of patients with atherosclerosis
A82-41494
Functional condition of the heart mitochondria in the dynamics of emotional and pain stress
A82-41500
Role of hormonal compounds in regulation of electrolyte metabolism in the presence of emotional stress
N82-28952
Slow waves of cardiac rhythm in healthy man under different conditions
N82-28955
Physiological studies of heat stress acclimation during a specific exercise regimen
[AD-A111897] N82-28991
Task analysis and the ability requirements of tasks: Collected papers
[AD-A111181] N82-29000
Hypo-and hyperglycemia in rats: Effects on the ability to work in the heat
[AD-A111711] N82-29849
Significance of minute volume parameters to evaluation of vestibular stability
N82-29860
Phase analysis of dynamics of galvanic skin responses in man
N82-29861

**STRESS (PSYCHOLOGY)**
The effect of repeated episodes of emotional stress on heart activity and the content of monoamines in the heart
A82-38163
The influence of the GABA-receptor blocker bicuculline on the effects of fenibut and diazepam
A82-38539
Ultrastructural changes in the brains of rats subjected to acute emotional stress
A82-38558
Adapting a scale for measuring competition anxiety
A82-40450
A factor of resistance to emotional stress in the brain of rats
A82-40452

The correlations of the central nervous system and thyroid functions in conditions of chronic emotional stress
A82-40453
Statistical analysis of neuronal impulse activity in the diencephalon during immobilization-produced emotional stress in rats
A82-40467
The anti-stress role of the gamma-aminobutyric acid system of the brain
A82-40468
Psychic stress in athletic activity
A82-40489
Task analysis and the ability requirements of tasks: Collected papers
[AD-A111181] N82-29000

STUDENTS
Instructor's role in individualized training: A survey of two computer managed courses
[AD-A114917] N82-29894

SUBMERGING
Vestibular effects of water immersion and Clonidine
A82-40762
ADH suppression under immersion combined with dehydration --- antidiuretic hormone secretion
A82-40776
Endurance of +Gz G forces by middle-aged people before and after 7-day immersion
N82-28958
Human external respiration and gas exchange in acute period of adaptation to immersion in water
N82-28959

SULFUR COMPOUNDS
Study of the relation between the number of sulfhydryl groups and the level of lipid antioxidant activity in the organs of individual animals of different species
A82-38153

SUPINE POSITION
Postural control related to the different tilting body positions
A82-40732

SURFACE PROPERTIES
An investigation of the conformational stability of immunoglobulin G in the monolayers at the phase boundary between aqueous solutions of NaCl and octane
A82-38607

SURGERY
The effect of denervation and tendotomy on oxidative phosphorylation in skeletal muscles of the rabbit and the resistance of phosphorylation to uncoupling agents
A82-38171
Sword and scalpel --- laser surgery
A82-38564
The ultrastructure of the myocardium in the restorative period following aorto-coronary shunting in patients with chronic ischemic heart disease
A82-41484

SURVIVAL
Effect of the combined administration of antibiotic-resistant bifidobacteria and the corresponding antibiotics on the survival of irradiated mice
A82-38581

SURVIVAL EQUIPMENT
Metabolic distinctions related to intake of low-calorie 'survival' rations consisting only of readily assimilated carbohydrates
N82-28953

SUSPENDING (HANGING)
A new rat model simulating some aspects of space flight
A82-40655
Suspension restraint - Induced hypokinesia and antiorthostasis as a simulation of weightlessness
A82-40744
Animal models for simulating weightlessness
A82-40749

SWIMMING
Relation between physiological effects of gravitational forces and that of magnetic forces
A82-40730

SWINE
The biological effects of repeated blasts
[AD-A113113] N82-28990

SYMPTOMOLOGY
The influence of psychological and somatic factors on the symptomatics of hypertension
A82-41492

SYNAPSES
Ultrastructural changes in the brains of rats subjected to acute emotional stress
A82-38550

SYNTHESIS (CHEMISTRY)
Uracil synthesis via HCN oligomerization --- chemical evolution of biomolecules in primitive earth
A82-38117
Acceleration of HCN oligomerization by formaldehyde and related compounds - Implications for prebiotic syntheses
A82-41199
Monograph on new direction of chemistry and biology of peptide and protein bioregulators reviewed
N82-28979

SYSTEMS ANALYSIS
An approach to the preliminary evaluation of Closed Ecological Life Support System (CELSS) scenarios and control strategies
[NASA-CR-166368] N82-29897

SYSTEMS ENGINEERING
A design methodology for nonlinear systems containing parameter uncertainty: Application to nonlinear controller design
[NASA-CR-166358] N82-29005
Preprototype independent air revitalization subsystem
[NASA-CR-167703] N82-29898

SYSTOLE
Alterations in heart work rhythm during hyperactivation of the anterior amygdaline nucleus
A82-38545
Effects of a weightlessness simulation on the velocity curves measured by Doppler sonography at the level of the carotid system
A82-40656
Dynamics of left ventricular systolic phase structure during long-term (140-185 days) spaceflights
N82-28954

T

TACHYCARDIA
The effect of repeated episodes of emotional stress on heart activity and the content of monoamines in the heart
A82-38163

TARGET RECOGNITION
Discrimination and detection thresholds - The effect of observer criterion on the spatial properties of chromatic and achromatic mechanisms
A82-39438

TASK COMPLEXITY
Task analysis and the ability requirements of tasks: Collected papers
[AD-A111181] N82-29000

TASKS
On models and methods for performance measurement
[AD-A113578] N82-28998

TASTE
Electrometric investigation of human gustatory analyzer under normal conditions and in simulated weightlessness
N82-29859

TEETH
Bone growth in the rat mandible during space flight
A82-40705
Acoustic tooth cleaner
[NASA-CASE-LAR-12471-1] N82-29862

TEMPERATURE DEPENDENCE
Temperature characteristics of the ouabain-insensitive sodium flux in frog muscles
A82-38600
The temperature dependence of the H-1 NMR spectrum of hydrated collagen
A82-38611

TEMPERATURE EFFECTS
The effect of urea and heat on the activity of lactate dehydrogenase and glucose 6-phosphate dehydrogenase
A82-38612

Thermal pulsation - Techniques, demonstration, and clinical application
A82-41474

Physiological studies of heat stress acclimation during a specific exercise regimen
[AD-A111097] N82-28991

Phase analysis of dynamics of galvanic skin responses in man
N82-29861

TENDONS

The effect of denervation and tendotomy on oxidative phosphorylation in skeletal muscles of the rabbit and the resistance of phosphorylation to uncoupling agents
A82-38171

The effect of denervation and tendotomy on oxidative phosphorylation in the skeletal muscles of the rabbit and on the resistance of phosphorylation to uncoupling agents
A82-40504

THALAMUS

Higher integrative systems of the brain --- Russian book
A82-40642

THERAPY

Diagnosis and organization of the therapy of patients with disorders of blood circulation in the brain
A82-38554

Occult bacterial persistence and resistance to colonization after antibiotic therapy
A82-40460

Optimization of medicinal electrophoresis --- enhancement of cutaneous penetration
A82-41472

The use of an audio-frequency magnetic field in certain diseases
A82-41473

Thermal pulsation - Techniques, demonstration, and clinical application
A82-41474

The effect of ultrasound and phonophoresis of ganglioblockers on the cardiovascular system in patients with cervical osteochondrosis
A82-41476

Dynamics of the brain electric activity in patients with cerebral insults under the effect of muscle stimulation with sinusoidal modulated currents
A82-41477

The use of electrovacuum therapy in certain diseases of the peripheral nervous system
A82-41478

Electrical stimulation of the urinary bladder following radical surgery for cancer of the rectum
A82-41479

THERMAL ABSORPTION

Effect of heating rate on evaporative heat loss in the microwave-exposed mouse
A82-41208

THERMAL COMFORT

The effectiveness of perspiration in a hot environment
A82-38178

Skin temperature and thermal comfort in weightlessness
A82-40726

Thermal garment
[NASA-CASE-XMS-03694-1] N82-29002

THERMAL ENVIRONMENTS

Auxiliary cooling - Comparison of air-cooled vs. water-cooled vests in hot-dry and hot-wet environments
A82-40440

THERMAL INSULATION

Thermal garment
[NASA-CASE-XMS-03694-1] N82-29002

THERMAL MAPPING

Use of the thermovision method in the prophylactic examination of polar workers
A82-38565

THERMAL POLLUTION

Is the $CH_4$, $H_2$ and CO venting from submarine hydrothermal systems produced by thermophilic bacteria
A82-39422

THERMAL PROTECTION

Study of the radioprotective effectiveness of an hypoxic gas mixture during combined radiation and thermal injuries to rats
A82-38159

THERMAL STABILITY

The effect of urea and heat on the activity of lactate dehydrogenase and glucose 6-phosphate dehydrogenase
A82-38612

THERMALIZATION (ENERGY ABSORPTION)

Thermal pulsation - Techniques, demonstration, and clinical application
A82-41474

THERMODYNAMIC PROPERTIES

Thermodynamic parameters characterizing interaction between polymer-absorbed ligand molecules
A82-38609

Ultrasonic determination of thermodynamic threshold parameters for irreversible cutaneous burns
A82-41122

THERMODYNAMICS

Local cerebral blood flow dynamics during experimental ischemia
A82-38544

THERMOPHILES

Metabolism of the thermophilic hydrogenous bacterium Pseudomonas thermophila K-2
A82-39427

THERMOPHILIC PLANTS

Is the $CH_4$, $H_2$ and CO venting from submarine hydrothermal systems produced by thermophilic bacteria
A82-39422

THERMOREGULATION

The thermal pulsation method in the study of several physiological mechanisms of the brain stem
A82-38559

The effect of serotonin on the development of acute hyperthermia in rats
A82-38583

Trace reactions of the frog tissue metabolism on changes of ambient temperature in the frog Rana ridibunda Pall
A82-40316

Thermoregulation and the menstrual cycle
A82-40441

Centrifuge high-g effects on temperature regulation in unanesthetized rats
A82-40671

Alterations in heat loss and heat production mechanisms in rat exposed to hypergravic fields
A82-40718

Temperature and behavioral responses of squirrel monkeys to 2Gz acceleration
A82-40774

Effect of heating rate on evaporative heat loss in the microwave-exposed mouse
A82-41208

In vivo and in vitro characteristics of eccrine sweating in patas and rhesus monkeys
A82-41214

THIAMINE

The effect of potassium orotate on the metabolism of certain vitamins in patients with fractures of the long tubular bones
A82-38563

THRESHOLDS (PERCEPTION)

Effects of reference lines on displacement thresholds at various durations of movement --- in human visual perception
A82-38797

Application of xylite for the detection of labyrinthine hydrops
A82-39243

Temporal sensitivities to square-wave gratings, sawtooth-wave gratings and their fundamentals - More evidence for multiple spatial frequency channels in human vision
A82-39437

Discrimination and detection thresholds - The effect of observer criterion on the spatial properties of chromatic and achromatic mechanisms
A82-39438

An absolute threshold in psychoacoustics
A82-40448

Effect of caloric stimulation of vestibular system on hearing N82-28963

Determining visual acuity thresholds: A simulation study of stimulus presentation strategies [AD-A111821] N82-28992

THYMUS GLAND

Changes in the relations of pyrimidine blocks in DNA of the hematopoietic system immediately following gamma irradiation of the animal A82-38152

Experimental and clinical study of a new immunoregulatory preparation - thymalin A82-38177

THYROID GLAND

The correlations of the central nervous system and thyroid functions in conditions of chronic emotional stress A82-40853

THYROXINE

Altitude-induced changes in plasma thyroxine, 3,5,3 prime-triiodothyronine, and thyrotropin in rats A82-41207

The effect of leienkephalin and thyrosine on the lymphatic and blood microvessels A82-41490

TIBIA

Aortic and tibial bloodflow response to lower body negative pressure /LBNP/ A82-40727

TIME DEPENDENCE

Temporal sensitivities to square-wave gratings, sawtooth-wave gratings and their fundamentals - More evidence for multiple spatial frequency channels in human vision A82-39437

Antimotion-sickness efficacy of scopolamine 12 and 72 hours after transdermal administration A82-40437

TISSUES (BIOLOGY)

The effect of helium on gas exchange and tissue respiration A82-38165

Histoenzymological changes in experimental animals exposed to variable noise A82-38577

Serotonin content of peripheral organs and tissues in rats under normal conditions and under stress during postnatal development A82-38584

The content of cAMP and cGMP in brain tissues during adaptation to ischemia A82-40310

Trace reactions of the frog tissue metabolism on changes of ambient temperature in the frog Rana ridibunda Pall A82-40316

Space flight effects upon plasma and tissue lipids in rats A82-40722

The assimilation of vitamin C in seamen during voyages at high latitudes A82-41465

Myosatellocytes and cambial properties of skeletal and muscular tissue A82-41469

Nitrogen compound levels in tissues of rat cerebral hemispheres and cerebellum after flight aboard Cosmos-1129 biosatellite N82-28967

TOXIC HAZARDS

An industrial hygiene evaluation of aircraft refueling inside closed aircraft shelters at elevated ambient temperatures [AD-A114396] N82-28994

TOXICITY

The toxic properties of rabbit and dog sera under controlled hyperthermia A82-40458

Protection from O2 toxicity by preexposure to hypoxia - Lung antioxidant enzyme role A82-41217

The consequences of hydrazine exposition and its treatment [NBL-1981-2] N82-28996

TOXICITY AND SAFETY HAZARD

Superior heat-transfer fluids for solar heating and cooling applications. Results of acute oral toxicity determinations [DE82-003071] N82-29869

TRACE ELEMENTS

Changes in the microelement content of muscles under denervation A82-38598

TRAINING ANALYSIS

Instructor's role in individualised training: A survey of two computer managed courses [AD-A114917] N82-29094

TRAINING EVALUATION

Training of personnel specialized in cartography N82-29669

Potential applications of computer-assisted instruction to P-3 aircrew training [AD-A113491] N82-29093

TRAINING SIMULATORS

Unconventional visual displays for flight training [AD-A111392] N82-28999

TRANSIENT RESPONSE

Analysis of transient cardiovascular response to orthostatic stress using noninvasive methods A82-40740

TRITIUM

Tritium oxide distribution and excretion kinetics in the exposure of animals to noise A82-41463

TROPICAL REGIONS

Some characteristics of the diurnal rhythm of physiological functions of sailors in the tropics A82-38180

U

U.S.S.R.

USSR report. Life sciences. Biomedical and behavioral sciences, no. 18 [JPRS-81428] N82-29857

ULTRASONIC CLEANING

Acoustic tooth cleaner [NASA-CASE-LAR-12471-1] N82-29862

ULTRASONIC RADIATION

The effect of ultrasound and phonophoresis of ganglioblockers on the cardiovascular system in patients with cervical osteochondrosis A82-41476

ULTRASONIC TESTS

Ultrasonic determination of thermodynamic threshold parameters for irreversible cutaneous burns A82-41122

ULTRAVIOLET RADIATION

The effect of long-wave ultraviolet radiation on cyclophosphamide-induced levels of chromosome aberrations in the bone marrow cells of mice A82-38556

Technical assessment of the prevention of micro-fouling on OTEC heat-transfer surfaces through the use of ultraviolet radiation [DE82-005489] N82-29850

URACIL

Uracil synthesis via HCN oligomerization --- chemical evolution of biomolecules in primitive earth A82-38117

UREAS

The effect of urea and heat on the activity of lactate dehydrogenase and glucose 6-phosphate dehydrogenase A82-38612

Leucine and urea metabolism in acute human cold exposure A82-41211

URI[illegible]ION

[illegible]ctrical stimulation of the urinary bladder following radical surgery for cancer of the rectum A82-41479

URINE

Rhythms of electrolytes and hydroxyproline excretion in urine of rats after three weeks of weightlessness - Biosatellite Cosmos-1129 A82-40693

USER REQUIREMENTS

Development of a methodology for assessing aircrew workloads [AD-A110366] N82-29010

V

VACUUM EFFECTS
The use of electrovacuum therapy in certain diseases of the peripheral nervous system A82-41478

VAPORS
An industrial hygiene evaluation of aircraft refueling inside closed aircraft shelters at elevated ambient temperatures [AD-A114396] N82-28994

VASCULAR SYSTEM
Chronic central vascular expansion induces hypokalemia in conscious primates A82-40719
Short term gravity effects on volume homeostasis in man Assessment of transvascular fluid shifts after graded tilt A82-40760

VASOCONSTRICTION
An improved apparatus for venous occlusion plethysmography A82-38548

VASOCONSTRICTOR DRUGS
Changes in blood volume and response to vaso-active drugs in horizontally casted primates A82-40657

VEGETATION GROWTH
Cytogenetic effect of 5-fluoro-2desoxy uridine in the G2 phase on intact and X-irradiated crepis capillaris L cells A82-40461
Gravitational scale effects --- moving organism performance as function of gravity and size A82-40650

VEINS
The response of the venous walls in the extremities to a disturbed venous outflow A82-40493

VENTILATION
Acid-base, metabolic, and ventilatory responses to repeated bouts of exercise A82-41219
Modification of method for assaying ozone by the diacetyl dihydrolutidine reaction N82-28973

VENTURI TUBES
The accuracy of venturi masks at altitude A82-40445

VERTEBRAE
Peculiarities of the relief of the trabecular surface of the spongy substance of the human vertebrae A82-40492

VERTEBRAL COLUMN
Anatomy of the spine N82-29871
Biomechanics of the spine N82-29872
Helicopter accidents N82-29876
Clinical examination of spinal injuries N82-29882
Vertebral arthritis N82-29890
Medico-legal aspect of spinal disorders in aviation medicine N82-29892

VERTEBRATES
Proof of the existence of Ca/2+/-induced structural changes in stems of myosin-containing filaments of vertebrate skeletal muscles A82-38599

VERTICAL ORIENTATION
Regulation of cerebral circulation in erect position N82-28957

VERTICAL PERCEPTION
Receptors signaling gravity orientation in an insect A82-40668
Preparation of labyrinthectomied animals for flight aboard Cosmos-936 biosatellite N82-28971

VESTIBULAR NYSTAGMUS
Evaluation of vestibular function in flight personnel with chronic diseases during stable remission A82-38179
Otoneurological symptoms and syndromes --- Russian book A82-39386
Current problems concerning the vestibulo-ocular interaction A82-39416
Nystagmometry of optovestibular interaction N82-28962

VESTIBULAR TESTS
Evaluation of vestibular function in flight personnel with chronic diseases during stable remission A82-38179
The dynamics of quantitative changes of RNA in rat cerebellum Purkinje cells in different functional states A82-38538
Vestibular screening of cosmonauts A82-38853
Labyrinth plugging as a model of suspended vestibular sensory input A82-40721
Vestibular effects of water immersion and Clonidine A82-40762
Gravity only dependent receptor field of the vestibular sensors Its significance in orbital flight A82-40770
Effect of caloric stimulation of vestibular system on hearing N82-28963
A procedure for the analysis of nystagmus and other eye movements [AD-A112603] N82-28987
Significance of minute volume parameters to evaluation of vestibular stability N82-29860

VESTIBULES
Spatial organization of the vestibular influences on the cerebellar fastigial neurons of cats A82-40312
Afferent associative and comissural projections of the cortical vestibular zone VI of cats A82-40495
Gravity sensing system formation in tadpoles /Rana temporaria/ developed in weightlessness simulation A82-40759
Effect of caloric stimulation of vestibular system on hearing N82-28963
Preparation of labyrinthectomied animals for flight aboard Cosmos-936 biosatellite N82-28971

VESTS
Auxiliary cooling - Comparison of air-cooled vs. water-cooled vests in hot-dry and hot-wet environments A82-40440

VIBRATION EFFECTS
Achievements and possibilities in the research being carried out to protect workers in the 11th five-year plan from noise and vibration A82-38573
The combined effect of carbon monoxide and total-body vibration on the organism A82-40475
Vibration and decompression gas bubbles A82-40729
Validation of a new method for studying the effects of vibration on the primate spine A82-40768
Vibration and assessment of this flight factor by pilots N82-28976

VIDEO EQUIPMENT
A functional video-based anthropometric measuring system [NASA-CR-167637] N82-29896

VINYL COPOLYMERS
The utilization of macromolecules in blood purification systems [NRC/CNR-TT-2021] N82-29864

VIRUSES
The circadian rhythm of the sensitivity of the chromosome apparatus of mice to the mutagenic effect of measles A82-40462

VISION
Long-term and progressive changes in Rhesus spectral sensitivity after low-level coherent light (514nm exposure) --- effects of laser exposure on visual function [AD-A111639] N82-28986
Cold weather goggles. 2: Performance evaluation [AD-A114067] N82-29008
VISUAL ACCOMMODATION
Model of the accommodative mechanism in the human eye A82-39437
VISUAL ACUITY
Hyperacuity for luminance phase angle in the human visual system A82-38799
Aging and visual function of military pilots - A review A82-40435
Determining visual acuity thresholds: A simulation study of stimulus presentation strategies [AD-A111821] N82-28992
VISUAL AIDS
Unconventional visual displays for flight training [AD-A111392] N82-28999
VISUAL DISCRIMINATION
Discrimination and detection thresholds - The effect of observer criterion on the spatial properties of chromatic and achromatic mechanisms A82-39438
Detection/discrimination in the long-wavelength pathways --- human color vision tests A82-39439
The ranking of displays based on transinformation --- as a measure of tracking performance [FB-52] N82-29001
VISUAL PERCEPTION
Contrast influence on perceived orientation --- of gratings obtained by dichoptic fusion of two monocular images A82-36796
Retinal location and visual localization during pursuit eye movement A82-39436
Temporal sensitivities to square-wave gratings, sawtooth-wave gratings and their fundamentals - More evidence for multiple spatial frequency channels in human vision A82-39437
Image orientation for RPV ground station crew A82-39743
Mode of mutual influence of stimulation-characteristics in the visual processing system --- German thesis A82-41445
Visual Technology Research Simulator (VTRS) human performance research: Phase 3 [AD-A112475] N82-28988
Determining visual acuity thresholds: A simulation study of stimulus presentation strategies [AD-A111821] N82-28992
Cold weather goggles. 2: Performance evaluation [AD-A114067] N82-29008
VISUAL STIMULI
Changes in the human visually evoked cortical potential in response to chromatic modulation of a sinusoidal grating A82-38795
Contrast influence on perceived orientation --- of gratings obtained by dichoptic fusion of two monocular images A82-38796
Hyperacuity for luminance phase angle in the human visual system A82-38799
Field sensitivity of the 'red' mechanism derived from primate local electroretinogram A82-39431
Effect of chromatic adaptation on the achromatic locus - The role of contrast, luminance and background color A82-39433
Neurons in cat visual cortex tuned to the direction of motion in depth - Effect of positional disparity A82-39434
Global visual processing for saccadic eye movements A82-39435
Retinal location and visual localization during pursuit eye movement A82-39436
Detection/discrimination in the long-wavelength pathways --- human color vision tests A82-39439
An LED system for the formation of visual stimuli A82-40471
Mode of mutual influence of stimulation-characteristics in the visual processing system --- German thesis A82-41445
Determining visual acuity thresholds: A simulation study of stimulus presentation strategies [AD-A111821] N82-28992
VISUAL TASKS
Global visual processing for saccadic eye movements A82-39435
Participation of the prefrontal cortex in delayed spatial choice and differentiation of time intervals in rhesus monkeys A82-40470
VITAMINS
The influence of a deficit of vitamins on immunity /A review of the literature/ A82-41504

W

WATER BALANCE
A new rat model for studies of hypokinesia and antiorthostasis A82-40706
WATER POLLUTION
Microorganisms used to monitor environmental pollution N82-28978
WAVE GENERATION
A study of the mechanism governing the different types of behavior exhibited by the spiral excitation wave period in auricle and ventricle A82-38597
WAVELENGTHS
Detection/discrimination in the long-wavelength pathways --- human color vision tests A82-39439
WEIGHTLESSNESS
Investigation of the cardiovascular system during prolonged space flights on board the Salyut space stations A82-39429
Methodological aspects of future cardiovascular research in space A82-40652
Morphogenesis of a higher plant from cultured cells and embryos in space A82-40666
Adaptation to weightlessness and its physiological mechanisms - Results of animal experiments aboard biosatellites A82-40688
Physiological mechanisms of adaptation of rat skeletal muscles to weightlessness and similar functional requirements A82-40689
Weightlessness effects on resistance and reactivity of animals A82-40690
Artificial gravity in space flight A82-40691
Rhythms of electrolytes and hydroxyproline excretion in urine of rats after three weeks of weightlessness - Biosatellite Cosmos-1129 A82-40693
Body composition of rats flown aboard Cosmos-1129 A82-40695
Stress in space flight - Metabolic aspects A82-40696
Results of morphological investigations aboard biosatellites Cosmos A82-40697
Studies of specific hepatic enzymes involved in the conversion of carbohydrates to lipids in rats exposed to prolonged spaceflight aboard Cosmos 1129 A82-40698

Effect of prolonged weightlessness on certain aspects of brain metabolism of the rat A82-40699

Study of contractile properties and composition of myofibrillar proteins of skeletal muscles in the Cosmos-1129 experiment A82-40701

Bone resorption and calcium absorption in rats during spaceflight A82-40704

Bone growth in the rat mandible during space flight A82-40705

Skin temperature and thermal comfort in weightlessness A82-40726

Results of investigations of weightlessness effects during prolonged manned space flights onboard Salyut-6 A82-40750

Results of biosatellite studies of gravity-dependent changes in the musculo-skeletal system of mammals A82-40751

Mechanisms of the effects of weightlessness on the motor system of man A82-40752

Adaptation of the rat skeleton to weightlessness and its physiological mechanisms - Results of animal experiments aboard the Cosmos-1129 biosatellite A82-40753

Suppression of osteoblast differentiation during weightlessness A82-40756

Preparation of labyrinthectomied animals for flight aboard Cosmos-936 biosatellite N82-28971

Methodological aspects of testing erythrocyte balance by counting incubated reticulocytes N82-28972

Neurochemical background and approaches in the understanding of motion sickness [NASA-CR-3569] N82-29865

Medical-biological investigations under space conditions: Present and future significance N82-30275

Intracutaneous partial oxygen pressure (pO2 sub ic) in man during short-term space flights: Results of joint USSR-GDR space flight N82-30276

**WEIGHTLESSNESS SIMULATION**

Orthostatic tests during cosmonaut selection A82-38854

As if in weightlessness --- simulation through hypnosis A82-40474

Study of high-g effects in animals A82-40651

Research opportunities and limitations of protracted hypogravity simulations for plant gravitational physiology A82-40653

Low-G simulation in mammalian research A82-40654

A new rat model simulating some aspects of space flight A82-40655

Effects of a weightlessness simulation on the velocity curves measured by Doppler sonography at the level of the carotid system A82-40656

Cardiovascular responses to isometric exercise during simulated zero gravity A82-40662

Effect of simulated weightlessness on energy metabolism in the rat A82-40677

Influences of horizontal hypokinesia on performance and circadian physiological rhythms in female humans A82-40682

Plasticity of fast and slow muscle myofibrillar proteins in model experiments simulating weightlessness A82-40709

Chronic central vascular expansion induces hypokalemia in conscious primates A82-40719

Changes of periodic protoplasmic movements on the fast clinostat A82-40725

Orthostatic tolerance and exercise response before and after 7 days simulated weightlessness A82-40731

The reaction of simulated and true weightlessness on digestive tract of rats A82-40733

Relevance of aldosterone on circulatory, renal and blood reactions during simulated weightlessness and on aerobic metabolic rate A82-40736

Atrophy of rat skeletal muscles in simulated weightlessness A82-40738

Effects of prolonged bedrest in antiorthostatic position on rCBF measured by 133Xe inhalation technique - Effects of clonidine --- regional Cerebral Blood Flow A82-40743

Suspension restraint - Induced hypokinesia and antiorthostasis as a simulation of weightlessness A82-40744

Restraint of animals in space research A82-40746

Animal models for simulating weightlessness A82-40749

Gravity sensing system formation in tadpoles /Rana temporaria/ developed in weightlessness simulation A82-40759

Vestibular effects of water immersion and Clonidine A82-40762

The effect of Clonidine on peripheral vasomotor reactions during simulated zero gravity A82-40763

Cardiovascular effects of Clonidine during 20 hours head down tilt /-5 deg/ A82-40764

ADH suppression under immersion combined with dehydration --- antidiuretic hormone secretion A82-40776

Skeletal abnormalities in rats induced by simulated weightlessness A82-41548

Endurance of +Gz G forces by middle-aged people before and after 7-day immersion N82-28958

Efficacy of kavinton in prevention of motion sickness N82-28961

Electrometric investigation of human gustatory analyzer under normal conditions and in simulated weightlessness N82-29859

**WHITE NOISE**

The incorporation of P-32 into various sections of the brain upon exposure to intermittent noise of low intensity A82-41467

**WORK**

Rotating shift work schedules that disrupt sleep are improved by applying circadian principles A82-38325

**WORK CAPACITY**

Some characteristics of the diurnal rhythm of physiological functions of sailors in the tropics A82-38180

A study of temporary absences from work arising from disorders of the circulatory system A82-38555

Achievements and possibilities in the research being carried out to protect workers in the 11th five-year plan from noise and vibration A82-38573

A method of evaluating the functional state of the central nervous system of a person performing work A82-38579

The significance of the bicycle ergometer test for evaluating the work capacity in patients with hypertension A82-40477

Physical activity and human requirements for energy and food substances A82-40487

Diurnal dynamics of the indicators of the capacity for physical work and of physiological functions A82-41460

Problem of accelerations in aviation medicine
N82-28950
Sleep, circadian cycles of physiological functions and parameters of human work capacity on first day after changing from altered to usual sleep-waking cycle
N82-28951
On models and methods for performance measurement [AD-A113578]
N82-28998
Flight crewmember workload evaluation [AD-A114167]
N82-29012

WORK-REST CYCLE
Flight crewmember workload evaluation [AD-A114167]
N82-29012

WORKLOADS (PSYCHOPHYSIOLOGY)
Use of the thermovision method in the prophylactic examination of polar workers
A82-38565
Physiological and hygienic analysis of the response of young truck drivers to their work load
A82-38567
The conditions attending muscular strain in work involving only a few types of movements
A82-38569
Psychological investigation of pilot behavior during integration of control systems in the cockpit of passenger airliners --- German thesis
A82-40560
The tolerance to physical loads in women during menopause complicated by climacteric neurosis with cardialgia
A82-41495
Development of a methodology for assessing aircrew workloads [AD-A114364]
N82-29010
Quantification of pilot workload via instrument scan [NASA-CR-169238]
N82-29900

WOUND HEALING
Relation between physiological effects of gravitational forces and that of magnetic forces
A82-40730

X

X RAY ANALYSIS
X-ray study of loaded skeletal portions in the upper extremities of athletes engaging in karate
A82-40490
Effects of lower body negative pressure on the reliability of cardiovascular system using X-ray kymograms
A82-40728

X RAY FLUORESCENCE
Changes in the microelement content of muscles under denervation
A82-38598

X RAY IRRADIATION
Cytogenetic effect of 5-fluoro-2deoxy uridine in the G2 phase on intact and X-irradiated crepis capillaris L cells
A82-40461
ATPase activity and the potassium ion permeability of erythrocyte membranes in the presence of serotonin and radiation
A82-40479

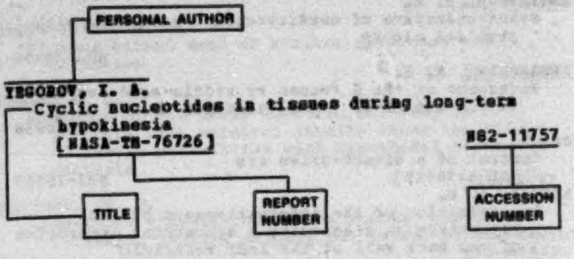
Y

YEAST
The effect of laser radiation on lipid synthesis in yeast
A82-38585

# PERSONAL AUTHOR INDEX

AEROSPACE MEDICINE AND BIOLOGY/*A Continuing Bibliography (Suppl. 238)* NOVEMBER 1982

## Typical Personal Author Index Listing



The title of the document is used to provide the user with a brief description of the subject matter. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstact in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

## A

**ABBOTT, R. A.**
Effect of induced erythrocythemia on hypoxia tolerance during physical exercise
A82-41218

**ABBOTT, U. K.**
Embryonic development during chronic acceleration
A82-40755

**ABE, M.**
Effect of athletic training on physical fitness under hypodynamics
A82-40663

Relation between physiological effects of gravitational forces and that of magnetic forces
A82-40730

Relation between physiological effects of gravitational forces and that of magnetic forces. II
A82-40771

**ABRAHAM, S.**
Studies of specific hepatic enzymes involved in the conversion of carbohydrates to lipids in rats exposed to prolonged spaceflight aboard Cosmos 1129
A82-40698

**ABULADZE, L. A.**

# PUBLIC COLLECTIONS OF NASA DOCUMENTS

## DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

**CALIFORNIA**
University of California, Berkeley
**COLORADO**
University of Colorado, Boulder
**DISTRICT OF COLUMBIA**
Library of Congress
**GEORGIA**
Georgia Institute of Technology, Atlanta
**ILLINOIS**
The John Crerar Library, Chicago

**MASSACHUSETTS**
Massachusetts Institute of Technology, Cambridge
**MISSOURI**
Linda Hall Library, Kansas City
**NEW YORK**
Columbia University, New York
**OKLAHOMA**
University of Oklahoma, Bizzell Library
**PENNSYLVANIA**
Carnegie Library of Pittsburgh
**WASHINGTON**
University of Washington, Seattle

NASA publications (those indicated by an '*' following the accession number) are also received by the following public and free libraries:

**CALIFORNIA**
Los Angeles Public Library
San Diego Public Library
**COLORADO**
Denver Public Library
**CONNECTICUT**
Hartford Public Library
**MARYLAND**
Enoch Pratt Free Library, Baltimore
**MASSACHUSETTS**
Boston Public Library
**MICHIGAN**
Detroit Public Library
**MINNESOTA**
Minneapolis Public Library and Information Center
**NEW JERSEY**
Trenton Public Library

**NEW YORK**
Brooklyn Public Library
Buffalo and Erie County Public Library
Rochester Public Library
New York Public Library
**OHIO**
Akron Public Library
Cincinnati and Hamilton County Public Library
Cleveland Public Library
Dayton Public Library
Toledo and Lucas County Public Library
**TEXAS**
Dallas Public Library
Fort Worth Public Library
**WASHINGTON**
Seattle Public Library
**WISCONSIN**
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

## EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and *, from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

# AEROSPACE MEDICINE AND BIOLOGY

## A CONTINUING BIBLIOGRAPHY WITH INDEXES

## (Supplement 239)

**A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in November 1982 in**

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

NASA Scientific and Technical Information Branch 1982
**National Aeronautics and Space Administration**
Washington, DC

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS). Questions on the availability of the predecessor publications, Aerospace Medicine and Biology (Volumes I - XI) should be directed to NTIS.

This supplement is available as NTISUB/123/093 from the National Technical Information Service (NTIS), Springfield, Virginia 22161 at the price of $7.00 domestic; $14.00 foreign.

# INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* lists 318 reports, articles and other documents announced during November 1982 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the Earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections: *IAA Entries* and *STAR Entries*, in that order. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Two indexes -- subject and personal author -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1982 Supplements.

# AVAILABILITY OF CITED PUBLICATIONS

## IAA ENTRIES (A82-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at $8.00 per document. Microfiche(1) of documents announced in *IAA* are available at the rate of $4.00 per microfiche on demand, and at the rate of $1.35 per microfiche for standing orders for all *IAA* microfiche.

Minimum air-mail postage to foreign countries is $2.50 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

## STAR ENTRIES (N82-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $4.00 price, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Document Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26.1 reduction)

**Avail:** DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts.* Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

**Avail:** Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

**Avail:** USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

**Avail:** HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

**Avail:** BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

**Avail:** Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

**Avail:** Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

**Avail:** U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

**Other availabilities:** If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

A82-11697 # **The significance of the respiratory minute volume index in the evaluation of vestibular stability (Znachenie pokazatelei minutnogo ob'ema dykhaniia pri otsenke vestibuliarnoi ustoichivosti).** A. S. Gusarov, *Voenno-Meditsinskii Zhurnal*, Aug. 1981, p. 48-50. In Russian.

The respiratory dynamics of persons of various vestibular stabilities undergoing Coriolis acceleration is investigated in order to assess the possibility of using respiratory minute volume in the evaluation of vestibular function. Respiratory rate, respiratory minute volume, heart rate and electrocardiography were monitored continuously in 100 men with healthy vestibular analyzers in a 5-min test of tolerance to cumulative Coriolis forces. Changes in respiratory parameters are observed to be correlated with levels of vestibular reaction to Coriolis acceleration. Rotational and especially post-rotational vestibulospirometry and vestibulospirography are found to be the objective means of determining vestibular condition. It is concluded that the determination of respiratory minute volume taking into account other vegetative reactions appears to be a useful means of evaluating subject vestibular stability. A.L.W.

# AEROSPACE MEDICINE AND BIOLOGY *A Continuing Bibliography (Suppl. 239)*

DECEMBER 1982

## IAA ENTRIES

**A82-41665** **Laboratory simulation of interstellar chemical evolution.** K. Kuriki and Y. Ishikawa (Tokyo, University, Tokyo, Japan). *Astrophysical Journal, Part 1*, vol. 259, Aug. 1, 1982, p. 411-422. 26 refs.

A plasma flow experiment has been carried out in the laboratory to simulate the chemical evolution in interstellar and circumstellar clouds. The gas constituents were identified at 7.2 cm downstream from the arc jet exit, and the streamwise distribution of the radiative emission of atomic ions was recorded by an optical multichannel analyzer. The final product in the gas phase was also analyzed with gas chromatography, and a similarity law was derived in order to connect the laboratory flow with the interstellar cloud or circumstellar flow. It was found that the ion-molecule reaction plays an important role in the recombination relaxation. The transition from equilibrium to nonequilibrium state was found in the flow, and some species were found to be localized and constructing spatial patterns in the flow. The relation to Miller's (1953) experiment is discussed. C.D

**A82-41681** **Color coding of information on electronic display devices (Über die Farbcodierung von Informationen auf elektronischen Sichtgeräten).** M. Häusing. Darmstadt, Technische Hochschule, Fachbereich Maschinenbau, Dr.-Ing. Dissertation, 1980. 190 p. 99 refs. In German.

The present investigation is concerned with the determination of colors which can be presented on electronic displays and which can be reproduced as elements of a code with respect to six linguistic categories. The six imaging categories are described by elementary color names of the colloquial language. The terms used are Red, Green, Blue, Yellow, Violet, and Turquoise. The effect of the geometric size of colored signs on the assignment of colors to the considered six nominal categories is investigated. Displays operating according to a television raster procedure are considered. Six color tolerance ranges are isolated, taking into account ranges within which the colors are uniformly classified by many observers with different experience levels as belonging to one of the six color categories. G.R.

**A82-41686** # **An on-line procedure for the extraction of acoustically evoked potentials from the electroencephalogram (Ein on-line Verfahren zur Extraktion von akustisch evozierten Potentialen aus dem Elektroenzephalogramm).** J. Klotti. Karlsruhe, Universität, Fakultät für Elektrotechnik, Dr.-Ing. Dissertation, 1980. 178 p. 40 refs. In German.

Audiometry is concerned with the determination of the hearing ability of a human being. An objective audiometry method is based on the evaluation of the electroencephalogram (EEG). EEG audiometry is also called Electric Response Audiometry (ERA). The employment of ERA involves a utilization of the behavior of the brain to produce specific bioelectric responses in case of an arrival or peripheral stimuli of tactile, optical, or acoustic characteristics. These bioelectric responses are called evoked potentials. The foundations of objective audiometry are discussed along with the currently employed methods of this approach. A description is presented of a new procedure which makes it possible to eliminate the disturbing factors which are mainly observed in connection with the derivation of evoked potentials. The new procedure is based on a utilization of the averaging method. Attention is given to results obtained with the considered method and the realization of an ERA computer. G.R.

**A82-41690** # **A command and control device for a man-machine system - Fabrication of a platform and trials (Dispositif de contrôle et de commande d'un systéme homme-machine - Réalisation d'une plate-forme et essais).** P. Mangin. Valenciennes et Hainaut-Cambrésis, Université, Docteur (3e cycle) Thesis, 1980. 131 p. 56 refs. In French.

The parameters, mechanics, construction, operation, and performance of a motion simulator suitable for testing pilot visual functions and task performance while undergoing dynamic movements are reported. An electrohydraulic actuator system was chosen after an analysis of existing machinery and consideration of the inclusion of three axes of rotation into the system. The human subject sits in the center of a platform and is exposed to visual stimuli while the chair moves on three axes, and certain tasks must be performed. Subjects were initially exposed to pitching motions of varying durations. Reaction time to the appearance of visual cues and subsequent task performance were measured and statistical analyses are presented. The chair, with movements proceeding along preprogrammed lines, is concluded to be effective for modification of tasks requiring visual stimuli, and also determining the range, amplitude, and frequency of vestibular disturbances transmitted to the pilot by motions. M.S.K.

**A82-41908** **An analog tracking filter for a swept-sine human vibration test.** M. S. Hundal and B. B. Woodworth (Vermont, University, Burlington, VT). In: International Instrumentation Symposium, 27th, Indianapolis, IN, April 27-30, 1981, Proceedings. Part 2. Research Triangle Park, NC, Instrument Society of America, 1981, p. 515-520. PHS-sponsored research.

The theory, design and construction of a tracking filter are presented. The filter is used for the accelerometer signals from a swept-sine human vibration test. Without the filter the signals contained high harmonic content which rendered the determination of frequency response difficult and error prone. The filter is based on a second order low pass circuit consisting of two integrators, a summer and a sign inverter. The frequency of the filter is continuously varied to keep it tuned to the driving frequency. The frequency variation is obtained by inserting a multiplier at the input of each integrator; the former are supplied by a ramp voltage proportional to the frequency. (Author)

**A82-42065** † **Principles of biological and medical climatology (Osnovy meditsinskoi i biologicheskoi klimatologii).** N. M. Voronin. Moscow, Izdatel'stvo Meditsina, 1981. 352 p. 200 refs. In Russian.

The effect on the body of weather, climate, and season is considered, together with the effect of diurnal changes in weather. The theoretical assumptions are expounded, and the way in which natural factors can be used in the prevention and cure of disease is discussed. Attention is also given to the way in which deleterious environmental factors can be neutralized. C.R.

**A82-42078** # **An investigation of the mechanical meaning of the surface electromyogram (Contribution à l'étude de la signification mecanique de l'électromyogramme de surface).** M. Boulangé. Lille I, Université, Docteur (3e cycle) Thesis, 1980. 175 p. 126 refs. In French.

The relation between the force developed by a muscle during voluntary contractions and its electromyographic activity is investigated by experiments conducted on rat gastrocnemius muscles. The muscle is activated by nerve stimulation and the electromyogram (EMG) is detected by means of surface electrodes. The relation between the EMG and the force developed at the time of the tetanic contractions simulates the spatial and temporal recruitment of the motor units. The interpretation of the EMG-force relation is completed by analyzing the histological profiles of the two heads of the muscle and studying the potentials collected in the course of the muscular contractions. Results show that the diameter of the same type of fibers varies according to the regrouping and to the location of the fibers in the muscle. The spatial recruitment of the motor units is clearly evident at the time of voluntary contractions. The influence of the stimulation frequency is more complex than the temporal recruitment at the time of voluntary movement. Finally, the EMG-force relation is found to be curvilinear, with at first a small slope, reflecting the activity of the slow motor units, but then it becomes steeper due to the activity of both the slow and rapid motor units. N.B.

**A82-42080** # **An examination of heat exchanges in man - Establishment of a reference technique for measuring average cutaneous temperatures using infrared thermometry (Contribution à l'étude des**

**échanges thermiques chez l'homme - Détermination d'une méthode de référence pour la mesure des températures cutanées moyennes par thermométrie infra-rouge).** J.-L. Lecroart. Lille I, Université, Docteur (3e cycle) Thesis, 1980. 102 p. 41 refs. In French.

The development of a method for establishing the average cutaneous temperature in a nonempirical manner using IR thermometry is reported. A numerical model of heat exchanges between the skin and the ambient environment is presented and classical formules for calculating the average cutaneous temperature are reviewed, showing that recorded discrepancies from test to test are due to arbitrary choices of locations for the placement of thermocouples. IR thermometric scans of the whole body are demonstrated to yield maps of the electromagnetic radiation emitted by the body through the skin, with different temperatures expressed as different gray levels. The scan is performed without touching the person, and techniques for accounting for the intervening medium and the angle of view are explored. Specific points of temperature are found by weighting the scanned temperature with a coefficient representing the total area of the measurement around that site. M.S.K.

**A82-42083** # **The effects of the direction of attention on the transmission of cutaneous information (Effets de la direction de l'attention sur la transmission des messages cutanés).** J. Honore. Lille I, Université, Docteur (3e cycle) Thesis, 1980. 99 p. 86 refs. In French.

An experimental investigation of the modulation of cutaneous excitation impulses during performance of a task requiring a particular bodily orientation and attention focus are presented. Subjects (right-handed only) were exposed to electrical current stimulation at internal popliteal or the external malleolar region. The afferent pulses were applied at 330 Hz, with variations in intensity and duration. The intensity of the stimuli was expressed as a function of the psychophysiological standard of unity, which marks the response threshold. The subjects were then tested during two tasks while intermittent stimulation continued: moving dots on a display screen to the same level or fixating on a target area dot on the screen while the head was held in a steady position. Subjects were asked to count the number of stimuli they received during the trial period. It was found that the stimuli were detected better when the attention was directed toward the same side of the visual field as the side of the body which was stimulated. The results confirm that orientation of the optical attention is important even when stimuli occur which do not require visual attention. M.S.K.

**A82-42087** # **Thermography and microwave heating - The design and fabrication of systems intended for biological and medical use (Thermographie et chauffage microonde - Contribution à la conception et à la réalisation de systèmes destinés au génie biologique et médical).** D. D. Nyguen. Lille I, Université, Docteur (3e cycle) Thesis, 1980. 137 p. 65 refs. In French. Research supported by the Délégation Générale à la Recherche Scientifique et Technique and Caisse Nationale de l'Assurance des Travailleurs Salariés.

Applications of thermographic sensors for measuring subdermal heat fluxes and as control sensors in the use of microwaves for hyperthermic cancer treatment are described. The development of a monomode rectangular waveguide for measuring nontraumatic subcutaneous temperature of living tissues is modeled numerically. Optimization is defined to mimimize the reflection coefficient at the skin-sensor interface and maximize the coupling between the waveguide and the coaxial connector. It is shown that, in the 1-10 GHz range, a weak microwave signal caused by warmth can pass through thick layers of adipose tissue or bone, and up to 1.5 cm through high water content tissue, such as muscles. The fabrication of a microwave sensor operating at 2-4 GHz as a tumor detector through observation of temperature gradients which indicate the presence of a cancerous mass is reported. Techniques for heating the tumors to destroy them, while simultaneously monitoring to assure that interior temperatures do not exceed 43 C are detailed. M.S.K.

**A82-42090** # **An analysis and modeling of the binocular system in human sagittal vision (Analyse et modélisation du système binoculaire en vision sagittale chez l'homme).** J. L. Edme. Lille I, Université and Valenciennes et Hainaut-Cambrésis, Université, Docteur (3e cycle) Thesis, 1980. 182 p. 43 refs. In French.

An analysis of ocular movements in humans is presented and a model for binocular vergence is developed. An experimental device for tracking the positions of the eyes following a moving object is described, noting the confinement of the stimuli to the sagittal plane of vision. An oculometer was devised which recorded the eye motions, with the signal being analyzed by a computer as to the changing angles of the position of the eyes, which were focused on a target being maneuvered on a screen. A total of 17 subjects were exposed to trials which required vergence of the eyes at angles of 4.5, 7, 9.5, and 12 deg. Curves of amplitude and dephasing were generated of the oculomotor response to a sinusoidal stimulus. Vergence was found to be particularly important to the functioning of saccadic eye movements. A frequency of visual cut-off was found to exist, at which movement could not be tracked. The binocular system was modeled as a coupled system, linked in positioning and behaving nonlinearly. M.S.K.

**A82-42171** † **Current problems in hypobiosis (Aktual'nye voprosy gipobioza).** N. N. Timofeev (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia*, July-Aug. 1982, p. 39-48. 57 refs. In Russian.

A review of recent research concerning hypobiosis, the slowing down of the life processes of warm-blooded animals and humans over an extended period of time, is presented. It is concluded in a summary of research concerning attempts to produce an analog of natural hypobiosis by prolonged hypothermia that the use of traditional pharmacological substances, such as narcotics and neuroplegic mixtures, is unlikely to produce an acceptable artificial hypobiosis in the foreseeable future. A better approach is suggested to lie in the search for substances which alter the neurohumoral regulation of warm-blooded animals in ways similar to the changes in these processes shown in animals during hibernation. Results of recent research concerning the biological mechanism of hypobiosis show the neurochemical basis of the processes of chemical thermoregulation. The fundamental link in this mechanism is found to be the role of the catecholamine system. N.B.

**A82-42196** **Logistics support productivity improvement.** R. A. Boenning, G. A. Mohr, Jr., and V. B. Minnis, Jr. (Westinghouse Electric Corp., Baltimore, MD). In: Annual Reliability and Maintainability Symposium, Los Angeles, CA, January 26-28, 1982, Proceedings. New York, Institute of Electrical and Electronics Engineers, 1982, p. 227-232.

Five current research and development projects in Westinghouse Integrated Logistics Support Division which contribute to improved productivity and enhanced quality in logistics support are described. The projects range widely over the field of logistics support. Combined interactive training, technical manuals and ATE; voice control of ATE; automated conversion of photographs to line drawings; a compact laser range simulator; and computerized reading grade level determination are discussed. In: Annual Reliability and Maintainability Symposium, Los Angeles, CA, January 26-28, 1982, Proceedings. New York, Institute of Electrical and Electronics Engineers, 1982, p. 497-503. 11 refs.

Test data are presented from an evaluation of the impact of novel training methods on operation and maintenance personnel performance. Extension Training Material (ETM) lessons allowed the test group to overcome the experience advantage of a control group, and then outperform the control group in every criterion measured. A 31% reduction in performance time and a 59% error reduction is reported. The ETM lessons are multimedia, programmed instructional training materials which include audiovisual, highly illustrated print, and audio tape components. Media selection for each lesson is based on audience learning skill as well as task characteristics. Learning retention is enhanced as a result of the integration of more of the user's five senses into the learning process. O.C.

Studies of the local variation in the hematocrit, the volume percentage of erythrocytes in the whole plasma, are reviewed, and methods for both direct and indirect determination of the local hematocrit are discussed. It is concluded that two related phenomena contribute to the observed local variation in the hematocrit. First, a relative decrease can occur in the number of erythrocytes in the microvessels as compared to those present in the central circulatory system. Second, variation in the local hematocrit can occur according to the rate of local circulation, which is associated with the nonuniform distribution of erythrocytes and plasma in the sequence of arterial branches beginning with the aorta. Also presented is a discussion of the possible physiologic and pathologic implications of the local variations in the hematocrit. N.B.

**A82-42602** † **New methodological aspects of the investigation of organ specificity of the lymphatic pathways (Novye metodicheskie aspekty izucheniia organnoi spetsifichnosti limfonosnykh putei).** Iu. E. Vyrenkov and E. L. Soboleva (Tsentral'nyi Institut Usovershenstvovaniia Vrachei, Moscow, USSR). *Akademiia Meditsinskikh Nauk SSSR, Vestnik*, no. 7, 1982, p. 84-87. 17 refs. In Russian.

Replicas of the lymphatic pathways of the microvascular beds of various organs of humans, dogs, and rats are studied by scanning electron microscopy. The results provide for the three dimensional visualization of the lymphatic microvessels, both capillaries and post-capillary segments, in various organs, such as the heart, liver, kidney, and lungs, and demonstrate their considerable structural diversity. The organ specificity of the lymphatic microcirculatory bed is examined. In addition, it is suggested that the terminology used to designate various segments of the lymphatic pathway be clarified and standardized. N.B.

**A82-42603** † **The contraction, regulation, and functional role of lymph vessels (Sokrashcheniia limfaticheskikh sosudov, ikh reguliatsiia i funktsional'naia rol').** R. S. Orlov and R. P. Borisova (Leningradskii Sanitarno-Gigenicheskii Meditsinskii Institut, Leningrad, USSR). *Akademiia Meditsinskikh Nauk SSSR, Vestnik*, no. 7, 1982, p. 74-83. 11 refs. In Russian.

The contractile activity of isolated segments of the main lymph vessels, as expressed in spontaneous phasic rhythmic contractions, slow waves, and variations in tone, is studied in rats, guinea pigs, and sheep. Results show that the contraction produced by myocytes in response to stimulation of various intensities is found to be of the quantal type, depends on the stretching force, and also shows various forms of rhythmointropic dependence. The pacemaker of a section of a lymph vessel between valves optimizes the rhythm and amplitude of the contraction according to the temperature and ionic composition of the medium, intravascular pressure, etc. In addition, the sections of the major lymph vessels between valves possess both inhibitory and excitatory nerves. It is concluded that the combination of phasic and tonic myocytes allows the lymph vessels to function like the heart and blood vessels, which enables them to cope with both the pumping of the lymph and variations in the capacity of their own vessels. N.B.

**A82-42604** † **Circulation and energetics of forearm muscles in man (Krovoobrashchenie i energetika myshts predplech'ia cheloveka).** Ia. V. Skards, A. O. Paeglitis, and D. R. Matisone (Latviiskii Nauchno-Issledovatel'skii Institut Kardiologii, Riga, Latvian SSR). *Akademiia Meditsinskikh Nauk SSSR, Vestnik*, no. 7, 1982, p. 65-74. 20 refs. In Russian.

Mechanisms are examined whereby a long-term equilibrium can be achieved between the rates of ATP metabolism and aerobic resynthesis of phosphogens during voluntary contraction of forearm muscles in static conditions. It is shown that such an equilibrium can be achieved only if the entire additional blood flow is directed toward those muscle fibers which are active at a given moment. An increase in the relative force of contraction, a reduction in regional arterial blood pressure, or a decrease in the oxidative phosphorylation efficiency will lead to a cumulative activation of aerobic phosphogen resynthesis, inhibition of mechanisms responsible for blood flow redistribution, hemodynamic and metabolic shunting of active muscle fibers, and an abrupt decrease in working capacity. R. Orlova, M. P. Sakharov, S. E. Ragimov, V. A. Shlain, and A. V. Trubetskoi (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Akademiia Meditsinskikh Nauk SSSR, Vestnik*, no. 7, 1982, p. 48-58. 27 refs. In Russian.

The load characteristics of the heart have been investigated using a mathematical model and experimental data on intact cat hearts. It is found that the loading characteristics, represented as a relationship between the peak values of intraventricular pressure and blood flow in the aorta, are close to linear and can be described by two parameters: the force parameter (maximum pressure at zero blood flow) and the rate parameter (maximum blood flow at zero pressure). The load characteristics are largely determined by the viscoelastic properties of the left ventricle. The possibility of using these parameters as indicators of cardiac function is discussed. V.L.

**A82-42607** † **The effectiveness of neurohumoral influences on pulmonary circulation (Effektivnost' neirogumoral'nykh vliianii na legochnoe krovoobrashchenie).** D. P. Dvoretskii and B. I. Tkachenko (Akademiia Meditsinskikh Nauk SSSR, Leningrad, USSR). *Akademiia Meditsinskikh Nauk SSSR, Vestnik*, no. 7, 1982, p. 39-48. 46 refs. In Russian.

Changes in the resistance and capacity of pulmonary vessels in response to the activation of sympathetic and parasympathetic pulmonary nerves and to introduction of acetylcholine, serotonin, and histamine into the pulmonary circulation system were studied in cats and rabbits. Results indicate that vasomotor activity in the lungs has a relatively weak effect on integral lung circulation indicators, while neurohumoral control of regional blood flow distribution in the lungs is fairly effective. These findings are explained in terms of local and regional differentiation of the biophysical properties of lung tissue and gravitational influences on the distribution pattern of blood flow in the lungs. Acetylcholine, serotonin, and histamine are shown to increase the postcapillary resistance of the pulmonary vascular bed to a greater extent than they increase the precapillary resistance. V.L.

**A82-42608** † **Emotional stress and hypokinesia in the origination of cardiac disorders and hypertensive states (Emotsional'noe napriazhenie i gipokineziia v geneze narushenii serdechnoi deiatel'nosti i gipertenzivnykh sostoianii).** B. M. Fedorov (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *Akademiia Meditsinskikh Nauk SSSR, Vestnik*, no. 7, 1982, p. 33-39. 27 refs. In Russian.

A biotelemetric monitoring system has been used to study the cardiac activity of man under emotional stress and various degrees of motor activity in both simulated and real-life situations. The results of the study indicate that prolonged hypokinesia increases the susceptibility of man to stress reactions, leads to excessive stimulation of the circulatory system, and inhibits depressor reflexes, which can produce a prolonged increase in arterial blood pressure. Normalization of circulation on termination of emotional stress is delayed under the conditions of hypokinesia. V.L.

**A82-42609** † **Blood circulation and aging (Krovoobrashchenie i starenie).** V. V. Frol'kis (Akademiia Meditsinskikh Nauk SSSR, Kiev, Ukrainian SSSR). *Akademiia Meditsinskikh Nauk SSSR, Vestnik*, no. 7, 1982, p. 24-33. 30 refs. In Russian.

It is noted that the changes brought about in the heart and blood vessels by aging pave the way for cardiovascular pathologies, among them atherosclerosis, arterial hypertension, ischemic diseases of the heart, and cardiac insufficiency. Attention is given to hemodynamics and the contractility of the heart, to efferent neurohumoral regulation of the cardiovascular system, and to the regulation of coronary circulation in old age. It is found that the hemodynamic center becomes excitable, that neural adrenergic and cholinergic influences become weaker, and that shifts occur in the sensitivity of the heart and blood vessels to humoral factors. Taken as a whole, these changes are seen as hampering the adaptability of the circulatory system. C.R.

**A82-42610** † **A systems analysis of individual vascular reactions in animals under experimentally induced emotional stress (Sistemnyi analiz individual'nykh sosudistykh reaktsii zhivotnykh v usloviiakh eksperimental'nogo emotsional'nogo stressa).** K. V. Sudakov (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Akademiia Meditsinskikh Nauk SSSR, Vestnik*, no. 7, 1982, p. 11-24. 18 refs. In Russian.

On the basis of the theory of functional systems propounded by Anokhin

(1970), an approach that allows for individual responses to emotional stress is discussed. Data are presented on the individual vascular reactions of animals faced with the same type of threatening situation. It is shown that both in animals resistant to changes in blood pressure under emotional stress and in those predisposed to such changes, the distribution of catecholamines in the brain differs from individual to individual. It is also shown that, in animals exhibiting differing degrees of resistance to emotional stress, the morphological and histochemical changes in the ganglia of the involuntary system are peculiar to each individual. C.R.

**A82-42611 † Biomicroscopy of a microcirculatory bed in experiments - Possibilities, limitations, and prospects (Biomikroskopiia mikrotsirkuliarnogo rusla v eksperimente - Vozmozhnosti ogranicheniia, perspektivy).** A. M. Chernukh (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Akademiia Meditsinskikh Nauk SSSR, Vestnik*, no. 7, 1982, p. 3-11. 13 refs. In Russian.

The experience gained in studying microcirculation in various organs underlines the importance of taking into consideration the microcirculatory bed, along with the nearby cell formations. Using contact luminescent biomicroscopy in investigations of permeability, data are obtained on the gradient of vascular permeability and on the role of venular and lymphatic microvessels in regulating tissue homeostasis. The homeostasis is regulated at the level of the functional element of an organ where the ultrafine structure of the microvessel wall is not uniform. It is noted that further improvements in biomicroscopy have come from the use of the television microscope and from analyses of the television images. Biomicroscopic studies are found to yield fuller results when the tissue is afterwards subjected to a morphological study. Techniques of high-speed microcinematography and lasers are seen as promising. C.R.

**A82-42612 † Experimental study of the combined effect of noise and acetone (Eksperimental'noe izuchenie kombinirovannogo deistviia shuma i atsetona).** L. N. Burykina, V. L. Ponomareva, V. P. Kurnaeva, A. P. Red'kin, E. V. Shmeleva, E. V. Varsanovich, A. D. Dasaeva, and N. K. Demokidova (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Gigiena Truda i Professional'nye Zabolevaniia*, July 1982, p. 48-51. 11 refs. In Russian.

The combined effect of noise and acetone was studied in male Wistar rats. Rats that were exposed to the separate effects of acetone at low but active levels and noise at a level of 85 dB in the course of one month and a half were found to exhibit single-type nonspecific changes primarily in the neuroendocrine system. The combined effect of acetone and noise was found to be less than additive for all of the physiological indices studied, and close to antagonistic for some of these indices. B.J.

**A82-42613 † The state of hemodynamics under the effect of laser radiation (Sostoianie gemodinamiki pri deistvii lazernogo izlucheniia).** I. N. Ushkova, L. A. Pokrovskaia, and I. M. Suvorov (Akademiia Meditsinskikh Nauk SSSR, Leningrad). *Gigiena Truda i Professional'nye Zabolevaniia*, July 1982, p. 44, 45. In Russian.

Experiments were conducted to evaluate the state of systemic blood circulation in operators of He-Ne lasers. Mechanocardiography showed that operators of He-Ne lasers with output powers of 2-8 mW exhibited lower-than-normal levels of arterial pressure combined with lower-than-normal values of blood minute volume and insufficient increases of peripheral resistance, or combined with constant blood minute volume and decreased peripheral resistance. Laser radiation tends to produce hypotension, accompanied by a reduction in blood minute volume at a constant peripheral resistance. B.J.

**A82-42614 † The condition of the cardiovascular system in air traffic controllers according to data acquired at the workplace (Sostoianie serdechno-sosudistoi sistemy u aviatsionnykh dispetcherov po dannym obsledovaniia na rabochem meste).** Sh. T. Avetikian and E. L. Kan (Nauchno-Issledovatel'skii Neirokhirurgicheskii Institut, Leningrad, USSR). *Gigiena Truda i Professional'nye Zabolevaniia*, July 1982, p. 40, 41. In Russian.

**A82-42615 † The effect of general vibration combined with intermittent noise on the human auditory function (Deistvie obshchei vibratsii v sochetanii s preryvistym shumom na slukhovuiu funktsiiu cheloveka).** N. T. Svistunov and L. N. Marchenkova. *Gigiena Truda i Professional'nye Zabolevaniia*, July 1982, p. 35, 36. 5 refs. In Russian.

**A82-42616 † Early clinical manifestations of vibration-noise pathology in miners of Donets Basin (O rannikh klinicheskikh proiavleniiakh vibratsionno-shumovoi patologii u gornorabochikh Donbassa).** M. L. Vel'skaia, M. A. Nekhorosheva, G. I. Grishanova, N. G. Simonian, A. M. Marin, E. A. Smirnova, and V. I. Dzhereiei (Institut Gigieny Truda i Profzabolevanii, Donetsk, Ukranian SSR). *Gigiena Truda i Professional'nye Zabolevaniia*, July 1982, p. 19-21. In Russian.

**A82-42617 † A physiological justification of allowable noise levels in work involving heavy physical labor under nervous stress (Fiziologicheskoe obosnovanie dopustimykh urovnei shuma pri tiazhelom fizicheskom nervno-napriazhennom trude).** G. S. Zvereva, M. V. Ratner, A. V. Kolganov, and L. V. Mar'enko (Institut Gigieny Truda i Profzabolevanii, Donetsk, USSR). *Gigiena Truda i Professional'nye Zabolevaniia*, July 1982, p. 7-11. In Russian.

It is found that, as reflected by physiological indicators, heavy physical labor, noise, and nervous stress conditions act synergistically. The effect of noise in bringing about additional shifts in the physiological indicators is found to be more pronounced than that of physical labor or nervous stress. C.R.

**A82-42618 † Levels of physiological reserves of sailors working a 10-hour shift (Urovni fiziologicheskikh rezervov organizma moriakov, rabotaiushchikh po 10-chasovomu grafiku).** V. N. Evstaf'ev, L. M. Shafran, and O. Iu. Netudykhatka (Institut Gigieny Vodnogo Transporta, Odessa, Ukrainian SSR). *Gigiena Truda i Professional'nye Zabolevaniia*, July 1982, p. 4-7. 10 refs. In Russian.

**A82-42619 † Studies directed toward improving hygienic standards pertaining to total-body vibration resulting from heavy moving equipment (Materialy k utochneniiu gigienicheskikh norm obshchei transportno-tekhnologicheskoi vibratsii).** Iu. P. Pal'tsev, Iu. P. Syromiatnikov, A. M. Vialov, E. M. Abramova, T. A. Shabolina, and E. L. Sineva (Institut Gigieny, Moscow, USSR). *Gigiena Truda i Professional'nye Zabolevaniia*, July 1982, p. 1-4. In Russian.

Tests were conducted on excavator operators in order to define safe levels of total-body vibration for operators of heavy moving equipment. Simulation experiments revealed the adverse effect of low-frequency vibration (108 dB in the octave band with a geometric mean frequency of 4 Hz) on the total and regional cerebral hemodynamics. It is concluded that safe working conditions can be attained if vibration levels at workplaces do not exceed values corresponding to LS (limiting spectrum) 92. B.J.

**A82-42620 † Principles of the definition and classification of tissues (Printsipy opredeleniia i klassifikatsii tkanei).** A. A. Bazitov (Vladivostokskii Meditsinskii Institut, Vladivostok, USSR). *Arkhiv Anatomii, Gistologii i Embriologii*, vol. 82, June 1982, p. 92-100. 30 refs. In Russian.

A number of questions pertaining to the definition and classification of tissues are addressed, including difficulties in defining the concept of tissue, general principles underlying the classification of tissues, the relationship between criteria of definition and classification, and the place that the term 'tissue' occupies among other biological terms. It is suggested that contemporary histological description is based on two classifications of tissues, which are complementary: morphophysiological and genetic. B.J.

**A82-42621 † The organization of the afferent subcortical inputs of the visual region of the cat cerebrum (Organizatsiia afferentnykh podkorkovykh vkhodov zritel'noi oblasti kory bol'shogo mozga u koshki).** G. P. Obukhova (Akademiia Meditsinskikh Nauk SSSR, Leningrad, USSR). *Arkhiv Anatomii, Gistologii i Embriologii*, vol. 82, June 1982, p. 17-21. 15 refs. In Russian.

**A82-42622 † Stereological analysis of interneuronal contacts in the cerebral cortex of rats during the posthypoxic period (Stereologicheskii analiz mezhneironal'nykh kontaktov kory bol'shogo mozga krys v postgipoksicheskom periode).** S. S. Stepanov, V. V. Semchenko, and Iu. V. Chesnokov (Omskii Meditsinskii Institut, Omsk, USSR). *Arkhiv Anatomii, Gistologii i Embriologii*, vol. 82, June 1982, p. 12-16. 16 refs. In Russian.

The effect of hypoxia on the ultrastructure and number of synapses in the neocortex of white rats was studied by the selective staining of the interneuronal contacts. Asphyxia lasting 6 min results in a considerable decrease in the number of synapses. Reparation during the posthypoxic period occurs at the cost of hypertrophy of the contacts and the activation of neosynapsogenesis. The considerable decrease in the number of synapses (by 31%) was maintained one month after the asphyxia, with a considerable change in the synapsoarchitectonics. B.J.

**A82-42623 † Changes in the lymphoid organs of rats under the effect of acute hypoxia (Izmeneniia v limfoidnykh organakh u krys pri ostroi gipoksii).** A. M. Nalivaiko (Sverdlovskii Meditsinskii Institut, Sverdlovsk, USSR). *Arkhiv Anatomii, Gistologii i Embriologii*, vol. 82, June 1982, p. 87-91. 21 refs. In Russian.

Changes in the thymus, spleen, and mesenteric lymph nodes in rats under acute hypoxia that simulates the effect of elevations of 7000 m above sea level for 1 hour and 6500 m above sea level for 6 hours are investigated using histological and cytofluorometric methods. The migration of differentiated lymphocytes out of the lymphoid organs is found to increase, with essential shifts occurring in the temporal parameters in the mitotic cycle of the lymphocytes. The contents of nucleic acids in the lymphoid cells is found to change. The hypoxia is thus seen as intensifying differentiation processes. C.R.

**A82-42624 † The anatomy and topography of the human bronchopulmonary lymph nodes (Anatomiia i topografiia bronkholegochnykh limfati-**

**cheskikh uzlov u cheloveka).** A. B. Aubakirov (I Moskovskii Meditsinskii Institut, Moscow, USSR). *Arkhiv Anatomii, Gistologii i Embriologii*, vol. 82, June 1982, p. 64-67. 11 refs. In Russian.

**A82-42625** † **The topography of elements of the cardiac conduction system (Topografiia elementov provodiashchei sistemy serdtsa cheloveka).** S. S. Mikhailov and A. V. Churbar (Moskovskii Meditsinskii Stomatologicheskii Institut, Moscow, USSR). *Arkhiv Anatomii, Gistologii i Embriologii*, vol. 82, June 1982, p. 56-67. 25 refs. In Russian.

A total of 112 heart preparations from persons ranging in age from 18 to 87 is studied. A number of fasciculi connected with the sinoatrial and atrioventricular nodes are revealed. The atrioventricular part of the conduction system is seen as having a structure and topography that is not subject to variation. The sinoatrial part, being younger in a phylogenetic sense, is more susceptible to variation. C.R.

**A82-42626** † **Microcirculatory state in the case of chronic obliteration of arteries (Sostoianie mikrotsirkuliatornogo rusla pri khronicheskoi obliteratsii arterii).** P. F. Bytka, V. T. Zhitsa, and E. T. Chikale (Klinika Gospital'noi Khirurgii; Kishinevskii Meditsinskii Institut, Kishinev, Moldavian SSR). *Arkhiv Anatomii, Gistologii i Embriologii*, vol. 82, June 1982, p. 49-55. 13 refs. In Russian.

**A82-42627** † **A morphological investigation of the regulatory mechanisms of the intracerebral blood circulation (Morfologicheskie issledovaniia reguliatornykh mekhanizmov vnutrimozgovogo krovoobrashcheniia).** P. A. Motavkin, V. M. Chertok, and Iu. I. Pigolkin (Vladivostokskii Meditsinskii Institut, Vladivostok, USSR). *Arkhiv Anatomii, Gistologii i Embriologii*, vol. 82, June 1982, p. 42-49. 35 refs. In Russian.

The intracerebral branches of the posterior and medial cerebral arteries in the region of the gray and white substances of the parietal, occipital, and temporal cerebral lobes, and in the nuclei of the superior and inferior colliculi in the tectum mesencephali, as well as in the pons, were studied in 36 male corpses (from 5-49 years of age) by the methods of Cajal, Koelle, Furness, and Costa. Results show the presence of sensory nerve endings of the cholinergic plexuses in the walls of the intracerebral arteries with a diameter of up to 100 microns and greater, and adrenergic neural networks in arteries up to 40 microns in size and larger. It is suggested that the nerve and other systems of the intracerebral circulatory bed play a role in the regulation of the local cerebral circulation. N.B.

A study carried out on 26 healthy males ranging in age from 19 to 28 reveals that there are two diametrically opposed variants in the organization of the endocrinal system. One is characterized by high activity of the sympathetic adrenal and hypophysial adrenal systems, high activity of the insular apparatus of the pancreas, and a comparatively lower activity of the hypophysial thyroid system and gonads. In the other variant, the activities are reversed. The variants are found to be linked to the organization of the nervous system. The first variant corresponds to a nervous system where hypothalamic, reticular, and amygdala effects prevail over the inhibiting effects of the neopallium, the corpus striatum, septo-hippocampal system, and the epiphysis. In the other variant, the prevalence is reversed. It is believed that individual features of the endocrine system may be responsible for such disorders as hypothalamic obesity, hypertension, acromegaly, and bronchial asthma. C.R.

The role of organic and functional factors in the pathogenesis of diseases of the central nervous system is reviewed. Studies of neurological diseases present in various functional conditions of the brain are discussed, and the neurophysiological and neurochemical mechanisms of these conditions are examined. It is concluded that clinical studies of Parkinsonism, epilepsy, and other diseases in patients, both during sleep and while awake, show the importance of such functional investigations of the pathogenesis of neurological diseases of the brain. The variations in the morphological structure of the human brain were examined in 205 individuals. Results show a great variation in the brain weights of different individuals, particularly for each hemisphere. In addition, an examination of the variations of the rostrocaudal length showed that in a majority of individuals the rostrocaudal length was longer in the left hemisphere than in the right. The logomotor areas 44 and 45 exhibited variabilities in the total volumetric fraction and in the neuronal composition of layers III and V. N.B.

**A82-42638** † **An experimental study of the human blood-cerebral barrier using scanning electron microscopy (Opyt izucheniia gematolikvornogo bar'era cheloveka metodom skaniruiushchei elektronnoi mikroskopii).** A. I. Kiktenko (Akademiia Meditsinskikh Nauk, SSSR, Moscow, USSR). *Zhurnal Nevropatologii i Psikhiatrii im S. S. Korsakova*, vol. 82, no. 7, 1982, p. 968-971. 22 refs. In Russian.

The results obtained in examining the epithelium of the choroid plexuses of the lateral ventricles using scanning electron microscopy are described. A superficial morphological picture makes it possible to distinguish four types of cells in the choroid plexus epithelium, namely cells bearing microvilli on the surface presented to the ventricle lumen, cells having a relatively smooth surface, cells bearing scanty cilia, and cells characterized by large processes. The diversity in the morphological picture of the surface of the choroid plexus epithelium cells is seen as a manifestation of the activity of the barrier between the blood and cerebrospinal fluid represented by those cells. C.R.

**A82-42794** # **Aerial combat simulation in the U.S. Air Force.** P. A. Cook (USAF, Human Resources Laboratory, Williams AFB, AZ). *Astronautics and Aeronautics*, vol. 20, Sept. 1982, p. 60-65.

Progress in techniques and equipment for successful computer image generation (CIG) combat simulator trainers for the pilots of A-10 and F-16 fighters are described. An advanced simulator features seven visual display screens on a dodecahedron structure to give 300 deg horizontal and 140 deg vertical field of view on 36 in. CRTs, all mounted on a six-degree-of-freedom motion platform. Combat simulation training with F-5 pilots yielded improved performances in actual practice combat flights. SAM missile launches and antiaircraft fire can be simulated, along with full combat maneuvering, although representation of enemy planes is still limited to 2-3 km distance at most. Twin cockpits permit joint missions to be flown against a third, visually projected target field. Further advances in helmet-mounted simulations and coupling of actual weapons systems electronics to simulator displays are discussed. M.S.K.

**A82-42829** **Vibration and comfort. I - Translational seat vibration.** M. J. Griffin, E. M. Whitham, and K. C. Parsons (Southampton, University, Southampton, England). *Ergonomics*, vol. 25, July 1982, p. 603-630. 19 refs.

The effects of level, frequency, and duration of the translational vibration of a firm flat seat are investigated as part of a series of studies of discomfort caused by multi-axis vibration at the seat, feet, and back of seated persons. The levels of fore-and-aft, lateral, and vertical seat vibration which causes discomfort equivalent to 0.5 and 1.25 m/sq sec r.m.s. 10 Hz vertical seat vibration are determined at octave center frequencies from 1-63 Hz. In addition, comfort contours equivalent to 0.8 m/sq sec r.m.s. 10 Hz vertical seat vibration and subject transmissibilities are determined at preferred third-octave center frequencies from 1-100 Hz. It is found that the shapes of equivalent comfort contours need not normally depend on vibration level, and significant correlations are found between subject characteristics (size and transmissibility) and subject relative discomfort. A method also is developed to predict the influence of high levels of harmonic distortion on the comfort contours. N.B.

**A82-42830** **Vibration and comfort. II - Rotational seat vibration.** K. C. Parsons and M. J. Griffin (Southampton, University, Southampton, England). *Ergonomics*, vol. 25, July 1982, p. 631-644. 7 refs.

The effects of level, frequency, and direction of the roll, pitch, and yaw vibration of a firm flat seat are studied to investigate the discomfort produced by rotational seat vibration. The levels of roll, pitch, and yaw seat vibration which causes discomfort equivalent to 0.5 and 1.25 m/sq sec r.m.s. 10 Hz vertical seat vibration are determined at octave center frequencies in the range 1-31.5 Hz. In addition, the comfort contours equivalent to 0.8 m/sq sec r.m.s. 10 Hz vertical seat vibration are determined at preferred third-octave center frequencies from 1-31.5 Hz. Results for both individual and group equivalent comfort contours show that the shape of the contours need not normally depend on vibration level. The median contours of vibration acceleration increase in proportion to vibration frequency in all three axes, while sensitivity is greatest for roll vibration and least for yaw vibration of the seat. N.B.

**A82-42831** **Subjective response to whole-body vibration - The effects of posture.** D. J. Oborne and P. A. Boarer (Swansea, University College, Swansea, Wales). *Ergonomics*, vol. 25, July 1982, p. 673-681. 23 refs. Research supported by the Social Science Research Council.

In an investigation of the effects of posture on subjective responses to whole-body vibration, 20 undergraduate subjects produced equal sensation contours adopting three postures each on different occasions. The postures adopted were standing, sitting upright and sitting slouched. The results indicated significant differences in the contour shapes from the three postures, and the level set in the sitting postures were significantly lower than in the standing posture. No difference was obtained between the two sitting postures. Implications of these findings are discussed regarding the role of transmissibility in subjective response to vibration, and the necessity to produce different standards for different postures. (Author)

**A82-42900** **Three stimuli for visual motion perception compared.** H. Wallach, M. L. McMahon (Swarthmore College, Swarthmore, PA), and A. O'-Leary (Stanford University, Stanford, CA). *Perception and Psychophysics*, vol. 32, no. 1, July 1982, p. 1-6. 7 refs. Grant No. PHS-11089.

Two arrangements yielding induced motion were used to explore the relative effectiveness of three stimulus conditions known to produce perception of motion - namely, image displacement, ocular pursuit, and object-relative displacement. In these arrangements, object-relative displacement, which resulted in induced motion, was in conflict either with ocular pursuit or with image displacement. The outcomes of these conflicts were determined by measuring the extent of induced motion. Image displacement proved more effective in competing with object-relative displacement than did ocular pursuit, which in one arrangement yielded to object-relative displacement entirely. The same pattern of results was obtained both with the usual arrangement of the moving-center type and with a stationary-center display. (Author)

**A82-42993** † **Methods of human adaptation to heat (O metodike teplovoi adaptatsii cheloveka).** A. T. Mar'ianovich. *Voenno-Meditsinskii Zhurnal*, July 1982, p. 41-43. 8 refs. In Russian.

Experiments were conducted to evaluate the discrete or discontinuous method of adaptation to heat, in which a tolerance to heat is built up by short exposures (of the order of 10 minutes) to extremal thermal effects. It is shown that, in certain cases, the discrete method involving the effect of an extremal heat factor is superior to the method of continuous exposure to a lower-intensity heat factor. The discrete method can be used to speed up the heat-adaptation process. B.J.

Various methods for evaluating the functional state of the human body under the effects of heat or cold are analyzed with reference to providing suitable uniforms for military personnel. Rectal temperature, the state of the cardiovascular system, external breathing, the state of the central nervous system, the functioning of the motor analyzer, skin sensitivity, and the state of the sympathico-adrenal system were among the factors evaluated. The condition studied involved extremal temperatures ranging from +45 to -35 C. B.J.

**A82-42995** † **The dynamics of certain psychophysiological indicators under the cumulative effect of Coriolis accelerations (Dinamika nekotorykh psikhofiziologicheskikh pokazatelei pri vozdeistvii kumuliatsii uskorenii Koriolisa).** V. I. Babiiak, L. A. Glaznikov, and V. A. Mozin. *Voenno-Meditsinskii Zhurnal*, July 1982, p. 45-47. 8 refs. In Russian.

Indicators of simple and complex sensorimotor reaction before and after the effect of the continuous accumulation of Coriolis acclerations were studied in subjects with varying degrees of resistance to motion sickness. It is shown that the simple sensorimotor reaction is not an informative indicator in the case of cumulative Coriolis acclerations. The complex sensorimotor reaction more adequately reflects the psychophysiological state of the body in the case of the appearance of the motion-sickness syndrome (even in its latent forms). B.J.

The microcirculation state (as reflected in arterial-pressure indices and EKG data) in dogs was studied under conditions of the separate and combined effects of acute blood loss and hypoxia. Blood circulation was found to be considerably disrupted in animals not adapted to oxygen deficit in inhaled air under the combined effect of hypoxic and hemic hypoxia. The preliminary adaptation of the dogs to hypoxia was shown to increase their resistance to blood loss. B.J.

**A82-43045** **Effect of dosed physical loading on plasma and liver lipids and lipoproteins in rats.** L. N. Dakovska and V. T. Orbetsova (Meditsinska Akademiia, Sofia, Bulgaria). *Bolgarskaia Akademiia Nauk, Doklady*, vol. 35, no. 4, 1982, p. 549-552. 11 refs.

The quantity of total lipids (TL), phospholipids (PhL), and free fatty acid (FFA) are investigated using Boehringer test reagents in adequate aliquots of blood plasma or purified Folch extracts (evaporated to dryness at 60 C). The lipoproteins (LP) are separated in two ways. For qualitative purposes, electrophoretic techniques (discacrylamide electrophoresis) are used; for a quantitative determination of cholesterol (Ch) and triglycerides (TGl) in the LP, Wilson's dual-precipitation method is used. It is found that the quantity of total lipids and total Ch in the experimental group does not differ from that of the controls. The content of PhL shows an upward tendency and that of TGl is significantly higher. C.R.

**A82-43046** **Effect of dosed physical loading on biological oxidation and bioenergy in liver and myocardium.** V. T. Orbetsova, L. N. Dakovska, M. P. Anastasova, N. N. Iavorska, and M. T. Pesheva (Meditsinska Akademiia, Sofia, Bulgaria). *Bolgarskaia Akademiia Nauk, Doklady*, vol. 35, no. 4, 1982, p. 553-556. 7 refs.

Experiments with two plasticizers (Santisizer and Condea) are carried out on seven groups of 10 male rats whose body weights range from 200-240 g. The plasticizers are applied dermally using Draize's method: 21 daily applications five times a week in doses of 4, 1, and 0.5 ml/kg. During the 21-day period, no changes are observed in the behavior, general condition, food consumption, and body weight of the animals. The activity of oxidizing enzymes and phosphatases in the myocardium is determined. It is found that in low doses the phthalate plasticizers do not substantially change all the enzyme activities tested in myocardium homogenates. C.R.

**A82-43099** **Contrast increment thresholds of rhesus monkeys.** E. L. Smith, III, R. S. Harweth, D. M. Levi, and R. L. Boltz (Houston, University, Houston, TX). *Vision Research*, vol. 22, no. 9, 1982, p. 1153-1161. 30 refs. Grants No. NIH-EY-03611; No. NIH-EY-01139; No. NIH-EY-01728.

Increment contrast thresholds were determined behaviorally as a function of background contrast for sinusoidal gratings with spatial frequencies between 0.5

and 8.0 c/deg. As has been previously reported for humans, the contrast discrimination functions were characterized by a facilitation effect for low background contrasts and a masking effect for high background contrasts. The shapes of the functions varied with spatial frequency, but for all spatial frequencies, portions of the functions were adequately described by a power law. The shapes of the reaction time distributions obtained for near threshold stimuli suggested that at least two mechanisms with different spatio-temporal sensitivities were involved in detecting the stimulus and that the exact shape of the contrast discrimination function was dependent on which mechanism dominated detection. (Author)

**A82-43100** **Hyperacuity and interpolation by the visual pathways.** A. W. Snyder (Australian National University, Canberra, Australia). *Vision Research*, vol. 22, no. 9, 1982, p. 1219, 1220. 12 refs.

Hyperacuity demands some form of neural interpolation. This places constraints on the relation between optical image quality and the cone mosaic. In particular, if the cone mosaic significantly undersamples the optical image, then hyperacuity is downgraded. This fact is consistent with the comparatively poor hyperacuity in the peripheral retina of man. (Author)

**A82-43145** **Computer simulation of respiratory control system.** N. Suzuki and A. Uchiyama (Waseda University, Tokyo, Japan). *Electronics and Communications in Japan*, vol. 63, Nov. 1980, p. 118-126. 8 refs. Translation.

A computer simulation of the human respiratory control system is carried out using a model which incorporates the diffusion phenomenon and gas transport delay. The response of the respiratory system to carbon dioxide inhalation, a lack of oxygen in the inhaled air, and possible damage within the system is investigated within the framework of the proposed model. Finally, several methods for refining the model are suggested. V.L.

**A82-43221** † **Interpretation of Viking biology experiments (K voprosu ob interpretatsii biologicheskikh eksperimentov na KA 'Viking').** A. V. Garbuz, L. M. Mukhin, S. L. Orlov, and A. I. Shafiev. *Kosmicheskie Issledovaniia*, vol. 20, July-Aug. 1982, p. 651-653. 9 refs. In Russian.

An experiment has been carried out in which soil samples imitating Martian soil were irradiated with high-energy electrons and gamma quanta. Results suggest that radiation defects accumulating in Martian soil due to the effect of cosmic rays may be one of the sources of the gases that were detected by the Viking spacecraft in the Martian atmosphere. V.L.

**A82-43222** † **Comparative analysis of the biological effects of electromagnetic radiation. II - Eye damage. Cataractogenesis (Sravnitel'nyi analiz biologicheskikh effektov elektromagnitnykh izluchenii. II - Porazhenie glaz. Kataraktogenez).** B. I. Davydov, V. S. Tikhonchuk, and V. V. Antonov. *Kosmicheskie Issledovaniia*, vol. 20, July-Aug. 1982, p. 653-655. 20 refs. In Russian.

The available literature on cataracts induced by microwave radiation in animals and humans is briefly reviewed. It is found that microwave radiation produces cataracts in animals at frequencies of 2450-3000 and 10,000 MHz; cataractogenesis is not observed at lower frequencies. Equations are presented for extrapolating thresholds for reversible eye changes and for cataractogenesis in humans subjected to microwave radiation. The threshold of functional and organic changes of the human eye is a function of absorbed dose and dose power. B.J.

**A82-43230** † **Threshold models of spatial vision (Porogovye modeli prostranstvennogo zreniia).** V. D. Glezer (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad, USSR). *Fiziologiia Cheloveka*, vol. 8, July-Aug. 1982, p. 547-558. 43 refs. In Russian.

A comparative analysis is presented of neurophysiological studies of receptive fields and psychophysiological data concerning the detection and recognition of simple images, and the discrimination of textures. A threshold detection model is described which is based on a set of independent elements whose weighting function is the difference of two Gaussians; the elements are combined by spatial-probabilistic summation. A threshold recognition model is proposed which is based on a set of detector gratings of different frequencies. The texture discrimination model consists of nonlinear incoherent spatial-frequency filters. The neurophysiological correlates of each of these three types of spatial elements are discussed. B.J.

**A82-43231** † **Dynamics of the process of the determination of orientation by man (Dinamika protsessa otsenki orientatsii chelovekom).** N. B. Kostelianets and V. M. Kamenkovich (Akademiia Nauk SSSR, Institut Vysshei Nervnoi Deiatel'nosti i Neirofiziologii, Moscow, USSR). *Fiziologiia Cheloveka*, vol. 8, July-Aug. 1982, p. 559-563. 14 refs. In Russian.

The accuracy of human visual determination of the orientation of a line was evaluated as a function of the time set aside for this task. This time was limited either by masking with one image or by the additional task of recognizing one of three possible masking images. In the first case, a monotonic dependence of the precision of orientation determination on the time interval between the test and masking images was found. The second case showed a nonmonotonic dependence. Possible neurophysiological mechanisms for this difference are discussed. B.J.

**A82-43232** † **Factors determining the characteristics of the perception of stabilized retinal images (O faktorakh, opredeliaiushchikh osobennosti vospriiatiia stabilizirovannykh setchatochnykh izobrazhenii).** G. I. Rozhkova, P. P. Nikolaev, and V. E. Shchadrin (Akademiia Nauk SSSR, Institut Problem Peredachi Informatsii, Moscow, USSR). *Fiziologiia Cheloveka*, vol. 8, July-Aug. 1982, p. 564-571. 21 refs. In Russian.

It is shown that given the same precision of stabilization of retinal images but different conditions and parameters of stimulation it is possible to observe either irreversible fading of visual images or their prolonged existence. The observed images differ significantly in their temporal evolution: they can disappear after a few seconds or last for many minutes, smoothly fade and fluctuate or maintain their sharpness for a long time and gradually fade. Anatomical, physiological, and psychological factors are examined which might explain these features of the perception of stabilized images. It is suggested that the formation of images in conditions of stabilization might be facilitated by the high contrast and large size of the test field, the high contrast of test objects, and the presentation of matched stimuli to both eyes (i.e., the simulation of binocular vision). B.J.

**A82-43233** † **Mechanisms of the damaging effect of light on retinal photoreceptors (Mekhanizmy povrezhdaiushchego deistviia sveta na fotoretseptory setchatki glaza).** M. A. Ostrovskii and I. B. Fedorovich (Akademiia Nauk SSSR, Institut Khimicheskoi Fiziki, Moscow, USSR). *Fiziologiia Cheloveka*, vol. 8, July-Aug. 1982, p. 572-577. 16 refs. In Russian.

Data on light-produced damage in the human retina are examined. It is shown that prolonged exposure to bright light mainly imperils those who are prone to eye diseases, and that the light effect consists in damage to photoreceptors, which destroys their contacts with pigment epithelium. The mechanism for this damaging effect of light is shown to be the oxidation of rhodopsin and lipids (the molecular components of the photoreceptor membrane) which is photoinduced by the end products of photolysis of the retinal pigment. Ways to protect the eyes from this type of damage are discussed. B.J.

**A82-43234** † **Brain-stem auditory evoked potentials in persons with normal hearing (Korotkolatentnye slukhovye vyzvannye potentsialy u liudei s normal'nym slukhom).** B. M. Sagalovich and G. G. Melkumova (Ministerstvo Zdravookhraneniia RSFSR, Moskovskii Nauchno-Issledovatel'skii Institut Ukha, Gorla i Nosa, Moscow, USSR). *Fiziologiia Cheloveka*, vol. 8, July-Aug. 1982, p. 578-584. 25 refs. In Russian.

Brain-stem auditory evoked potentials were recorded in 40 persons (with ages ranging from 18 to 25) with normal hearing. It is shown that the latent periods of the principal waves of the potentials are characterized by low intrasubject and intersubject variability, whereas their amplitudes are extremely unstable. These potentials are masked by white noise, the character of the masking being determined by the relationship between the superthreshold intensity of the masker and the masked auditory click. It is concluded that both fast and slow auditory evoked potentials should be recorded in order to obtain complete information about the objective condition of hearing. B.J.

**A82-43235** † **Psychophysical characteristics of perception and bioelectric activity of the brain during micropolarization of the occipital part of the hemispheres (Psikhofizicheskie kharakteristiki vospriiatiia i bioelektricheskaia aktivnost' mozga pri mikropoliarizatsii zatylochnoi oblasti polusharii).** I. A. Korsakov and L. V. Matveeva (Vsesoiuznyi Nauchno-Issledovatel'skii Institut Obshchei i Sudebnoi Psikhiatrii, Moscow, USSR). *Fiziologiia Cheloveka*, vol. 8, July-Aug. 1982, p. 595-603. 10 refs. In Russian.

**A82-43236** † **Electrocardiographic correlates of emotional stress (K voprosu ob elektrokardiograficheskikh korreliatakh emotsional'nogo napriazheniia).** E. I. Sokolov and E. V. Belova (Meditsinskii Stomatologicheskii Institut, Moscow, USSR). *Fiziologiia Cheloveka*, vol. 8, July-Aug. 1982, p. 609-614. 15 refs. In Russian.

EKG studies were performed on 33 healthy human subjects (with ages ranging from 17 to 23) who were subjected to emotional stress. It is shown that the main changes produced by emotional stress are in the P and T waves. These changes have different signs and depend on the type of vegetative regulation. Changes in the shape and amplitude of the P wave are found to be an index of emotional stress. B.J.

**A82-43237** † **Physiological mechanisms determining the mechanical work of breathing for different types of muscular activity (Fiziologicheskie mekhanizmy, opredeliaiushchie rabotu dykhaniia pri razlichnykh vidakh myshechnoi deiatel'nosti).** V. V. Gritsenko, V. I. Gavrilenkov, and O. Iu. Momchalov (I Leningradskii Meditsinskii Institut, Leningrad, USSR). *Fiziologiia Cheloveka*, vol. 8, July-Aug. 1982, p. 615-621. 20 refs. In Russian.

Experiments were performed on healthy young human subjects under conditions of rest, voluntary hyperventilation, and physical exercise (ergometer loads of 10 to 125 W on the upper and lower extremities). An analysis of respiratory and cardiovascular indicators showed that the main factors determining the mechanical work of breathing during muscular activity are the intensity of ventilation, the blood level in lung vessels, and the breathing volume. The influence of these factors is more pronounced during manual exercise and in women. B.J.

**A82-43238** † **The effect of body position and the administration of a diuretic on the water-salt status and the activity of the kidneys (Vliianie polozheniia tela i priema diuretika na vodno-solevoi status i deiatel'nost' pochek).** V. B. Noskov. *Fiziologiia Cheloveka,* vol. 8, July-Aug. 1982, p. 636-641. 12 refs. In Russian.

Experiments were performed on 10 healthy males in order to evaluate the effect of orthostatic and antiorthostatic (-20 deg) body positions and the administration of a diuretic on the indicators of the natruretic function of the kidneys and the water-electrolyte status. The antiorthostatic position and the peroral administration of the diuretic are found to produce regular changes in the water-salt homeostasis and in the activity of the kidneys; these changes are determined by a decrease in the reabsorption of fluid and salts. The combined action of the antiorthostatic position and the diuretic is found to constitute a synergistic effect. B.J.

**A82-43239** † **The relationship between postural components and voluntary movement (Sviaz' poznykh komponentov s proizvol'nym dvizheniem).** N. V. Kholmogorova (Moskovskii Gosudarstvennyi Pedagogicheskii Institut, Moscow, USSR). *Fiziologiia Cheloveka,* vol. 8, July-Aug. 1982, p. 642-652. 22 refs. In Russian.

Experiments performed on 30 healthy human subjects showed that changes in muscular postural activity precede voluntary movement if the latter produces a change in the center of gravity of the body. This postural anticipation of movement was disclosed in the case of the lifting of the arms as well as in the case of stabilization of the body with a horizontally outstretched arm. Local arm movement was preceded by a preparatory period of postural reactions, including two components: the inhibition of the background activity of a series of muscles and the anticipatory activity of leg muscles. **A82-43329** # **The role of the test pilot in flight tests (Die Rolle des Testpiloten bei der Flugerprobung).** D. Thomas (Dornier GmbH, Friedrichshafen, West Germany). *Deutsche Gesellschaft für Luft- und Raumfahrt, Symposium über angewandte Flugwissenschaften bei der Entwicklung des Alpha Jet, Darmstadt, West Germany, Sept. 24, 1981, Paper.* 19 p. In German.

A description is presented of various aspects related to the development of an aircraft, taking into account the experience of the project pilot in connection with the development of the Alpha Jet aircraft. The Alpha Jet was developed as a training aircraft and bomber aircraft in a joint project by French and German aerospace companies. Attention is given to the objectives of flight tests, the functions of the test pilot in connection with the development of the aircraft, details concerning the daily activities of a test pilot, the determination of flight performance, comments concerning the duration and extension of the flight tests, weapons tests, and approaches for avoiding aircraft accidents due to poststall gyration. G.R.

**A82-43383** **Regulation of circadian rhythmicity.** J. S. Takahashi (National Institutes of Health, Laboratory of Clinical Science; National Institute of General Medical Sciences, Bethesda, MD) and M. Zatz (National Institutes of Health, Laboratory of Clinical Sciences, Bethesda, MD). *Science,* vol. 217, Sept. 17, 1982, p. 1104-1111. 106 refs.

An anatomical and physiological basis for circadian rhythmicity in animals is presented. A suprachiasmatic nucleus which displays all basic characteristics of circadian rhythms and multiple oscillators comprise the anatomical basis of the system. Neural activity in the nucleus persists at least 34 cycles after surgical isolation, and evidence suggests that the nucleus acts as a pacemaker within the mammalian system. The pacemaking system normally functions as a single oscillator, but evidence shows the possibility of a multioscillator system. Two organizational types may be the basis for this system: a dominant pacemaker imposes itself on the system, or a mutually coupled system shares the role. The biochemical analysis reveals two regulators of the system: the pineal gland which expresses a driven rhythm, and the Aplysia eye whose phase-shifting effects are mediated by the synthesis of adenosine 3',5'-monophosphate. Potentially useful experimental systems to study the oscillator biochemical components of multicellular organisms have emerged. R.K.R.

**A82-43388** **Use of physiological information in man-machine systems.** A. A. Desova. *(Avtomatika i Telemekhanika, Jan. 1982, p. 151-166.) Automation and Remote Control,* vol. 43, no. 1, June 20, 1982, pt. 2, p. 122-135. 124 refs. Translation.

Attention is given to the use of physiological information on the condition and characteristics of the human operator in designing, studying, and operating man-machine systems. Groups of specialized engineering psychological criteria are developed that characterize practical problems. The main steps of a methodological approach for obtaining formalized estimates of physiological information are formulated and described. An approach to obtaining a quantitative estimate of the human operator's functional state is suggested and then developed in an example of scale formulation for operating tension. C.R.

**A82-43513** † **Internal stresses and contractility of myocardium (Vnytrennye napriazheniia i sokratitel'naia sposobnost' miokarda).** G. S. Pisarenko, V. V. Kriveniuk, A. A. Moibenko, T. P. Sivachenko, and A. K. Belous (Akademiia Nauk Ukrainskoi SSR, Institut Problem Prochnosti, Kiev, Ukrainian SSR). *Mekhanika Kompozitnykh Materialov,* July-Aug. 1982, p. 690-694. 6 refs. In Russian.

Model computations of stresses in the left ventricle due to external load and systolic contraction of the myocardial elastic component are presented. Analysis of the data obtained, taken in conjunction with the results of certain physiological experiments reported in the literature, shows that the final systolic volume is an important indicator of the contractile function of myocardium. A. Vakhrameeva. Leningrad, Izdatel'stvo Nauka, 1980. 152 p. 258 refs. In Russian.

**A82-43610** † **Thermogenesis and muscle activity during the adaptation to cold (Termogenez i myshechnaia deiatel'nost' pri adaptatsii k kholodu).** Iu. I. Bazhenov. Leningrad, Izdatel'stvo Nauka, 1981. 105 p. 392 refs. In Russian.

The role of muscle activity in the process of the adaptation of homeothermic animals to cold is reviewed. The changes in the energetics of the various forms of muscular activity during individual and specific acclimations to low environmental temperatures are analyzed. The role of muscle activity in the development of the adaptive changes of thermogenesis is discussed in detail. In addition, the basic principles of the compensatory interaction between the specific thermoregulatory and motor functions of the muscles during the division and combination of the influence of cold and muscle activity on an organism are presented. N.B.

**A82-43611** † **The morphology of the connections of the cortical vestibular zone (Morfologiia sviazei korkovoi vestibuliarnoi zony).** A. S. Iontov, V. A. Kisliakov, T. F. Kuleshova, F. N. Makarov, and V. A. Otellin. Leningrad, Izdatel'stvo Nauka, 1980. 128 p. 365 refs. In Russian.

The physiology of the cortical connections of the vestibular apparatus in several animals is reviewed. Also discussed is the input-output switching of the vestibular impulses which enter the cerebral cortex. Recent morphological data about the associative and commissural connections with the vestibular nuclei of the medulla oblongata and with the formations of the striopallidal complex are examined. In addition, results of electron microscopic investigations concerning the reactivity of the vestibular cortex to the action of gravitational overloads are presented. N.B.

**A82-43627** † **The intracentral connections of the brain structures participating in cardiovascular control (O vnutritsentral'nykh sviaziakh mozgovykh struktur, uchastvuiushchikh v reguliatsii krovoobrashcheniia).** M. I. Gurevich, A. G. Kartseva, and V. A. Maiskii (Akademiia Nauk Ukrainskoi SSR, Institut Fiziologii, Kiev, Ukrainian SSR). *Fiziologicheskii Zhurnal SSSR,* vol. 68, Aug. 1982, p. 1025-1031. 11 refs. In Russian.

The hemodynamic responses to the electrical stimulation of different hypothalamus structures, and to simultaneous electrical stimulations of the sinus nerve and the hypothalamus are studied in anesthetized vagotomized cats. In addition, the monosynaptic hypothalamic connections to the brain and spinal cord are investigated. Results show that the hypothalamus influences the efferent link in the regulation of cardiovascular control by means of the activation of various descending pathways both through the bulbar level of regulation as well as by omitting it. A scheme of the intracentral monosynaptic connections which participate in cardiovascular control is given. N.B.

**A82-43628 † The role of the integrity of the central synaptic and direct influences in the regulation of hemodynamics (O roli integrativnosti tsentral'nykh sinapticheskikh i priamykh vliianii v reguliatsii gemodinamiki).** K. V. Kovanov (Gosudarstvennyi Meditsinskii Institut, Ternopol, Ukrainian SSR). *Fiziologicheskii Zhurnal SSSR*, vol. 68, Aug. 1982, p. 1049-1056. 18 refs. In Russian.

The interrelationships of the direct and reflex mechanisms, as well as the general organization of the regulation of hemodynamics are investigated in cats and dogs. Results show that the ultimate efferent effects of the central apparatus of hemodynamic regulation result from the integrity of their responses to the sum total of the incoming afferent signals and to the substances in the blood and in the cerebrospinal fluid which act directly on these signals. The types of cytoarchitectonic constructions and morphological structures which could mediate the central effects of these substances and the interrelationships between the reflex and direct mechanisms of regulation are determined by light and electron microscopic studies of the stereohistological organization of the spinal cord. In addition, a scheme for the organization of the central mechanisms of the regulation of hemodynamics and of the reflex arc structure is presented. N.B.

**A82-43629 † An analysis of the role of endogenous opioid peptides in experimental hypertension (Analiz roli endogennykh opioidnykh peptidov pri eksperimental'noi gipertenzii).** A. V. Val'dman, O. S. Medvedev, and N. I. Rozhanskaia (Akademiia Meditsinskikh Nauk, Moscow, USSR). *Fiziologicheskii Zhurnal SSSR*, vol. 68, Aug. 1982, p. 1091-1095. 18 refs. In Russian.

The effects of endogenous opioid peptides on the parameters of the hemodynamic system and on the functions of the barareceptor reflex are investigated in normotensive rats and in rats with two types of experimental hypertension. In spontaneously hypertensive rats and in rats with one-kidney Goldblatt hypertension, naloxone (0.1 and 1.0 mg/kg body weight) evokes a 10 mm Hg increase in blood pressure, but does not change the sensitivity of the baroreceptor reflex. However, naloxone facilitates this reflex in normotensive rats. A possible role of endogenous peptides in the regulation of blood pressure is proposed in relation to their ability to stimulate mu and delta opiate receptors in the brain. N.B.

**A82-43630 † The mechanisms of hypertensive responses during emotional stress (Mekhanizmy vozniknoveniia gipertenzivnykh reaktsii pri emotsional'nom napriazhenii).** V. A. Tsyrlin (Nauchno-Issledovatel'skii Institut Kardiologii, Leningrad, USSR) and B. G. Bershadskii (I Meditsinskii Institut, Leningrad, USSR). *Fiziologicheskii Zhurnal SSSR*, vol. 68, Aug. 1982, p. 1096-1101. 10 refs. In Russian.

The shifts of the hemodynamic system are studied in alert cats exposed to emotional stress that was evoked by electrical stimulation of the hypothalamus or by confining the cats in a closed chamber in which a dog was also present. Results showed that hypertension, expressed in response to a confrontation with a dog, was accompanied by a suppression of the baroreceptor reflexes in the majority of cats tested. After severing the sino-carotid and aortic nerves, no hypertensive responce was observed in these same cats. In two cats, the baroreceptor reflexes were not altered by emotional stress, and deafferentation of the sino-carotic nerve and the arch of the aorta intensified the hypertensive response expressed by the cats during confrontations with dogs. Various mechanisms for the hypertensive response to emotional stress are proposed for various animals. N.B.

**A82-43631 † The mechanisms of the development of the cardiogenic vagosympathetic reflexes (O mekhanizmakh razvitiia kardiogennykh vagosimpaticheskikh refleksov).** A. A. Moibenko, V. B. Pavliuchenko, I. E. Buriakov, and V. M. Shaban (Akademiia Nauk Ukrainskoi SSR, Institut Fiziologii, Kiev, Ukrainian SSR). *Fiziologicheskii Zhurnal SSSR*, vol. 68, Aug. 1982, p. 1103-1110. 27 refs. In Russian.

The mechanisms of the development of the vagosympathetic depressor reflexes during adrenergic stimulation of the heart and during local immune and ischemic damages of the left ventricle are studied in anesthetized dogs and cats by recording the afferent and efferent impulses from the cardiac nerves as well as the cardiodynamic indices. Reciprocal changes are found in the impulse activity of the cardiac nerves. The frequency of the afferent impulses in the vagal nerves increases, while the efferent impulses in the sympathetic nerves are inhibited. It is proposed that the reflex inhibition of sympathetic impulses and of the depressor reflex is triggered by the stimulation of heart mechanoreceptors that is evoked by the increase in myocardial contractility and the asynergy of the left ventricle. N.B.

**A82-43632 † Functional means for the regulation of heart rhythm during burst stimulation of the vagus nerves (Funktsional'nye vozmozhnosti upravleniia ritmom serdtsa pri zalpovom razdrazhenii bluzhdaiushchikh nervov).** V. Abushkevich (Kubanskii Meditsinskii Institut, Krasnodar, USSR). *Fiziologicheskii Zhurnal SSSR*, vol. 68, Aug. 1982, p. 1112-1115. 14 refs. In Russian.

**A82-43633 † The participation of the hypothalamus in the regulation of parasympathetic cardiac reflexes in unanesthetized cats (Uchastie gipotalamusa v reguliatsii parasimpaticheskikh refleksov na serdtse u nenarkotizirovannykh koshek).** G. E. Samonina, E. I. Pevtsova, and M. G. Udel'nov (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR). *Fiziologicheskii Zhurnal SSSR*, vol. 68, Aug. 1982, p. 1116-1122. 16 refs. In Russian.

**A82-43634 † The responses of the coronary vessels in dogs to hypothalamic stimulation in acute and chronic experiments (Reaktsii koronarnykh sosudov u sobak pri razdrazhenii gipotalamusa v ostrom i khronicheskom opytakh).** A. V. Trubetskoi and V. L. Golubykh (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Fiziologicheskii Zhurnal SSSR*, vol. 68, Aug. 1982, p. 1123-1129. 15 refs. In Russian.

**A82-43635 † Conjugated changes of the resistance and blood filling of cerebral vessels during shifts in the blood gas composition (Sopriazhennye izmeneniia soprotivleniia i krovenapolneniia sosudov golovnogo mozga pri sdvigakh gazovogo sostava krovi).** V. G. Krasil'nikov and A. I. Artem'eva (Akademiia Meditsinskikh Nauk SSSR, Leningrad, USSR). *Fiziologicheskii Zhurnal SSSR*, vol. 68, Aug. 1982, p. 1130-1136. 12 refs. In Russian.

The changes in the resistance and blood filling of cerebral vessels during various concentrations of CO2 and O2 in the blood are studied in anesthetized cats during perfusion of the brain with constant blood volumes. Results show that hypercapnia and hypoxia lead to a decrease in the resistance of the cerebral vessels and to a reduction of the brain blood flow, whereas a decrease in the pCO2 and an increase in the pO2 in the blood exerts an opposite effect. The different responses of the vessels are found to have several similar features in respect to the threshold changes of the pCO2 and pO2, to the potentiation of the effects of both parts of the vascular system of the brain during increased shifts of the blood gas tension, to the greater sensitivity of both parts of the vascular system to changes in pCO2 than in pO2, and to the effect of the blood gas tension on the response of both parts of the vascular system to injections of noradrenaline. It is suggested that an alteration in the filtering and absorption relationships in the brain is caused by the different responses of the arterial and venous vessels to changes in the blood gas tension. N.B.

**A82-43636 † The interrelationship between the pressor response and energy metabolism during isometric muscle contractions (O sviazi pressornoi reaktsii s energeticheskim metabolizmom myshts, sokrashchaiushchikhsia v staticheskom rezhime).** A. V. Vitols, I. P. Kukulis, A. O. Paeglitis, and Ia. V. Skards (Latviiskii Nauchno-Issledovatel'skii Institut, Riga, Latvian SSR). *Fiziologicheskii Zhurnal SSSR*, vol. 68, Aug. 1982, p. 1137-1142. 17 refs. In Russian.

Studies of the pressor response parameters connected with blood flow, energy demands, and maximal isometric work show that the part of the arterial pressure maintained by means of arterial occlusion is dependent upon the energy demands during isometric muscle contractions in humans. It is concluded that a biochemical agent or agents is involved in the formation of the pressor response. N.B.

**A82-43637 † A composite assessment of heart rhythm regulation during dosed functional loads (Kompleksnaia otsenka reguliatsii ritma serdtsa pri dozirovannykh funktsional'nykh nagruzkakh).** N. I. Sapova. *Fiziologicheskii Zhurnal SSSR*, vol. 68, Aug. 1982, p. 1159-1164. 16 refs. In Russian.

The regulation of heart rhythm is studied in 152 healthy trained and untrained men during the performance of physical and mental work. Results show that the regulation of heart rhythm during these functional loads is determined both by the initial balance of the sympathetic and parasympathetic effects, and by its variation during the performance of the work. The expression of the sympathetic effects depends on the peculiarities of regulation and on the flow of afferent impulses which enter the central nervous system during the performance of functional tests of various types, efforts, and lengths. A set of indicators for the evaluation of heart rhythm regulation during these tests is proposed. N.B.

**A82-43638 † Liver microcirculation in normoxia and hypoxia (Mikrotsirkuliatsiia v pecheni pri normo- i gipoksemii).** K. P. Ivanov, M. K. Kalinina, Iu. I. Levkovich, N. A. Mal'tsev, and G. P. Mikhailova (Akademiia Meditsinskikh Nauk SSSR, Leningrad, USSR). *Fiziologicheskii Zhurnal SSSR*, vol. 68, Aug. 1982, p. 1165-1170. 15 refs. In Russian.

The values of the blood flow velocity in the liver sinusoids, and the normal fluctuations of these values and the fluctuations during hypoxic conditions were studied in rat liver sinusoids 11 + or - 1 microns in diameter using the movement of the white blood cells that were flowing in the direction of the red cells as the markers to measure the linear flow velocity. Results showed that the linear flow velocity in normoxic rats was 0.29 + or - 0.01 mm/s and the volumetric flow rate was calculated to be .00165 microliter/min. During hypoxic conditions the blood pressure dropped to 70-80 torr, and the pO2 in the arterial blood and in the portal vein dropped to 45 + or - 3 torr and 18 + or - 3 torr, respectively, as compared with 77 + or - 3 torr and 41 + or - 2 torr during normoxic conditions. The mean sinusoidal blood flow velocity increased by nearly 12%. It was concluded that increased oxygen extraction is the main compensatory mechanism in liver tissue hypoxia. N.B.

**A82-43651** † **The role of the extrapolation and dynamic stereotype in the mechanism of the formation and improvement of adequate motor coordination (Rol' ekstrapoliatsii i dinamicheskogo stereotipa v mekhanizmakh formirovaniia i sovershenstvovaniia adekvatnykh dvigatel'nykh koordinatsii).** N. V. Zimkin (Gosudarstvennyi Institut Fizicheskoi Kul'tury, Leningrad, USSR). *Fiziologicheskii Zhurnal SSSR*, vol. 68, July 1982, p. 926-935. 29 refs. In Russian.

An investigation of the tonus, viscosity, bioelectric potentials, force, and endurance of human muscles shows that all of these properties are greatly altered by fluctuations of muscle temperature and oxygen provision, and also by the processes of dynamic work or static efforts at 25, 50, and 75% of maximal strength. It is found that these results are not in accordance with the theory of the mechanism of the dynamic stereotype. The inner structure of the motor apparatus is permanently altered not only during work, but also during the restitution period. Due to its plasticity, the nervous system has a high capacity for extrapolation and can adequately react to new tasks which arise with changes in the internal or external environment. Extrapolation is improved by training, but decreases after the cessation of training. N.B.

**A82-43652** † **The adaptive control of vegetative processes (Adaptivnoe upravlenie vegetativnymi protsessami).** N. N. Vasilevskii and Z. A. Aleksanian (Akademiia Meditsinskikh Nauk SSSR, Leningrad, USSR). *Fiziologicheskii Zhurnal SSSR*, vol. 68, July 1982, p. 948-952. 17 refs. In Russian.

Clinical investigations of the control of the cardiovascular system by using biofeedback methods are presented. Results showed that rabbits and cats were able to shift their blood pressure level and to alter their heart rate, while humans were found to be able to regulate their heart rhythm using similar methods. In addition, it was found that these methods can modulate the endogenous biorhythm in a range of 15-20 s, and this regulation can be controlled not only in the central nervous system (hypothalamus), but also during the registration of peripheral function of the cardiovascular system (the blood pressure system, heart rhythm). It is concluded that these results indicate the existence of a general mechanism of adaptation to innovation (adaptive rhythm). N.B.

**A82-43653** † **The effect of drugs altering the exchange of cAMP on the bioelectrogenesis of skeletal muscles (Vliianie preparatov, izmeniaiushchikh obmen tsAMF, na bioelektrogenez skeletnykh myshts).** I. A. Patrin, A. S. Mozzhukhin, and V. O. Samoilov (Gosudarstvennyi Institut Fizicheskoi Kul'tury; Voenno-Meditsinskaia Akademiia, Leningrad, USSR). *Fiziologicheskii Zhurnal SSSR*, vol. 68, July 1982, p. 970-975. 22 refs. In Russian.

In isolated sartorius muscles from frogs, the bioelectrical characteristics of separate fibers of different groups (dark, light, and intermediate) were studied using microelectrodes in conjunction with in vivo television microscopy in order to determine the effect of drugs which alter cAMP exchange (adrenaline, caffeine, and imidasol) on the resting and action potentials of these muscles. Results showed that 0.00001 M concentrations of these drugs affect the generation potentials in the different fibers to varying degrees, and that the effect of these drugs is more pronounced in the case of excitatory potentials. In addition, a mechanism to account for the effects of these drugs on the bioelectric generation in skeletal muscles is presented. N.B.

**A82-43654** † **The effect of a physiological load on the exchange and phosphorylation of cell membrane proteins in the brain of rats (Vliianie fiziologicheskoi nagruzki na obmen i fosforilirovanie belkov kletochnykh membran mozga krys).** V. N. Vitvitskii and L. V. Vitvitskaia (Akademiia Nauk SSSR, Institut Obshchei Genetiki, Moscow, USSR). *Fiziologicheskii Zhurnal SSSR*, vol. 68, July 1982, p. 992-998. 14 refs. In Russian.

**A82-43655** † **Changes of the functional condition of the neocortex during direct application of optical radiation (Izmeneniia funktsional'nogo sostoianiia neokorteksa pri priamom deistvii opticheskogo izlucheniia).** V. A. Velling, G. V. Gal'dinov, and S. A. Gromova (Akademiia Meditsinskikh Nauk SSSR, Leningrad, USSR). *Fiziologicheskii Zhurnal SSSR*, vol. 68, July 1982, p. 999-1006. 20 refs. In Russian.

The action of optical radiation on the bioelectrical activity of the neocortex and the penicillin-induced epileptigenic focus is investigated in rabbits and cats. Results show that the direct action of ultraviolet radiation at wavelengths of 280, 310, and 365 nm leads to an increase in the amplitude of the EEG and intensifies the epilepiform activity, while the action of radiation above the threshold value at wavelengths of 580 and 630 nm evokes a decrease in the EEG amplitude and a suppression of the epileptiform activity. It is proposed that the mechanism of action of ultraviolet radiation on the bioelectric activity of the neocortex is based on changes in the permeability of neural membranes for sodium and potassium ions and on the subsequent depolarization of the membranes. The action of visible radiation appears to lead to the injuring of the neurons by heat in the irradiated zones, which results in an irreversible suppression of their activity and a reduction of the EEG amplitude. N.B.

**A82-43665** † **The mechanism of the activating effect of anti-cardiac antibodies on the electrical and contractile activity of myocardial cells (O mekhanizme aktiviruiushchego deistviia protivoserdechnykh antitel na elektricheskuiu i sokratitel'nuiu aktivnost' miokardial'nykh kletok).** N. In Russian.

**A82-43666** † **Heart antigens (Antigeny serdtsa).** G. M. Butenko, A. A. Moibenko, and O. V. Shablovskaia (Akademiia Nauk Ukrainskoi SSR, Institut Fiziologii, Kiev, Ukrainian SSR). *Fiziologicheskii Zhurnal* (Kiev), vol. 28, July-Aug. 1982, p. 485-491. 59 refs. In Russian.

Studies of heart antigens in humans and other animals are reviewed, including work on heart specific antigens as well as antigens specific for other organs, such as the kidneys, liver, and skeletal muscles, in addition to the heart. The characteristics of heart specific antigens are summarized, and information about their intracellular localization is presented. In addition, the action of specific anti-heart antibodies on the heart is discussed. N.B.

**A82-43671** † **Study of the morphological and biological properties of obligate and facultative psychrophylic bacteria found in the Antarctic (Izuchenie morfologicheskikh i biologicheskikh svoistv obligatnykh i fakul'tativnykh psikhrofil'nykh bakterii, vydelennykh v usloviiakh Antarktidy).** R. Iu. Tashpulatov, V. M. Bondarenko, and N. S. Dusmukhamedov. *Antarktika*, no. 20, 1981, p. 169-182, 184. 17 refs. In Russian.

**A82-43674** **Vibration and comfort. III - Translational vibration of the feet and back. IV - Application of experimental results.** M. J. Griffin, K. C. Parsons, and E. M. Whitham (Southampton, University, Southampton, England). *Ergonomics*, vol. 25, Aug. 1982, p. 705-719, 721-739. 42 refs.

The effect on human comfort of the frequency and direction of the translational vibration of a footrest and a flat firm backrest are investigated. The levels of fore and aft, and lateral and vertical vibration of the feet of seated subjects which causes discomfort equivalent to that from 0.8 m/s sq r.m.s. 10 Hz vertical vibration of a firm flat seat are determined at frequencies ranging from 2.5-63 Hz. The levels of fore and aft, and lateral and vertical vibration at the back of a seat, equivalent to 0.8 m/s sq r.m.s. 10 Hz vertical seat vibration, are also determined. Results are presented in the form of individual and group equivalent comfort contours. It is found that the contours for vibration of the back show a high sensitivity to fore and aft vibration. N.B.

**A82-43675** **Variability in human response to whole-body vibration - The effects of instructions.** D. J. Oborne and P. A. Boarer (Swansea, University College, Swansea, Wales). *Ergonomics*, vol. 25, Aug. 1982, p. 759-769. 12 refs. Research supported by the Social Science Research Council.

Two studies are described in this paper with the aim of assessing the degree to which the instructions given to a subject during an experiment designed to investigate human reaction to vibration, affect the vibration equal sensation contour which is produced. In the first study, 100 subjects produced equal sensation contours by equating pairs of vibration stimuli. After each pair, subjects were required to record the basis on which they had made their judgments. The results demonstrated that subjects differ in the concepts which they use to equate vibration stimuli, although the majority equate in terms of the degree to which parts of the body are shaken. In the second study, 48 subjects were required to produce equal sensation contours using the terms of either 'comfort' or 'discomfort' or 'body shake' or 'sensation'. The overall contour shapes produced by the four instruction groups were not significantly different, although the frequency ranges of maximum vibration sensitivity were shown to be significantly different. Implications of these findings are discussed. (Author)

**A82-44133** **Effects of beta-adrenergic receptor blockade on glycogenolysis during exercise.** A. C. Juhlin-Dannfelt, S. E. Terblanche, R. D. Fell, J. C. Young, and J. O. Holloszy (Washington University, St. Louis, MO). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Sept. 1982, p. 549-554. 27 refs. Research supported by the Muscular Dystrophy Association and Swedish Society of Medical Sciences; Grant No. NIH-AM-18986.

The effects of beta-adrenergic receptor blockage on glycogen depletion is studied in rats during exercise. Results show that beta-adrenergic stimulation is not necessary for glycogen breakdown in skeletal muscle during prolonged exercise. Beta-adrenergic blockage does not inhibit liver glycogen depletion during exercise. In addition, it is found that the elevation of plasma free fatty acids partially inhibits the exercise induced decrease in glycogen concentration in the heart, and when elevation of free fatty acids and beta-blockage are combined, depletion of cardiac glycogen is almost completely prevented. Beta-blockage markedly reduces glycogen depletion in the heart during exercise. It is concluded that beta-adrenergic stimulation is of major importance in mediating glycogenolysis in the heart but is not necessary for glycogenolysis in skeletal muscle or liver during prolonged exercise. N.B.

**A82-44134** **Temperature effects on lung mechanics in air- and liquid-filled rabbit lungs.** H. Inoue, C. Inoue, and J. Hildebrandt (Virginia Mason Research Center, Seattle, WA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Sept. 1982, p. 567-575. 26 refs. Grant No. NIH-HL-14854.

The effects of temperature on lung pressure-volume curves and on the reversibility of changes in the lung tissues are studied in rabbit lungs in the temperature range 4-52 C. Air curves are obtained at 21 C, then at one of seven test temperatures (4, 21, 32, 37, 42, 47, and 52 C) after 60 minutes equilibrium, and finally again at 21 C. Peak inflation volume is made identical at all temperatures in a given lung. Results show that warming diminishes elastic recoil in air-filled lungs, but above 42 C a slight increase occurs, probably reflecting the transition zone of pure dipalmitoyl phosphatidylcholine. Liquid filled lungs also demonstrate considerable temperature dependency, but no transitions. In addition, all surface and tissue changes up to 47 C are found to be reversible, but those at 52 are not. N.B.

**A82-44135** **Hemodynamic response to converting enzyme inhibition at rest and exercise in humans.** R. Fagard, P. Lijnen, L. Vanhees, and A. Amery (Leuven, Katholieke Universiteit, Louvain, Belgium). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Sept. 1982, p. 576-581. 33 refs. Research supported by the Instituut voor Wetenschappelijk Onderzoek of Belgium and Nationaal Fonds voor Wetenschappelijk Onderzoek.

The hemodynamic effects of Captopril is studied in six normal sodium-replete male subjects at rest and during exercise, together with the effects of the drug on the exercise capacity for graded uninterrupted exercise. Results show that the renin-angiotensin system is not involved in the homeostasis of blood pressure in supine sodium-replete humans, but has a modest role in blood pressure regulation when posture is changed from supine to upright. In addition, the orthostatic effect of Captopril is found to be maintained during upright exercise, and the reduction of systemic vascular resistance by Captopril does not affect peak oxygen uptake. N.B.

**A82-44136** **Aortic body chemoreceptor responses to dopamine, haloperidol, and pargyline.** N. J. Smatresk and S. Lahiri (Pennsylvania, University, Philadelphia, PA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Sept. 1982, p. 596-602. 33 refs. Grant No. NIH-HL-19737-05.

The effect of exogenously administered dopamine (DA) and a dopaminergic blocker, haloperidol, on aortic chemoreceptor activity, from single or few-fiber afferent nerve preparations, is studied in 18 anesthetized cats. Results show that exogenously administered DA has an inhibitory effect on the aortic body chemoreceptors that is qualitatively similar to that seen in the carotid body. In addition, the endogenous release of DA is found to increase as the arterial partial pressure levels fall, as judged by DA antagonism with haloperidol. Exogenous DA produces an inhibition that appears to interact with arterial oxygen levels in a complex fashion for unknown reasons. No physiologically significant role in the degradation of endogenous DA at aortic body receptor sites is found to be played by monoamine oxidase. N.B.

**A82-44137** **Hormone response of normal and intermittent cold-preadapted humans to continuous cold.** M. W. Radomski and C. Boutelier (Institute of Environmental Medicine, Downsview, Ontario; Toronto, University, Toronto, Canada; Centre d'Essais en Vol, Laboratoire de Medécine Aerospatiale, Bretigny-sur-Ogre, Essonne, France). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Sept. 1982, p. 610-616. 30 refs.

The hormonal and thermal responses of two groups of subjects were studied during 16 days in the Arctic (mean temperature -26.8 C), with one group (NPA) having received no prior cold exposure, while the other group (PA) was subjected to nine daily immersions (20-40 min) in cold water (15 C) for 20 days before the Arctic exposure. It was found that the NPA group showed an increase in metabolism and rectal temperature, while the PA group showed no elevation in metabolism and a decrease in rectal temperature. For the NPA group, Arctic exposure led to significant daily increases over the control period of urine volume, urinary norepinephrine, epinephrine, and 17-hydroxycoricosteroids, while only epinephrine increased in the PA group. It is concluded that the hormonal and thermal responses of the NPA group in the Arctic were characteristic of metabolic adaptation, whereas those in the PA group were suggestive of a hypothermic type of adaptation or habituation with no evidence of sympathetic or adrenocortical stimulation. N.B.

**A82-44138** **Hypoxic pulmonary vasoconstriction and the size of hypoxic compartment.** M. A. Zasslow, J. L. Benumof, and F. R. Trousdale (California, University, La Jolla, CA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Sept. 1982, p. 626-630. 24 refs. Research supported by the University of California.

The relationship between the amount of hypoxic pulmonary vasoconstriction (HPV) and the size of the hypoxic test segment (TS) is studied in pentobarbital sodium-anesthetized mongrel dogs. Results show that as the percent of the cardiac output perfusing the TS increases, the expression of HPV changes from flow redistribution to perfusion pressure increase, but the overall magnitude of HPV does not change. In addition, at any given percentage of the cardiac output perfusing the TS, the limits of any given individual HPV response are wide. N.B.

**A82-44139** **Effect of exercise conditioning on coronary resistance.** I. Y. S. Liang and H. L. Stone (Oklahoma, University, Health Sciences Center, Oklahoma City, OK). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Sept. 1982, p. 631-636. 19 refs. Grants No. NIH-HL-22154; No. NIH-HL-07430.

The diastolic coronary resistance (DCR) is measured in seven conscious dogs in the untrained state and after 4-6 weeks of daily exercise conditioning (partial training) in order to determine if daily exercise leading to a reduction in the coronary reactive hyperemic response produces any change in the DCR when myocardial oxygen demand is increased by atrial pacing. Also, the mechanism for any change in the DCR with atrial pacing is examined following adrenergic receptor blockage. Significant changes are found in the coronary flow, coronary resistance, and the reactive hyperemic response in partially trained animals. In addition, the evidence indicates a structural alteration in the vascular bed itself, possibly a change in the vessel caliber. N.B.

**A82-44140** **Factors inducing periodic breathing in humans - A general model.** M. C. K. Khoo, R. E. Kronauer, K. P. Strohl, and A. S. Slutsky (Harvard University, Cambridge; U.S. Veterans Administration Hospital, West Roxbury; Women's Hospital, Boston, MA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Sept. 1982, p. 644-659. 39 refs. Research supported by the Medical Research Council of Canada and U.S. Veterans Administration; Grant No. NIH-HL-16325-05.

A general model is developed to account for all kinds of periodic breathing (PB) resulting from instability in respiratory control: in normals during sleep and on acute exposure to high altitude, in sleeping infants, and in patients with cardiovascular or neurologic lesions. It is found that in almost every case the ventilatory oscillation is mediated predominantly by the peripheral controller. System stability is decreased by hypoxia, hypercapnia, increased lung washout times, prolonged lung-chemoreceptor delays, and high controller sensitivity. Stability is enhanced by large lung CO2 and O2 storage volumes but little affected by body tissue stores. Using our own measurements of lung-ear delays, the model predicts that the mean cycle time of PB decreases from about 30 s at sea level to 20 s at 14,000 ft, in excellent agreement with data from other studies. Allometric scaling of the relevant parameters also shows close agreement between model predictions and data obtained in infants. (Author)

**A82-44141** **A critical value for O2 transport in the rat.** R. P. Adams, L. A. Dieleman, and S. M. Cain (Alabama, University, Birmingham, AL). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Sept. 1982, p. 660-664. 8 refs. Research supported by the Stichting De Drie Lichten of Netherlands; Grants No. NIH-HL-14693; No. NIH-HL-26927.

Intact anesthetized rats are ventilated under hypoxic, normoxic, and hyperoxic conditions while either normovolemic or hypovolemic, and the point at which the whole-animal skeletal muscle oxygen uptake becomes dependent on total oxygen transport (TOT) is determined. By so doing, a wide range of TOT values both above and below the range normally observed are obtained, and a critical value of TOT can be identified with respect to whole-body skeletal muscle oxygen uptake. No dependence of whole-body skeletal muscle oxygen uptake is found in the range of transport from approximately 23-80 ml/kg-min in anesthetized rats. Only below that range does the skeletal muscle oxygen uptake become dependent on transport. It is concluded that skeletal muscle oxygen uptake in the rat, as in the dog and other larger animals, is not normally transport limited during normoxic or hyperoxic conditions. N.B.

**A82-44142** **Modification of training-induced responses by repeated norepinephrine injections in rats.** M. Harri, P. Kuusela, and R. Oksanen-Rossi (Kuopio, University, Kuopio, Finland). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Sept. 1982, p. 665-670. 28 refs. Ministry of Education of Finland *Grants No. 9040/78/79;* No. 9449/78/80.

The effect of increased sympathetic influence, produced by repeated injections of norepinephrine, during exercises on the development of exercise-induced adaptive changes in rats is investigated. Results showed that the training specific changes (increased activity of oxidative muscle enzymes) were not potentiated by training under the influence of exogenous norepinephrine administration. While norepinephrine injections alone produced hypertrophy of the brown adipose tissue and increased colonic temperature response to isoproterenol, these changes failed to develop if the rats underwent physical training in addition to drug treatment. Norepinephrine treatment produced lower tail skin temperatures in a cool environment (15 C) with or without simultaneous training. It is concluded that the chronic norepinephrine treatment and physical training combination led to complex adaptive changes that could not be systematically associated with either norepinephrine treatment or physical training alone. N.B.

**A82-44143** **Hyperoxia inhibits stimulated superoxide release by rat alveolar macrophages.** H. J. Forman, J. J. Williams, J. Nelson, R. P. Daniele, and A. B. Fisher (Pennsylvania, University, Philadelphia, PA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Sept. 1982, p. 686-689. 26 refs. Grants No. NIH-HL-15061; No. NIH-HL-23790.

**A82-44144** **Regulation of glycogenolysis in human muscle at rest and during exercise.** D. Chasiotis, K. Sahlin, and E. Hultman (Huddinge University Hospital, Huddinge, Sweden). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Sept. 1982, p. 708-715. 37 refs. Research supported by the Medicinska Forskningsradet and Swedish National Association Against Rheumatism. MF Project 2647.

The mechanism for the increased glycogenolysis during exercise is studied in human muscle by measuring the activities of phosphorylase and synthase as well as the concentration of the activators AMP, IMP, and inorganic phosphate. Results show that the total glycogen phosphorylase and synthase activities are unchanged during exercise, while the activity of phosphorylase a at rest is low and critically dependent on the concentration of inorganic phosphate in the muscle. Phosphorylase a is found to increase initially 2.4 fold during isometric contraction and 1.6 fold during maximal bicycle exercise, but reverts to or below the resting value at fatigue/exhaustion. Synthetase I comprises 17-48% of the total activity at rest, but decreases during exercise to about half of this value. The reciprocal changes in phosphorylase and synthase are found to be correlated with the enhanced rate of glycogenolysis during exercise. It is concluded that the concentration of inorganic phosphate is one of the main factors determining phosphorylase activity and provides a link between phosphocreatine breakdown and glycogen utilization in muscle. N.B.

**A82-44145** **Protein kinase activity in liver of heat-acclimated hamsters.** R. Chayoth, M. Aharon, and Y. Graziani (Negev, University, Beersheva, Israel). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Sept. 1982, p. 716-718. 28 refs.

Protein kinase activity, potential changes in the activities of phosphorylase kinase and phosphorylase a during heat acclimation, and the cAMP dependence of protein kinases are investigated in liver slices from heat acclimated (35 C) and control (23 C) hamsters. Results show that the protein kinase activity in heat acclimated (HA) hamsters is 70% higher than in similar slices from control (C) hamsters, while adding glucagon to the incubation medium increased protein kinase activity by 65% for C animals but by only 30% for HA animals. The binding of tritium-labelled cAMP to proteins of a low-speed supernatant fraction of incubated and homogenized slices is 30% lower for HA than for C animals, while the addition of glucagon decreased the binding by 30% for each group. The activities of phosphorylase kinase, phosphorylase phosphatase, and phosphorylase a incubated with or without glucagon does not differ between groups. It is concluded that heat acclimation of the hamster increases the amount of a species of liver protein kinase that is different from the one that mediates the effect of glucagon on glycogenolysis. N.B.

**A82-44146** **Effect of heat stress on cutaneous vascular responses to the initiation of exercise.** J. M. Johnson and M. K. Park (Texas, University, Health Science Center, San Antonio, TX). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 53, Sept. 1982, p. 744-749. 29 refs. Grant No. NIH-HL-20663.

The competition between the vasoconstrictor and vasodilator reflexes in the regulation of skin blood flow is studied by investigating the responses in the forearm blood flow (FBF) to the initiation of supine leg exercises as determined by plethysmography against a background of rising internal temperature. Results show that FBF falls significantly with the beginning of each period of exercise, and the amount by which FBF falls increases with increasing levels of preexercise FBF. It was determined that these responses are not due to changes in internal temperature as reflected by esophageal temperatures, although individual studies occasionally showed a reduction or abolition of the vasoconstrictor response with the last period of exercise. It is concluded that these findings are in agreement with earlier studies showing a cutaneous participation in the vasoconstrictor responses to exercise, but they also indicate that sufficient hyperthermia can attenuate or even abolish this response. N.B.

**A82-44290** **Dynamic preload as an impact protection concept.** J. H. Raddin, Jr. (USAF, Aeronautical Systems Div., Wright-Patterson AFB, OH) and B. F. Hearon (USAF, Aerospace Medical Research Laboratories, Wright-Patterson AFB, OH). *SAFE Journal*, vol. 12, Fall 1982, p. 5-10. 5 refs.

Results of matched human impact exposures on a decelerator (with a preload of about 0.3 G) and an accelerator (with no preload) are presented, showing that the forces imposed on human subjects in impacts preceded by even a minimal dynamic preload were decreased in comparison to those in which the dynamic preload is zero. In tests with sled accelerations of 8 and 10 G's, head acceleration was 47 and 31 percent higher respectively for impacts without preload than for those with it, and the head severity index was up 86 and 56 percent. Statistically significant increases in resultant strap loads, lap belt loads and seat pan loads were also observed. So means should be sought to intentionally impose preload as a protective technique in impact exposures. A.B.

**A82-44292** **Head cooling and heat.** D. C. Reader, S. A. Nunneley, and R. J. Maldonado (USAF, School of Aerospace Medicine, Brooks AFB, TX). *SAFE Journal*, vol. 12, Fall 1982, p. 18-22.

The effects of head and body cooling during hyperthermia were investigated to determine whether head cooling alone would overcome some of the problems of heat stress. Measurements of body temperature, heart rate, psychomotor performance and subjective comfort were made during cycles of head and body heating and cooling. Heart rates were highest with head and body heating, less with head cooling, and lowest with head and body cooling. Decreased reaction time and increased errors occurred during head and body heating, but head cooling returned performance to near control levels. While head cooling is not a substitute for full body cooling or cabin conditioning, it may be a useful alternative for reducing the effects of heat stress on aircrew performance. A.B.

**A82-44450 *** **Polyamines and plant stress - Activation of putrescine biosynthesis by osmotic shock.** H. E. Flores and A. W. Galston (Yale University, New Haven, CT). *Science*, vol. 217, Sept. 24, 1982, p. 1259-1261. 23 refs. Research supported by the Binational Agricultural Research and Development Foundation and NASA.

The putrescine content of oat leaf cells and protoplasts increases up to 60-fold within 6 hours of exposure to osmotic stress (0.4 to 0.6 molar sorbitol). Barley, corn, wheat, and wild oat leaves show a similar response. Increased arginine decarboxylase activity parallels the rise in putrescine, whereas ornithine decarboxylase remains unchanged. DL-alpha-Difluoromethylarginine, a specific irreversible inhibitor of arginine decarboxylase, prevents the stress-induced rise in increase in arginine decarboxylase activity and putrescine synthesis, indicating the preferential activation of this pathway. (Author)

**A82-44512 *** **Design and evaluation of an onboard computer-based information system for aircraft.** S. H. Rouse, W. B. Rouse, and J. M. Hammer (Georgia Institute of Technology, Atlanta, GA). *IEEE Transactions on Systems, Man, and Cybernetics*, vol. SMC-12, July-Aug. 1982, p. 451-463. 18 refs. Grant No. NsG-2119.

Information seeking by human operators of technical systems is considered. Types of information and forms of presentation are discussed and important issues reviewed. This broad discussion provides a framework within which flight management is considered. The design of an onboard computer-based information system for aircraft is discussed. The aiding possibilities of a computer-based system are emphasized. Results of an experimental evaluation of a prototype system are presented. It is concluded that a computer-based information system can substantially lessen the frequency of human errors. (Author)

**A82-44513** **Information automation and the Apollo program - A retrospective.** J. G. Wohl (Alphatech, Inc., Burlington, MA). *IEEE Transactions on Systems, Man, and Cybernetics*, vol. SMC-12, July-Aug. 1982, p. 469-479. 19 refs.

The information revolution currently in progress is raising concerns about introducing computers and automation into peoples' lives. A review is in this connection presented of the problems and techniques associated with introducing computers into the prelaunch test and checkout activities of the Apollo Manned Lunar Landing program. This review has been provided in retrospective in the hope that some of the principles and concepts in an earlier and highly successful program will find an application to the not-so-different world of today and tomorrow. The examples demonstrate that a computer can be used to serve human needs for real-time information management, processing, and display in ways which keep people very much 'in-the-loop'. The methods described were specifically designed to compensate for normal human limitations in attention allocation, short-term memory, and information processing rate, and to exploit human ability to recognize unusual or unprogrammed events. G.R.

**A82-44514** **A finite-state description of coordination in a two-handed target acquisition task.** R. A. Miller, R. J. Jagacinski, W. W. Johnson (Ohio State University, Columbus, OH), and R. B. Nalavade (Rochester Institute of Technology, Rochester, NY). *(Human Factors Society, Annual Meeting, 25th, Rochester, NY, Oct. 12-16, 1981.) IEEE Transactions on Systems, Man, and Cybernetics*, vol. SMC-12, July-Aug. 1982, p. 529-538. 19 refs. Grant No. AF-AFOSR-78-3697.

A position control stick with one hand and a velocity control stick with the other hand were manipulated in order to capture a moving target displayed on an oscilloscope screen. The two control sticks were additively coupled. In order to understand the coordination of the two control sticks, event-based first-order Markov 'activity sequence generators' were constructed for individual subjects. These discrete probabilistic structures are closely related to each subject's overall plan or general strategy for the capture task. Striking individual differences and strategic errors in performance were revealed. When combined with additional time-conditioned (open-loop) and error-conditioned (closed-loop) details, the activity sequence generators provide a basis for a hierarchic description of this perceptual-motor skill. (Author)

**A82-44658 #** **Regenerable life support for the space station - A technology status summary.** T. W. Herrala and G. N. Kleiner (United Technologies Corp., Hamilton Standard Div., Windsor Locks, CT). *International Astronautical Federation, International Astronautical Congress, 33rd, Paris, France, Sept. 27-Oct. 2, 1982, Paper 82-45.* 8 p.

Regenerable environmental control and life support (ECLS) subsystems for use with STS are reviewed along with the candidate technologies currently being considered. Water processing and management is able to provide a major savings in launch weight for extended missions; vapor compression distillation and thermoelectrically integrated membrane evaporation are the major approaches being developed, and both are in the preprototype phase. Carbon dioxide removal and collection is possible using a molecular sieve, solid amine desorbtion, or an electrochemical concentrator, and the molecular sieve method has been flight qualified already. Sabatier, Bosch, and solid electrolyte processes are being considered for carbon dioxide reduction. A number of electrolysis methods are possible for maintaining the oxygen supply which employ different vapor or liquid water sources. Other subsystems for which the technology has been flight qualified include cabin ventilation and temperature control, heat transport, and extravehicular activity support. A.B.

**A82-44684 #** **Medical monitoring and therapy of space motion sickness.** K. E. Money (Defence and Civil Institute of Environmental Medicine, Downsview, Ontario, Canada) and C. M. Oman (MIT, Cambridge, MA). *International Astronautical Federation, International Astronautical Congress, 33rd, Paris, France, Sept. 27-Oct. 2, 1982, Paper 82-169.* 7 p. 46 refs.

The nature of motion sickness in space, its monitoring and treatment are reviewed. While the signs of motion sickness are malaise, pallor, cold sweating, nausea, and vomiting, the monitoring of this sickness in space has been largely confined to reports from astronauts. Techniques for the electric monitoring of pallor and cold sweating have been developed for experimental studies of motion sickness on earth, and similar equipment for monitoring these responses are being developed for applications in space. Also discussed are the special training plans proposed for astronauts before the early Spacelab missions in order to enable careful self-monitoring of certain autonomic phenomena by biofeedback. Therapy includes preflight habituation and drug selection, and in space, drugs, immobility, and time are used. N.B.

**A82-44685 #** **Habitability support for manned missions of space 2000.** G. L. Murphy (McDonnell Douglas Astronautics Co., Huntington Beach, CA). *International Astronautical Federation, International Astronautical Congress, 33rd, Paris, France, Sept. 27-Oct. 2, 1982, Paper 82-170.* 9 p. 6 refs.

The need to emphasize habitability in the design of future manned space vehicles is stressed as a means of enhancing productivity, motivation, crew morale, and acceptance of longer space stay times and shorter earth stay times between flights. Aspects which must be considered include longer mission duration and diverse crew composition (a factor which requires psychological, social, and cultural considerations). In addition, specific personal needs are mentioned, such as privacy, recreation, cleanliness and grooming, and separation of work and leisure time. Habitability data have been collected based on long-term space flights, ground confinement studies, comparative literature, and research by specialists. Data show the need for specification of zero-g posture, the most effective means of locomotion, and the most satisfying off-duty activity (looking out the window). In order to develop a habitable environment, it is suggested that a data base be established, and that engineering design data and techniques for evaluating habitats be developed. R.K.R.

**A82-44686 #** **Psychophysiological performance examination onboard the orbital complex Salyut-Soyuz.** J. Hideg, L. Bogner, P. Remes (Hungarian Academy of Sciences, Intercosmos Council, Budapest, Hungary), O. P. Kozarenko, V. I. Miasnikov, and I. P. Ponomareva (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *International Astronautical Federation, International Astronautical Congress, 33rd, Paris, France, Sept. 27-Oct. 2, 1982, Paper 82-171.* 6 p. 9 refs.

Studies of the psychic performance of three aircrews aboard the orbital station Salyut-6, measured by an instrument called the Belatron, are reviewed. The results of these studies show that the speed of information processing decreases in the case of cosmonauts flying for the first time, and the emotional tension significantly increases at the very beginning of the adaptation to weightlessness, while these responses are less pronounced in the case of experienced cosmonauts. The sensory-motor reaction time and the four-choice reaction time notably lengthen and the information processing ability decreases at the beginning of the postflight period. The indices of the psychic work capacity quickly return to normal after the flight, and the emotional tension level becomes stable within five days. N.B.

**A82-44687 * #** **Medical support and technology for long-duration space missions.** S. Furukawa (McDonnell Douglas Technical Services Co., Inc., Cocoa Beach, FL), A. Nicogossian (NASA, Washington, DC), P. Buchanan (NASA, Kennedy Space Center, Cocoa Beach, FL), and S. L. Pool (NASA, Johnson Space Center, Houston, TX). *International Astronautical Federation, International Astronautical Congress, 33rd, Paris, France, Sept. 27-Oct. 2, 1982, Paper 82-174.* 9 p. 6 refs.

The current philosophy and development directions being taken towards realization of medical systems for use on board space stations are discussed. Data was gained on the performance of physical examinations, venipuncture and blood flow, blood smear and staining, white blood cell differential count, throat culture swab and colony count, and microscopy techniques during a 28-day period of the Skylab mission. It is expected that the advent of Shuttle flights will rapidly increase the number of persons in space, create a demand for in-space rather than on-earth medical procedures, and necessitate treatments for disorders without the provision for an early return to earth. Attention is being given to pressurized environment and extravehicular conditions of treatment, the possibilities of the use of the OTV for moving injured or ill crewmembers to other space stations, and to isolation of persons with communicable diseases from station crews. M.S.K.

**A82-44688 #** **Catecholamines and their enzymes in discrete brain areas of rats after space flight on biosatellites Cosmos.** R. Kvetnansky, J. Culman, T. Torda, L. Macho (Slovenska Akademia Vied, Ustav Experimentalnej Endokrinologie, Bratislava, Czechoslovakia), L. V. Serova, and R. A. Tigranian (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *International Astronautical Federation, International Astronautical Congress, 33rd, Paris, France, Sept. 27-Oct. 2, 1982, Paper 82-180* 8 p. 33 refs.

The influence of stressful factors and of long periods of weightlessness on the activity of the catecholaminergic system in the brains of rats is investigated during 18.5-19.5 day flights on Cosmos biosatellites. In two experiments, the concentration of norepinephrine and the activities of tyrosin hydroxylase, dopamine-beta-hydroxylase, and monamine oxidase were measured in the total hypothalamus, and were found not to have changed after space flight. In a subsequent experiment, the concentrations of norepinephrine, epinephrine, and dopamine were studied in isolated nuclei of the hypothalamus of rats within 6 to 10 hours following the return from space. It was found that norepinephrine was significantly reduced in the arcuate nucleus, median eminence, and periventricular nucleus, and epinephrine was reduced in the median eminence, and in the periventricular and suprachiasmatic nuclei, whereas dopamine was not significantly changed after space flight. It was concluded that the decreased catecholamine levels indicate that no chronic intensive stress factors acted during the flights, and that this decrease was induced by the effect of a stressogenic factor acting for a short time only, most likely during or immediately after landing. N.B.

**A82-44689 #** **The first joint Franco-Soviet manned flight - The posture experiment (Premier vol habité Franco-Soviétique - L'expérience posture).** F. Lestienne, G. Clément (CNRS, Laboratoire de Physiologie Neurosensorielle, Paris, France), V. Gurfinkel (Akademiia Nauk SSSR, Institut Problem Peredachi Informatsii, Moscow, USSR), R. Capraro (Centre National d'Etudes Spatiales, Toulouse, France), V. Kojarinov, A. Lepsky (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR), and J. L. Lafon (Société Bertin et Cie., Plaisir, Yvelines, France). *International Astronautical Federation, International Astronautical Congress, 33rd, Paris, France, Sept. 27-Oct. 2, 1982, Paper 82-183.* 7 p. 14 refs. In French.

The apparatus, procedures, and results of the posture experiment to test the sensorimotor interactions linked to postural control in weightless conditions on board the Salyut 7 space station during a seven-day mission are reported. The experiment comprised observation of postural adjustments enacted during elevation of the arms in conditions of varying visual limits and mechanical stresses. Specific attention was given to reflex activities of postural muscles, any increase in visual dependence, and persistence of motor programs. The subject stood on a platform and, at the sound of a signal, moved his arms towards a target, sometimes carrying a 1-kg mass. Trials were performed which involved the wearing of glasses which blocked the total vision, the peripheral vision, or permitted tunnel vision. Monitoring was carried out for muscle rigidity, leg muscle myographic signals, angle of the feet, speed of arm movement, stability of the feet, and arm used, and 16 mm movies were made. The soleus muscle was found to equally activate during weighted and nonweighted movements, and peripheral vision was found to be prominent in postural control. M.S.K.

**A82-44690 #** **Possible adaptation to strong magnetic fields.** Z. N. Nakhimitskaia, L. D. Klimovskaia, Z. F. Kuzmina, V. M. Mastriukova, N. P. Smirnova, A. D. Strzhizhovskii, and G. V. Cherkasov (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *International Astronautical Federation, International Astronautical Congress, 33rd, Paris, France, Sept. 27-Oct. 2, 1982, Paper 82-188.* 4 p. 5 refs.

Animal adaptation to a strong magnetic field was investigated. Mice were exposed to 30-day total-body continuous effects of a constant magnetic field

(CMF) of 1.6 T, and their physiological responses were assessed. Analysis of the data obtained showed that different parameters varied in a dissimilar manner. Red blood changes returned to normal in the course of the experiment. Leucocytosis and increased content of catecholamines and corticosterone of blood and adrenals persisted throughout the exposure. Changes in the spermatogenic epithelium were most distinct after the exposure. The recovery of certain parameters during the CMF exposure is indicative of adaptation of some physiological systems. The adaptation is, however, incomplete as suggested by the long persisting stress manifestations. Reticulocytopenia and spermatogenetic abnormalities found after the exposure are of particular importance. Animal and human adaptation to strong magnetic fields is attracting greater attention of researchers in space biology and medicine in view of future space flights. The possibility of applying magnetic devices in space rocketry (magnetohydrodynamic engines, magnetic energy accumulators, strong magnets used in assembly operations in orbit, magnetic radiation protection systems) makes the magnetic protection of crewmembers one of the important problems of space medicine. **A82-44708** # **Planetary atmospheres and the search for life.** T. Owen (New York, State University, Stony Brook, NY). *International Astronautical Federation, International Astronautical Congress, 33rd, Paris, France, Sept. 27-Oct. 2, 1982, Paper 82-268.* 23 p.

The search for life on other planets is considered through comparative studies of planetary atmospheres. It is suggested that planetary atmospheres are necessary for life, based on moon and Mars explorations, and water and carbon are considered to be the essential elements. Other atmospheric constituents such as methane, ammonia, and hydrogen sulfide are considered in terms of atmospheric origins. It is found that the atmospheric development process requires a solid surface in order to provide a place where chemicals can react after formation, implying that this is a necessary condition for the origin of life. Although these conditions are characteristic of other planetary bodies within our solar system, earth is the only body warm enough andof the right size to allow water to be liquid and to have acquired a large enough store of volatiles. Tables of atmospheric composition are included. R.K.R.

**A82-44823** **Absence of depth processing in the large-frame rod-and-frame effect.** S. M. Ebenholtz (Wisconsin, University, Madison, WI) and G. W. Glaser (Rhode Island School of Design, Providence, RI). *Perception and Psychophysics*, vol. 32, no. 2, Aug. 1982, p. 134-140. 21 refs. Grant No. NIH-EY-02264.

Attenuation of the rod-and-frame effect with depth separation was investigated with the rod and frame in either intersecting or parallel depth planes (PDP). In the former case, in which either the top of the rod or the frame was inclined 45 deg away from the observer, no attenuation was found for frames projecting a retinal angle of 39.2 or 13.5 deg. In the PDP paradigm, the rod was optically 60 cm nearer the observer than was the frame. The depth adjacency effect of Gogel and Newton (1975) was replicated, but only for small retinal angles (7.2 and 6.8 deg) of the frame and for a 15-deg frame tilt, but not for larger retinal angles (39.2 and 12.7 deg) or for frames tilted at 22 deg. The absence of attenuation with depth separation in large frames and its presence in small frames is consistent with the identification of these phenomena with properties of the ambient and focal visual systems, respectively. C.D.

**A82-44824** **Inhibition of the rod-and-frame effect by circular contours.** S. M. Ebenholtz and J. W. Utrie, Jr. (Wisconsin, University, Madison, WI). *Perception and Psychophysics*, vol. 32, no. 2, Aug. 1982, p. 199, 200. 12 refs.

The influence of a frame on orientation perception was studied. Twenty-four volunteers took part in a task whose aim was to adjust a luminous rod to the egocentric vertical. The rod rotated about an axis at the center of the tilted frame. Differences in the frame-present and frame-absent settings defined the rod-and-frame effect (RFE). Both high and low scorers were significantly influenced by the circumscribing patterns. It is found that the presence of the circular pattern around the frame inhibits the influence of the tilted frame on egocentric orientation. C.D.

**MODELING OF HUMAN OPERATOR DYNAMICS IN SIMPLE MANUAL CONTROL UTILIZING TIME SERIES ANALYSIS**
Gyan C. Agarwal, Frank Osafo-Charles, William D. Oneill, and Gerald L. Gottlieb *In* MIT Proc. of the 16th Ann. Conf. on Manual Control 1980 p 1-28 refs Prepared in cooperation with Rush-Presbyterian-Saint Luke's Medical Center, Chicago, Ill.

(Grants NSF ENG-76-08754; NS-00196; NS-12877)
Avail: NTIS HC A99/MF A01 CSCL 05H

Time series analysis is applied to model human operator dynamics in pursuit and compensatory tracking modes. The normalized residual criterion is used as a one-step analytical tool to encompass the processes of identification, estimation, and diagnostic checking. A parameter constraining technique is introduced to develop more reliable models of human operator dynamics. The human operator is adquately modeled by a second order dynamic system both in pursuit and compensatory tracking modes. In comparing the data sampling rates, 100 msec between samples is adequate and is shown to provide better results than 200 msec sampling. The residual power spectrum and eigenvalue analysis show that the human operator is not a generator of periodic characteristics.

Avail: NTIS HC A99/MF A01 CSCL 05H

Several models were developed for describing human operator input-output behavior in ground-to-air target tracking tasks. The problems associated with formulating and validating mathematical models for describing and predicting human target acquisition response are considered. The extension of the human observer model to include the acquisition phase as well as the tracking segment is presented. Relationship of the observer model structure to the more complex strandard optimal control model formulation and to the simpler transfer function/noise representation is discussed. Problems pertinent to structural identifiability and the form of the parameterization are elucidated. A systematic approach towards the identification of the observer acquisition model parameters from ensemble tracking error data is presented.

Ronald A. Hess *In* MIT Proc. of the 16th Ann. Conf. on Manual Control 1980 p 92-105 refs

Avail: NTIS HC A99/MF A01 CSCL 05I

A model of the human pilot is offered for pursuit tracking tasks; it encompasses an existing model for compensatory tracking. The central hypothesis in the development of this model states that those primary structural elements in the compensatory model responsible for the pilot's equalization capabilities remain intact in the pursuit model. The sharp reduction in low-frequency phase lag beyond that associated with the disappearance of phase droop is seen to accompany relatively low-gain feedback of vehicle output. The results of some recent motion cue research are discussed and interpreted in terms of the compensatory-pursuit display dichotomy. Preview is shown to demand no fundmanetal changes in structure or equalization, and to allow the pilot to eliminate the effective time delays that accrue in the inversion of the controlled-element dynamics. Precognitive behavior is discussed and a model that encompasses all the levels of skill development outlined in the successive organizations of perception (SOP) theory is finally proposed.

The scanning behavior and the control behavior of the pilot who manually controls the two-variable system, which is the most basic one of multi-variable system, which is the most basic one of multi-variable systems are investigated. Two control tasks, which simulate the actual airplane attitude and airspeed control are reported. In order to simulate the change of the situation where the pilot is placed, such as changes of flight phase, mission and others, the subject was requested to vary the wrightings, as his control strategy, upon each task. Changes of human control dynamics and his scanning properties caused by the modification of the situation were investigated.

**EFFECT OF COUNTING AND TRACKING ON VERBAL AND PRODUCTION METHODS OF TIME ESTIMATION**

Kathleen L. Bird and Sandra Hart *In* MIT Proc. of the 16th Ann. Conf. on Manual Control 1980 p 189-211 refs Prepared in cooperation with Tufts Univ., Medford, Mass.

(Contract NCC2-34; Grant NsG-2156)

Avail: NTIS HC A99/MF A01 CSCL 05I

The effects of time estimation technique and task condition on the production and verbal estimation of time intervals ranging from 5 to 14 sec were investigated. Sixteen male college students were randomly assigned to two groups, each of which utilized a different estimation method: (a) production; or (b) verbal estimation. The subjects were instructed either to produce or to give a verbal estimate of the duration of these time intervals during each task condition: (a) pretracking, (b) tracking (subject performed a one-axis tracking task), and (c) posttracking. Each subject used each of the two estimation techniques: (a) vocal counting and (b) no counting. The ratio of the subject's time estimate to actual interval length was computed for each trial. Productions were typically longer than verbal estimates of the same duration and produced durations were typically too long whereas verbal estimates were too short relative to the correct duration. A significant interaction was found between counting technique and tracking condition for both estimation methods. A significant effect could be attributed to the addition of a tracking task. Author

**A MODEL BASED TECHNIQUE FOR PREDICTING PILOT OPINION RATINGS FOR LARGE COMMERCIAL TRANSPORTS**

William H. Levison *In* MIT Proc. of the 16th Ann. Conf. on Manual Control 1980 p 216-242 refs

(Contract NAS1-15529)

Avail: NTIS HC A99/MF A01 CSCL 05I

A model-based technique for predicting pilot opinion ratings is described. Features of this procedure, which is based on the optimal-control model for pilot/vehicle systems, include: (1) capability to treat 'unconventional' aircraft dynamics, (2) a relatively free-form pilot model, (3) a simple scalar metric for attentional workload, and (4) a straightforward manner of proceeding from descriptions of the flight task environment and requirements to a prediction of pilot opinion rating. The method was able to provide a good match to a set of pilot opinion ratings obtained in a manner simulation study of large commercial aircraft in landing approach. Author

**AN ANALYTICAL PREDICTION OF PILOT RATINGS UTILIZING HUMAN PILOT MODEL**

Koji Tanaka and Kyuichiro Washizu *In* MIT Proc. of the 16th Ann. Conf. on Manual Control 1980 p 243-253 refs Prepared in cooperation with Tokyo Univ.

Avail: NTIS HC A99/MF A01 CSCL 05I

In order to analytically predict pilot ratings, an evaluation method of a manual control system which consists of an aircraft and a human pilot, is proposed and examined. The method is constructed upon the assumptions that the control mission determines the critical frequency the pilot should bring to his focus, and that the degree of closed-loop stability and the human compensation necessary to attain the stability determine the human subjective evaluation of the system. As a result, a simple evaluation chart is introduced. The chart enables us to predict the subjective evaluation, if the controlled element dynamics and the mission are given. The chart is in good accord with almost all of the existing results of pilot ratings. This method has the following four advantages: (1) Simplicity, in a sense that the method needs to evaluate only two typical controlled element parameters, namely, the gain slope and the phase at the critical control frequency; (2) Applicability to unstable controlled elements; (3) Predictability of controllability limits of manual control; (4) Possibility of estimating human compensatory dynamics. **A PERFORMANCE ANALYSIS STUDY OF A COMPLEX G FIELD EXPERIMENT**

D. W. Repperger *In* MIT Proc. of the 16th Ann. Conf. on Manual Control 1980 p 292-315 refs

Avail: NTIS HC A99/MF A01 CSCL 05S

A performance study was conducted on human tracking under a complex field. Three important points are illustrated. First it shows the connection between the phase plane boundary points and window measures through the use of cumulative distribution function (CDF) on the data. Secondly, the effects of stress on tracking performance manifests itself via the t tests across CDF's under two experimental conditions. It is shown for one subject and 4 replications that there exists a significant performance degradation due to stress. A third point made by this paper is that a K-S test on the distributions of the phase plane trajectories indicate the nonnormality of the empirical density functions. This statement can be made with greater than 98% confidence. It is interesting in this case to have such a result hold for a tracking task which is sum of sines and to contrast this result to the deterministic case considered. L.F.M.

### PILOT REACTION TO ATTITUDE GYRO FAILURE: A FLIGHT EXPERIMENT

Richard L. Newman and David L. Quam *In* MIT Proc. of the 16th Ann. Conf. on Manual Control 1980 p 410-421 refs

Avail: NTIS HC A99/MF A01 CSCL 05H

A flight experiment using a Cessna 172 airplane with the vacuum system modified to permit total failure of the attitude and directional gyros is described. Nine subject pilots, ranging in experience from 170 to 5100 hours, flew simulated (hooded) instrument missions with an unexpected gyro failure introduced at a critical point. All subjects, except for the 170 hour pilot, were instrument rated. (The 170 hour pilot was a private pilot working on his instrument rating). All of the subject pilots were able to maintain control of the airplane following the gyro failure. Only one subject exceeded the a priori criterion of losing a maximum of 250 feet of altitude. None of the subjects flew a satisfactory VOR approach following the failure: however, all would have found the airport safely given a ceiling of 1000 feet or better. J.D.

### COMBINED DISCRETE NETWORK CONTINUOUS CONTROL MODELLING OF OPERATOR BEHAVIOR

R. A. Miller and Deborah J. Seifert (AiResearch Manufacturing Co.) *In* MIT Proc. of the 16th Ann. Conf. on Manual Control 1980 p 448-464 refs

Avail: NTIS HC A99/MF A01 CSCL 05I

Systems in which an operator is faced with a continuous control task plus one or more discrete information processing tasks were investigated. A modeling approach which has the capability of realistically representing both types of tasks and the resulting interactions is described. The modeling approach utilizes discrete network models for the cognitive tasks and elements of an open loop/closed loop control representation for the continuous task. The approach is demonstrated through its application to a simulated digital avionics information system in which subjects were required to perform retrieval and processing tasks as well as flight control. This model differs from conventional models in that system status sampling is not necessarily continuous or periodic. Rather, the pilot is assumed to read system status displays only as time permits and operate in open loop preprogrammed fashion between sampling. J.D.

### A MODEL OF HUMAN DECISION MAKING IN MULTIPLE PROCESS MONITORING SITUATIONS

Joel S. Greenstein and William B. Rouse (Illinois Univ., Urbana-Champaign) *In* MIT Proc. of the 16th Ann. Conf. on Manual Control 1980 p 465-487 refs

(Grant NsG-2119)
Avail: NTIS HC A99/MF A01 CSCL 05J

Human decision making in multiple process monitoring situations is considered. It is proposed that human decision making in many multiple process monitoring situations can be modeled in terms of the human's detection of process related events and his allocation of attention among processes once he feels events have occurred. A mathematical model of human event detection and attention allocation performance in multiple process monitoring situations is developed. An assumption made in developing the model is that, in attempting to detect events, the human generates estimates of the probabilities that events have occurred. An elementary pattern recognition technique, discriminant analysis, is used to model the human's generation of these probability estimates. The performance of the model is compared to that of four subjects in a multiple process monitoring situation requiring allocation of attention among processes. Author

### APPLICATION OF OPTIMAL CONTROL PRINCIPLES TO DESCRIBE THE SUPERVISORY CONTROL BEHAVIOR OF AAA CREW MEMBERS

Chris Hale and George J. Valentino (Air Force Aerospace Medical Reseach Lab., Wright-Patterson AFB, Ohio) *In* MIT Proc. of the 16th Ann. Conf. on Manual Control 1980 p 523-532

Avail: NTIS HC A99/MF A01 CSCL 05J

Supervisory decision making and contol behavior within a C to the third power oriented, ground based weapon system was studied. The sequence of control strategies used during engagement of aircraft targets was empircally investigated. An engagement is conceptually divided into several stages which include initial information processing activity, tracking, and ongoing adaptive control decisions. Model parameters are described and two experiments which served as initial investigation into the accuracy of assumptions on the importance of situation assessment in procedure selection are outlined. The validity of the assumptions on strategic information processing and cue criterion relationship learning is upheld. It is indicated that the model structure is useful in studies of supervisory decision behavior. E.A.K.

### THE ROLE OF ANTAGONIST COACTIVATION IN THE CONTROL OF NATURAL MOVEMENT

Neville Hogan *In its* Proc. of the 16th Ann. Conf. on Manual Control 1980 p 571-583 refs

(Grant NSF PFR-79-17348)
Avail: NTIS HC A99/MF A01 CSCL 06P

The control of the impedance about the joints of the natural musculoskeletal system by coactivation of antagonist muscle groups is described. The consequences of the ability to control joint impedance are discussed. An explanation of the crucial role played by two joint muscles in the control of natural movement is proposed. The implications for the control manipulators and the modeling of the human operator are discussed. E.A.K.

**N82-30868*#** Massachusetts Inst. of Tech., Cambridge.

### A COMPARISON OF CONTROL MODES FOR TIME-DELAYED REMOTE MANIPULATION

Gregory P. Starr *In its* Proc. of the 16th Ann. Conf. on Manual Control 1980 p 584-592 refs

Avail: NTIS HC A99/MF A01 CSCL 05H

Transmission time delay in the communication channel of a manual control system which degrades performance by preventing the human operator from immediately seeing the results of his actions is discussed. A time delay exists in remote manipulation systems, caused by long communication distances or bandwidth limitations. It is suggested tha because of the difficulty of effectively using the move and wait strategy with a master slave manipulator -rate control is a more effective control mode with time delay. Manipulator rate controllers are usually multiaxis joysticks or switchboxes and are constructed so that the manipulator can be held stationary. The hand is removed from the controller which eliminates the possibility of undesired manipulator motion and should aid in the use of the move and wait strategy. Master slave and rate control of a manipulator are compared. Four time delays are used. These delays allow the examination of the effect of time delay on control mode performance. A peg transfer task used, with automated dated acquisition. E.A.K.

### EXPERIMENTAL EVALUATION OF THE CONCEPT OF SUPERVISORY MANIPULATION

T. L. Brooks and T. B. Sheridan (MIT) *In* MIT Proc. of the 16th Ann. Conf. on Manual Control 1980 p 593-606 refs

(Contracts NAS7-100; N00014-77-C-0256)
Avail: NTIS HC A99/MF A01 CSCL 05H

A computer controlled teleoperator system which is based on task referenced sensor aided control to study supervisory manipulation was developed. This SUPERMAN system, performs complicated tasks in real time by utilizing the operator for high level functions related to the unpredictable, portions of a task, while the subordinate machine performs the more well defined subtasks under human supervision. Supervisoy control schemes were compared with manual control under real time conditions. Six representative tasks were performed under simulated conditions using four forms of manual control, as well as suprvisory control. The effectiveness and quality of control were evaluated on the basis of the time required to complete each portion of the task and the type and number of errors which occurred. It is found that supervisory control improves performance for all forms of manual control except force reflecting master-slave which is slightly faster than supervisory control, but more prone to errors. E.A.K.

### EVALUATION OF SMART SENSOR DISPLAYS FOR MULTIDIMENSIONAL PRECISION CONTROL OF SPACE SHUTTLE REMOTE MANIPULATOR

A. K. Bejczy, J. W. Brown (JPL, Calif. Inst. of Tech., Pasadena), and J. L. Lewis *In* MIT Proc. of 16th Ann. Conf. on Manual Control 1980 p 607-627 refs

(Contract NAS7-100)
Avail: NTIS HC A99/MF A01 CSCL 05H

An enhanced proximity sensor and display system was developed and tested on the full scale Space Shuttle remote manipulator. The sensor system, integrated with a four claw end effector, measures range error up to 6 inches, and pitch and yaw alignment errors within + or - 15 deg., and displays error data on both graphic and numeric displays. The errors are referenced to the end effector control axes through appropriate data processing by a microcomputer acting on the sensor data in real time. Methods to minimize terminal range and alignment errors by utilizing range, pitch and yaw error information from the sensor displays were investigated. The test runs aided by sensor displays are contrasted with test runs without sensor display aids. The enhanced sensor and display system, the test runs and results are described. It is indicated that the use of graphic/numeric displays of proximity sensor information improves precision control of grasp/capture range by more than a factor of two for both static and dynamic grapple conditions. E.A.K.

### EFFECT OF RESTRICTED MOBILITY ON THE COMPOSITION AND METABOLISM OF BLOOD LIPOPROTEIDS IN RABBITS

P. P. Chayalo and T. A. Kirlyenko Apr. 1982 13 p refs Transl. into ENGLISH from Ukr. Biokhim. Zh. (USSR), v. 52, no. 3, 1980 p 359-364 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(Contract NASw-3541)
(NASA-TM-76846; NAS 1.15:76846) Avail: NASA Scientific and Technical Information Facility, P.O. Box 8757, B.W.I. Airport, Md. 21240 CSCL 06C

The content of total cholesterol and triacylglycerols in the blood increases in rabbits, subjected to conditions of restricted mobility for a period of two months, because of the increase in the content in the composition of lipoproteids of very low and low density. After intravenous administration of lipoproteids of very low density, which contain H3 cholesterol, the slowing of their dissociation was observed with hypokinesia. The metabolism of lipoproteids of low and high density is also slowed under these conditions while the activity of lipoproteidlipase in the blood plasma decreases. S.L.

### REGIONAL REDISTRIBUTIONS OF THE BLOOD IN BLOOD LOSS AND MECHANICAL TRAUMA AGAINST THE BACKGROUND OF VARIOUS FUNCTIONAL STATES OF THE BODY

O. A. Kovalev, V. K. Kulagin, and B. I. Krivoruchko Jun. 1982 15 p refs Transl. into ENGLISH from Vestn. Akad. Med. Nauk SSSR (USSR), no. 4, 1979 p 27-34 Transl. by SCITRAN, Santa Barbara, Calif.
(Contract NASw-3542)
(NASA-TM-76880; NAS 1.15:76880) Avail: NASA Scientific and Technical Information Facility, P.O. Box 8757, B.W.I. Airport, Md. 21240 CSCL 06C

Loss of 20-40% of circulating blood volume in immobilized rats subjected to shock by Kennon's method with either short term fixation of controls or 7 day hypokinesia was investigated. Phases of shock caused by compression of soft tissues and of irreversible shock caused by Kennon's method are described. Regional and after 7 day hypokinesia were studied. Shifts in the relative content of blood in organs and tissues and their relation to pathophysiology resulting from blood loss or mechanical trauma are discussed. Regional redistributions of blood may be caused by various factors such as stress, excitation and hemostasis. Characteristic sequential stages of regional blood redistribution are noted during the progression of the physiological reaction to extreme external effects. E.A.K.

### THE INTERACTION OF PURKINJE CELLS, CAPILLARIES AND GLIA IN THE CEREBELLAR CORTEX OF NORMAL

### AND HYPOKINETIC CATS

R. P. Kotskovich Jun. 1982 13 p refs Transl. into ENGLISH from Biol. Nauk. (USSR), no. 3, 1981 p 50-54 Transl. by SCITRAN, Santa Barbara, Calif.
(Contract NASw-3542)
(NASA-TM-76882; NAS 1.15:76882) Avail: NASA Scientific and Technical Information Facility, P.O. Box 8757, B.W.I. Airport, Md. 21240 CSCL 06C

The interaction of Purkinje cells, capillaries and glicocytes in the cerebral cortex of normal and hypokinetic cats was studied. It is demonstrated that prolonged hypokinesia does not cause significant changes in the structure of Purkinje cells. It is found that morphological changes in the capillaries take place, which leads to a reduction in the vascular microbasin in the nerve cells. E.A.K.

### INFLUENCE OF HYPOKINESIA ON THE CONTENT OF ELECTROLYTES IN ANIMAL ORGANS

G. D. Reushkina, V. N. Reushkina, and N. P. Rostyakov May 1982 4 p Transl. into ENGLISH from Patol. Fiziol. ekap. Ter. (USSR), no. 2, Mar. - Apr. 1981 p 92 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(Contract NASw-3541)
(NASA-TM-76899; NAS 1.15:76899) Avail: Issuing Activity CSCL 06C

In 60 day controlled tests of hypokinesia of 35 rabbits, significant reduction in potassium, sodium and chlorine concentration in the myocardium and hypothalamus and slight reductions in the adrenals were noted. Intravenous administration of strophanthin had no effect. After 60 days of kypokinesia, no further change in electrolyte concentration in the hypothalamas was noted. Further reduction in sodium, but an increase in potassium in the adrenals, and a progressive reduction of potassium content in the myocardium were noted. Administration of strophanthin caused no significant changes in electrolyte concentrations of the hypothalamus or adrenals, but it increased the sodium, chlorine and particularly potassium concentration of the myocardium. R.J.F.

### BIOGENIC MONOAMIME CONTENT OF THE GANGLIA IN THE AUTONOMIC NERVOUS SYSTEM OF RABBITS DURING ACUTE EXPERIMENTAL EMOTIONAL STRESS

V. V. Portugalov, N. V. Petrova, S. I. Kashtanov, and B. N. Manukhin May 1982 13 p refs Transl. into ENGLISH from Patol. Fiziol. Ekap. Ter. (USSR), no. 5, Sep.-Oct. 1981 p 28-32 Original language document announced as A82-16817 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(Contract NASw-3541)
(NASA-TM-76900; NAS 1.15:76900) Avail: NASA Scientific and Technical Information Facility, P.O. Box 8757, B.W.I. Airport, Md. 21240 CSCL 06C

During emotional stress the content of norepinephrine in the adrenals, stellate ganglion and sympathetic chain increases, it decreases, in the myocardium and in the superior cervical ganglion it could not be determined. It was found that the content of epinephrine decreases in all the structures. Catecholamine depletion in the superior cervical ganglion has the most damaging effect of emotional stress. Introduction of electrodes into the hypothalamic ventromedial nuclei of intact rabbits induces shifts in the content of biogenic amines (in all structures with the exception of the myocardium). These shifts are similar in character but less pronounced than those in emotional stress. E.A.K.

### EFFECT OF IMMOBILIZATION ON THE DEVELOPMENT OF EXPERIMENTAL ARTERIOSCLEROSIS IN RABBITS

G. P. Deryagina and T. A. Sinitsyna May 1982 10 p refs Transl. into ENGLISH from Patol. Fiziol. Ekap. Ter. (USSR), no. 5, Sep. - Oct. 1981 p 32-36 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(Contract NASw-3541)
(NASA-TM-76901; NAS 1.15:76901) Avail: Issuing Activity CSCL 06C

The permeability of the aortic wall increased as a result of immobilization within one month in animals given their usual food. Morphological examination revealed lipoidosis of the intima of the aorta and cardiac coronary arteries in 50 percent of cases. Preliminary immobilization of animals for one month with their subsequent maintenance on an atherogenic diet for five months increased the frequency of sharp and marked atherosclerotic changes in the aorta and coronaries as compared to that in animals kept only on an atherogenic diet for the same period. The changes in lipid metabolism and the blood coagulation system as a result of immobilization were less significant. Author

### INFLUENCE OF STRESS ON THE BLOOD SYSTEM REACTION IN ADRENALECTOMIZED MICE

P. D. Gorizontov, M. I. Fedotova, and L. N. Yegorova May 1982 8 p refs Transl. into ENGLISH from Patol. Fiziol. Ekap. Ter. (USSR), no. 5, Sep. - Oct. 1981 p 36-39 Original language was announced as A82-16814 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(Contract NASw-3541)
(NASA-TM-76902; NAS 1.15:76902) Avail: NASA Scientific and Technical Information Facility, P.O. Box 8757, B.W.I. Airport, Md. 21240 CSCL 06C

The role of adrenocortical hormones in the cardiovascular system reaction to stress was studied on adrenalectomized and sham operated F1 mice. It is noted that under stress in hypocorticism the number of lymphoid cells in peripheral blood does not increase and the number of cells in the thymus did not decrease. No increase in the number of hemopoietic stem cells in the bone marrow was noted. The cells diminished in the early phase of stress in both sham operated mice and adrenalectomized mice. It is found that in the spleen neutrophilic leucocytosis is not dependent on the level of adrenal hormones. E.A.K.

### EFFECT OF PROLONGED HYPOKINESIA ON RESISTANCE OF RESISTIVE VESSELS IN RATS

V. A. Saltykova Apr. 1982 8 p refs Transl. into ENGLISH from Kardiologiya (USSR), v. 20, no. 6, 1980 p 107-108 Transl. by Scientific Translation Service, Santa Barbara, Calif. Original doc. prep. by Inst. of General Pathology and Pathological Physiology, Academy of Medical Sciences (USSR), Moscow
(Contract NASw-3542)
(NASA-TM-76849; NAS 1.15:76849) Avail: NTIS HC A02/MF A01 CSCL 06C

Under the effect of prolonged hypokinesia, the perfusion pressure in resistive vessels, measured under conditions of deep anesthesia and complete denervation, increased by approximately the same degree as arterial pressure in nonanesthetized animals. The increase in arterial, perfusion pressure and the resistance of resistive vessels in animals subjected to prolonged hypokinesia was accompanied by an increase in adrenoreactivity. During prolonged hypokinesia, partial obliteration of the vascular bed of the skeletal muscles plays a significant role in the observed increase in resistance of vessels of the extremities. The increase in adrenoreactivity of the vessels during hypokinesia may be realized as a partial case of an increase in the adrenoreactivity of structures whose innervation is disturbed. Author

### EFFECT OF MEBICAR ON ANIMALS UNDER EXTREME CONDITIONS

I. Ye. Zimakova, R. A. Kamburg, and S. V. Kirshin May 1982 8 p refs Transl. into ENGLISH from Farmakol. Toksikol. (USSR), v. 43, no. 4, Jul. - Aug. 1980 p 368-371 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(Contract NASw-3541)
(NASA-TM-76851; NAS 1.15:76851) Avail: Issuing Activity CSCL 06C

Mebicar, a new original tranquilizer, exerts a protective action on some parameters of body function under the influence of extreme conditions (stress, hypoxia). The antihypoxic effect of the drug manifests itself within a wide range (100-1000 mg/kg), and compares favorably with the effect of sodium hydroxybutyrate. Mebicar does not affect the muscle tone, movement coordination, or working capacity of the animals. It is suggested that the normalizing action of mebicar as a tranquilizer and antihypoxic agent may be related to its involvement in metabolism. Author

Activation of the adrenergic and pituitary adrenal system which under the effects of prolonged severe stress factors such as immobilization or pain, was investigated. It is shown that activation of the hypophysealadrenal system in emotional pain stress in rats lasts 4 days after cessation of the stress effect and is attended regularly by activation of the GABA ergic inhibiting system. It is suggested that the GABA ergic inhibiting system is a nonspecific mechanism which is activated regularly when stress factors restricting the stress reaction act on the organism. E.A.K.

Male Wistar rats were kept hypokinetic for 46, 53, or 60 days to reveal biochemical alterations in the CNS. Neuronal and glial cytoplasmic RNA concentrations, acetylcholinesterase and butyrylcholinesterase activities, total thiol group content, and free amino acids were determined in various CNS tissues. A marked suppression of RNA metabolism appeared in the spinal cord, but RNA concentrations in the brain either did not change or increased slightly. There was a slight decrease of thiol group content in the brain. Amino acid determinations were inconclusive, but tended to show decreased amounts. The findings demonstrate that hypokinesia produces certain biochemical alterations, primarily suppression of activity, in certain regions of the CNS. Author

(NASA-TM-76872; NAS 1.15:76872) Avail: NASA Scientific and Technical Information Facility, P.O. Box 8757, B.W.I. Airport, Md. 21240 CSCL 06C

Male August and Wistar rats were catheterized and immobilized to produce stress. Blood pressure and catecholamine concentrations were measured during and after immobilization to reveal differences in the two groups' responses. Arterial pressure varied in both strains, but soon returned to initial levels in the Wistar rats, showing these animals to have greater cardiovascular stability. Stable arterial pressure is associated with low initial plasma catecholamine levels and higher levels during stress and that adrenal medullary activity differs in the two strains. S.L.

(NASA-TM-76873; NAS 1.15:76873) Avail: NASA Scientific and Technical Information Facility, P.O. Box 8757, B.W.I. Airport, Md. 21240 CSCL 06C

Adult male August and Wistar rats were catheterized, then immobilized for two hours in order to make a comparative study of the neurochemistry of the physiological function stabilization during emotional stress. Arterial pressure was measured and blood samples were taken to ascertain plasma renin and catecholamine levels. Plasma renin activity was somewhat higher in August than in Wistar rats, but the August rats had a greater variability in results. The highest renin activity was found in those animals with highest blood pressure and adrenalin levels. In most cases there was no link between renin activity changes and catecholamine levels. S.L.

Male rats were immobilized for 30 min to 2 days to define the compensated and decompensated phases of stress. Intracellular steroid receptor interactions in the liver and heart, glucocorticoid dependent enzyme synthesis, and some aspects of cell metabolism were studied. The compensated phase was characterized by reduction of glucocorticoid binding by cytoplasmic receptors in response to highendogeneous glucocorticoid levels, increased liver tissue tyrosine aminotransferase (TAT) activity, and high blood glucose and cholesterol levels. Prolonged stress led to the decompensated phase, characterized by lower blood and tissue endogeneous glucocorticoid levels, depleted cell glucose and cholesterol reserves, reduced protein content, increased blood and tissue urea, marked hyponatremia, and reduced liver cell TAT activity. S.L.

Model experimental emotional stress of rabbits and rats in serious conflict situations resulted in cardiovascular disturbances including ischemia and myocardial infarction in some animals. Animals were found to resist, adapt or be predisposed to cardiovascular disturbances. Limbic and reticular structures of the brainstem were found to be involved in changes of cardiac activity and arterial pressure. Individual and genetic differences in predisposition and resistance to cardiovascular disturbance were found in different genetic lines of rats. Catecholamine distribution in brainstem structures of predisposed and resistant rats were determined. Stagnant emotional excitation was found in separate experiments in the hypothalamus and reticular formation of the mesencephalon, resulting in visceral disturbances. This is associated with changes in sensitivity of individual reticular formation neurons. Author

The arterial pressure and heart rate of rats (Wistar, way, August, random bred) was continuously recorded in 30 hour and 8 week immobilization emotional stress. Characteristic patterns of arterial pressure and heart rate in 30 hour immobilization were found. Wistar, rats had the highest resistance to stress and August rats the least. Criteria were developed to predict cardiovascular disturbances and death from the time variations of blood pressure and heart rate early in immobilization. Significant correlation was found between motor activity and individual and genetic resistance to emotional stress, based on which animals and groups of animals can be selected with known proportions of animals with different degrees of resistance and predisposition to emotional stress. Adrenalectomized, intact, and stressed male Wistar rats were analyzed for dexamethasone and corticosterone binding by specific cytoplasmic receptors in the liver. Scatchard analysis provided dissociation constants for receptor hormone complexes. The number of binding sites diminished during stress. It is suggested that measures taken to combat the effects of stress cause increasing steroid receptor interactions in the liver, restoring adaptive enzyme induction, and normalizing metabolic processes. Experiments were devised to improve the reliability and versatility of that class of detector systems currently known as in vivo biosensors. The target substance of interest in this research was the military explosive TNT. The research was designed to prove the validity of four theses: (1) Rats can detect TNT vapor via their olfactory function; (2) Trained rats will operantly signal the arrival of TNT vapor at their nares; (3) Rats may be trained en masse to function as biosensor detection systems; (4) The electroencephalogram (EEG) of trained rats contains specific signals uniquely related to their awareness of TNT vapor. Albino male rats were equipped with four chronic indwelling brain electrodes, three of which were electroencephalograpgh (EEG) pick-off electrodes juxtaposed to the dura mater, while the fourth lead was a stimulus electrode embedded in the medial forebrain bundle (MFB). Electrical brain stimulation (EBS) was applied to the MFB (which has been termed a pleasure center), as a conditioning stimulus duri;ng training and reinforcement sessions. Subjects were first conditioned by operant methods to associate the presence of TNT vapors with EBS and to signal awareness of the target substances by treadle pressing. The four theses postulated above were proven individually. It has thus been demonstrated that properly conditioned rats can, in fact, be utilized as sensory elements in bio-sensor explosives detection systems. GRA

A survey was conducted of antifoulant coatings that are currently available for controlling macrofouling in the marine environment. An overview of macrofouling problems that can be expected in various phases of the OTEC program is presented. The various general types of coatings systems, methods, and construction materials that are presently available for the control of marine macrofouling are summarized. These include copper coatings, organo-metallic coatings, low energy coatings, ablative coatings, antifouling fiber reinforced plastics, antifouling concrete, and electrochemical protection methods. The various available coating compositions and electrochemical methods of macrofouling prevention are described. Commercially available antifouling coatings ar listed. A selected list of marine coatings manufacturers is also provided. A selected bibliography of references on marine macrofouling prevention is included. DOE

**USSR REPORT: LIFE SCIENCES. EFFECTS OF NONIONIZING ELECTROMAGNETIC RADIATION, NO. 6**
16 Jul. 1982 93 p refs Transl. into ENGLISH from various Russian articles
(JPRS-81300) Copyright. Avail: Issuing Activity

Nonionizing electromagnetic radiation and its biological and physiological effects on animals and humans was studied. The following topics are discusse: stimulating effects of exposure of rat sterum to variable magnetic fields on antibody production in the spleen; biological and therapeutic effects of magnetic fields; different nervous sytem reactions; systematic adaptation reactions; use of magnetbiological effects in neurosurgery; changes in peripheral circulation in limbs during bone regeneration; changes in transcapillary metabolism in chronic venous insufficiency of legs; chromatin of rat brain neurons and nucleic acids of muscles as related to localization of decimeter waves during exercise; heat distribution in tissues; low frequency effects on animals of different ages; meteorological radar as source of SHF electromagnetic field energy and problems of environmental hygiene; effects of microwave radiation and resitance to ionizing radiation; effects of single exposure to microwaves on quantity and functional properties of T and B lymphocytes; and cytogenetic and gonadotozic effects of static electric fields. For individual titles, see N82-30900 through N82-30916.

**STIMULATING EFFECT OF EXPOSURE OF RAT STERNUM TO VARIABLE MAGNETIC FIELD ON ANTIBODY PRODUCTION IN THE SPLEEN**
O. F. Melnikov, A. A. Diyesperova, E. A. Bakay, and A. I. Rudoy *In its* USSR Rept.: Life Sci., No. 6 (JPRS-81300) 16 Jul. 1982 p 1-5 refs Transl. into ENGLISH from Fiziol. Zh. (Kiev), v. 28, no. 1, Jan. - Feb. 1982 p 109-112

Avail: Issuing Activity

The possibility of stimulating antibody production by exposing the sternum, at the projection of the thymus, to a variable frequency magnetic field was investigated. Agents capable of selectively altering functional activity of the immunogenetic system were studied. Physical factors along with biological agents are used, most often from thymus tissue and their synthetic analogues. It is demonstrated that exposure to variable electromagnetic fields could activate antibody genesis. Besides the entire lymphoid tissue system, other organs and systems are exposed to magnetic fields, which is not always desirable. E.A.K.

**STATUS AND PROSPECTS OF RESEARCH ON BIOLOGICAL AND THERAPEUTIC EFFECTS OF MAGNETIC FIELDS**

V. M. Bogolyubov *In its* USSR Rept.: Life Sci., No. 6 (JPRS-81300) 16 Jul. 1982 p 6-10 Transl. into ENGLISH from Vopr. Kurortol., Fizioterapii i Lechebnoy Kult. (Moscow), no. 4, Jul. - Aug. 1981

Avail: Issuing Activity

Biological effects of magnetic fields (MF) on physiological aspects and general questions in appreciation of this factor were examined. Therapeutic use of MF, magnetohygiene, magnetoecology, biomagnetism is discussed. Biotropic parameters of MF which refer to the physical characteristics of the field that determines the mechanisms of its interaction with biological systems, as well as biological effects was formed in magnetobiology. Intensity, gradient, vector frequency and shape of pulses, as well as duration of exposure are among the main biotropic parameters of MF. E.A.K.

### DISTINCTIONS OF NERVOUS SYSTEM REACTIONS TO ARTIFICIALLY INTENSIFIED MAGNETIC FIELDS

Yu. A. Kholodov *In its* USSR Rept.: Life Sci., No. 6 (JPRS-81300) 16 Jul. 1982 p 11-15 refs Transl. into ENGLISH from Vopr. Kurortol., Fizioterapii i Lechebnoy Fiz. Kult. (Moscow), no. 4, Jul. - Aug. 1981 p 5-9

Avail: Issuing Activity

The reaction of the body systems to exogenous, intensified magnetic fields (MF) was studied. Body systems are ranked in the following order according to extent of involvement in reacting to total body exposure to MF: nervous, endocrine, sense organs, cardiovascular, blood, digestive, muscles, excretory, respiratory, integument and bone. The presence of both local changes and reactions by systems not directly exposed to local MF shows that regulatory system, nervous and endocrine, is involved in reactions to MF. The distinctions of some reactions of the nervous system to MF are discussed. E.A.K.

### MECHANISM OF BIOLOGICAL EFFECTS OF MAGNETIC FIELDS

N. A. Udintsev *In its* USSR Rept.: Life Sci., No. 6 (JPRS-81300) 16 Jul. 1982 p 16-0 refs Transl. into ENGLISH from Vopr. Kurotol., Fizioterapii i Lechebnoy Fiz. Kult. (Moscow), no. 4, Jul. - Aug. 1981 p 9-12

Avail: Issuing Activity

Magnetic fields (MF) of different intensities and frequencies are used more extensively for treatment of diseases of the skeletomuscular system, vessels and gastrointestinal tract. The mechanism of biological effects of MF, like other physiotherapeutic factors, a systemic organization of functions were investigated. The state of the neuroendocrine system and metabolism after total body exposure of white rats to variable MF (VMF) with 20 mT induction and at a frequency of 50 Hz was studied. Data obtained during brief exposure to MF are presented. E.A.K.

**N82-30904#** Joint Publications Research Service, Arlington, Va.

### FORMATION OF SYSTEMIC ADAPTATION REACTIONS IN STATIC MAGNETIC FIELDS

M. A. Shishlo, S. Kh. Kubli, and L. L. Shimkevich *In its* USSR Rept.: Life Sci., No. 6 (JPRS-81300) 16 Jul. 1982 p 21-27 refs Transl. into ENGLISH from Vopr. Kurortol. Fizioterapii i Lechebnoy Fiz. Kult. (Moscow), no. 4, Jul. - Aug. 1981 p 12-18

Avail: Issuing Activity

The activation of compensatory and adaptive processes, as well as formation of systemic adaptive reactions which enhance resistance to deleterious environmental factors, during exposure to magnetic fields were examined. Animals were exposed daily to static magnetic field (SMF), with a large volume of tissues in the field interaction. An increase in dispersion of resistance without change in its mean level after two SMF treatments was observed. By the 8th to 9th da reliable increase in resistance decreased substantially. It is found that under the influence of many weeks of exposure to magnetic fields fluctuations of these parameters persist but their amplitude gradually disappears. E.A.K.

### CHANGES IN PERIPHERAL CIRCULATION OF LIMBS DURING BONE REGENERATION UNDER INFLUENCE OF LOW-FREQUENCY MAGNETIC FIELDS

I. M. Mitbreyt, G. I. Lavrishcheva, and V. A. Dirin *In its* USSR Rept.: Life Sci., No. 6 (JPRS-81300) 16 Jul. 1982 p 34-38 refs Transl. into ENGLISH from Vopr. Kurortol., Fizioterapii i Lechebnoy Fiz. Kult. (Moscow), no. 4, Jul. - Aug. 1981 p 24-27

Avail: Issuing Activity

Reparative regenerative processes in bone tissue are largely determined by the state of circulation in the injured limb segment. The role of peripheral circulation in the extremity in the mechanism of action of low frequency magnetic fields (MF), on reparative regeneration of bone was investigated. It is indicated that MF at a frequency of 50 Hz, an induction of 10 mT under both experimental and clinical conditions, has a marked effect on peripheral circulation in extremities and improve tissular trophics in the course of bone regeneration in fractures of the distal epimetaphysis of the radius. E.A.K.

**N82-30907#** Joint Publications Research Service, Arlington, Va.

### CHANGES IN TRANSCAPILLARY METABOLISM IN PATIENTS WITH CHRONIC VENOUS INSUFFICIENCY OF LEGS UNDER INFLUENCE OF STATIC MAGNETIC FIELDS

B. N. Zhukov, L. A. Trufanov, and S. M. Musiyenko *In its* USSR Rept.: Life Sci., No. 6 (JPRS-81300) 16 Jul. 1982 p 39-43 refs Transl. into ENGLISH from Vopr. Kurortol., Fizioterapii i Lechebnoy Fiz. Kult. (Moscow), no. 4, Jul. - Aug. 1981 p 28-31

Avail: Issuing Activity

Magnetotherapy in the treatment of peripheral vascular diseases was investigated. Experimental and clinical data are collected and indicated the beneficial effects of magnetic fields (MF) on some forms of vascular pathology. However, the mechanism of therapeutic action of MF, with indications and contraindications for its use have not yet been investigated sufficiently. Transcapillary metabolism and microcirculation in patients with chronic venous insufficiency of the legs were studied. Biophysical parameters which were monitored dynamically are presented. E.A.K.

### CHROMATIN OF RAT BRAIN NEURONS AND NUCLEIC ACIDS OF MUSCLES AS RELATED TO LOCALIZATION OF DECIMETER WAVES DURING EXERCISE

Z. A. Sokolova *In its* USSR Rept.: Life Sci., No. 6 (JPRS-81300) 16 Jul. 1982 p 44-47 refs Transl. into ENGLISH from Vopr. Kurortol., Fizioterapii i Lechebnoy Fiz. Kult. (Moscow), no. 4, Jul. - Aug. 1981 p 35-38

Avail: Issuing Activity

The effects of different localizations of DMW on structural and functional state of chromatin (deoxyribonucleoprotein--DNP) of cerebral neuronal nuclei and nucleic acid content of rat muscles during intensive physical exercise were studied. Experiments were conducted on 60 white male Wistar rats weighing 180 to 220 g. The physical load consisted of graded daily swimming in fresh water at a temperature of 28 to 32 deg for 4 weeks. DMW were generated by a Volna 1 unit (emitter with 4 cm diameter, intensity of 120 mW/sq cm). The waves were delivered to the region of the femoral muscles, adrenals or head for 3 min/day to a total of 10 times. S.L.

**DISTRIBUTION OF HEAT IN BIOLOGICAL TISSUES UNDER INFLUENCE OF UHF ELECTROMAGNETIC FIELDS**

P. V. Svetitskiy *In its* USSR Rept.: Life Sci., No. 6 (JPRS-81300) 16 Jul. 1982 p 48-53 refs Transl. into ENGLISH from Med. Braiol. (Moscow), v. 27, no. 3, Mar. 1982 p 46-49

Avail: Issuing Activity

The link between nature of distribution of generated heat in biological tissues and technical parameters is determined in order to control the biological effects of UHF EMF hyperthemia. The same intensity of exogenous EMF can elicit different levels of induced endogenous EMF, for which reason there is a change in heating of tissues. This phenomenon depends on the size and shape of biological objects, their orientation in relation to EMF vectors, morphological structures and electric properties of tissues, and intensity of energy emission by tissues as a result of vital functions. The distribution of heat in biological tissues exposed to UHF radiation was studied, in order to serve as a guide for clinical work. S.L.

**N82-30910#** Joint Publications Research Service, Arlington, Va.

**EFFECTS OF LOW-FREQUENCY (50 Hz) ELECTRIC FIELDS ON ANIMALS OF DIFFERENT AGES**

I. P. Kazyarin *In its* USSR Rept.: Life Sci., No. 6 (JPRS-81300) 16 Jul. 1982 p 54-57 refs Transl. into ENGLISH from Gigiyen. Sanitariya (Moscow), no. 8, Aug. 1981 p 18-19

Avail: Issuing Activity

The comparative sensitivity of young (growing) and old animals to 50 Hz electric fields was examined. The biological mode consisted of 40 male white rats 1.5 to 2 months of age, weighing 90 to 100 g, and 1.5 to 2 years old, weighing 400 to 500 g, which were divided into 4 groups of 10 animals. The 1st group (young) and 3d (old) group served as a control, while the rats in the 2d and 4th groups were exposed daily to commercial frequency electric fields (CFEF) of 15 kV/m for 30 min a day, for 2 months. For this purpose, the animals were placed in special dielectric cages with simulated electric field of 50 Hz generated by means of high voltage tank [oil] transformers. The animals' condition was assessed on the basis of dynamics of body weight, static work capacity, summation threshold index, latency period of unconditioned reflex, duration of hexenal induced sleep, overall exchange of gases and blood cholinesterase activity. These parameters were determined before the experiment (background data) and every 2 weeks during exposure. S.L.

**EFFECTS OF MICROWAVE RADIATION ON MOUSE HEMOPOIETIC STEM CELLS AND ON ANIMAL RESISTANCE TO IONIZING RADIATION**

D. Rotkovska, A. Vacek, and A. Bartonickova *In its* USSR Rept.: Life Sci., No. 6 (JPRS-81200) 16 Jul. 1982 p 64-69 refs Transl. into ENGLISH from Radiobiol. (Moscow), v. 21, no. 4, Jul. - Aug. 1981 p 558-562
N82-30899 21-51)

Avail: Issuing Activity

The effects of microwave (MW) on hemopoiesis in mice are discussed. Stimulation of colony-forming capacity of bone marrow and the spleen was demonstrated after total body exposure of mice for 5 min at the parameters used. This MW effect was used to enhance mouse resistance to ionizing radiation. S.L.

**N82-30913#** Joint Publications Research Service, Arlington, Va.

**EFFECT OF SINGLE EXPOSURE TO MICROWAVES ON QUANTITY AND FUNCTIONAL PROPERTIES OF T AND B LYMPHOCYTES OF GUINEA PIG AND MOUSE SPLEEN**

I. A. Rudakov, S. F. Rudakova, I. V. Rizhinskaya, and O. S. Ogurtsova *In its* USSR Rept.: Life Sci., No. 6 (JPRS-81300) 16 Jul. 1982 p 70-74 refs Transl. into ENGLISH from Radiobiol. (Moscow), v. 21, no. 4, Jul. - Aug. 1981 p 626-629

Avail: Issuing Activity

Parameters of cellular immunity of animals at different intervals following single exposure to microwaves of thermal intensity were studied. The first series of experiments was performed with guinea pigs weighing 300 to 400 g, who were submitted to single total body exposure to microwaves in the reactive zone using a Luch 58 unit (frequency 2375 MHz, distance from emitting antenna horn 30 cm, output power 100 W, exposure 15 min). As a result of such exposure, the animals' body temperature rose by 4 to 4.5 C. Immediately after irradiation, as well as 1, 4, 7, and 21 days later, the animals were sacrificed; the spleen was excised under sterile conditions and a pooled suspension of spleen cells from 3 to 5 animals was obtained, which was then used to assess spontaneous and concanavalin A induced lymphocyte blast transformation by recording radioactivity of H3 thymidine incorporated in DNA. S.L.

### EFFECTS OF SUPERHIGH FREQUENCY ELECTROMAGNETIC FIELDS ON ANIMALS OF DIFFERENT AGES

O. I. Shutenko, I. P. Kozyarin, and I. I. Shvayko *In its* USSR Rept.: Life Sci., No. 6 (JPRS-81300) 16 Jul. 1982 p 85-90 refs Transl. into ENGLISH from Gigiyen. i Sanitariya (Moscow), no. 10, Oct. 1981 p 35-38

Avail: Issuing Activity

Effects of superhigh frequency (SHF) electromagnetic fields (EMF) on young (growing) and mature animals were tested. The experimental model consisted of 90 male white rats initially weighing 70 to 80 and 160 to 200 g, which were divided into 6 groups of 15 animals in each, depending on intensity of the factor used. The animals of the first (young) and fourth (puberal) groups served as a control. The second, third (young) and fifth, sixth (mature) groups were exposed to an SHF field with energy flux density (EFD) of 10 and 100 microwatts/sq cm, respectively, for 2 h/day over a period of 10 weeks. We used the Luch-58 magnetron SHF generator, at working frequency of 2375 + or - 50 MHz (wavelength 12.6 cm) as the source of SHF radiation. The animals were irradiated in groups in the zone of the formed field in an ordinary room with cinder block walls (temperature 18 to 20 C, humidity 40 to 60%). We used a PO 1 instrument (Medik 1) for dosimetry. We measured EFD of the SHF field over the entire area of the room. The animal cages were placed in areas where the fields constituted 10 and 100 microwatts/sq cm. S.L.

### A GENERAL PURPOSE DATA ACQUISITION AND ANALYSIS SYSTEM FOR NYSTAGMUS AND RELATED DATA

William G. Crosier Feb. 1982 261 p
(Contract NAS9-14880)
(NASA-CR-167704; NAS 1.26:167704) Avail: NTIS HC A12/MF A01 CSCL 06P

A system for collecting and analyzing nystagmus and related data is described. The system uses commercially available equipment for performing caloric irrigation and rotating chair tests on human subjects in order to evaluate certain characteristics of the human vestibular system. Three programs and their associated subprograms which are used with a laboratory microcomputer to perform three primary tasks are discussed. These include: (1) control and collect data in real time from a nystagmus experiment, (2) analyze data from eye movements and related signals in order to measure such variables as eye velocities, and (3) provide hard copy formatted reports for reduced test data. ### COGNITIVE PERFORMANCE, SLEEP QUALITY AND MOOD DURING DEEP OXY-HELIUM DIVING

Vivien J. Lewis and Alan D. Baddeley Jan. 1981 32 p refs
(RNP-1/81; BR79073) Avail: NTIS HC A03/MF A01

A series of simulated saturation oxyhelium dives, examining physiological and psychological changes in man in high pressure conditions were studied. A series of five dives are reported, lasting between 18 and 26 days, and reaching maximum depths of between 300 msw and 540 msw. Tests of cognitive functioning, including associative and short term memory, arithmetic ability, perceptual speed, spatial manipulation, grammatical reasoning and semantic processing, were administered to well practiced subjects prior to each dive, at maximum depth and again during decompression. Self report measures of sleep and mood questionnaires were administered for a period extending from one week before each dive commenced until at least one week after the dive was completed. S.L.

### RNA ACCUMULATION IN THE BODY OF NEURONS AS AN INDICATOR OF THEIR FUNCTIONAL DEAFFERENTATION

V. A. Klenikova and L. D. Malinauskayte Apr. 1982 10 p refs Transl. into ENGLISH from Fiz. Zh. SSSR (USSR), v. 6, no. 3, 1980 p 339-343 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(Contract NASw-3541)
(NASA-TM-76850) Avail: Issuing Activity CSCL 06P

Using two wave cytospectrophotometry in the ultraviolet and visible regions of the spectrum, it is shown that prolonged functional deafferentation, evoked by visual deprivation or induced hypokinesia, caused a pronounced accumulation of RNA in the visual neurons of the cerebral cortex and in the motor neurons of the spinal cord, respectively. A similar, although quantitatively less considerable, accumulation of RNA is noted with intensified stimulation of these neurons, whereas a combination of deafferentation and stimulation weakened, and in a number of cases completely eliminated, the accumulation of RNA, evoked by deafferentation. The obtained data indicate that the accumulation of RNA in the body of neurons may serve as an indicator not so much of intensified, but, conversely, weakened sensory pulsation. In the latter case, the mechanism of this accumulation is associated with the weakening of utilization of RNA by the neurons. Author

**REACTION TO HYPOKINESIA AND HYPERKINESIA OF SOMATOCHROME NEURONS IN THE MOTOR ZONE OF THE CEREBRAL CORTEX IN RABBITS**

L. A. Zaruba Jun. 1982 8 p refs Transl. into English from Vestn. Zool. (USSR), no. 3, 1979 p 61-63 Transl. by Scientific Translation Service, Santa Barbara, Calif.
(Contract NASw-3542)
(NASA-TM-76885; NAS 1.15:76885) Avail: NASA Scientific and Technical Information Facility, P.O. Box 8757, B.W.I. Airport, Md. 21240 CSCL 06P

A group of rabbits were subjected to limited mobility for 2-2.5 months, another group to daily moderate running exercise on a treadmill during 3, 5, 8 and 9 months with a 3rd group serving as control. Analysis of sections of the cerebral cortex motor zone revealed that a presence of impulses coming from peripheral receptors was necessary for a normal activity of nerve cells. The 2 months hypokinesia disturbed the metabolism of nerve cells. In the absence of peripheral stimulation the size of the cell body decreased due to water disturbance in the cell. By 2.5 months the animals adapted to hypokinesia and differences in volume of the neuron, its nucleus and RNA content in neurons became insignificant. Long-term flow of stimulation from the periphery resulted in increased protoplasm mass while the volume of the nerve cell nucleus increased comparatively less. Prolonged increase of nerve cell activity heightened the expenditure of RNA. In this case the RNA functioned as the energy source which was necessary for protein synthesis by the cell. Author

**CONTROL OF MUSCLE ACTIVITY IN UNLOADED CONDITIONS**

A. V. Kovalik May 1982 7 p refs Transl. into ENGLISH from Gig. Tr. Prof. Zabol. (USSR), no. 8, Aug. 1981 p 44-45 Original language document announced as A82-15712 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(Contract NASw-3541)
(NASA-TM-76883; NAS 1.15:76883) Avail: NASA Scientific and Technical Information Facility, P.O. Box 8757, B.W.I. Airport, Md. 21240 CSCL 06P

The ability of human test subjects to voluntarily tense specific muscle groups was. It was shown that less tension is generated than in overcoming an external load and that muscles of the upper half of the body are generally more controllable and generate greater tension than those of the lower half of the body. It is also noted that voluntary muscle tension can be generated in any sequence of muscle groups and for at least 3 hours continuously. It is found that 2 weeks of training produces greatly improved precision and selectivity on muscle tensing. E.A.K.

**PULMONARY FUNCTION MEASURES BEFORE AND AFTER EXPOSURE OF HUMAN SUBJECTS TO +G(z) AND +G(x) ACCELERATION LOADS**

Edwin Hendler 28 Sep. 1981 25 p refs
(ZR0000101)
(AD-A114652; NADC-81236-60) Avail: NTIS HC A02/MF A01 CSCL 06/19

Baseline dynamic lung volume measurements were determined on four subjects seated upright or reclined, both with and without inflation of an anti-G suit (AGS). Additional measurements were made before and after exposing the subjects to double acceleration pulses using the NADC Dynamic Flight Simulator. During the acceleration exposures, the subjects were either seated upright or were reclined; they wore an inflated AGS and either did or did not perform the M-1 maneuver. Acceleration pulses lasted 20 or 40s, and ranged in magnitude from 3 to 7 G. The effects of body position, G-protective clothing, and acceleration exposure on pulmonary function measures derived from flow-volume loops are described. GRA

**AIRCREW IONIZING DOSES FROM RADIOACTIVE DUST CLOUD GENERATED BY NUCLEAR BURST M.S. Thesis**

Burl E. Hickman Mar. 1982 77 p refs
(AD-A115541; AFIT/GNE/PH/82M-9) Avail: NTIS HC A05/MF A01 CSCL 06/18

This report will evaluate the threat of radioactive fallout to which aircrew members will be exposed when flying through a descending fallout cloud. A computer program is developed for calculating the ionizing dose rate of a radioactive dust cloud as a function of time, and also the dose that an aircrew receives when flying through the respective cloud. A cloud model that is patterned after the AFIT fallout smearing code was developed. A comparison is made between the activities at various altitudes from 305 meters to 9150 meters to provide information for possible re-direction of flight. The external ionizing dose to the aircrew is computed by the new code considering the cloud size, the aircraft's transit time through the cloud, and the ingestion rate of radioactive particles into the aircraft's cabin. Information is also provided to indicate the method by which doses can be computed from a cloud of multiple bursts. The results demonstrate that total dose to each aircrew member is approximately 8 rems after flying through a fallout cloud one hour after cloud stabilization of a 1 Mt burst, with the mission continuing for eight hours subsequent to the cloud transit. **POSITION PAPER: THE TOXIC EFFECTS OF CHRONIC EXPOSURE TO LOW LEVELS OF CARBON DIOXIDE Interim Report**

19 Jan. 1982 46 p refs
(AD-A115053; NSMRL-973) Avail: NTIS HC A03/MF A01 CSCL 06/20

Numerous patrol studies have provided a sizable data base of levels of CO2 exposure and health problems encountered by Naval nuclear submariners. Humans have been exposed to a variety of concentrations of CO2 for chronic periods of time aboard submarines, as well as in laboratory environments. Mean data, PICO2 = 10 torr and 40 days, collectively represent this wide variety of CO2 exposures. Physiological responses to the CO2 environment were repeatedly documented, but toxic effects were not apparent. Human exposure tests were safely conducted in atmospheres containing up to 5 torr CO2, for up to 90 days. Such exposures are therefore considered safe at this time. Animal studies showed that chronic, low-level, CO2 exposures caused changes of the bone content of CO2, the bone content of calcium, the soft tissue content of calcium, and histological changes of the lung. These changes were found to be completely reversible upon discontinuance of the animal's exposure to CO2. The extrapolation of the animal data to humans is a current problem in the advancement of our understanding of the effects of CO2 on humans. GRA

### A CORTICALLY IMPLANTABLE MULTIELECTRODE ARRAY FOR INVESTIGATING THE MAMMALIAN VISUAL SYSTEM

**M.S. Thesis**

George W. Gorman, III Dec. 1981 107 p refs
(AD-A115484; AFIT/GE/EE/81D-24) Avail: NTIS HC A06/MF A01 CSCL 06/16

The research conducted during this study is a continuation of the Tatman-Fitzgerald (DTIC AD A080378, AD A100763) fabrication and testing of an implantable, multiplexed, multielectrode array that will be used to record the bioelectric signals emitted from the visual cortex of a live, visually functional animal. Primary emphasis of this study is the investigation of passivation materials that can be used to protect the AFIT Multielectrode Array from the harsh cerbrospinal environment encountered inside the cranium. Secondary emphasis is placed on analyzing the electrical characteristics of an AFIT JFET, designing an improved multiplexing drive circuit, and testing the system equipment with an operational device. ### BIOLOGICAL AVAILABILITY OF NICKEL ARSENIDES: TOXIC EFFECTS OF PARTICULATE Ni5As2

L. R. Gurley, R. A. Tobey, J. G. Valdez, M. S. Halleck, and S. S. Barham (Mayo Clinic, Rochester, Minn.) 1981 29 p refs
Presented at the 21st Hanford Life Sci. Symp. on Biol. Availability of Trace Metals, Richland, Wash., 4-8 Oct. 1981
(Contract W-7405-eng-36)
(DE82-000580; LA-UR-81-2708; CONF-811035-1) Avail: NTIS HC A03/MF A01

The toxicity of nickel arsenides was studied to determine if fugitive nickel arsenides from an oil shale retort could pose a threat to personnel in the workplace or to other living organisms in the environment. Considerations of: oil shale retort operating conditions, oil shale elemental composition, nickel and arsenic physicochemical properties, and oil shale matrix structure suggest that nickel arsenides may be formed during the oil shale retorting process. Similarities between nickel subarsenide and nickel subsulfide and nickel subselenimide, both of which are known potent carcinogens, have caused concern that nickel arsenides may have adverse effects on biological systems. Five stable nickel arsenides and nickel arsenic sulfide are considered possible species for study. GRA

### INVESTIGATION ON THE CARCINOGENIC EFFECT OF TRICHLORETHYLENE BY INHALATION AND MECHANISMS OF METABOLIC BIOACTIVATION Final Report, May 1980

Dietrich Henschler Bonn Bundesministerium fuer Forschung und Technologie Mar. 1982 22 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-HA-82-007; ISSN-0171-7618) Avail: NTIS HC A02/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 4.60

Trichloroethylene, one of the most frequently used solvents, was studied as a carcinogen on account of the chemical relationship to vinylchloride. To test this, systematic inhalation experiments were performed on three animal species (mice, rats, hamsters) at 100 ppm and 500 ppm, 6 h/day, 5 days/week for 18 months. In parallel the biochemical level was measured, providing insight into the mechanism of action of the compound. Macroscopic and microscopic evaluation of all tissues of the experimental animals after spontaneous death reveals no increase in the rates of benign and malignant tumors in the exposed group above the controls. In female mice, there is a dose related increase in the rate of malignant lymphomas which is, however, believed to be a nonspecific activation of virus infestation. The results show that long-term inhalation of trichloroethylene, even in high concentrations, renders no indication of a carcinogenic risk. The results of this investigation stand against the worldwide suspicion that trichloroethylene, a very frequently used solvent in the work area as well as in household environments, presents a carcinogenic risk. **PREDICTION OF SHORT TERM TRACKING TASKS USING AN OPTIMAL PILOT MODEL M.S. Thesis**
Patrick A. Mullen Mar. 1982 101 p refs
(AD-A115543; AFIT/GAE/AA/81D-21) Avail: NTIS HC A06/MF A01 CSCL 17/8

An optimal pilot model has previously been successful in predicting the long term tracking performance of a longitudinal air-to-air gunnery task. This study investigated modifications to the same pilot model to determine whether it could be used to successfully predict performance for a short term task. The same task, including a lead computing optical sight, was simulated on a hybrid computer. Three pilots flew three different aircraft configurations on the fixed-base simulator against a target driven to RMS accelerations of 3.5G and 5.0G by filtered, Gaussian noise. The target was at either 1000' or 3000' range. A comparison of the data generated by the human pilots versus that of the optimal pilot model showed moderate correlation for elevator deflection, lead angle and pitch rate. Overall, the optimal pilot model was less successful in predicting short term tracking performance than it was in predicting long term performance.

(AD-A115127; HEL-TM-9-82) Avail: NTIS HC A03/MF A01 CSCL 14/2

A comparison of two sets of display formats for the Electronic Master Monitor and Advisory Display System (EMMADS) was conducted to determine the effect display format has no performance. Performance measures included accuracy of response and latency of response to a display of a fault, as well as error on a subsidiary tracking task. A subjective questionnaire was used to determine if pilot preferences exist for display format. The results indicated that there were no significant differences in any performance measure due to the display formats but that there was a significant difference in reaction time among the subsystems. The subsystem with only three alternative faults had a significantly lower reaction time than the two other subsystems with eight and ten alternatives each. Pilot preference tended to favor those formats which were simple, uncluttered, and which appeared to be least busy. GRA

A procedure for measuring thyroid uptake and retention of I 125 is described. After a single dose of 1.85 MBq the thyroid retention curve can be followed for 3 to 6 months or more. Physiologic changes and experimental manipulations of thyroid function are observed by changes in the slope of the release curve. The form of the slope of the curve is useful for determining biological half life, evaluating changes in turnover, calculating release rate exponentials, and for analyzing iodine compartmental distribution. Backscatter and attenuation affect measurements of I 125 uptake more than measurements made with I 131. The major disadvantage of I 125 is the extent of its absorption in tissues, which is partially counterbalanced by backscatter from the tissues surrounding the thyroid. Backscatter in the Lucite neck phantom can exceed attenuation. Author (ESA)

Microorganisms which cause biocorrosion, factors which favor their development, and detection and treatment of biocorrosion are discussed. It is impossible to eradicate traces of water, in which the organisms develop, from contaminating fuel tanks, so fuel should be kept as free of water as possible. Synthetic liners which inhibit organism growth, and which are chemically resistant to water and jet fuel are suggested. It is possible that potassium bichromate, and boron compounds are good fungicides and bactericides. Author (ESA)

Biological and medical tests conducted on animals and humans during and after manned spaceflights are reported. The following topics are discussed: psychological and physiological effects and changes, hemodynamic responses, nervous system and sensorimotor performance, neurological tests, cardiovascular system tests, biochemistry, developments in medical technology, and biological and physiological stress tests. For individual titles, see N82-31893 through N82-31921.

Avail: Issuing Activity

Personality and psychological stability tests, used in the decision making of cosmonaut selection and the successful completion of their training are discussed. High demands are made on individual psychological, personality and professional qualities of cosmonauts to assure the reliability of the cosmonaut spacecraft system. The battery of psychological tests at the screening stage, routine and special certification and special training, aimed at selecting individuals whose psychological traits and personality make them eligible for professional work with specific space equipment, are outlined. Technical problems of spacecraft environments and the changes in the human body and how they effect medical aid aboard a manned spaceflight are discussed. In space flight anesthesia can be applied using methods as multicomponent balanced anesthesia and peridural anesthesia. Surgery and resuscitation can be performed, by procedures and methods that allow operations in an abacterial environment, correction of vital dysfunctions with the aid of artificial pulmonary ventilation, cardiac electrotherapy, and sorptive purification of body fluids. Various aspects of infusion treatment and first medical aid are discussed. E.A.K.

Fourteen cosmonauts were exposed to rheographic examination before and after space missions, to measure the pulse blood filling, tone and elasticity of cerebral vessels, right lung and right leg vessels during tilt tests. Postflight examinations demonstrated distinct changes in the cerebral, pulmonary and peripheral circulation, indicating cardiovascular deconditioning. The greatest changes were seen in the tone of arteries, arterioles and veins of the brain hemispheres, vertebrobasilar system and the leg. The changes were reversible, requiring no special correction. The changes in different vascular compartments returned to normal in a nonuniform manner. E.A.K.

Belonogov *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 4, Jul. - Aug. 1982 (JPRS-81599) 20 Aug. 1982 p 21-25 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 16, no. 4, Jul. - Aug. 1982 p 17-20

Avail: Issuing Activity

The effects of optokinetic noise on the physiological and professional parameters of a trained operator was examined. The pattern and level of changes in the parameters depend on the initial sensitivity to optokinetic stimulation. It is shown that the optokinetic stimulus, which leads to operator activity impairment, especially in spatial orientation is significant to the impaired orderlines of analyzer function, and its prolonged presence in subjects who are optokinetically unstable causes motion sickness symptoms. (Moscow), v. 16, no. 4, Jul. - aug. 1982 p 20-24

Avail: Issuing Activity

The effect of intravenous injection of 20% mannitol in a dose of 1 g per kg body weight at a rate of 5 ml/min on the central circulation and cardiac contractile function was investigated. The infusions were performed on 18 healthy male volunteers, who participated in a head down tilt test, during the control period, on days 3, 7 and 14 of bed rest, and during the recovery. It was found that prolonged osmotherapy produced a clinically distinct dehydration effect without influencing central circulation, led to positive cardiodynamics, and an improvement of left ventricle contractile function. E.A.K.

**DYNAMICS OF FUNCTIONAL STATE OF HEAVY TRANSPORT HELICOPTER PILOTS IN THE COURSE OF FLIGHT SHIFT**

Yu. N. Kamenskiy *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 4, Jul. - Aug. 1982 (JPRS-81599) 20 Aug. 1982 p 42-45 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 16, no. 4, Jul. - Aug. 1982 p 30-32

Avail: Issuing Activity

Before and after flights about 300 crewmembers of heavy transport helicopters were examined, using psychophysiological and integral methods. During a flight shift the health state of helicopter pilots varies via three stages: habituation, initial decline, and distinct lassitude, with the latter developing after a five hour flight load. In order to increase human reliability in the pilot-helicopter system, it is advisable to allow four hours flight time during a flight shift onboard helicopters of the above type. In this case the pilot exposure to vibration effects will also be limited. The paper describes a maximally permissible spectrum of vibration velocity for a four hour exposure. Author

**SEISMOCARDIOGRAPHIC EVALUATION OF CONTRACTILE FUNCTION OF THE MYOCARDIUM OF HYPOKINETIC RATS**
V. I. Kuznetsov *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 4, Jul. - Aug. 1982 (JPRS-81599) 20 Aug. 1982 p 50-55 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v.16, no. 4, Jul. - Aug. 1982 p 35-38
Avail: Issuing Activity

Seismocardiograph (SCG) recording in rats was explored and SCG time and amplitude parameters were determined. The measurements were performed on normal rats and hypokinetic rats with an altered cardiac contractility. The SCG data obtained in hypokinetic rats were compared with the results derived from contractility studies by heart catheterization and subsequent calculation of contraction strength and velocity. It is shown that the data compared are similar on hypokinetic days one and five. This suggests that the seismocardiographic method of studying heart contractility function of rats is adequate for integral evaluations of the strength and velocity of cardiac contractions in chronic experiments. On hypokinetic days fifteen and thirty the data obtained by catheterization and seismocardiographically are at variance. This is attributed to muscle mass losses and variations in the rigidity of 'internal' bonding. Author

**MORPHOLOGY AND COAGULANT FUNCTION OF HUMAN BLOOD SYSTEM DURING LONG EXPOSURE TO LOW AMMONIA CONCENTRATIONS IN A SEALED ENVIRONMENT**

M. P. Kalandarova and L. S. Pochukayeva *In its* USSR Rept: Space Biol. and Aerospace Med., Vol. 16, No. 4, Jul. - Aug. 1982 (JPRS-81599) 20 Aug. 1982 p 56-59 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 16, no. 4, Jul. - Aug. 1982 p 39-4
Avail: Issuing Activity

A group of test subjects was kept in a chamber in which the ammonia concentrations 5.1 + or - 0.05 mg/cu m and 2.1 + or - 0.1 mg/cu m were maintained for 17 and 31 days, respectively; on days 22 and 38 the ammonia concentration was increased to 9.3 + or - 0.1 mg/cu m. During this exposure the norphological composition (red blood cells, hemoglobin, reticulocytes, platelets, white blood cells and their various types), as well as the coagulative-anticoagulative system (factor 4 of platelets, index of blood clot retraction, recalcification time, thrombin time, ethanol and protamine sulphate paracoagulation test, fibrinogen degradation products, fibrinolytic activity, and fbrinogen and prothrombin content) were investigated. The parameters characterizing hemopoiesis and status of the coagulative-anticoagulative system did not show any significant changes. However, a slight decrease in the counts of leukocytes, neutrophils, and eosinophils is of concern, because in space flight resistance to different infections declines. Author

Smirnova *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 4, Jul. - Aug. 1982 (JPRS-81599) 20 Aug. 1982 p 79-87 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 16, no. 4, Jul. - Aug. 1982 p 52-58

Avail: Issuing Activity

Thyroid glands and C cells of Macaca rhesus were examined histologically, electron microscopically, and morphometrically. The examinations were performed on six intact and seven hypokinetic rhesus monkeys which were kept in a suspension device for two months, small cages for two months or in a head-down position (seven days in a horizontal position and then eleven days in a head-down position at -6 deg). The experiment with a diminished motor activity and a normal support function of the lower limbs (maintenance in small cages), in spite of its long duration, produced no structural changes in the parenchyma or C cells. The 18-day bed rest test was followed by a hypofunction of the thyroid gland, inhibition of hormonal synthesis, and secretion without distinct changes in C cells. Unlike previous experiments, the suspension study led to hyperplasia and hypertropy of C cells and increase of their nuclear volume. Activation of C cells can be regarded as an adaptive reaction aimed at stabilizing bone calcium. M.G.

Tenchova *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 4, Jul. - Aug. 1982 (JPRS-81599) 20 Aug. 1982 p 88-92 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 16, no. 4, Jul. - Aug. 1982 p 58-60

Avail: Issuing Activity

The effect of acceleration and adeturon, a radioprotector, on the content of nucleic acids and the count, composition and osmotic resistance of white and red blood cells was investigated. Male mice of the H strain were exposed to +20G sub x for 5 min. The above parameters were measured 1, 24, and 48 hours after the exposure. The nuclei acid content decreased significantly immediately after the exposure and tended to return to normal afterwards. The leucocyte count was increased during all observation periods, and the erythrocyte count was decreased 1 hour after the exposure. Osmotic resistance of white and red blood cells varied in a different manner after the exposure. Adeturon administered at optimal protective doses (300 mg/kg) modified regulatory mechanisms of the animal body. M.G.

**SIGNIFICANCE OF MAGNETIC FIELD PARAMETERS TO CHANGE IN EVOKED BIOELECTRIC ACTIVITY OF THE BRAIN**
N. P. Smirnova, L. D. Klimovskaya, and A. S. Dyakonov *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 4, Jul. - Aug. 1982 (JPRS-81599) 20 Aug. 1982 p 93-97 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 16, no. 4, Jul. - Aug. 1982 p 61-63

Avail: Issuing Activity

The effect of a constant uniform magnetic field of 0.1 to 1.6 T on the somatosensory potentials of the brain cortex and hypothalamus was investigated on nembutal anesthesized rats. The exposure increased the amplitude and modified the form of evoked potentials in both brain structures. The effect grew significantly with induction of the magnetic field. At every induction level changes in the evoked potentials of the hypothalamus were more distinct than those of the cortex. These findings were compared with the effects of a weakly pulsating magnetic field of the induction 0.1-0.4 T. Author

**CYTOGENETIC EFFECTS OF HIGH-ENERGY CHARGED PARTICLES**
R. D. Govorun, S. V. Vorozhtsova, and V. N. Gerasimenko *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 4, Jul. - Aug. (JPRS-81599) 20 Aug. 1982 p 98-102 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 16, no. 4, Jul. - Aug. 1982 p 64-67

Avail: Issuing Activity

The cytogenetic effects of irradiation were investigated in the bone marrow and corneal epithelium of mice, human white blood cells, and Stamm V79-4 cells of Chinese hamsters exposed to protons with energy = 9.2 GeV, deutons and helium ions with energy = 4.6 GeV/nucleon. It was demonstrated that with an increase in the irradiation dose the number of aberrant cells and chromosome aberrations grew. A high yield of exchange type aberrations was found. The proliferative activity of cells of bone marrow decreased and its depletion occurred. The relative biological effectiveness coefficients of high-energy particles varied from 1.3 to 2.7 in relation to the cell type and parameters measured. R.J.F.

**CYTOGENETIC EFFECTS OF HEAVY CHARGED PARTICLES OF GALACTIC COSMIC RADIATION IN EXPERIMENTS ABOARD COSMOS-1129 BIOSATELLITE**
L. V. Nevzgodina and Ye. N. Maksimova *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 4, Jul. - Aug. 1982 (JPRS-81599) 20 Aug. 1982 p 103-108 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 16, no. 4, Jul. - Aug. 1982 p 67-71
Avail: Issuing Activity

An experiment was carried out on lettuce (Lactuca sativa) seeds flown in a biocontainer equipped with plastic detectors to record heavy charged particles (HCP). The purpose of the experiment was to determine the yield of aberrant cells as a result of irradiation, and to identify this effect as a function of HCP topography in the seed. The cytogenetic examination of flight seedlings revealed a significant difference between the seeds which were hit with HCP and those that remained intact. This indicates a significant contribution of the heavy component of galactic cosmic radiation into the radiobiological effect. The relationship between the radiobiological effect and the HCP topography in the seed was established: zones of the root and stem meristem proved to be the most sensitive targets. Author

**RENIN-ANGIOTENSIN-ALDOSTERONE SYSTEM AND ELECTROLYTE METABOLISM IN RAT BLOOD AFTER FLIGHT ABOARD COSMOS-1129 BIOSATELLITE**
R. Kvetnansky, R. A. Tigranyan, A. Jindra, and T. A. Viting *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 4, Jul. - Aug. 1982 (JPRS-81599) 20 Aug. 1982 p 136-138 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 16, No. 4, Jul. - Aug. 1982 p 85-87

Blood plasma aldosterone concentration and renin activity were studied in rats flow in space on the Cosmos 1129 satellite using radioimmunoassay techniques. Immediately after the flight, the animals presented significant decreases in plasma renin activity, as compared to rats in the vivarium control and animals in the synchronous experiment. R.J.F.

**EPINEPHRINE AND NOREPINEPHRINE CONCENTRATIONS IN RAT CARDIAC VENTRICLES AND ATRIA AFTER FLIGHT ABOARD COSMOS-1129 BIOSATELLITE**
R. Kvetnansky and R. A. Tigranyan *In its* USSR Rept: Space Giol. and Aerospace Med., Vol. 16, No. 4, Jul. - Aug. 1982 (JPRS-81599) 20 Aug. 1982 p 139-142 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 16, no. 4, Jul. - Aug. 1982 p 87-89

Demonstrable concentrations of norepinephrine and epinephrine in tne four compartments of the myocardium of rats aboard the Cosmos 1129 satellite were analysed. Findings confirmed the hypothesis that there is elevation of the catecholamine level in the heart after spaceflights, probably due to the diminished functional load in weightlessness. Thus, this state is not a chronic stressor. However, some parts of the heart reacted to spaceflight by a drop in the norepinephrine level. R.J.F.

**A TRIMIX SATURATION DIVE TO 660 METERS: STUDIES OF COGNITIVE PERFORMANCE, MOOD AND SLEEP QUALITY**
Robert H. Logie and Alan D. Baddeley Mar. 1982 24 p refs
(RPN-2/82; BR83533) Avail: Issuing Activity

An He-O2-N2 (Trimix) gas mixture was tested. Data were obtained from two divers on cognitive performance tests (arithmetic ability, grammatical reasoning, perceptual speed, visuo-spatial manipulation and semantic processing) during a simulated dive to 660 msw. At maximum depth there is a severe blanket impairment of ability to perform any of the tests. At shallower depths, impairments are not as marked, with performance at 300 msw close to that measured at surface pressure. Sleep quality is disrupted throughout the dive, with one subject affected more than the other. Mood patterns vary less systematically, with large individual differences. Low correlations between sleep quality and performance indicate that performance decrements are due almost entirely to breathing Trimix at high pressure. Author (ESA)

(DE82-001337; LBL-12496; CONF-810862-2) Avail: NTIS HC A02/MF A01

A discussion of the failure of a report on lighting recommendations to explicitly consider cost-effectiveness is presented. It is argued that in visual performance experiments, accuracy is as much a function of the relative worth of speed and accuracy as it is of visibility. In a task that consists of subtasks, such as comparing two lists, it may be necessary to explicitly model the effect of each subtask's visibility on speed and accuracy. Finally changes in print may be significant in that they can lead to changes in visual performance without a corresponding change in visibility. The current Commission Internationale de L'Elairage (CIE) model for visual performace CIE 19/2, does not consider the above factors. Althought it is believed that the CIE model is not useful as an application model, it is felt that the general features of the visibility/visual performance relationship are clear and are important to lighting design. Particle accelerators and their uses in connection with medically-related research, diagnosis, and treatment are discussed. For cancer radiotherapy, nuclear particles including protons, neutrons, heavy ions, and negative pi mesons have advantages compared to conventional radiations in terms of dose localization and/or biological effectiveness. Clinical evaluations of these particles are underway at a number of institutions. Accelerator-produced radionuclides are in widespread use for research and routine diagnostic purposes. Elemental analysis techniques with charged particles and neutrons are being applied to bone, blood, and other tissues. Finally, low-dose medical imaging can be accomplished with accelerated protons and heavy ions. The status and future of these programs are discussed. DOE

**FLUID DISTRIBUTION IN PROGRESSIVE PULMONARY EDEMA: A LOW-TEMPERATURE SCANNING ELECTRON MICROSCOPY STUDY Ph.D. Thesis**

Gregory Ross Hook Jun. 1981 100 p refs
(Contract W-7405-eng-48)
(DE82-002554; LBL-11516) Avail: NTIS HC A05/MF A01

High pressure pulmonary edema, a common medical disorder caused by venous hypertension following left ventricular heart failure, is discussed. Abnormal fluid accumulation in the alveolar air spaces results in a life threatening loss of respiratory function. The primary component of the fluid is water and therefore the study of water distribution in the alveolus can provide insight into high pressure pulmonary edema pathology. The new method of freeze fracture low temperature scanning electron microscopy (SEM) developed and applied to the study of pulmonary edema. This method combines freeze fracture sample preservation with SEM observation and retains pulmonary fluids in the frozen hydrated state for direct three dimensional SEM imaging of alveoli. Quantitative measurements of alveolar structures resulting from high pressure pulmonary edema were made from SEM micrographs. From these measurements a model for alveolar fluid distribution resulting from progressive high pressure edema was made. DOE

**PROBABILISTIC METHODOLOGY FOR ESTIMATING RADIATION INDUCED CANCER RISK**

D. E. Dunning, Jr., R. W. Leggett, and L. R. Williams 1981 7 p
Presented at the ANS/ENS Topical Meeting on Probabilistic Risk Assessment, Port Chester, N.Y., 20 Sep. 1981
(Contract W-7405-eng-26)
(DE82-001474; CONF-810905-22) Avail: NTIS HC A02/MF A01

A computer code was developed to provide a versatile and convenient methodology for radiation risk assessment. The code allows as input essentially any dose pattern commonly encountered in risk assessments for either acute or chronic exposures, and this includes consideration of the age structure of the exposed population. Results produced by the analysis include the probability of one or more radiation-induced cancer deaths in a specified population, expected numbers of deaths, and expected years of life lost as a result of premature fatalities. These calculations include consideration of competing risks of death from all other causes. The program also generates a probability frequency distribution of the expected number of cancers in any specified cohort resulting from a given radiation dose. The methods may be applied to any specified population and dose scenario. DOE

**PRINCIPAL ELECTROCARDIOGRAPHIC ANOMALIES IN THE EVALUATION OF PILOTS [PRINCIPALES ANOMAIES ELECTROCARDIOGRAPHIQUES DANS L'EXPERTISE DU PERSONNEL NAVIGANT]**

R. Carre, A. Didier, and H. Ille *In* AGARD Noninvasine Tech. for Cardiovascular Exam. of Interest in Aerospace Med. May 1982 p 1-4 refs In FRENCH

Avail: NTIS HC A10/MF A01

The cardiovascular system is the sysem most influenced by stress during the flight of high performance aircraft such as the Mirage 2000 or 4000 type. Military regulations covering the physical fitness of pilots requires absolute organic and functional integrity of the circulatory system and an electrocardiogram with six peripheral and precordial derivations is obtained at each evaluation of pilots of such aircraft. Unfitness is easily pronounced for rhythm problems, flutter, auricular fibrillation, trouble in condition, complete right or complete left bundle branch block, and effects of myocardial infraction. Electrocardiograms are discussed with focus on: (1) rhythm irregularities; (2) incomplete right bundle branch block; (3) left axial deviations and their relation to the left anterior hemiblock concept; the Wolf Parkinson White syndrome; and (5) irregularities of ventricular polarization. **VENTRICULAR PREEXCITATION SYNDROMES [LES SYNDROMES DE PRE-EXCITATION VENTRICLAIRE]**

J. Droniou *In* AGARD Noninvasine Tech. for Cardiovascular Exam. of Interest in Aerospace Med. May 1982 p 15-25 refs In FRENCH
Avail: NTIS HC A10/MF A01

Ventricular preexcitations constitute a group of conduction anomalies involving the premature activation of all or part of the ventricule by normal sine wave excitation.They can be asymptomatic, reduced to their electrocardiograph signatures alone or complicated with arrhythmias, which are often serious. The asymptomatic forms are the source of difficulties in the evaluation of pilots for two reasons: certain electrocardiograph anomalies suggestive of preexcitation do not have an unambiguous signification, and the prognosis is not easily predicted. **CONTINUOUS ECG REGISTRATION ACCORDING TO THE HOLTER METHOD [ENREGISTREMENT CONTINU DE L'E.C.G. SELON LA METHODE DE HOLTER]**

G. Leguay and A. Seigneuric *In* AGARD Noninvasine Tech. for Cardiovascular Exam. of Interest in Aerospace Med. May 1982 p 67-86 refs In FRENCH

Avail: NTIS HC A10/MF A01

In 1949, Holter implemented a process which allows for the continuous recording of ECG's during ambulation. This process not only permits almost instantaneous knowledge of the electrical activity of the heart but also allows for modification of certain concepts, particularly with regards to arrhythmia. With constant improvement, this method presents two large centers of interest to cardiology: rhythm problems and the supervision of their treatment, and the repolarization problem. The technical modalities of the method are reviewed and implications for cardiology are summarized in order to suggest aspects of interest in aerospace medicine. Transl. by A.R.H.

**THE CONTRIBUTION OF CARDIAC MECHANOGRAMS IN THE EVALUATION OF PILOTS [APPORT DES MECANOGRAMMES CARDIAQUES DANS L'EXPERTISE DU PERSONNEL NAVIGANT]**

R. Carre, R. Amoretti, A. Didier, and H. Ille *In* AGARD Noninvasine Tech. for Cardiovascular Exam. of Interest in Aerospace Med. May 1982 p 93-112 In FRENCH

Avail: NTIS HC A10/MF A01

The idea of graphically registering carotid pulsations or the apexogram is not recent, having been used in the nineteenth century by Chaveau, Marey, and Maceray. If such recordings were valuable to physiologists, they have beon of little value to clinicians and experts on pilots. These nonbloody techniques are easily reproducible at each examination and tracings can be included in the pilot's file for comparison from one examination to another. Cardiac mechanograms provide three classes of information: (1) analysis of the heart murmur, indicates the variety of cardiopathology by phonocardiography; (2) the study of arterial distensibility by the carotidogram; and (3) chronocardiographic measure by the study of systolic intervals, permitting determination of the value of myocardial muscle contraction. Transl. by A.R.H.

**N82-31937#** Hopital d'Instruction des Armees, Paris (France).

**ECHOCARDIOGRAPHY IN THE EXAMINATION OF PILOTS [L'ECHOCARDIOGRAPHIE DANS L'EXPERTISE DU PERSONNEL NAVIGANT]**

J. Droniou and A. Coignard *In* AGARD Noninvasine Tech. for Cardiovascular Exam. of Interest in Aerospace Med. May 1982 p 113-143 In FRENCH

Avail: NTIS HC A10/MF A01

Echocardiography permits visualization of intracardiac structures thanks to the reflection of an ultrasonic beam by these structures. Introduced into the clinic in the 1950's, this technique has made an extraordinarily rapid advance, to the point of becoming an indispensable requirement in cardiologic examination. Its nonagressive character and its relative simplicity in operation, warrants repetition of the examination at will. Its sensitivity and reliability in experienced hands should give it an important place in the cardiological evaluation of pilots. Transl. by A.R.H.

**CONTRIBUTION OF NUCLEAR MEDICINE IN CARDIOLOGY [APPORT DE LA MEDECINE NUCLEAIRE EN CARDIOLOGIE]**

J. F. Gaillard *In* AGARD Noninvasine Tech. for Cardiovascular Exam. of Interest in Aerospace Med. May 1982 p 159-166 refs In FRENCH

Avail: NTIS HC A10/MF A01

Isotopic exploration techniques have a practically undeniable place among complementary cardiological examinations. In 1948 a radiocardiogram was introduced which recorded by external detection the dilution curve in cardiac cavities using a radioactive detector. Static scintigraphy appeared in 1964, and in the 1970's, the gamma camera was coupled with a computer to permit rapid dynamic studies with image processing. Benefitting from the same electronic progress and the same image reconstruction algorithm as tomodensitometry, gamma emission tomography obtained results in studies of vascularization and metabolism of the myocardium. Isotopic methods furnish data which, for the most part, were obtained only by bloody radiological explorations using the products of contrast and ultrasonics. Nuclear medicine is

interested in the noninvasine functional study of an organ and the possibility of quantifying organ function and of describing it by curves, graphics, and images. To the expert, nuclear medicine is important because of the noninvasive character of most of the techniques used. Those techniques having an invasive character which are excluded in the initial step in pilot evaluation are cited.

**THE ADVANTAGE OF THE LOWER BODY NEGATIVE PRESSURE TEST IN AEROSPACE MEDICINE [INTERET DU TEST LOSER BODY NEGATIVE PRESSURE EN MEDECINE AEROSPATIALE]**

B. Vettes and H. Viellefond *In* AGARD Noninvasine Tech. for Cardiovascular Exam. of Interest in Aerospace Med. May 1982 191-194 refs In FRENCH
Avail: NTIS HC A10/MF A01

The study of the physiopathological effects of weightlessness is not easy since these effects appear only when the human organism escapes the attractive forces of Earth. It is necessary to resort to simulation to examine the functions of the different physiological systems implicated. Simulation of the incidence of weightlessness on the cardiovascular system shows that physiopathological effects appear very early leading to a new distribution of blood volume. So-called orthostatic tests reveal interesting elements of hemodynamic response. The tests actually provide two classes of blood volume repartition conforming to that observed during prolonged space flight and during the return to Earth. Some tests such as those carried out on a tilt table during long duration bed rest involve modification of the posture of the entire organism. Other tests simulate the difference of ambient pressure between the upper nd lower parts of the body by creating a mobilization of the blood volume in regions where ambient pressure is weakest.

**EFFECT OF SYNTHESIZED PROPELLER VIBRATION ON PASSENGER ANNOYANCE IN A TURBOPROP INTERIOR NOISE ENVIRONMENT**

Sherman A. Clevenson Aug. 1982 20 p refs
(NASA-TM-84515; L-15298; NAS 1.15:84515) Avail: NTIS HC A02/MF A01 CSCL 05H

The effect of synthesized propeller vibration on passenger annoyance to aircraft noise was investigated in passenger ride quality apparatus. Passenger reactions of annoyance to a wide range of potential turboprop interior noise environments were obtained under three simulated vibration conditions: no vibration, armrest vibration, and armrest plus cabin vibration. The noises, ranging from 71 to 95 dB(A) consisted of a turbulent boundary layer with a factorial combination of five blade passage frequencies (50 to 200 Hz), two harmonic roll offs, and three tone to noise ratios. Results indicate that passenger annoyance to noise in the presence of armrest vibration did not significantly change. However, those passengers exposed to cabin plus armrest vibration while being exposed to noise lower rating for the combined cabin vibration and noise environment compared with the rating for the noise along environment. This result is predicted by the ride quality model.

**THE AIRLINE PILOT'S VIEW OF FLIGHT DECK WORKLOAD A PRELIMINARY STUDY USING A QUESTIONNAIRE**

G. A. Ellis and A. H. Roscoe Feb. 1982 26 p refs
(RAE-TM-FS(B)-465; BR83316) Avail: NTIS HC A03/MF A01

A self-administered questionnaire was distributed to 116 civil airline pilots in order to establish pilots' views on workload as a concept and from the viewpoint of their own flying task. Of the 98 questionnaires returned, 80% indicated that pilots think of workload as being related to effort. Several pilots differentiate between subjective and objective workload. The marked diversity

of opinion as to the workload associated with various tasks or flight phases, e.g., landing or radio communication, is highlighted.

White, green, and red monochromatic television phosphors are used in a variety of military display systems, without consideration to their potential effect on an operator's target recognition performance. Since display contrast is known to have a significant effect on target recognition performance, it was also included as a variable to examine possible interaction effects. Target recognition performance was operationally defined as the visual angle (degrees) subtended by a group target, viewed via a television, at the time of recognition. Each of the twelve subjects viewed five different types of targets at four diagonal orientations, each under six television display conditions. For each trial, the target (located in the center of the television) started small and unrecognizable, then slowly enlarged until it became recognizable. At the moment of recognition, the subject pressed a projector stop button and identified the target. The experimenter then measured the target's size. Results showed that color did not significantly affect subject's target recognition performance ($p = 0.25$). Contrast was highly significant ($p < 0.001$), thereby replicating several previous studies. There was no color by contrast interaction ($p = 0.70$), but targets and color by targets were significant ($p < 0.0001$ and $p < 0.02$, respectively). GRA

**AIRCREW WINDBLAST PROTECTION CONCEPTS, DEVELOPMENT AND EVALUATION Final Report, Oct. 1979 - Jun. 1980**
R. J. Cummings and W. J. Adams Wright-Patterson AFB, Ohio Aerospace Medical Research Lab. Mar. 1982 86 p refs
(Contract F33615-79-C-0528; AF Proj. 7231)
(AD-A115424; NA-80-390; AFAMRL-TR-80-123) Avail: NTIS HC A05/MF A01 CSCL 01/3

The problem of protecting aircrews from limb injuries during high-speed ejection is addressed. Design criteria, data, and evaluation techniques that were developed to support the selection of an appropriate windblast protection device concept for the F-15 and F-16 fighter aircraft are described in detail. Several alternate arm and leg-restraint systems were designed, fabricated, and evaluated as part of the research effort. Test fixtures were designed and fabricated to simulate (1) cockpit geometry, (2) force relationships between the seat and man, (3) deployment and retraction of restraints in 0.1 second, and (4) seat/man separation dynamics. The evaluation of restraint concept performance using the prototypes, evaluation plan, and test fixtures is described. The selection criteria to identify the best restraint designs are presented. A test and evaluation plan for airworthiness verification is described to aid follow-on engineering development efforts.

**LIFE-CYCLE COSTING OF LIFE SUPPORT EQUIPMENT Final Report, Apr. - Sep. 1980**
Clifford C. Petersen, Colin L. Moodie, Jack Posey, Gary Schulties, and Jhitang Chen Dec. 1981 78 p
(Contract F33615-78-C-0627; AF Proj. 7930)
(AD-A116404; SAM-TR-81-25) Avail: NTIS HC A05/MF A01 CSCL 06/11

A feasibility study has been accomplished on applying life-cycle costing (LCC) to aircrew life support equipment (LSE). The AFLC Logistics Support Cost (LSC) model was examined and found to be too complex for application to life support devices (LSD). A potentially useful simplification of the LSC model was developed and applied to the CRU-68 oxygen regulator and the FR139 and FR140 anti-G valves, but available logistics data were insufficient for these devices. An alternate model (LCC-LSD) was developed and applied with some success. The simpler computer program requires data much more accessible from the DO41, DO39, and DO62 data systems and has a plotting capability to graph LCC vs. changes in reliability or maintainability. Sensitivity analyses showed maintenance costs to be the key area where the U.S. Air Force could achieve significant savings (perhaps $15 million).

**SUPERVISORY CONTROL: PROBLEMS, THEORY AND EXPERIMENT FOR APPLICATION TO HUMAN-COMPUTER INTERACTION IN UNDERSEA REMOTE SYSTEMS Technical Report, 1 Feb. 1981 - 31 Jan. 1982**
Thomas B. Sheridan 1 Mar. 1982 144 p refs
(Contract N00014-77-C-0256; NR Proj. 196-158)
(AD-A116236) Avail: NTIS HC A07/MF A01 CSCL 17/2

This technical report provides an overview of a four-year theoretical and experimental research project on human-computer cooperation in remote control of undersea manipulators and vehicles. The report puts forth a theoretical framework for viewing supervisory control in terms of a hierarchical interaction of three fundamentally different types of control loops: (1) interaction of a human supervisor with a high level computer; (2) interaction between the high level and one or more low level computers; and (3) interaction of the low level computers with the environment as mediated through artificial sensors and effectors. The perspective is one of coordinated allocation of human and artificial resources to various functions at various levels and times within given tasks. Numerous problems are discussed in conjunction with human and computer cognition, display, command and control, matching capabilities to tasks and evaluation aspects. Experiments performed in our laboratory on human supervisory control of remote undersea manipulators, vehicles and dynamic processes are reviewed briefly in relation to the theoretical constructs. These draw upon already published detailed reports of each experiment. Author (GRA)

**THE BENCH MINING SYSTEM: PROGRESS IN TWO-DIMENSIONAL SIMULATION OF STEERING CHARACTERISTICS**
J. B. Edwards Mar. 1982 19 p
(RR-176) Avail: NTIS HC A02/MF A01

Computer programs which simulate the vertical steering characteristics of the thick seam bench mining system were adjusted, in order to eliminate unwanted penetration of the floor. A flow chart which describes program functions needed to obtain bench fit is presented. Results for a variety of floor profiles confirm the validity of the fitting routines, so these routines were incorporated into color graphics simulation programs. Effects of interaction between roof support and bench can be incorporated into the simulation routine. Roof support and roof beam fitting routines work well for chocks with a very short front extension, but less well for long based chocks.

**HIGH SPEED CYLINDRICAL ROLLER BEARING ANALYSIS. SKF COMPUTER PROGRAM CYBEAN. VOLUME 2: USER'S MANUAL Final Report**
G. J. Dyba and R. J. Kleckner Jun. 1981 147 p refs
(Contract NAS3-22690)
(NASA-CR-165364; NAS 1.26:165364; SKF-AT81D049-Vol-2)
Avail: NTIS HC A07/MF A01 CSCL 09B

CYBEAN (CYlindrical BEaring ANalysis) was created to detail radially loaded, aligned and misaligned cylindrical roller bearing performance under a variety of operating conditions. Emphasis was placed on detailing the effects of high speed, preload and system thermal coupling. Roller tilt, skew, radial, circumferential and axial displacement as well as flange contact were considered. Variable housing and flexible out-of-round outer ring geometries, and both steady state and time transient temperature calculations were enabled. The complete range of elastohydrodynamic contact considerations, employing full and partial film conditions were treated in the computation of raceway and flange contacts. The practical and correct implementation of CYBEAN is discussed. The capability to execute the program at four different levels of complexity was included. In addition, the program was updated to properly direct roller-to-raceway contact load vectors automatically in those cases where roller or ring profiles have small radii of curvature. Input and output architectures containing guidelines for use and two sample executions are detailed. R.J.F.

**RESEARCH REPORT: USER'S MANUAL FOR COMPUTER PROGRAM AT81Y003 SHABERTH. STEADY STATE AND TRANSIENT THERMAL ANALYSIS OF A SHAFT BEARING SYSTEM INCLUDING BALL, CYLINDRICAL AND TAPERED ROLLER BEARINGS Final Report**
G. B. Hadden, R. J. Kleckner, M. A. Ragen, and L. Sheynin May 1981 254 p refs
(Contract NAS3-22690)
(NASA-CR-165365; NAS 1.26:165365; SKF-AT81DO40) Avail: NTIS HC A12/MF A01 CSCL 09B

The SHABERTH program is capable of simulating the thermomechanical performance of a load support system consisting of a flexible shaft supported by up to five rolling element bearings. Any combination of ball, cylindrical, and tapered roller bearings can be used to support the shaft. The user can select models in calculating lubricant film thickness and traction forces. The formulation of the cage pocket/rolling element interaction model was revised to improve solution numerical convergence characteristics. S.L.

This report is a tutorial for learning graphics programming with the Graphics Compatibility System (GCS). GCS is a collection of ANSI standard FORTRAN subroutines invocable by a user's FORTRAN program. The report cover's GSC's capabilities. GSC can produce a simple line drawing or handle comprehensive general purpose axis creation and automatic clipped; arc and conic generation; graphics input; secondary coordinate systems; multiple software character fonts; data structures; segmentation; and color. The report addresses both two- and three-dimensional graphics capability within GCS. GRA

This paper suggests the use of an on-on computer time sharing system acting in the role of a communications facility serving a community of subscribers who pose problems and tender solutions to one another anonymously. Subscribers to the system may be categorized by professional or academic discipline. They may also be aligned through the creation of associations which the computer will recognize. Subscribers may direct their problems to members of select disciplines, associations or by general broadcast. The system is intended to work throught the mutual cooperation of its anonymous subscribers who are encouraged to make effective contributions by the mutual benefits to be gained as well as through a status based incentive system. (AD-A116070; RADC-TR-82-46) Avail: NTIS HC A06/MF A01 CSCL 09/2

In this investigation of the ability of ADA to support machine independent software, a library package of the elementary mathematical functions (sin, cos, en, etc.) was implemented and tested on the ADA/ED Compiler Version 11/4. The ADA language constructs proved quite useful and effective in creating the math function package. The programs were written and successfully syntax checked; however, flaws in this version of the compiler prevented a thorough debugging of these routines. The routines were designed to be machine and accuracy independent. Accuracy independence was obtained using variable length polynomials whose coefficients are computed (at compile time) from Chebyshev series. For increased efficiency, the normally machine dependent operations (bit picking) are isolated into subroutines that can be optimized for individual installations and hardware. Author (GRA)

**OPTICAL FIBER MULTIPLE SENSOR FOR GRIPPING COMPLEX OBJECTS**
Michel Defaux *In its* West Europe Rept.: Sci. and Technol., No. 99 (JRPS-80536) 9 Apr. 1982 p 30-31 Transl. into ENGLISH from L'Usine Nouvelle (France), 11 Feb. 1982 p 48-49

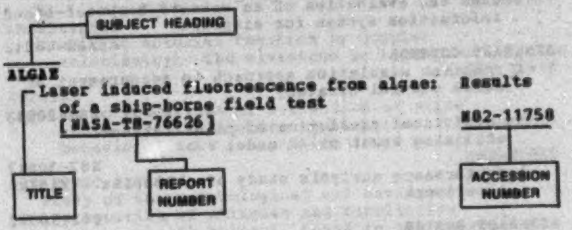
Avail: NTIS HC A04

The development of an experimental grip for industrial robots which provides a sense of touch is announced. Multiple fiber optic sensors (Stafo) are integrated into the structure of the three fingers of the grip. Grasping tests on simple and complex geometrical shapes, and on deformable and fragile objects, incuding eggs, were performed. The grip was designed for use in the assembly of small parts (1 cu decimeter and 1 kg) such as are used in household appliances. J.D.

# SUBJECT INDEX

**AEROSPACE MEDICINE AND BIOLOGY** / *A Continuing Bibliography (Suppl. 239)* , **DECEMBER 1982**

## Typical Subject Index Listing



The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

[NASA-SP-7037(148)] N82-30917
Aerospace Medicine and Biology: A continuing bibliography with indexes
[NASA-SP-7011(234)] N82-31922

BINOCULAR VISION
An analysis and modeling of the binocular system in human sagittal vision --- French thesis
A82-42090

Threshold models of spatial vision
A82-43230

Absence of depth processing in the large-frame rod-and-frame effect --- human space perception
A82-44823

Inhibition of the rod-and-frame effect by circular contours --- human depth perception
A82-44824

BIOACOUSTICS
An on-line procedure for the extraction of acoustically evoked potentials from the electroencephalogram --- German thesis
A82-41688

BIOASSAY
Investigation on the carcinogenic effect of trichlorethylene by inhalation and mechanisms of metabolic bioactivation
[BMFT-FB-HA-82-007] N82-30933

BIOASTRONAUTICS
Medical monitoring and therapy of space motion sickness
[IAF PAPER 82-169] A82-44684
The first joint Franco-Soviet manned flight - The posture experiment
[IAF PAPER 82-183] A82-44689
USSR report: Space Biology and Aerospace Medicine, volume 16, no. 4, July - August 1982
[JPRS-81599] N82-31892

BIOCHEMISTRY
The influence of afferent visual impulses on the morphological and biochemical parameters of the development of the neurons of the visual, motor, and parietal cerebral cortices
A82-42636

Regulation of circadian rhythmicity
A82-43383

Distinctions of nervous system reactions to artificially intensified magnetic fields
N82-30902

USSR report. Life sciences: Biomedical and behavioral sciences, no. 19
[JPRS-81442] N82-30935

BIOCLIMATOLOGY
Principles of biological and medical climatology --- Russian book
A82-42065

Study of the morphological and biological properties of obligate and facultative psychrophylic bacteria found in the Antarctic
A82-43671

BIOCONTROL SYSTEMS
The contraction, regulation, and functional role of lymph vessels
A82-42603

A morphological investigation of the regulatory mechanisms of the intracerebral blood circulation
A82-42627

Computer simulation of respiratory control system
A82-43145

Regulation of circadian rhythmicity
A82-43383

The intracentral connections of the brain structures participating in cardiovascular control
A82-43627

The role of the integrity of the central synaptic and direct influences in the regulation of hemodynamics
A82-43628

The adaptive control of vegetative processes --- biofeedback control of cardiovascular system
A82-43652

Factors inducing periodic breathing in humans - A general model
A82-44140

BIODYNAMICS
An investigation of the mechanical meaning of the surface electromyogram --- French thesis
A82-42078

The relationship between postural components and voluntary movement
A82-43239

Internal stresses and contractility of myocardium
A82-43513

A software package for evaluating the transmissibility between vehicle vibration and motions of hands (in controls), limb, head and eyes
N82-30853

Status and prospects of research on biological and therapeutic effects of magnetic fields
N82-30901

Diffusion mediated localization on membrane surfaces
[NASA-CR-166386] N82-31880
Geometrical considerations in the separation of biological particles by affinity partitioning
N82-32069

BIOELECTRIC POTENTIAL
An investigation of the mechanical meaning of the surface electromyogram --- French thesis
A82-42078

Brain-stem auditory evoked potentials in persons with normal hearing
A82-43234

The role of the extrapolation and dynamic stereotype in the mechanism of the formation and improvement of adequate motor coordination
A82-43651

The mechanism of the activating effect of anti-cardiac antibodies on the electrical and contractile activity of myocardial cells A82-43665

BIOELECTRICITY

Hyperacuity and interpolation by the visual pathways A82-43100

Psychophysical characteristics of perception and bioelectric activity of the brain during micropolarization of the occipital part of the hemispheres A82-43235

The effect of drugs altering the exchange of cAMP on the bioelectrogenesis of skeletal muscles A82-43653

A cortically implantable multielectrode array for investigating the mammalian visual system [AD-A115484] N82-30931

BIOINSTRUMENTATION

Investigation of behaviorally modified rats for use in explosives detection systems [AD-A114632] N82-30895

BIOLOGICAL EFFECTS

The influence of prostaglandins and polyunsaturated fatty acids on the corticosteroid metabolism of normal and spontaneously hypertensive rats A82-42174

A systems analysis of individual vascular reactions in animals under experimentally induced emotional stress A82-42610

Experimental study of the combined effect of noise and acetone A82-42612

Comparative analysis of the biological effects of electromagnetic radiation. II - Eye damage. Cataractogenesis A82-43222

The mechanism of the activating effect of anti-cardiac antibodies on the electrical and contractile activity of myocardial cells A82-43665

Possible adaptation to strong magnetic fields --- by animals [IAF PAPER 82-188] A82-44690

Indices of the rat central nervous system metabolism during 36- and 60-day hypokinesia [NASA-TM-76870] N82-30883

Status and prospects of research on biological and therapeutic effects of magnetic fields N82-30901

Mechanism of biological effects of magnetic fields N82-30903

Effects of low-frequency (50 Hz) electric fields on animals of different ages N82-30910

Meteorological radar as source of SHF electromagnetic field energy and problems of environmental hygiene N82-30911

Effects of microwave radiation on mouse hemopoietic stem cells and on animal resistance to ionizing radiation N82-30912

Main directions of Soviet research on biological effects of microwave radiation N82-30914

Cytogenetic and gonadotoxic effects of static electric fields N82-30915

Effects of superhigh frequency electromagnetic fields on animals of different ages N82-30916

Efficacy of cimetidin in the prevention of ulcer formation in the stomach during immobilization stress [NASA-TM-76864] N82-30923

USSR report: Space Biology and Aerospace Medicine, volume 16, no. 4, July - August 1982 [JPRS-81599] N82-31892

Effects of +G sub z acceleration and adeutron on nuclei acid content and other parameters of mouse peripheral blood N82-31909

Aerospace Medicine and Biology: A continuing bibliography with indexes [NASA-SP-7011(234)] N82-31922

BIOLOGICAL MODELS (MATHEMATICS)

An examination of heat exchanges in man - Establishment of a reference technique for measuring average cutaneous temperatures using infrared thermometry --- French thesis A82-42080

An analysis and modeling of the binocular system in human sagittal vision --- French thesis A82-42090

Analysis of load characteristics and development of new indicators of cardiac function A82-42606

Computer simulation of respiratory control system A82-43145

Threshold models of spatial vision A82-43230

BIOLOGY

Aerospace Medicine and Biology: A continuing bibliography with indexes [NASA-SP-7011(234)] N82-31922

BIOMAGNETISM

Possible adaptation to strong magnetic fields --- by animals [IAF PAPER 82-188] A82-44690

BIOMEDICAL DATA

Principles of biological and medical climatology --- Russian book A82-42065

Diagnostic use of enzymatic test in experiments on monkeys N82-31915

Continuous ECG registration according to the Holter method N82-31934

BIOMETRICS

Percutaneous measurement of partial oxygen tension and local blood flow in man during orthostatic test N82-31904

Diagnostic use of enzymatic test in experiments on monkeys N82-31915

The advantage of the tilt table test in examining circulatory function N82-31941

BIONICS

Computer simulation of respiratory control system A82-43145

USSR report. Life sciences: Biomedical and behavioral sciences, no. 19 [JPRS-81442] N82-30935

BIOSATELLITES

Catecholamines and their enzymes in discrete brain areas of rats after space flight on biosatellites Cosmos [IAF PAPER 82-180] A82-44688

BIOSYNTHESIS

The effect of a physiological load on the exchange and phosphorylation of cell membrane proteins in the brain of rats A82-43654

Polyamines and plant stress - Activation of putrescine biosynthesis by osmotic shock A82-44450

BIOTECHNOLOGY

The role of antagonist coactivation in the control of natural movement N82-30867

USSR report. Life sciences: Biomedical and behavioral sciences, no. 19 [JPRS-81442] N82-30935

BLOCKING

Microcirculatory state in the case of chronic obliteration of arteries A82-42626

BLOOD

Changes in the transaminase activity and several biochemical blood values in the acute period of experimental myocardial infarction in monkeys A82-42172

The interrelationship of the function of the blood kallikrein-kinin system with the main parameters of central hemodynamics during hypertension A82-42175

Some potential blood flow experiments for space [UE-3490-1720] N82-32068

BLOOD CIRCULATION

Features and variations of the local hematocrit A82-42601

Blood circulation and aging
A82-42609
Biomicroscopy of a microcirculatory bed in experiments - Possibilities, limitations, and prospects
A82-42611
Microcirculation during acute blood loss and hypoxia
A82-42997
Liver microcirculation in normoxia and hypoxia
A82-43638
Regional redistributions of the blood in blood loss and mechanical trauma against the background of various functional states of the body
[NASA-TM-76880] N82-30872
Dehydration therapy for subjects exposed to simulated spaceflight conditions
N82-31897
The advantage of the tilt table test in examining circulatory function
N82-31941
Some potential blood flow experiments for space
[UR-3490-1720] N82-32060

BLOOD COAGULATION
Morphology and coagulant function of human blood system during long exposure to low ammonia concentrations in a sealed environment
N82-31903

BLOOD FLOW
Circulation and energetics of forearm muscles in man
A82-42604
Effect of exercise conditioning on coronary resistance
A82-44139
Percutaneous measurement of partial oxygen tension and local blood flow in man during orthostatic test
N82-31904
Noninvasive techniques for cardiovascular examination of interest in aerospace medicine
[AGARD-AG-277(FR)] N82-31930
Examining arterial function by Doppler velocimetry: The advantage in aerospace medicine
N82-31938

BLOOD PLASMA
Effect of dosed physical loading on plasma and liver lipids and lipoproteins in rats
A82-43045
Effect of restricted mobility on the composition and metabolism of blood lipoproteids in rabbits
[NASA-TM-76846] N82-30871
Catecholamines in the blood plasma of August and Wistar rats during emotional stress
[NASA-TM-76872] N82-30885
Changes of blood plasma renin activity in August and Wistar rats under emotional stress
[NASA-TM-76873] N82-30886
Renin-angiotensin-aldosterone system and electrolyte metabolism in rat blood after flight aboard Cosmos-1129 biosatellite
N82-31918
Rat blood plasma corticosterone after flight aboard Cosmos-1129 biosatellite
N82-31920

BLOOD PRESSURE
A systems analysis of individual vascular reactions in animals under experimentally induced emotional stress
A82-42610
The state of hemodynamics under the effect of laser radiation
A82-42613
The interrelationship between the pressor response and energy metabolism during isometric muscle contractions
A82-43636
Effect of prolonged hypokinesia on resistance of resistive vessels in rats
[NASA-TM-76849] N82-30878
Catecholamines in the blood plasma of August and Wistar rats during emotional stress
[NASA-TM-76872] N82-30885
Changes of blood plasma renin activity in August and Wistar rats under emotional stress
[NASA-TM-76873] N82-30886

BLOOD VESSELS
Features and variations of the local hematocrit
A82-42601
The coronary vessels and the contractile apparatus of the myocardium in immune heart damage /Histochemical and ultrastructural studies/
A82-42605
Biomicroscopy of a microcirculatory bed in experiments - Possibilities, limitations, and prospects
A82-42611
The responses of the coronary vessels in dogs to hypothalamic stimulation in acute and chronic experiments
A82-43634
Conjugated changes of the resistance and blood filling of cerebral vessels during shifts in the blood gas composition
A82-43635
The interaction of Purkinje cells, capillaries and glia in the cerebellar cortex of normal and hypokinetic cats
[NASA-TM-76882] N82-30873

BLOOD VOLUME
The dynamics of the development of postischemial cerebrovascular phenomena during the perfusion of the cerebral vessels with a stable volume of blood
A82-42173
Microcirculation during acute blood loss and hypoxia
A82-42997

BLOOD-BRAIN BARRIER
An experimental study of the human blood-cerebral barrier using scanning electron microscopy
A82-42638

BODY COMPOSITION (BIOLOGY)
Features and variations of the local hematocrit
A82-42601

BODY MEASUREMENT (BIOLOGY)
Morphological features of the individual structure of the human brain
A82-42637

BODY TEMPERATURE
The role of the extrapolation and dynamic stereotype in the mechanism of the formation and improvement of adequate motor coordination
A82-43651
Head cooling and heat
A82-44292

BODY VOLUME (BIOLOGY)
Temperature effects on lung mechanics in air- and liquid-filled rabbit lungs
A82-44134

BONE MARROW
Cytogenetic effects of high-energy charged particles
N82-31911

BONES
Stereological analysis of rat bone tissue after flight aboard Cosmos-1129 biosatellite
N82-31906

BRADYCARDIA
Functional means for the regulation of heart rhythm during burst stimulation of the vagus nerves
A82-43632
The participation of the hypothalamus in the regulation of parasympathetic cardiac reflexes in unanesthetized cats
A82-43633

BRAIN
Features of information processing in the right and left hemispheres of the human brain /A survey of the literature/
A82-42632
Functional conditions of the brain and cerebral pathology
A82-42634
Morphological features of the individual structure of the human brain
A82-42637
Catecholamines and their enzymes in discrete brain areas of rats after space flight on biosatellites Cosmos
[IAF PAPER 82-180] A82-44680
Effect of immobilization stress on diacyl- and plasmalogen-derivatives of phospholipids in various rat organs and tissues
[NASA-TM-76852] N82-30891
Chromatin of rat brain neurons and nucleic acids of muscles as related to localization of decimeter waves during exercise
N82-30900

BRAIN CIRCULATION
The dynamics of the development of postischemial cerebrovascular phenomena during the perfusion of the cerebral vessels with a stable volume of blood
A82-42173

Studies directed toward improving hygienic standards pertaining to total-body vibration resulting from heavy moving equipment
A82-42619

A morphological investigation of the regulatory mechanisms of the intracerebral blood circulation
A82-42627

An experimental study of the human blood-cerebral barrier using scanning electron microscopy
A82-42630

Conjugated changes of the resistance and blood filling of cerebral vessels during shifts in the blood gas composition
A82-43635

Regional hemodynamic changes after spaceflights lasting up to eight days
N82-31895

BRAIN DAMAGE
Stereological analysis of interneuronal contacts in the cerebral cortex of rats during the posthypoxic period
A82-42622

Changes of the functional condition of the neocortex during direct application of optical radiation
A82-43655

BRAIN STEM
Brain-stem auditory evoked potentials in persons with normal hearing
A82-43234

BRONCHI
The anatomy and topography of the human bronchopulmonary lymph nodes
A82-42624

BUOYANCY
Space telescope neutral buoyancy simulations: The first two years
[NASA-TM-82485] N82-30942

C

CAFFEINE
The effect of drugs altering the exchange of cAMP on the bioelectrogenesis of skeletal muscles
A82-43653

CALCIUM METABOLISM
Morphological distinctions of Macaca rhesus monkey thyroid under normal and various types of hypokinetic conditions
N82-31908

CAMERAS
Medical thermography with a pyroelectric vidicon camera
[RSRE-3365] N82-30921

CANCER
Probabilistic methodology for estimating radiation induced cancer risk
[DE82-001474] N82-31929

CAPILLARIES (ANATOMY)
Biomicroscopy of a microcirculatory bed in experiments - Possibilities, limitations, and prospects
A82-42611

The interaction of Purkinje cells, capillaries and glia in the cerebellar cortex of normal and hypokinetic cats
[NASA-TM-76882] N82-30873

Changes in transcapillary metabolism in patients with chronic venous insufficiency of legs under influence of static magnetic fields
N82-30907

CARBOHYDRATE METABOLISM
Effects of beta-adrenergic receptor blockade on glycogenolysis during exercise
A82-44133

Regulation of glycogenolysis in human muscle at rest and during exercise
A82-44144

CARBON DIOXIDE
Position paper: The toxic effects of chronic exposure to low levels of carbon dioxide
[AD-A115053] N82-30930

CARCINOGENS
Biological availability of nickel arsenides: Toxic effects of particulate Ni5As2
[DE82-000580] N82-30932

Investigation on the carcinogenic effect of trichlorethylene by inhalation and mechanisms of metabolic bioactivation
[BMFT-FB-HA-82-007] N82-30933

CARDIAC AURICLES
The topography of elements of the cardiac conduction system
A82-42625

CARDIAC VENTRICLES
The topography of elements of the cardiac conduction system
A82-42625

Internal stresses and contractility of myocardium
A82-43513

The mechanisms of the development of the cardiogenic vagosympathetic reflexes
A82-43631

Ventricular preexcitation syndromes
N82-31932

CARDIOGRAPHY
Noninvasive techniques for cardiovascular examination of interest in aerospace medicine
[AGARD-AG-277(FR)] N82-31930

Cybernetic analysis of cardiac rhythm of Salyut-6 orbital station crew during graded exercise test
N82-32282

CARDIOLOGY
Heart antigens
A82-43666

Effect of prolonged hypokinesia on resistance of resistive vessels in rats
[NASA-TM-76849] N82-30878

The exercise electrocardiogram
N82-31933

Contribution of nuclear medicine in cardiology
N82-31939

CARDIOVASCULAR SYSTEM
Blood circulation and aging
A82-42609

The condition of the cardiovascular system in air traffic controllers according to data acquired at the workplace
A82-42614

The intracentral connections of the brain structures participating in cardiovascular control
A82-43627

The adaptive control of vegetative processes --- biofeedback control of cardiovascular system
A82-43652

Regional redistributions of the blood in blood loss and mechanical trauma against the background of various functional states of the body
[NASA-TM-76880] N82-30872

Influence of stress on the blood system reaction in adrenalectomized mice
[NASA-TM-76902] N82-30877

Reaction of the blood system to single and double effect of a stress agent
[NASA-TM-76866] N82-30880

Emotional stress as a factor in cardiovascular disturbances
[NASA-TM-76910] N82-30889

Genetic and individual differences in cardiovascular disturbances of rats during experimental emotional stress
[NASA-TM-76911] N82-30890

Possible use of magnetobiological effects in neurosurgery
N82-30905

Detailed research plan: Cardiovascular effects of noise
[PB82-163379] N82-30934

Morphology and coagulant function of human blood system during long exposure to low ammonia concentrations in a sealed environment
N82-31903

Noninvasive techniques for cardiovascular examination of interest in aerospace medicine
[AGARD-AG-277(FR)] N82-31930

Principal electrocardiographic anomalies in the evaluation of pilots
N82-31931

The contribution of cardiac mechanograms in the evaluation of pilots N82-31936

Echocardiography in the examination of pilots N82-31937

Ballistocardiography: A noninvasive method moving towards clinical applications N82-31940

The advantage of the lower body negative pressure test in aerospace medicine N82-31942

Techniques for cardiovascular examination in human centrifuges and the principal results obtained N82-31943

Cybernetic analysis of cardiac rhythm of Salyut-6 orbital station crew during graded exercise test N82-32202

CAROTID SINUS BODY

The intracentral connections of the brain structures participating in cardiovascular control A82-43627

CATARACTS

Comparative analysis of the biological effects of electromagnetic radiation. II - Eye damage. Cataractogenesis A82-43222

CATECHOLAMINES

Effects of beta-adrenergic receptor blockade on glycogenolysis during exercise A82-44133

Catecholamines and their enzymes in discrete brain areas of rats after space flight on biosatellites Cosmos [IAF PAPER 82-180] A82-44688

Catecholamines in the blood plasma of August and Wistar rats during emotional stress [NASA-TM-76872] N82-30885

Changes of blood plasma renin activity in August and Wistar rats under emotional stress [NASA-TM-76873] N82-30886

Activity of rat adrenal medula after flight aboard Cosmos-1129 biosatellite N82-31905

CELLS (BIOLOGY)

The mechanism of the activating effect of anti-cardiac antibodies on the electrical and contractile activity of myocardial cells A82-43665

Glucocorticoid receptors and metabolic disturbances in the (rat) liver and heart during immobilization [NASA-TM-76874] N82-30887

Diffusion mediated localization on membrane surfaces [NASA-CR-166306] N82-31088

Morphological distinctions of Macaca rhesus monkey thyroid under normal and various types of hypokinetic conditions N82-31908

CENTER OF GRAVITY

The relationship between postural components and voluntary movement A82-43239

CENTRAL NERVOUS SYSTEM

Functional conditions of the brain and cerebral pathology A82-42634

Indices of the rat central nervous system metabolism during 36- and 60-day hypokinesia [NASA-TM-76870] N82-30883

Possible use of magnetobiological effects in neurosurgery N82-30905

Main directions of Soviet research on biological effects of microwave radiation N82-30914

Regional hemodynamic changes after spaceflights lasting up to eight days N82-31895

CENTRIFUGING STRESS

Techniques for cardiovascular examination in human centrifuges and the principal results obtained N82-31943

CEREBELLUM

The effect of a physiological load on the exchange and phosphorylation of cell membrane proteins in the brain of rats A82-43654

CEREBRAL CORTEX

Stereological analysis of interneuronal contacts in the cerebral cortex of rats during the posthypoxic period A82-42622

A morphological investigation of the regulatory mechanisms of the intracerebral blood circulation A82-42627

Functional conditions of the brain and cerebral pathology A82-42634

The influence of afferent visual impulses on the morphological and biochemical parameters of the development of the neurons of the visual, motor, and parietal cerebral cortices A82-42636

The morphology of the connections of the cortical vestibular zone --- Russian book A82-43611

Changes of the functional condition of the neocortex during direct application of optical radiation A82-43655

The interaction of Purkinje cells, capillaries and glia in the cerebellar cortex of normal and hypokinetic cats [NASA-TM-76882] N82-30873

Reaction to hypokinesia and hyperkinesia of somatochrome neurons in the motor zone of the cerebral cortex in rabbits [NASA-TM-76885] N82-30925

Significance of magnetic field parameters to change in evoked bioelectric activity of the brain N82-31910

CEREBRAL VASCULAR ACCIDENTS

The dynamics of the development of postischemial cerebrovascular phenomena during the perfusion of the cerebral vessels with a stable volume of blood A82-42173

CEREBROSPINAL FLUID

An experimental study of the human blood-cerebral barrier using scanning electron microscopy A82-42638

CEREBRUM

The dynamics of the development of postischemial cerebrovascular phenomena during the perfusion of the cerebral vessels with a stable volume of blood A82-42173

The organization of the afferent subcortical inputs of the visual region of the cat cerebrum A82-42621

Conjugated changes of the resistance and blood filling of cerebral vessels during shifts in the blood gas composition A82-43635

CHANNELS (DATA TRANSMISSION)

SNLA host-to-host transfer system [DE82-000089] N82-31925

CHARGED PARTICLES

Cytogenetic effects of heavy charged particles of galactic cosmic radiation in experiments aboard Cosmos-1129 biosatellite N82-31912

CHEMICAL EVOLUTION

Laboratory simulation of interstellar chemical evolution A82-41665

Planetary atmospheres and the search for life [IAF PAPER 82-268] A82-44700

CHEMORECEPTORS

Aortic body chemoreceptor responses to dopamine, haloperidol, and pargyline A82-44136

CHLORIDES

Investigation on the carcinogenic effect of trichlorethylene by inhalation and mechanisms of metabolic bioactivation [BMFT-FB-HA-82-007] N82-30933

CHLOROETHYLENES

Investigation on the carcinogenic effect of trichlorethylene by inhalation and mechanisms of metabolic bioactivation [BMFT-FB-HA-82-007] N82-30933

CHOLESTEROL

Effect of restricted mobility on the composition and metabolism of blood lipoproteids in rabbits [NASA-TM-76846] N82-30871

CHOLINERGICS
The effectiveness of neurohumoral influences on pulmonary circulation
A82-42607

CIRCADIAN RHYTHMS
Regulation of circadian rhythmicity
A82-43303

CIRCULATORY SYSTEM
Changes in peripheral circulation of limbs during bone regeneration under influence of low-frequency magnetic fields
N82-30906
The exercise electrocardiogram
N82-31933
The advantage of the tilt table test in examining circulatory function
N82-31941

CLASSIFICATIONS
Classification of pathological states of the stato-kinetic /vestibular/ analyzer
A82-42630

CLASSIFYING
Principles of the definition and classification of tissues
A82-42620

CLEANING
Biofouling countermeasure evaluations for OTEC heat exchangers
[DE82-003918] N82-30896

CLINICAL MEDICINE
Thermography and microwave heating - The design and fabrication of systems intended for biological and medical use --- French thesis
A82-42087
USSR report: Life sciences. Effects of nonionizing electromagnetic radiation, no. 6
[JPRS-81300] N82-30899
Efficacy of cimetidin in the prevention of ulcer formation in the stomach during immobilization stress
[NASA-TM-76868] N82-30923
Effect of optokinetic stimulation on operator's functional state and professional work capacity
N82-31896
Implantable, remotely-programmable insulin infussion system
[DE82-003084] N82-31927
Ballistocardiography: A nonintrusive method moving towards clinical applications
N82-31940

CLOSED ECOLOGICAL SYSTEMS
Algal culture studies related to a Closed Ecological Life Support System (CELSS)
[NASA-CR-166375] N82-30943
Workshop on Closed System Ecology
[NASA-CR-169280] N82-31887

CLOUDS
Aircrew ionizing doses from radioactive dust cloud generated by nuclear burst
[AD-A115541] N82-30929

COATINGS
Coatings for the prevention of macrofouling in the OTEC program
[DE82-003230] N82-30897

COGNITION
Cognitive performance, sleep quality and mood during deep oxy-helium diving
[ENP-1/81] N82-30920

COLD ACCLIMATIZATION
Analysis of methods for evaluating thermal stress --- effects on human beings
A82-42994
Thermogenesis and muscle activity during the adaptation to cold --- Russian book
A82-43610
Hormone response of normal and intermittent cold-preadapted humans to continuous cold
A82-44137

COLD TOLERANCE
Hormone response of normal and intermittent cold-preadapted humans to continuous cold
A82-44137

COLOR CODING
Color coding of information on electronic display devices --- German thesis
A82-41601
The effects of color and contrast on target recognition performance using monochromatic television displays
[AD-A116238] N82-31946

COMBAT
Aerial combat simulation in the U.S. Air Force
A82-42794

COMFORT
Vibration and comfort. I - Translational seat vibration
A82-42829
Vibration and comfort. II - Rotational seat vibration
A82-42830
Vibration and comfort. III - Translational vibration of the feet and back. IV - Application of experimental results
A82-43674

COMMAND AND CONTROL
A command and control device for a man-machine system - Fabrication of a platform and trials --- French thesis
A82-41699
Proceedings of the Sixteenth Annual Conference on Manual Control
[NASA-CR-169243] N82-30833
Supervisory control: Problems, theory and experiment for application to human-computer interaction in undersea remote systems
[AD-A116236] N82-31949

COMPARISON
A comparison of display formats for the electronic master monitor and advisory display system
[AD-A115127] N82-30946

COMPUTER ASSISTED INSTRUCTION
Logistics support productivity improvement
A82-42196
Training and personnel impact on increased productivity
A82-42230

COMPUTER NETWORKS
SNLA host-to-host transfer system
[DE82-000089] N82-31925

COMPUTER PROGRAMS
A software package for evaluating the transmissibility between vehicle vibration and motions of hands (in controls), limb, head and eyes
N82-30853
Human factors and robotics: Current status and future prospects
[AD-A115042] N82-30945
Probabilistic methodology for estimating radiation induced cancer risk
[DE82-001474] N82-31929
Life-cycle costing of life support equipment
[AD-A116404] N82-31948

COMPUTER SYSTEMS DESIGN
Design and evaluation of an onboard computer-based information system for aircraft
A82-44512

COMPUTER TECHNIQUES
An on-line procedure for the extraction of acoustically evoked potentials from the electroencephalogram --- German thesis
A82-41688
Information automation and the Apollo program - A retrospective
A82-44513

COMPUTERIZED SIMULATION
Aerial combat simulation in the U.S. Air Force
A82-42794
Computer simulation of respiratory control system
A82-43145

CONCENTRATION (COMPOSITION)
Biological availability of nickel arsenides: Toxic effects of particulate Ni5As2
[DE82-000580] N82-30932
Epinephrine and norepinephrine concentrations in rat cardiac ventricles and atria after flight aboard Cosmos-1129 biosatellite
N82-31919

CONFERENCES
Proceedings of the Sixteenth Annual Conference on Manual Control
[NASA-CR-169243] N82-30833
Workshop on Closed System Ecology
[NASA-CR-169280] N82-31887

CONSCIOUSNESS
Systemic mechanisms of human subconscious activity
N82-30938

CONSTRICTIONS
Effect of prolonged hypokinesia on resistance of resistive vessels in rats
[NASA-TM-76849] N82-30878

CONTACT POTENTIALS
Ear-nose-throat electrodiagnostic device for determining the rheobase of human mucosa and skin
A82-42629

CONTRACTION
An investigation of the mechanical meaning of the surface electromyogram --- French thesis
A82-42078

The coronary vessels and the contractile apparatus of the myocardium in immune heart damage /Histochemical and ultrastructural studies/
A82-42605

Analysis of load characteristics and development of new indicators of cardiac function
A82-42606

The interrelationship between the pressor response and energy metabolism during isometric muscle contractions
A82-43636

Seismocardiographic evaluation of contractile function of the myocardium of hypokinetic rats
N82-31902

CONTROL SIMULATION
Computer simulation of respiratory control system
A82-43145

Combined discrete network continuous control modelling of operator behavior
N82-30861

CONTROLLABILITY
A model based technique for predicting pilot opinion ratings for large commercial transports
N82-30846

An analytical prediction of pilot ratings utilizing human pilot model
N82-30847

CORIOLIS EFFECT
The dynamics of certain psychophysiological indicators under the cumulative effect of Coriolis accelerations
A82-42995

CORNEA
Cytogenetic effects of high-energy charged particles
N82-31911

CORONARY CIRCULATION
The coronary vessels and the contractile apparatus of the myocardium in immune heart damage /Histochemical and ultrastructural studies/
A82-42605

The responses of the coronary vessels in dogs to hypothalamic stimulation in acute and chronic experiments
A82-43634

Effect of exercise conditioning on coronary resistance
A82-44139

CORTICOSTEROIDS
The influence of prostaglandins and polyunsaturated fatty acids on the corticosteroid metabolism of normal and spontaneously hypertensive rats
A82-42174

Influence of stress on the blood system reaction in adrenalectomized mice
[NASA-TM-76902] N82-30877

Glucocorticoid receptors and metabolic disturbances in the (rat) liver and heart during immobilization
[NASA-TM-76874] N82-30887

Specific cytoplasmic glucocorticoid receptors of rat liver under conditions of immobilization stress
[NASA-TM-76863] N82-30893

Specific cytoplasmic glucocorticoid receptors of the rat liver during immobilization stress
[NASA-TM-76869] N82-30894

Rat blood plasma corticosterone after flight aboard Cosmos-1129 biosatellite
N82-31920

COSMIC RAYS
Interpretation of Viking biology experiments
A82-43221

Cytogenetic effects of heavy charged particles of galactic cosmic radiation in experiments aboard Cosmos-1129 biosatellite
N82-31912

COSMONAUTS
Main directions and principles of psychological expertise of cosmonauts
N82-31893

COST ESTIMATES
Life-cycle costing of life support equipment
[AD-A116404] N82-31948

CYTOGENESIS
Cytogenetic effects of high-energy charged particles
N82-31911

Cytogenetic effects of heavy charged particles of galactic cosmic radiation in experiments aboard Cosmos-1129 biosatellite
N82-31912

CYTOLOGY
The organization of the afferent subcortical inputs of the visual region of the cat cerebrum
A82-42621

CYTOPLASM
Specific cytoplasmic glucocorticoid receptors of rat liver under conditions of immobilization stress
[NASA-TM-76863] N82-30893

Specific cytoplasmic glucocorticoid receptors of the rat liver during immobilization stress
[NASA-TM-76869] N82-30894

D

DATA ACQUISITION
The condition of the cardiovascular system in air traffic controllers according to data acquired at the workplace
A82-42614

A general purpose data acquisition and analysis system for nystagmus and related data
[NASA-CR-167704] N82-30919

DATA BASES
A performance analysis study of a complex G field experiment
N82-30852

DATA PROCESSING
Combined discrete network continuous control modelling of operator behavior
N82-30861

System for automatic analysis of rheoencephalograms
N82-31916

DATA REDUCTION
A general purpose data acquisition and analysis system for nystagmus and related data
[NASA-CR-167704] N82-30919

DECIMETER WAVES
Chromatin of rat brain neurons and nucleic acids of muscles as related to localization of decimeter waves during exercise
N82-30908

DECISION MAKING
Subjective scaling of mental workload in a multi-task environment
N82-30844

A model of human decision making in multiple process monitoring situations
N82-30862

Application of optimal control principles to describe the supervisory control behavior of AAA crew members
N82-30864

DEHYDRATION
Dehydration therapy for subjects exposed to simulated spaceflight conditions
N82-31897

DEMOGRAPHY
USSR report. Life sciences: Biomedical and behavioral sciences, no. 19
[JPRS-81442] N82-30935

DEOXYRIBONUCLEIC ACID
DNA and RNA synthesis in isolated nuclei of rat skeletal muscles during hypodynamia
[NASA-TM-76875] N82-30888

Changes in rat tissue deoxyribonucleoprotein and nucleic acids following flight aboard Cosmos-1129 biosatellite
N82-31907

Deoxyribonucleoprotein and nucleic acid content of rat tissues after flight aboard Cosmos-936 biosatellite
N82-31921

DETECTION
A model of human decision making in multiple process monitoring situations
N82-30862
Investigation of behaviorally modified rats for use in explosives detection systems
[AD-A114632] N82-30895

DEUTERON IRRADIATION
Cytogenetic effects of high-energy charged particles
N82-31911

DIAGNOSIS
Morphological criteria for diagnosing pathologies of the thymus with myasthenia
A82-42633
Diagnostic use of enzymatic test in experiments on monkeys
N82-31915

DIASTOLIC PRESSURE
Effect of exercise conditioning on coronary resistance
A82-44139

DIFFERENTIATION (BIOLOGY)
New methodological aspects of the investigation of organ specificity of the lymphatic pathways
A82-42602

DIFFUSION
Diffusion mediated localization on membrane surfaces
[NASA-CR-166306] N82-31888

DISPLAY DEVICES
Color coding of information on electronic display devices --- German thesis
A82-41681
Proceedings of the Sixteenth Annual Conference on Manual Control
[NASA-CR-169243] N82-30833
A gunner model for an AAA tracking task with interrupted observations
N82-30835
The effect of visual information on the manual approach and landing
N82-30837
FMP study of pilot workload. Qualification of workload via instrument scan
[NASA-CR-169254] N82-30944
A comparison of display formats for the electronic master monitor and advisory display system
[AD-A115127] N82-30946
The effects of color and contrast on target recognition performance using monochromatic television displays
[AD-A116238] N82-31946
Reading text from visual display units
[FOA-C-53006-H2] N82-31951

DIURETICS
The effect of body position and the administration of a diuretic on the water-salt status and the activity of the kidneys
A82-43238

DIVING (UNDERWATER)
Cognitive performance, sleep quality and mood during deep oxy-helium diving
[RNP-1/81] N82-30920
A Trimix saturation dive to 660 meters: Studies of cognitive performance, mood and sleep quality
[RPN-2/82] N82-31923

DOGS
A technique for long-term measurements of thyroid function in beagle dogs using iodine 125
[FOA-A-59003-H3] N82-31890

DOPPLER EFFECT
Examining arterial function by Doppler velocimetry: The advantage in aerospace medicine
N82-31938

DRUGS
Current problems in hypobiosis
A82-42171
Hemodynamic response to converting enzyme inhibition at rest and exercise in humans
A82-44135
Aortic body chemoreceptor responses to dopamine, haloperidol, and pargyline
A82-44136

DYNAMIC LOADS
Dynamic preload as an impact protection concept
A82-44290

DYNAMIC RESPONSE
The role of antagonist coactivation in the control of natural movement
N82-30867

E

ECHOCARDIOGRAPHY
Echocardiography in the examination of pilots
N82-31937

ECOLOGY
USSR report. Life sciences: Biomedical and behavioral sciences, no. 19
[JPRS-81442] N82-30935

EDEMA
Fluid distribution in progressive pulmonary edema: A low-temperature scanning electron microscopy study
[DE82-002554] N82-31928

EDUCATION
Variability in human response to whole-body vibration - The effects of instructions
A82-43675

EFFERENT NERVOUS SYSTEMS
A morphological investigation of the regulatory mechanisms of the intracerebral blood circulation
A82-42627
Neurophysiological mechanisms of the compensation of motor disturbances in the presence of lesions of the pyramid system /An electromyographic analysis/
A82-42635
Sleep and motor activity: Stages of the ontogenic evolution of the supraspinal motor control in the human sleep cycle --- Russian book
A82-43607
The role of the integrity of the central synaptic and direct influences in the regulation of hemodynamics
A82-43628
Role of the thyroid gland during adaptation of skeletal muscles to increased motor activity
[NASA-TM-76871] N82-30884
USSR report: Space Biology and Aerospace Medicine, volume 16, no. 4, July - August 1982
[JPRS-81599] N82-31892

EJECTION SEATS
Aircrew windblast protection concepts, development and evaluation
[AD-A115424] N82-31947

ELECTRIC FIELDS
Effects of low-frequency (50 Hz) electric fields on animals of different ages
N82-30910
Cytogenetic and gonadotoxic effects of static electric fields
N82-30915

ELECTRIC STIMULI
The effects of the direction of attention on the transmission of cutaneous information --- French thesis
A82-42083
Ear-nose-throat electrodiagnostic device for determining the rheobase of human mucosa and skin
A82-42629
The intracentral connections of the brain structures participating in cardiovascular control
A82-43627
The mechanisms of hypertensive responses during emotional stress
A82-43630
Functional means for the regulation of heart rhythm during burst stimulation of the vagus nerves
A82-43632

ELECTRICAL IMPEDANCE
The role of antagonist coactivation in the control of natural movement
N82-30867

ELECTROCARDIOGRAPHY
Electrocardiographic correlates of emotional stress
A82-43236
Comparative evauation of informativeness of three corrected orthogonal leads and twelve conventional EKG leads in conducting functional tests
N82-31914

Principal electrocardiographic anomalies in the evaluation of pilots N82-31931
Ventricular preexcitation syndromes N82-31932
The exercise electrocardiogram N82-31933
Continuous ECG registration according to the Holter method N82-31934

ELECTRODES
Comparative evaluation of informativeness of three corrected orthogonal leads and twelve conventional EKG leads in conducting functional tests N82-31914

ELECTROENCEPHALOGRAPHY
An on-line procedure for the extraction of acoustically evoked potentials from the electroencephalogram --- German thesis A82-41688

ELECTROLYTES
Influence of hypokinesia on the content of electrolytes in animal organs [NASA-TM-76899] N82-30874
Renin-angiotensin-aldosterone system and electrolyte metabolism in rat blood after flight aboard Cosmos-1129 biosatellite N82-31918

ELECTROMAGNETIC FIELDS
Distribution of heat in biological tissues under influence of UHF electromagnetic fields --- for tumor treatment N82-30909
Meteorological radar as source of SHF electromagnetic field energy and problems of environmental hygiene N82-30911
Effects of superhigh frequency electromagnetic fields on animals of different ages N82-30916
Significance of magnetic field parameters to change in evoked bioelectric activity of the brain N82-31910

ELECTROMAGNETIC RADIATION
Comparative analysis of the biological effects of electromagnetic radiation. II - Eye damage. Cataractogenesis A82-43222
USSR report: Life sciences. Effects of nonionizing electromagnetic radiation, no. 6 [JPRS-81300] N82-30899
Stimulating effect of exposure of rat sternum to variable magnetic field on antibody production in the spleen N82-30900
Status and prospects of research on biological and therapeutic effects of magnetic fields N82-30901

ELECTROMYOGRAPHY
An investigation of the mechanical meaning of the surface electromyogram --- French thesis A82-42078
Neurophysiological mechanisms of the compensation of motor disturbances in the presence of lesions of the pyramid system /An electromyographic analysis/ A82-42635

ELECTRON MICROSCOPY
Fluid distribution in progressive pulmonary edema: A low-temperature scanning electron microscopy study [DE82-002554] N82-31928

ELECTRON PARAMAGNETIC RESONANCE
Electron paramagnetic resonance assignment: An analysis of methods used for biological samples [ISS-T-82/2] N82-31889

ELECTRONIC EQUIPMENT
Color coding of information on electronic display devices --- German thesis A82-41681

ELECTRONYSTAGMOGRAPHY
Measurement of vestibular asymmetry in rotation tests N82-31913

EMOTIONAL FACTORS
Emotional stress and hypokinesia in the origination of cardiac disorders and hypertensive states A82-42608
A systems analysis of individual vascular reactions in animals under experimentally induced emotional stress A82-42610
Electrocardiographic correlates of emotional stress A82-43236
The mechanisms of hypertensive responses during emotional stress A82-43630
Biogenic monoamine content of the ganglia in the autonomic nervous system of rabbits during acute experimental emotional stress [NASA-TM-76900] N82-30875
Catecholamines in the blood plasma of August and Wistar rats during emotional stress [NASA-TM-76872] N82-30885
Changes of blood plasma renin activity in August and Wistar rats under emotional stress [NASA-TM-76873] N82-30886
Emotional stress as a factor in cardiovascular disturbances [NASA-TM-76910] N82-30889
Effect of sensitization on development of stress gastric ulcers in rats [NASA-TM-76868] N82-30892

ENDOCRINE GLANDS
A technique for long-term measurements of thyroid function in beagle dogs using iodine 125 [FOA-A-59003-H3] N82-31890

ENDOCRINE SYSTEMS
Individual features in the organization of the human endocrinal system A82-42631

ENVIRONMENT EFFECTS
Meteorological radar as source of SHF electromagnetic field energy and problems of environmental hygiene N82-30911

ENVIRONMENTAL CONTROL
Regenerable life support for the space station - A technology status summary [IAF PAPER 82-45] A82-44658

ENZYME ACTIVITY
Changes in the transaminase activity and several biochemical blood values in the acute period of experimental myocardial infarction in monkeys A82-42172
Effect of dosed physical loading on biological oxidation and bioenergy in liver and myocardium A82-43046
Hemodynamic response to converting enzyme inhibition at rest and exercise in humans A82-44135
Protein kinase activity in liver of heat-acclimated hamsters A82-44145
Catecholamines and their enzymes in discrete brain areas of rats after space flight on biosatellites Cosmos [IAF PAPER 82-180] A82-44688
Diagnostic use of enzymatic test in experiments on monkeys N82-31915

EPINEPHRINE
The effect of drugs altering the exchange of cAMP on the bioelectrogenesis of skeletal muscles A82-43653

EPITHELIUM
Cytogenetic effects of high-energy charged particles N82-31911

ERYTHROCYTES
Effect of hypokinesia on some red blood indices and the condition of regulatory systems [NASA-TM-76752] N82-30918
Effects of +G sub x acceleration and adeutron on nuclei acid content and other parameters of mouse peripheral blood N82-31909
Some potential blood flow experiments for space [UR-3490-1720] N82-32068

ESTIMATING
Effect of counting and tracking on verbal and production methods of time estimation N82-30845

EVALUATION
An analytic framework for allocating R and D resources at GRI [PB82-168428] N82-30898
EVOKED RESPONSE (PSYCHOPHYSIOLOGY)
An on-line procedure for the extraction of acoustically evoked potentials from the electroencephalogram --- German thesis A82-41688
EXAMINATION
Preflight examination results used to forecast cosmonaut endurance of orthostatic tests after spaceflight N82-31917
EXERCISE PHYSIOLOGY
The exercise electrocardiogram N82-31933
EXOBIOLOGY
Interpretation of Viking biology experiments A82-43221
Planetary atmospheres and the search for life [IAF PAPER 82-268] A82-44708
EXPERIMENTAL DESIGN
A technique for long-term measurements of thyroid function in beagle dogs using iodine 125 [FOA-A-59003-B3] N82-31890
EXPLOSIVES
Investigation of behaviorally modified rats for use in explosives detection systems [AD-A114632] N82-30895
EXPOSURE
Distinctions of nervous system reactions to artificially intensified magnetic fields N82-30902
Mechanism of biological effects of magnetic fields N82-30903
Possible use of magnetobiological effects in neurosurgery N82-30905
Pulmonary function measures before and after exposure of human subjects to +G(z) and +G(x) acceleration loads [AD-A114652] N82-30928
EXTRATERRESTRIAL LIFE
Interpretation of Viking biology experiments A82-43221
Planetary atmospheres and the search for life [IAF PAPER 82-268] A82-44708
Cooperative effort suggested for research on extraterrestrial life N82-32284
EYE DISEASES
Comparative analysis of the biological effects of electromagnetic radiation. II - Eye damage. Cataractogenesis A82-43222
EYE MOVEMENTS
An analysis and modeling of the binocular system in human sagittal vision --- French thesis A82-42090
A software package for evaluating the transmissibility between vehicle vibration and motions of hands (in controls), limb, head and eyes N82-30853
Effect of optokinetic stimulation on operator's functional state and professional work capacity N82-31896

F

FALLOUT
Aircrew ionizing doses from radioactive dust cloud generated by nuclear burst [AD-A115541] N82-30929
FATTY ACIDS
The influence of prostaglandins and polyunsaturated fatty acids on the corticosteroid metabolism of normal and spontaneously hypertensive rats A82-42174
Effect of dosed physical loading on plasma and liver lipids and lipoproteins in rats A82-43045
FAULT TOLERANCE
Design and evaluation of an onboard computer-based information system for aircraft A82-44512
FEASIBILITY ANALYSIS
An analytic framework for allocating R and D resources at GRI [PB82-168428] N82-30898
FEET (ANATOMY)
Vibration and comfort. III - Translational vibration of the feet and back. IV - Application of experimental results A82-43670
FIBER OPTICS
Optical fiber multiple sensor for gripping complex objects N82-32298
FIELD STRENGTH
Mechanism of biological effects of magnetic fields N82-30903
FIGHTER AIRCRAFT
Aerial combat simulation in the U.S. Air Force A82-42794
FIRST AID
Anesthesia, surgey and resuscitation during manned spaceflights N82-31894
FLIGHT CONTROL
Design and evaluation of an onboard computer-based information system for aircraft A82-44512
FLIGHT CREWS
Procru: A model for analyzing flight crew procedures in approach to landing N82-30863
Aircrew ionizing doses from radioactive dust cloud generated by nuclear burst [AD-A115541] N82-30929
Aircrew windblast protection concepts, development and evaluation [AD-A115424] N82-31947
Life-cycle costing of life support equipment [AD-A116404] N82-31948
FLIGHT FITNESS
Principal electrocardiographic anomalies in the evaluation of pilots N82-31931
Ventricular preexcitation syndromes N82-31932
The contribution of standard radiography in cardiovascular exploration during the examination of pilots N82-31935
The contribution of cardiac mechanograms in the evaluation of pilots N82-31936
Echocardiography in the examination of pilots N82-31937
Examining arterial function by Doppler velocimetry: The advantage in aerospace medicine N82-31938
FLIGHT OPERATIONS
The airline pilot's view of flight deck workload: A preliminary study using a questionnaire [RAE-TM-FS(B)-465] N82-31945
FLIGHT SIMULATORS
Aerial combat simulation in the U.S. Air Force A82-42794
Improved procedures training through use of aids developed from learning guidelines [AD-A113109] N82-30939
Prediction of short term tracking tasks using an optimal pilot model [AD-A115543] N82-30940
FLIGHT STRESS (BIOLOGY)
Dynamics of functional state of heavy transport helicopter pilots in the course of flight shift N82-31900
FLIGHT TESTS
The role of the test pilot in flight tests A82-43329
FLIGHT TIME
Dynamics of functional state of heavy transport helicopter pilots in the course of flight shift N82-31900
FLIGHT TRAINING
Improved procedures training through use of aids developed from learning guidelines [AD-A113109] N82-30939
FOREARM
Circulation and energetics of forearm muscles in man A82-42604

FORMAT
A comparison of display formats for the electronic master monitor and advisory display system N82-30946
[AD-A115127]
FOULING
Biofouling countermeasure evaluations for OTEC heat exchangers N82-30896
[DE82-003918]
FREEZING
Electron paramagnetic resonance assignment: An analysis of methods used for biological samples N82-31889
[ISS-T-82/2]
FRENCH SPACE PROGRAMS
The first joint Franco-Soviet manned flight - The posture experiment A82-44689
[IAF PAPER 82-183]
FUEL CORROSION
Biocorrosion --- of aircraft fuel tanks N82-31891
[SNIAS-621-551-105]
FUEL TANKS
Biocorrosion --- of aircraft fuel tanks N82-31891
[SNIAS-621-551-105]

G

GAMMA RAYS
Specificity of ultrastructural changes in rat cardiomyocytes after local gamma-irradiation and hypokinesia N82-30882
[NASA-TM-76853]
GANGLIA
Biogenic monoamine content of the ganglia in the autonomic nervous system of rabbits during acute experimental emotional stress N82-30875
[NASA-TM-76900]
GAS MIXTURES
A Trimix saturation dive to 660 meters: Studies of cognitive performance, mood and sleep quality N82-31923
[RPN-2/82]
GAS PRESSURE
Temperature effects on lung mechanics in air- and liquid-filled rabbit lungs A82-44134
GAS TRANSPORT
A critical value for O2 transport in the rat A82-44141
GENETICS
Genetic and individual differences in cardiovascular disturbances of rats during experimental emotional stress N82-30890
[NASA-TM-76911]
Cytogenetic and gonadotoxic effects of static electric fields N82-30915
GLYCOGENS
Effects of beta-adrenergic receptor blockade on glycogenolysis during exercise A82-44133
Regulation of glycogenolysis in human muscle at rest and during exercise A82-44144
GONADS
Cytogenetic and gonadotoxic effects of static electric fields N82-30915
GROUND OPERATIONAL SUPPORT SYSTEM
Application of optimal control principles to describe the supervisory control behavior of AAA crew members N82-30864
GROUND SUPPORT SYSTEMS
Logistics support productivity improvement A82-42196
GUNNERY TRAINING
Prediction of short term tracking tasks using an optimal pilot model N82-30940
[AD-A115543]

H

HABITABILITY
Habitability support for manned missions of space 2000 A82-44685
[IAF PAPER 82-170]
HAND (ANATOMY)
A software package for evaluating the transmissibility between vehicle vibration and motions of hands (in controls), limb, head and eyes N82-30853
HEAD (ANATOMY)
Head cooling and heat A82-44292
HEAD MOVEMENT
A software package for evaluating the transmissibility between vehicle vibration and motions of hands (in controls), limb, head and eyes N82-30853
HEALING
Efficacy of cimetidin in the prevention of ulcer formation in the stomach during immobilization stress N82-30923
[NASA-TM-76864]
HEART
Effect of immobilization stress on diacyl- and plasmalogen-derivatives of phospholipids in various rat organs and tissues N82-30891
[NASA-TM-76852]
The contribution of standard radiography in cardiovascular exploration during the examination of pilots N82-31935
HEART DISEASES
The coronary vessels and the contractile apparatus of the myocardium in immune heart damage /Histochemical and ultrastructural studies/ A82-42605
Emotional stress and hypokinesia in the origination of cardiac disorders and hypertensive states A82-42608
HEART FUNCTION
Analysis of load characteristics and development of new indicators of cardiac function A82-42606
Internal stresses and contractility of myocardium A82-43513
Functional means for the regulation of heart rhythm during burst stimulation of the vagus nerves A82-43632
The participation of the hypothalamus in the regulation of parasympathetic cardiac reflexes in unanesthetized cats A82-43633
Heart antigens A82-43666
Continuous ECG registration according to the Holter method N82-31934
Ballistocardiography: A nonintrusive method moving towards clinical applications N82-31940
HEART MINUTE VOLUME
The state of hemodynamics under the effect of laser radiation A82-42613
HEART RATE
Evaluation of the heaviness of physical work with marked nervous-emotional stress A82-43240
A composite assessment of heart rhythm regulation during dosed functional loads A82-43637
Genetic and individual differences in cardiovascular disturbances of rats during experimental emotional stress N82-30890
[NASA-TM-76911]
Cybernetic analysis of cardiac rhythm of Salyut-6 orbital station crew during graded exercise test N82-32282
HEAT ACCLIMATIZATION
Methods of human adaptation to heat A82-42993
Analysis of methods for evaluating thermal stress --- effects on human beings A82-42994
Individual features of the vegetative regulation of body functions during the adaptation of sailors in the tropics A82-42996

Protein kinase activity in liver of heat-acclimated hamsters A82-44145

**HEAT EXCHANGERS**
Biofouling countermeasure evaluations for OTEC heat exchangers [DE82-003918] N82-30896

**HEAT MEASUREMENT**
An examination of heat exchanges in man - Establishment of a reference technique for measuring average cutaneous temperatures using infrared thermometry --- French thesis A82-42080

**HEAT TOLERANCE**
Methods of human adaptation to heat A82-42993

**HELICOPTERS**
A comparison of display formats for the electronic master monitor and advisory display system [AD-A115127] N82-30946

**HELIUM**
Cognitive performance, sleep quality and mood during deep oxy-helium diving [RNP-1/81] N82-30920

**HELIUM-NEON LASERS**
The state of hemodynamics under the effect of laser radiation A82-42613

**HEMATOCRIT RATIO**
Features and variations of the local hematocrit A82-42601

**HEMATOPOIESIS**
Possible use of magnetobiological effects in neurosurgery N82-30905
Effects of microwave radiation on mouse hemopoietic stem cells and on animal resistance to ionizing radiation N82-30912

**HEMATOPOIETIC SYSTEM**
The role of the hypophysis in early reaction of hemopoietic organs to stress [NASA-TM-76865] N82-30924

**HEMODYNAMIC RESPONSES**
The dynamics of the development of postischemial cerebrovascular phenomena during the perfusion of the cerebral vessels with a stable volume of blood A82-42173
The interrelationship of the function of the blood kallikrein-kinin system with the main parameters of central hemodynamics during hypertension A82-42175
The effectiveness of neurohumoral influences on pulmonary circulation A82-42607
Emotional stress and hypokinesia in the origination of cardiac disorders and hypertensive states A82-42608
A systems analysis of individual vascular reactions in animals under experimentally induced emotional stress A82-42610
The state of hemodynamics under the effect of laser radiation A82-42613
Studies directed toward improving hygienic standards pertaining to total-body vibration resulting from heavy moving equipment A82-42619
Microcirculation during acute blood loss and hypoxia A82-42997
The intracentral connections of the brain structures participating in cardiovascular control A82-43627
The mechanisms of hypertensive responses during emotional stress A82-43630
The responses of the coronary vessels in dogs to hypothalamic stimulation in acute and chronic experiments A82-43634
Conjugated changes of the resistance and blood filling of cerebral vessels during shifts in the blood gas composition A82-43635
The interrelationship between the pressor response and energy metabolism during isometric muscle contractions A82-43636
Liver microcirculation in normoxia and hypoxia A82-43638
Hemodynamic response to converting enzyme inhibition at rest and exercise in humans A82-44135
Hypoxic pulmonary vasoconstriction and the size of hypoxic compartment A82-44138
Regional redistributions of the blood in blood loss and mechanical trauma against the background of various functional states of the body [NASA-TM-76880] N82-30872
Influence of stress on the blood system reaction in adrenalectomized mice [NASA-TM-76902] N82-30877
Reaction of the blood system to single and double effect of a stress agent [NASA-TM-76866] N82-30880
Regional hemodynamic changes after spaceflights lasting up to eight days N82-31895
Dehydration therapy for subjects exposed to simulated spaceflight conditions N82-31897
The advantage of the tilt table test in examining circulatory function N82-31941
The advantage of the lower body negative pressure test in aerospace medicine N82-31942

**HEMODYNAMICS**
Blood circulation and aging A82-42609
The role of the integrity of the central synaptic and direct influences in the regulation of hemodynamics A82-43628
Preflight examination results used to forecast cosmonaut endurance of orthostatic tests after spaceflight N82-31917

**HEMORRHAGES**
Regional redistributions of the blood in blood loss and mechanical trauma against the background of various functional states of the body [NASA-TM-76880] N82-30872

**HIGH ALTITUDE BREATHING**
Factors inducing periodic breathing in humans - A general model A82-44140

**HISTOCHEMICAL ANALYSIS**
The organization of the afferent subcortical inputs of the visual region of the cat cerebrum A82-42621
Electron paramagnetic resonance assignment: An analysis of methods used for biological samples [ISS-T-82/2] N82-31889

**HISTOLOGY**
Principles of the definition and classification of tissues A82-42620
The topography of elements of the cardiac conduction system A82-42625

**HOMEOSTASIS**
Biomicroscopy of a microcirculatory bed in experiments - Possibilities, limitations, and prospects A82-42611
Formation of systemic adaptation reactions in static magnetic fields N82-30904

**HORMONE METABOLISMS**
Hormone response of normal and intermittent cold-preadapted humans to continuous cold A82-44137
Effect of hypokinesia on some red blood indices and the condition of regulatory systems [NASA-TM-76752] N82-30910

**HORMONES**
Activity of rat adrenal medula after flight aboard Cosmos-1129 biosatellite N82-31905

HOT WEATHER
Individual features of the vegetative regulation of body functions during the adaptation of sailors in the tropics
A82-42996

HUMAN BEHAVIOR
Combined discrete network continuous control modelling of operator behavior
N82-30861

A model of human decision making in multiple process monitoring situations
N82-30862

Procru: A model for analyzing flight crew procedures in approach to landing
N82-30863

New aspects of functional system theory
N82-30936

Systemic mechanisms of human subconscious activity
N82-30938

HUMAN BEINGS
Morphological features of the individual structure of the human brain
A82-42637

Sleep and motor activity: Stages of the ontogenic evolution of the supraspinal motor control in the human sleep cycle --- Russian book
A82-43607

Position paper: The toxic effects of chronic exposure to low levels of carbon dioxide
[AD-A115053] N82-30930

HUMAN BODY
An analog tracking filter for a swept-sine human vibration test
A82-41800

Subjective response to whole-body vibration - The effects of posture
A82-42831

HUMAN CENTRIFUGES
Techniques for cardiovascular examination in human centrifuges and the principal results obtained
N82-31943

HUMAN FACTORS ENGINEERING
Vibration and comfort. I - Translational seat vibration
A82-42829

Vibration and comfort. II - Rotational seat vibration
A82-42830

Habitability support for manned missions of space 2000
[IAF PAPER 82-170] A82-44685

Parametric identification of human operator models
N82-30842

Control of muscle activity in unloaded conditions
[NASA-TM-76883] N82-30927

USSR report. Life sciences: Biomedical and behavioral sciences, no. 19
[JPRS-81442] N82-30935

Human factors and robotics: Current status and future prospects
[AD-A115042] N82-30945

A comparison of display formats for the electronic master monitor and advisory display system
[AD-A115127] N82-30946

Overview of a procedure for human-reliability analysis
[DE81-030816] N82-30947

Main directions and principles of psychological expertise of cosmonauts
N82-31893

Aircrew windblast protection concepts, development and evaluation
[AD-A115424] N82-31947

HUMAN PATHOLOGY
The anatomy and topography of the human bronchopulmonary lymph nodes
A82-42624

Classification of pathological states of the stato-kinetic /vestibular/ analyzer
A82-42630

Morphological criteria for diagnosing pathologies of the thymus with myasthenia
A82-42633

Functional conditions of the brain and cerebral pathology
A82-42634

Neurophysiological mechanisms of the compensation of motor disturbances in the presence of lesions of the pyramid system /An electromyographic analysis/
A82-42635

HUMAN PERFORMANCE
A command and control device for a man-machine system - Fabrication of a platform and trials --- French thesis
A82-41699

Hemodynamic response to converting enzyme inhibition at rest and exercise in humans
A82-44135

Effect of counting and tracking on verbal and production methods of time estimation
N82-30845

A performance analysis study of a complex G field experiment
N82-30852

Performance tests for repeated measures: Moran and computer batteries
[AD-A115068] N82-30941

Overview of a procedure for human-reliability analysis
[DE81-030816] N82-30947

New look at models of visual performance
[DE82-001337] N82-31924

HUMAN REACTIONS
Variability in human response to whole-body vibration - The effects of instructions
A82-43675

A comprehensive system model for motion/space sickness: Preliminary results
N82-30855

New aspects of functional system theory
N82-30936

Effect of synthesized propeller vibration on passenger annoyance in a turboprop interior noise environment
[NASA-TM-84515] N82-31944

HUMAN TOLERANCES
Studies directed toward improving hygienic standards pertaining to total-body vibration resulting from heavy moving equipment
A82-42619

Methods of human adaptation to heat
A82-42993

Analysis of methods for evaluating thermal stress --- effects on human beings
A82-42994

Hormone response of normal and intermittent cold-preadapted humans to continuous cold
A82-44137

Dynamic preload as an impact protection concept
A82-44290

HYDROXYL COMPOUNDS
Effect of mebicar on animals under extreme conditions
[NASA-TM-76851] N82-30879

HYGIENE
Mental hygiene of sailors --- Russian book
A82-43602

HYPERCAPNIA
Conjugated changes of the resistance and blood filling of cerebral vessels during shifts in the blood gas composition
A82-43635

HYPERKINESIA
Reaction to hypokinesia and hyperkinesia of somatochrome neurons in the motor zone of the cerebral cortex in rabbits
[NASA-TM-76885] N82-30925

HYPEROPIA
Hyperacuity and interpolation by the visual pathways
A82-43100

HYPEROXIA
A critical value for O2 transport in the rat
A82-44141

Hyperoxia inhibits stimulated superoxide release by rat alveolar macrophages
A82-44143

HYPERTENSION
The influence of prostaglandins and polyunsaturated fatty acids on the corticosteroid metabolism of normal and spontaneously hypertensive rats
A82-42174

The interrelationship of the function of the blood kallikrein-kinin system with the main parameters of central hemodynamics during hypertension
A82-42175
Emotional stress and hypokinesia in the origination of cardiac disorders and hypertensive states
A82-42608
An analysis of the role of endogenous opioid peptides in experimental hypertension
A82-43629
The mechanisms of hypertensive responses during emotional stress
A82-43630

HYPERTHERMIA
Head cooling and heat
A82-44292

HYPODYNAMIA
Reaction to hypokinesia and hyperkinesia of somatochrome neurons in the motor zone of the cerebral cortex in rabbits
[NASA-TM-76885] N82-30925

HYPOKINESIA
Emotional stress and hypokinesia in the origination of cardiac disorders and hypertensive states
A82-42608
Effect of restricted mobility on the composition and metabolism of blood lipoproteids in rabbits
[NASA-TM-76846] N82-30871
Regional redistributions of the blood in blood loss and mechanical trauma against the background of various functional states of the body
[NASA-TM-76880] N82-30872
The interaction of Purkinje cells, capillaries and glia in the cerebellar cortex of normal and hypokinetic cats
[NASA-TM-76882] N82-30873
Influence of hypokinesia on the content of electrolytes in animal organs
[NASA-TM-76899] N82-30874
Effect of immobilization on the development of experimental arteriosclerosis in rabbits
[NASA-TM-76901] N82-30876
Effect of prolonged hypokinesia on resistance of resistive vessels in rats
[NASA-TM-76849] N82-30878
Reaction of the blood system to single and double effect of a stress ajent
[NASA-TM-76866] N82-30880
Specificity of ultrastructural changes in rat cardiomyocytes after local gamma-irradiation and hypokinesia
[NASA-TM-76853] N82-30882
Indices of the rat central nervous system metabolism during 36- and 60-day hypokinesia
[NASA-TM-76870] N82-30883
DNA and RNA synthesis in isolated nuclei of rat skeletal muscles during hypodynamia
[NASA-TM-76875] N82-30888
Specific cytoplasmic glucocorticoid receptors of rat liver under conditions of immobilization stress
[NASA-TM-76863] N82-30893
Specific cytoplasmic glucocorticoid receptors of the rat liver during immobilization stress
[NASA-TM-76869] N82-30894
Effect of hypokinesia on some red blood indices and the condition of regulatory systems
[NASA-TM-76752] N82-30910
RNA accumulation in the body of neurons as an indicator of their functional deafferentation
[NASA-TM-76850] N82-30922
Reaction to hypokinesia and hyperkinesia of somatochrome neurons in the motor zone of the cerebral cortex in rabbits
[NASA-TM-76885] N82-30925
State of the endocrine glands in hypodynamia (A review of the literature)
[NASA-TM-76906] N82-30926
Seismocardiographic evaluation of contractile function of the myocardium of hypokinetic rats
N82-31902
Morphological distinctions of Macaca rhesus monkey thyroid under normal and various types of hypokinetic conditions
N82-31906

HYPOMETABOLISM
Current problems in hypobiosis
A82-42171

HYPOTENSION
The state of hemodynamics under the effect of laser radiation
A82-42613

HYPOTHALAMUS
The intracentral connections of the brain structures participating in cardiovascular control
A82-43627
The participation of the hypothalamus in the regulation of parasympathetic cardiac reflexes in unanesthetized cats
A82-43633
The responses of the coronary vessels in dogs to hypothalamic stimulation in acute and chronic experiments
A82-43634
State of the endocrine glands in hypodynamia (A review of the literature)
[NASA-TM-76906] N82-30926
Significance of magnetic field parameters to change in evoked bioelectric activity of the brain
N82-31910

HYPOTHERMIA
Current problems in hypobiosis
A82-42171

HYPOXIA
Stereological analysis of interneuronal contacts in the cerebral cortex of rats during the posthypoxic period
A82-42622
Changes in the lymphoid organs of rats under the effect of acute hypoxia
A82-42623
Microcirculation during acute blood loss and hypoxia
A82-42997
Conjugated changes of the resistance and blood filling of cerebral vessels during shifts in the blood gas composition
A82-43635
Liver microcirculation in normoxia and hypoxia
A82-43638
Hypoxic pulmonary vasoconstriction and the size of hypoxic compartment
A82-44138
A critical value for O2 transport in the rat
A82-44141
Effect of mebicar on animals under extreme conditions
[NASA-TM-76851] N82-30879

I

ILLUMINATING
New look at models of visual performance
[DE82-001337] N82-31924

IMAGE CONTRAST
Contrast increment thresholds of rhesus monkeys
A82-43099

IMMOBILIZATION
Effect of immobilization on the development of experimental arteriosclerosis in rabbits
[NASA-TM-76901] N82-30876
Catecholamines in the blood plasma of August and Wistar rats during emotional stress
[NASA-TM-76872] N82-30885
Glucocorticoid receptors and metabolic disturbances in the (rat) liver and heart during immobilization
[NASA-TM-76874] N82-30887
Effect of immobilization stress on diacyl- and plasmalogen-derivatives of phospholipids in various rat organs and tissues
[NASA-TM-76852] N82-30891

IMMUNITY
The coronary vessels and the contractile apparatus of the myocardium in immune heart damage /Histochemical and ultrastructural studies/
A82-42605
Effect of single exposure to microwaves on quantity and functional properties of T and B lymphocytes of guinea pig and mouse spleen
N82-30913

IMMUNOLOGY
Heart antigens
A82-43666

Stimulating effect of exposure of rat sternum to variable magnetic field on antibody production in the spleen
N82-30900

IMPACT ACCELERATION
Dynamic preload as an impact protection concept
A82-44290

IMPACT RESISTANCE
Dynamic preload as an impact protection concept
A82-44290

IMPLANTED ELECTRODES (BIOLOGY)
A cortically implantable multielectrode array for investigating the mammalian visual system
[AD-A115484] N82-30931

INDUSTRIAL SAFETY
Studies directed toward improving hygienic standards pertaining to total-body vibration resulting from heavy moving equipment
A82-42619

INFLATING
Pulmonary function measures before and after exposure of human subjects to +G(z) and +G(x) acceleration loads
[AD-A114652] N82-30928

INFORMATION
Features of information processing in the right and left hemispheres of the human brain /A survey of the literature/
A82-42632

INFORMATION MANAGEMENT
Information automation and the Apollo program - A retrospective
A82-44513

INFORMATION RETRIEVAL
A general purpose data acquisition and analysis system for nystagmus and related data
[NASA-CR-167704] N82-30919

INFORMATION SYSTEMS
Design and evaluation of an onboard computer-based information system for aircraft
A82-44512

INFRARED IMAGERY
Medical thermography with a pyroelectric vidicon camera
[RSRE-3365] N82-30921

INFRARED INSTRUMENTS
An examination of heat exchanges in man - Establishment of a reference technique for measuring average cutaneous temperatures using infrared thermometry --- French thesis
A82-42080

Medical thermography with a pyroelectric vidicon camera
[RSRE-3365] N82-30921

INORGANIC PEROXIDES
Hyperoxia inhibits stimulated superoxide release by rat alveolar macrophages
A82-44143

INSTRUMENT LANDING SYSTEMS
FEP study of pilot workload. Qualification of workload via instrument scan
[NASA-CR-169254] N82-30944

INSULIN
Implantable, remotely-programmable insulin infussion system
[DE82-003084] N82-31927

INTERPROCESSOR COMMUNICATION
SNLA host-to-host transfer system
[DE82-000089] N82-31925

INTERSTELLAR CHEMISTRY
Laboratory simulation of interstellar chemical evolution
A82-41665

INTRAVENOUS PROCEDURES
Implantable, remotely-programmable insulin infussion system
[DE82-003084] N82-31927

IODINE 125
A technique for long-term measurements of thyroid function in beagle dogs using iodine 125
[FOA-A-59003-H3] N82-31890

IONIZING RADIATION
USSR report: Life sciences. Effects of nonionizing electromagnetic radiation, no. 6
[JPRS-81300] N82-30899

Effects of microwave radiation on mouse hemopoietic stem cells and on animal resistance to ionizing radiation
N82-30912

Aircrew ionizing doses from radioactive dust cloud generated by nuclear burst
[AD-A115581] N82-30929

IRRADIATION
Cytogenetic effects of heavy charged particles of galactic cosmic radiation in experiments aboard Cosmos-1129 biosatellite
N82-31912

ISCHEMIA
The dynamics of the development of postischemial cerebrovascular phenomena during the perfusion of the cerebral vessels with a stable volume of blood
A82-42173

Microcirculatory state in the case of chronic obliteration of arteries
A82-42626

Emotional stress as a factor in cardiovascular disturbances
[NASA-TM-76910] N82-30889

ISOTOPIC LABELING
Contribution of nuclear medicine in cardiology
N82-31939

J

JUDGMENTS
Proceedings of the Sixteenth Annual Conference on Manual Control
[NASA-CR-169243] N82-30833

Modelling of human operator dynamics in simple manual control utilizing time series analysis
N82-30834

K

KIDNEYS
The effect of body position and the administration of a diuretic on the water-salt status and the activity of the kidneys
A82-43238

L

LAKES
Study of the morphological and biological properties of obligate and facultative psychrophylic bacteria found in the Antarctic
A82-43671

LANDING
The effect of visual information on the manual approach and landing
N82-30837

LANDING SIMULATION
Pilot reaction to attitude gyro failure: A flight experiment
N82-30858

Procru: A model for analyzing flight crew procedures in approach to landing
N82-30863

LEARNING
Pursuit tracking and higher levels of skill development in the human pilot
N82-30839

Systemic mechanisms of human subconscious activity
N82-30938

LEARNING THEORY
Training and personnel impact on increased productivity
A82-42230

LESIONS
Neurophysiological mechanisms of the compensation of motor disturbances in the presence of lesions of the pyramid system /An electromyographic analysis/
A82-42635

LEUKOCYTES
Effects of +G sub z acceleration and neutron on nuclei acid content and other parameters of mouse peripheral blood
N82-31909

LIFE CYCLE COSTS
Life-cycle costing of life support equipment
[AD-A116404] N82-31948

LIFE SCIENCES
Current problems in hypobiosis
A82-42171

LIFE SUPPORT SYSTEMS
Regenerable life support for the space station - A technology status summary
[IAF PAPER 82-45] A82-44658
Algal culture studies related to a Closed Ecological Life Support System (CELSS)
[NASA-CR-166375] N82-30943
Workshop on Closed System Ecology
[NASA-CR-169280] N82-31807
Life-cycle costing of life support equipment
[AD-A116404] N82-31948
LIMBS (ANATOMY)
A software package for evaluating the transmissibility between vehicle vibration and motions of hands (in controls), limb, head and eyes
N82-30853
The role of antagonist coactivation in the control of natural movement
N82-30867
LIPID METABOLISM
Activation of lipid peroxidation during stress in man, evaluated according to the content of pentane in expired air
A82-42600
Effect of dosed physical loading on plasma and liver lipids and lipoproteins in rats
A82-43045
Effect of restricted mobility on the composition and metabolism of blood lipoproteids in rabbits
[NASA-TM-76846] N82-30871
Effect of immobilization stress on diacyl- and plasmalogen-derivatives of phospholipids in various rat organs and tissues
[NASA-TM-76852] N82-30891
LIPOPROTEINS
Effect of dosed physical loading on plasma and liver lipids and lipoproteins in rats
A82-43045
LIQUIDS
Temperature effects on lung mechanics in air- and liquid-filled rabbit lungs
A82-44134
LIVER
Effect of dosed physical loading on plasma and liver lipids and lipoproteins in rats
A82-43045
Effect of dosed physical loading on biological oxidation and bioenergy in liver and myocardium
A82-43046
Liver microcirculation in normoxia and hypoxia
A82-43638
Protein kinase activity in liver of heat-acclimated hamsters
A82-44145
Effect of immobilization stress on diacyl- and plasmalogen-derivatives of phospholipids in various rat organs and tissues
[NASA-TM-76852] N82-30891
Specific cytoplasmic glucocorticoid receptors of rat liver under conditions of immobilization stress
[NASA-TM-76863] N82-30893
Specific cytoplasmic glucocorticoid receptors of the rat liver during immobilization stress
[NASA-TM-76869] N82-30894
LOADS (FORCES)
Analysis of load characteristics and development of new indicators of cardiac function
A82-42606
LOGIC CIRCUITS
A cortically implantable multielectrode array for investigating the mammalian visual system
[AD-A115484] N82-30931
LOGISTICS MANAGEMENT
Logistics support productivity improvement
A82-42196
LONG DURATION SPACE FLIGHT
Medical support and technology for long-duration space missions
[IAF PAPER 82-174] A82-44687
LONG TERM EFFECTS
Levels of physiological reserves of sailors working a 10-hour shift
A82-42618
LOW FREQUENCIES
Changes in peripheral circulation of limbs during bone regeneration under influence of low-frequency magnetic fields
N82-30906
Effects of low-frequency (50 Hz) electric fields on animals of different ages
N82-30910
LOWER BODY NEGATIVE PRESSURE
The advantage of the lower body negative pressure test in aerospace medicine
N82-31942
LUMINOUS INTENSITY
Mechanisms of the damaging effect of light on retinal photoreceptors
A82-43233
LUNG MORPHOLOGY
The anatomy and topography of the human bronchopulmonary lymph nodes
A82-42624
Temperature effects on lung mechanics in air- and liquid-filled rabbit lungs
A82-44134
LYMPH
New methodological aspects of the investigation of organ specificity of the lymphatic pathways
A82-42602
The contraction, regulation, and functional role of lymph vessels
A82-42603
The anatomy and topography of the human bronchopulmonary lymph nodes
A82-42624
LYMPHOCYTES
Changes in the lymphoid organs of rats under the effect of acute hypoxia
A82-42623
Influence of stress on the blood system reaction in adrenalectomized mice
[NASA-TM-76902] N82-30877
Stimulating effect of exposure of rat sternum to variable magnetic field on antibody production in the spleen
N82-30900
Effect of single exposure to microwaves on quantity and functional properties of T and B lymphocytes of guinea pig and mouse spleen
N82-30913

M

MACROPHAGES
Hyperoxia inhibits stimulated superoxide release by rat alveolar macrophages
A82-44143
MAGNETIC EFFECTS
Possible adaptation to strong magnetic fields --- by animals
[IAF PAPER 82-188] A82-44690
MAGNETIC FIELDS
USSR report: Life sciences. Effects of nonionizing electromagnetic radiation, no. 6
[JPRS-81300] N82-30899
Stimulating effect of exposure of rat sternum to variable magnetic field on antibody production in the spleen
N82-30900
Status and prospects of research on biological and therapeutic effects of magnetic fields
N82-30901
Distinctions of nervous system reactions to artificially intensified magnetic fields
N82-30902
Mechanism of biological effects of magnetic fields
N82-30903
Formation of systemic adaptation reactions in static magnetic fields
N82-30904
Possible use of magnetobiological effects in neurosurgery
N82-30905
Changes in peripheral circulation of limbs during bone regeneration under influence of low-frequency magnetic fields
N82-30906
Changes in transcapillary metabolism in patients with chronic venous insufficiency of legs under influence of static magnetic fields
N82-30907

MAGNETOCARDIOGRAPHY
The contribution of standard radiography in cardiovascular exploration during the examination of pilots
N82-31933
MAINTAINABILITY
Training and personnel impact on increased productivity
A82-43330
MAINTENANCE
Space telescope neutral buoyancy simulations: The first two years
[NASA-TM-82485]
N82-30942
Life-cycle costing of life support equipment
[AD-A116404]
N82-31948
MAMMALS
A cortically implantable multielectrode array for investigating the mammalian visual system
[AD-A115484]
N82-30931
MAN MACHINE SYSTEMS
A command and control device for a man-machine system - Fabrication of a platform and trials --- French thesis
A82-41699
Use of physiological information in man-machine systems
A82-43388
A finite-state description of coordination in a two-handed target acquisition task
A82-44514
A computer simulation approach to measurement of human control strategy
N82-30843
Combined discrete network continuous control modelling of operator behavior
N82-30861
The role of antagonist coactivation in the control of natural movement
N82-30867
A comparison of control modes for time-delayed remote manipulation
N82-30868
Experimental evaluation of the concept of supervisory manipulation
N82-30869
Supervisory control: Problems, theory and experiment for application to human-computer interaction in undersea remote systems
[AD-A116236]
N82-31949
The bench mining system: Progress in two-dimensional simulation of steering characteristics
[RR-176]
N82-31950
MANAGEMENT METHODS
Application of optimal control principles to describe the supervisory control behavior of AAA crew members
N82-30864
MANIPULATORS
The role of antagonist coactivation in the control of natural movement
N82-30867
A comparison of control modes for time-delayed remote manipulation
N82-30868
MANNED SPACE FLIGHT
Habitability support for manned missions of space 2000
[IAF PAPER 82-170]
A82-44605
MANNED SPACECRAFT
Anesthesia, surgey and resuscitation during manned spaceflights
N82-31894
MANUAL CONTROL
A finite-state description of coordination in a two-handed target acquisition task
A82-44514
Proceedings of the Sixteenth Annual Conference on Manual Control
[NASA-CR-169243]
N82-30833
Modelling of human operator dynamics in simple manual control utilizing time series analysis
N82-30834
A gunner model for an AAA tracking task with interrupted observations
N82-30835
The effect of visual information on the manual approach and landing
N82-30837
Pursuit tracking and higher levels of skill development in the human pilot
N82-30839
An experimental study of human pilot's scanning behavior
N82-30841
A computer simulation approach to measurement of human control strategy
N82-30843
Subjective scaling of mental workload in a multi-task environment
N82-30844
Effect of counting and tracking on verbal and production methods of time estimation
N82-30845
A model based technique for predicting pilot opinion ratings for large commercial transports
N82-30846
An analytical prediction of pilot ratings utilizing human pilot model
N82-30847
A performance analysis study of a complex 6 field experiment
N82-30852
Pilot reaction to attitude gyro failure: A flight experiment
N82-30858
Combined discrete network continuous control modelling of operator behavior
N82-30861
The role of antagonist coactivation in the control of natural movement
N82-30867
A comparison of control modes for time-delayed remote manipulation
N82-30868
Experimental evaluation of the concept of supervisory manipulation
N82-30869
MARINE ENVIRONMENTS
Coatings for the prevention of macrofouling in the OTEC program
[DE82-003230]
N82-30897
MARKET RESEARCH
An analytic framework for allocating R and D resources at GRI
[PB82-168428]
N82-30898
MARKOV PROCESSES
A finite-state description of coordination in a two-handed target acquisition task
A82-44514
MARS (PLANET)
Cooperative effort suggested for research on extraterrestrial life
N82-32284
MARS SURFACE
Interpretation of Viking biology experiments
A82-43221
MATHEMATICAL MODELS
A model based technique for predicting pilot opinion ratings for large commercial transports
N82-30846
An analytical prediction of pilot ratings utilizing human pilot model
N82-30847
A performance analysis study of a complex 6 field experiment
N82-30852
A model of human decision making in multiple process monitoring situations
N82-30862
Procru: A model for analyzing flight crew procedures in approach to landing
N82-30863
New look at models of visual performance
[DE82-001337]
N82-31924
Life-cycle costing of life support equipment
[AD-A116404]
N82-31948
MECHANOGRAMS
The contribution of cardiac mechanograms in the evaluation of pilots
N82-31936
MECHANORECEPTORS
The effects of the direction of attention on the transmission of cutaneous information --- French thesis
A82-42083

The mechanisms of the development of the cardiogenic vagosympathetic reflexes
A82-43631
MEDICAL ELECTRONICS
Thermography and microwave heating - The design and fabrication of systems intended for biological and medical use --- French thesis
A82-42087
An analysis and modeling of the binocular system in human sagittal vision --- French thesis
A82-42090
Ear-nose-throat electrodiagnostic device for determining the rheobase of human mucosa and skin
A82-42629
MEDICAL EQUIPMENT
Thermography and microwave heating - The design and fabrication of systems intended for biological and medical use --- French thesis
A82-42087
Ear-nose-throat electrodiagnostic device for determining the rheobase of human mucosa and skin
A82-42629
Medical support and technology for long-duration space missions
[IAF PAPER 82-174] A82-44687
USSR report: Space Biology and Aerospace Medicine, volume 16, no. 4, July - August 1982
[JPRS-81599] N82-31892
Medical uses of accelerators
[DE82-000572] N82-31926
Implantable, remotely-programmable insulin infussion system
[DE82-003084] N82-31927
MEDICAL SERVICES
Medical support and technology for long-duration space missions
[IAF PAPER 82-174] A82-44687
MEMBRANES
Diffusion mediated localization on membrane surfaces
[NASA-CR-166386] N82-31888
MENTAL HEALTH
Mental hygiene of sailors --- Russian book
A82-43602
MENTAL PERFORMANCE
Features of information processing in the right and left hemispheres of the human brain /A survey of the literature/
A82-42632
Subjective scaling of mental workload in a multi-task environment
N82-30844
Controlography used for integral assessment of mental work capacity
N82-31901
A Trimix saturation dive to 660 meters: Studies of cognitive performance, mood and sleep quality
[RPN-2/82] N82-31923
METABOLISM
The interrelationship between the pressor response and energy metabolism during isometric muscle contractions
A82-43636
Indices of the rat central nervous system metabolism during 36- and 60-day hypokinesia
[NASA-TM-76870] N82-30883
Glucocorticoid receptors and metabolic disturbances in the (rat) liver and heart during immobilization
[NASA-TM-76874] N82-30887
Reaction to hypokinesia and hyperkinesia of somatochrome neurons in the motor zone of the cerebral cortex in rabbits
[NASA-TM-76885] N82-30925
METEOROLOGICAL PARAMETERS
Principles of biological and medical climatology --- Russian book
A82-42065
METEOROLOGICAL RADAR
Meteorological radar as source of SHF electromagnetic field energy and problems of environmental hygiene
N82-30911
MICROORGANISMS
Biocorrosion --- of aircraft fuel tanks
[SNIAS-821-551-105] N82-31891
Cooperative effort suggested for research on extraterrestrial life
N82-32284
MICROSCOPY
Biomicroscopy of a microcirculatory bed in experiments - Possibilities, limitations, and prospects
A82-42611
Stereological analysis of rat bone tissue after flight aboard Cosmos-1129 biosatellite
N82-31906
MICROWAVE RADIOMETERS
Thermography and microwave heating - The design and fabrication of systems intended for biological and medical use --- French thesis
A82-42087
MICROWAVE SENSORS
Thermography and microwave heating - The design and fabrication of systems intended for biological and medical use --- French thesis
A82-42087
MICROWAVES
Effects of microwave radiation on mouse hemopoietic stem cells and on animal resistance to ionizing radiation
N82-30912
Effect of single exposure to microwaves on quantity and functional properties of T and B lymphocytes of guinea pig and mouse spleen
N82-30913
Main directions of Soviet research on biological effects of microwave radiation
N82-30914
MINING
The bench mining system: Progress in two-dimensional simulation of steering characteristics
[ER-176] N82-31950
MITOCHONDRIA
Specificity of ultrastructural changes in rat cardiomyocytes after local gamma-irradiation and hypokinesia
[NASA-TM-76853] N82-30882
MITOSIS
Changes in the lymphoid organs of rats under the effect of acute hypoxia
A82-42623
MONAURAL SIGNALS
Brain-stem auditory evoked potentials in persons with normal hearing
A82-43234
MONITORS
A model of human decision making in multiple process monitoring situations
N82-30862
Continuous ECG registration according to the Holter method
N82-31934
MOODS
Cognitive performance, sleep quality and mood during deep oxy-helium diving
[ANB-1/81] N82-30920
A Trimix saturation dive to 660 meters: Studies of cognitive performance, mood and sleep quality
[RPN-2/82] N82-31923
MORPHOLOGY
The topography of elements of the cardiac conduction system
A82-42625
Morphological criteria for diagnosing pathologies of the thymus with myasthenia
A82-42633
The influence of afferent visual impulses on the morphological and biochemical parameters of the development of the neurons of the visual, motor, and parietal cerebral cortices
A82-42636
Morphological features of the individual structure of the human brain
A82-42637
The morphology of the connections of the cortical vestibular zone --- Russian book
A82-43611
Morphology and coagulant function of human blood system during long exposure to low ammonia concentrations in a sealed environment
N82-31903
Morphological distinctions of Macaca rhesus monkey thyroid under normal and various types of hypokinetic conditions
N82-31908

MOTION PERCEPTION
Three stimuli for visual motion perception compared A82-42900
A comprehensive system model for motion/space sickness: Preliminary results N82-30855
Effect of optokinetic stimulation on operator's functional state and professional work capacity N82-31896

MOTION SICKNESS
Medical monitoring and therapy of space motion sickness [IAF PAPER 82-169] A82-44684
A comprehensive system model for motion/space sickness: Preliminary results N82-30855
Effect of optokinetic stimulation on operator's functional state and professional work capacity N82-31896

MOTION SIMULATORS
A command and control device for a man-machine system - Fabrication of a platform and trials --- French thesis A82-41699

MOTIVATION
Plastic properties of motivation as prime component in systemic organization of purposeful behavioral acts N82-30937

MOVING TARGET INDICATORS
A finite-state description of coordination in a two-handed target acquisition task A82-44514

MUSCLES
Regulation of glycogenolysis in human muscle at rest and during exercise A82-44144

MUSCULAR FUNCTION
An investigation of the mechanical meaning of the surface electromyogram --- French thesis A82-42078
Circulation and energetics of forearm muscles in man A82-42604
Physiological mechanisms determining the mechanical work of breathing for different types of muscular activity A82-43237
The relationship between postural components and voluntary movement A82-43239
Thermogenesis and muscle activity during the adaptation to cold --- Russian book A82-43610
The interrelationship between the pressor response and energy metabolism during isometric muscle contractions A82-43636
The role of the extrapolation and dynamic stereotype in the mechanism of the formation and improvement of adequate motor coordination A82-43651
Role of the thyroid gland during adaptation of skeletal muscles to increased motor activity [NASA-TM-76871] N82-30884

MUSCULAR STRENGTH
Morphological criteria for diagnosing pathologies of the thymus with myasthenia A82-42633
Control of muscle activity in unloaded conditions [NASA-TM-76883] N82-30927

MUSCULAR TONUS
Control of muscle activity in unloaded conditions [NASA-TM-76883] N82-30927

MUSCULOSKELETAL SYSTEM
The effect of drugs altering the exchange of cAMP on the bioelectrogenesis of skeletal muscles A82-43653
Effects of beta-adrenergic receptor blockade on glycogenolysis during exercise A82-44133
A critical value for O2 transport in the rat A82-44141
The role of antagonist coactivation in the control of natural movement N82-30867
Role of the thyroid gland during adaptation of skeletal muscles to increased motor activity [NASA-TM-76871] N82-30884
Chromatin of rat brain neurons and nucleic acids of muscles as related to localization of decimeter waves during exercise N82-30908

MYOCARDIAL INFARCTION
Changes in the transaminase activity and several biochemical blood values in the acute period of experimental myocardial infarction in monkeys A82-42172
Emotional stress as a factor in cardiovascular disturbances [NASA-TM-76910] N82-30889

MYOCARDIUM
The coronary vessels and the contractile apparatus of the myocardium in immune heart damage /Histochemical and ultrastructural studies/ A82-42605
Effect of dosed physical loading on biological oxidation and bioenergy in liver and myocardium A82-43046
Internal stresses and contractility of myocardium A82-43513
The mechanism of the activating effect of anti-cardiac antibodies on the electrical and contractile activity of myocardial cells A82-43665
Specificity of ultrastructural changes in rat cardiomyocytes after local gamma-irradiation and hypokinesia [NASA-TM-76853] N82-30882
Seismocardiographic evaluation of contractile function of the myocardium of hypokinetic rats N82-31902
Epinephrine and norepinephrine concentrations in rat cardiac ventricles and atria after flight aboard Cosmos-1129 biosatellite N82-31919

N

NASA PROGRAMS
Information automation and the Apollo program - A retrospective A82-44513

NAVY
Levels of physiological reserves of sailors working a 10-hour shift A82-42618

NERVOUS SYSTEM
USSR report: Life sciences. Effects of nonionizing electromagnetic radiation, no. 6 [JPRS-81300] N82-30899
Distinctions of nervous system reactions to artificially intensified magnetic fields N82-30902

NEUROLOGY
Functional conditions of the brain and cerebral pathology A82-42634
Functional means for the regulation of heart rhythm during burst stimulation of the vagus nerves A82-43632

NEUROMUSCULAR TRANSMISSION
Neurophysiological mechanisms of the compensation of motor disturbances in the presence of lesions of the pyramid system /An electromyographic analysis/ A82-42635
The role of the integrity of the central synaptic and direct influences in the regulation of hemodynamics A82-43628

NEURONS
The influence of afferent visual impulses on the morphological and biochemical parameters of the development of the neurons of the visual, motor, and parietal cerebral cortices A82-42636
The interaction of Purkinje cells, capillaries and glia in the cerebellar cortex of normal and hypokinetic cats [NASA-TM-76882] N82-30873
Biogenic monoamine content of the ganglia in the autonomic nervous system of rabbits during acute experimental emotional stress [NASA-TM-76900] N82-30875

Chromatin of rat brain neurons and nucleic acids of muscles as related to localization of decimeter waves during exercise N82-30908

RNA accumulation in the body of neurons as an indicator of their functional deafferentation [NASA-TM-76850] N82-30922

NEUROPHYSIOLOGY

Individual features in the organization of the human endocrinal system A82-42531

Neurophysiological mechanisms of the compensation of motor disturbances in the presence of lesions of the pyramid system /An electromyographic analysis/ A82-42635

Threshold models of spatial vision A82-43230

The morphology of the connections of the cortical vestibular zone --- Russian book A82-43611

USSR report: Life sciences. Effects of nonionizing electromagnetic radiation, no. 6 [JPRS-81300] N82-30899

Mechanism of biological effects of magnetic fields N82-30903

Formation of systemic adaptation reactions in static magnetic fields N82-30904

Possible use of magnetobiological effects in neurosurgery N82-30905

NICKEL COMPOUNDS

Biological availability of nickel arsenides: Toxic effects of particulate Ni5As2 [DE82-000580] N82-30932

NOISE INJURIES

Early clinical manifestations of vibration-noise pathology in miners of Donets Basin A82-42616

NOISE INTENSITY

Experimental study of the combined effect of noise and acetone A82-42612

The effect of general vibration combined with intermittent noise on the human auditory function A82-42615

A physiological justification of allowable noise levels in work involving heavy physical labor under nervous stress A82-42617

NOISE POLLUTION

Detailed research plan: Cardiovascular effects of noise [PB82-163379] N82-30934

NOREPINEPHRINE

Modification of training-induced responses by repeated norepinephrine injections in rats A82-44142

Biogenic monoamine content of the ganglia in the autonomic nervous system of rabbits during acute experimental emotional stress [NASA-TM-76900] N82-30875

Epinephrine and norepinephrine concentrations in rat cardiac ventricles and atria after flight aboard Cosmos-1129 biosatellite N82-31919

NUCLEAR EXPLOSION EFFECT

Aircrew ionizing doses from radioactive dust cloud generated by nuclear burst [AD-A115541] N82-30929

NUCLEAR MEDICINE

USSR report. Life sciences: Biomedical and behavioral sciences, no. 19 [JPRS-81482] N82-30935

NUCLEAR POWER PLANTS

Overview of a procedure for human-reliability analysis [DE81-030816] N82-30947

NUCLEIC ACIDS

DNA and RNA synthesis in isolated nuclei of rat skeletal muscles during hypodynamia [NASA-TM-76875] N82-30888

Chromatin of rat brain neurons and nucleic acids of muscles as related to localization of decimeter waves during exercise N82-30908

Effects of +G sub z acceleration and adeturon on nuclei acid content and other parameters of mouse peripheral blood N82-31909

NUCLEOTIDES

Changes in rat tissue deoxyribonucleoprotein and nucleic acids following flight aboard Cosmos-1129 biosatellite N82-31907

O

OCCIPITAL LOBES

Psychophysical characteristics of perception and bioelectric activity of the brain during micropolarization of the occipital part of the hemispheres A82-43235

OCEAN THERMAL ENERGY CONVERSION

Biofouling countermeasure evaluations for OTEC heat exchangers [DE82-003918] N82-30896

Coatings for the prevention of macrofouling in the OTEC program [DE82-003238] N82-30897

OLFACTORY PERCEPTION

Investigation of behaviorally modified rats for use in explosives detection systems [AD-A114632] N82-30895

ONBOARD DATA PROCESSING

Design and evaluation of an onboard computer-based information system for aircraft A82-44512

ONTOGENY

Sleep and motor activity: Stages of the ontogenic evolution of the supraspinal motor control in the human sleep cycle --- Russian book A82-43607

OPERATOR PERFORMANCE

Early clinical manifestations of vibration-noise pathology in miners of Donets Basin A82-42616

Use of physiological information in man-machine systems A82-43388

Contrologography used for integral assessment of mental work capacity N82-31901

Reading text from visual display units [FOA-C-53006-H2] N82-31951

OPERATORS (PERSONNEL)

Mental hygiene of sailors --- Russian book A82-43602

Proceedings of the Sixteenth Annual Conference on Manual Control [NASA-CR-169243] N82-30833

Modelling of human operator dynamics in simple manual control utilizing time series analysis N82-30834

Parametric identification of human operator models N82-30842

Human factors and robotics: Current status and future prospects [AD-A115042] N82-30945

OPTICAL ILLUSION

Absence of depth processing in the large-frame rod-and-frame effect --- human space perception A82-44823

Inhibition of the rod-and-frame effect by circular contours --- human depth perception A82-44824

OPTIMAL CONTROL

A model based technique for predicting pilot opinion ratings for large commercial transports N82-30846

Application of optimal control principles to describe the supervisory control behavior of AAA crew members N82-30869

OPTIMIZATION

Prediction of short term tracking tasks using an optimal pilot model [AD-A115543] N82-30940

ORBITAL SPACE STATIONS

Regenerable life support for the space station - A technology status summary [IAF PAPER 82-45] A82-44658

ORGANIZING
Individual features in the organization of the human endocrinal system
A82-42631

ORGANS
New methodological aspects of the investigation of organ specificity of the lymphatic pathways
A82-42602
Influence of hypokinesia on the content of electrolytes in animal organs
[NASA-TM-76899] N82-30874

ORTHOSTATIC TOLERANCE
The effect of body position and the administration of a diuretic on the water-salt status and the activity of the kidneys
A82-43230
Percutaneous measurement of partial oxygen tension and local blood flow in man during orthostatic test
N82-31904

OSMOSIS
Polyamines and plant stress - Activation of putrescine biosynthesis by osmotic shock
A82-44850
Dehydration therapy for subjects exposed to simulated spaceflight conditions
N82-31897

OTOLARYNGOLOGY
Characteristics of pharmacotherapeutic complications in otolaryngology /Review of the literature/
A82-42628
Ear-nose-throat electrodiagnostic device for determining the rheobase of human mucosa and skin
A82-42629

OXIDATION
Effect of dosed physical loading on biological oxidation and bioenergy in liver and myocardium
A82-43046

OXIMETRY
Percutaneous measurement of partial oxygen tension and local blood flow in man during orthostatic test
N82-31904

OXYGEN
Cognitive performance, sleep quality and mood during deep oxy-helium diving
[RNP-1/81] N82-30920

OXYGEN CONSUMPTION
A critical value for O2 transport in the rat
A82-44141
The exercise electrocardiogram
N82-31933

OXYGEN METABOLISM
Effect of dosed physical loading on biological oxidation and bioenergy in liver and myocardium
A82-43046

OXYGEN TENSION
Percutaneous measurement of partial oxygen tension and local blood flow in man during orthostatic test
N82-31904

P

PAIN
Activation of the cerebral gba-ergic inhibiting system in stress
[NASA-TM-76867] N82-30881

PAPERS
Some potential blood flow experiments for space
[UR-3490-1720] N82-32068

PARAMETERIZATION
Parametric identification of human operator models
N82-30842

PARTICLE ACCELERATORS
Medical uses of accelerators
[DE82-000572] N82-31926

PARTITIONS (MATHEMATICS)
Geometrical considerations in the separation of biological particles by affinity partitioning
N82-32069

PATHOGENESIS
Functional conditions of the brain and cerebral pathology
A82-42634
Comparative analysis of the biological effects of electromagnetic radiation. II - Eye damage. Cataractogenesis
A82-43222

PATHOLOGICAL EFFECTS
Early clinical manifestations of vibration-noise pathology in miners of Donets Basin
A82-42616
Comparative analysis of the biological effects of electromagnetic radiation. II - Eye damage. Cataractogenesis
A82-43222
Mechanisms of the damaging effect of light on retinal photoreceptors
A82-43233

PATTERN RECOGNITION
Performance tests for repeated measures: Moran and computer batteries
[AD-A115068] N82-30941

PATTERN REGISTRATION
A comparison of display formats for the electronic master monitor and advisory display system
[AD-A115127] N82-30946

PENTANES
Activation of lipid peroxidation during stress in man, evaluated according to the content of pentane in expired air
A82-42600

PEPTIDES
An analysis of the role of endogenous opioid peptides in experimental hypertension
A82-43629

PERFORMANCE PREDICTION
Contrology used for integral assessment of mental work capacity
N82-31901

PERIPHERAL CIRCULATION
Microcirculatory state in the case of chronic obliteration of arteries
A82-42626
Changes in peripheral circulation of limbs during bone regeneration under influence of low-frequency magnetic fields
N82-30906
Changes in transcapillary metabolism in patients with chronic venous insufficiency of legs under influence of static magnetic fields
N82-30907

PERMEABILITY
Biomicroscopy of a microcirculatory bed in experiments - Possibilities, limitations, and prospects
A82-42611

PERSONALITY TESTS
Main directions and principles of psychological expertise of cosmonauts
N82-31893

PERSONNEL MANAGEMENT
Training and personnel impact on increased productivity
A82-42230

PERSONNEL SELECTION
Use of physiological information in man-machine systems
A82-43388
Main directions and principles of psychological expertise of cosmonauts
N82-31893

PHARMACOLOGY
Characteristics of pharmacotherapeutic complications in otolaryngology /Review of the literature/
A82-42628

PHONOCARDIOGRAPHY
The contribution of cardiac mechanograms in the evaluation of pilots
N82-31936

PHOSPHORYLATION
The effect of a physiological load on the exchange and phosphorylation of cell membrane proteins in the brain of rats
A82-43654

PHOTOMICROGRAPHY
New methodological aspects of the investigation of organ specificity of the lymphatic pathways
A82-42602

PHOTORECEPTORS
Mechanisms of the damaging effect of light on retinal photoreceptors
A82-43233
PHYSICAL EXAMINATIONS
Noninvasive techniques for cardiovascular examination of interest in aerospace medicine [AGARD-AG-277(FR)]
N82-31930
Principal electrocardiographic anomalies in the evaluation of pilots
N82-31931
Ventricular preexcitation syndromes
N82-31932
The exercise electrocardiogram
N82-31933
Continuous ECG registration according to the Holter method
N82-31934
The contribution of standard radiography in cardiovascular exploration during the examination of pilots
N82-31935
The contribution of cardiac mechanograms in the evaluation of pilots
N82-31936
Echocardiography in the examination of pilots
N82-31937
Examining arterial function by Doppler velocimetry: The advantage in aerospace medicine
N82-31938
Contribution of nuclear medicine in cardiology
N82-31939
Ballistocardiography: A nonintrusive method moving towards clinical applications
N82-31940
The advantage of the tilt table test in examining circulatory function
N82-31941
The advantage of the lower body negative pressure test in aerospace medicine
N82-31942
Techniques for cardiovascular examination in human centrifuges and the principal results obtained
N82-31943
PHYSICAL EXERCISE
Circulation and energetics of forearm muscles in man
A82-42604
Effect of dosed physical loading on plasma and liver lipids and lipoproteins in rats
A82-43045
Effect of dosed physical loading on biological oxidation and bioenergy in liver and myocardium
A82-43046
The effect of a physiological load on the exchange and phosphorylation of cell membrane proteins in the brain of rats
A82-43654
Effects of beta-adrenergic receptor blockade on glycogenolysis during exercise
A82-44133
Hemodynamic response to converting enzyme inhibition at rest and exercise in humans
A82-44135
Effect of exercise conditioning on coronary resistance
A82-44139
Modification of training-induced responses by repeated norepinephrine injections in rats
A82-44142
Regulation of glycogenolysis in human muscle at rest and during exercise
A82-44144
Effect of heat stress on cutaneous vascular responses to the initiation of exercise
A82-44146
Chromatin of rat brain neurons and nucleic acids of muscles as related to localization of decimeter waves during exercise
N82-30908
Control of muscle activity in unloaded conditions [NASA-TM-76883]
N82-30927
Cybernetic analysis of cardiac rhythm of Salyut-6 orbital station crew during graded exercise test
N82-32282
Combined rehabilitation and therapeutic measures in space medicine
N82-32283
PHYSICAL FITNESS
Levels of physiological reserves of sailors working a 10-hour shift
A82-42618
PHYSICAL WORK
A physiological justification of allowable noise levels in work involving heavy physical labor under nervous stress
A82-42617
Physiological mechanisms determining the mechanical work of breathing for different types of muscular activity
A82-43237
Evaluation of the heaviness of physical work with marked nervous-emotional stress
A82-43280
A composite assessment of heart rhythm regulation during dosed functional loads
A82-43637
The role of the extrapolation and dynamic stereotype in the mechanism of the formation and improvement of adequate motor coordination
A82-43651
PHYSIOCHEMISTRY
Current problems in hypobiosis
A82-42171
An analysis of the role of endogenous opioid peptides in experimental hypertension
A82-43629
A technique for long-term measurements of thyroid function in beagle dogs using iodine 125 [FOA-A-59003-H3]
N82-31090
PHYSIOLOGICAL ACCELERATION
The dynamics of certain psychophysiological indicators under the cumulative effect of Coriolis accelerations
A82-42995
PHYSIOLOGICAL DEFENSES
USSR report: Life sciences. Effects of nonionizing electromagnetic radiation, no. 6 [JPRS-81300]
N82-30899
PHYSIOLOGICAL EFFECTS
Experimental study of the combined effect of noise and acetone
A82-42612
The condition of the cardiovascular system in air traffic controllers according to data acquired at the workplace
A82-42614
A physiological justification of allowable noise levels in work involving heavy physical labor under nervous stress
A82-42617
Changes in the lymphoid organs of rats under the effect of acute hypoxia
A82-42623
Characteristics of pharmacotherapeutic complications in otolaryngology /Review of the literature/
A82-42628
The influence of afferent visual impulses on the morphological and biochemical parameters of the development of the neurons of the visual, motor, and parietal cerebral cortices
A82-42676
Analysis of methods for evaluating thermal stress --- effects on human beings
A82-42994
Microcirculation during acute blood loss and hypoxia
A82-42997
An analysis of the role of endogenous opioid peptides in experimental hypertension
A82-43629
The responses of the coronary vessels in dogs to hypothalamic stimulation in acute and chronic experiments
A82-43634
The effect of drugs altering the exchange of cAMP on the bioelectrogenesis of skeletal muscles
A82-43653
The effect of a physiological load on the exchange and phosphorylation of cell membrane proteins in the brain of rats
A82-43654
Changes of the functional condition of the neocortex during direct application of optical radiation
A82-43655

Vibration and comfort. III - Translational vibration of the feet and back. IV - Application of experimental results A82-43674
Effects of beta-adrenergic receptor blockade on glycogenolysis during exercise A82-44133
Temperature effects on lung mechanics in air- and liquid-filled rabbit lungs A82-44134
Effect of exercise conditioning on coronary resistance A82-44139
A critical value for O2 transport in the rat A82-44141
Modification of training-induced responses by repeated norepinephrine injections in rats A82-44142
Hyperoxia inhibits stimulated superoxide release by rat alveolar macrophages A82-44143
Regulation of glycogenolysis in human muscle at rest and during exercise A82-44144
Head cooling and heat A82-44292
A comprehensive system model for motion/space sickness: Preliminary results N82-30855
Regional redistributions of the blood in blood loss and mechanical trauma against the background of various functional states of the body [NASA-TM-76880] N82-30872
Status and prospects of research on biological and therapeutic effects of magnetic fields N82-30901
Distinctions of nervous system reactions to artificially intensified magnetic fields N82-30902
Position paper: The toxic effects of chronic exposure to low levels of carbon dioxide [AD-A115053] N82-30930
Biological availability of nickel arsenides: Toxic effects of particulate Ni5As2 [DE82-000580] N82-30932
Detailed research plan: Cardiovascular effects of noise [PB82-163379] N82-30934
Anesthesia, surgey and resuscitation during manned spaceflights N82-31894
Regional hemodynamic changes after spaceflights lasting up to eight days N82-31895
Effect of optokinetic stimulation on operator's functional state and professional work capacity N82-31896
Stereological analysis of rat bone tissue after flight aboard Cosmos-1129 biosatellite N82-31906
Changes in rat tissue deoxyribonucleoprotein and nucleic acids following flight aboard Cosmos-1129 biosatellite N82-31907

PHYSIOLOGICAL FACTORS
Use of physiological information in man-machine systems A82-43388

PHYSIOLOGICAL RESPONSES
An on-line procedure for the extraction of acoustically evoked potentials from the electroencephalogram --- German thesis A82-41688
Subjective response to whole-body vibration - The effects of posture A82-42831
Individual features of the vegetative regulation of body functions during the adaptation of sailors in the tropics A82-42996
Brain-stem auditory evoked potentials in persons with normal hearing A82-43234
Electrocardiographic correlates of emotional stress A82-43236
Physiological mechanisms determining the mechanical work of breathing for different types of muscular activity A82-43237
Thermogenesis and muscle activity during the adaptation to cold --- Russian book A82-43610
The mechanisms of the development of the cardiogenic vagosympathetic reflexes A82-43631
Functional means for the regulation of heart rhythm during burst stimulation of the vagus nerves A82-43632
Variability in human response to whole-body vibration - The effects of instructions A82-43675
Aortic body chemoreceptor responses to dopamine, haloperidol, and pargyline A82-44136
Hormone response of normal and intermittent cold-preadapted humans to continuous cold A82-44137
Factors inducing periodic breathing in humans - A general model A82-44140
Protein kinase activity in liver of heat-acclimated hamsters A82-44145
Effect of heat stress on cutaneous vascular responses to the initiation of exercise A82-44146
Proceedings of the Sixteenth Annual Conference on Manual Control [NASA-CR-169243] N82-30833

PHYSIOLOGICAL TESTS
Levels of physiological reserves of sailors working a 10-hour shift A82-42618
Dynamic preload as an impact protection concept A82-44290
Cybernetic analysis of cardiac rhythm of Salyut-6 orbital station crew during graded exercise test N82-32282

PHYSIOLOGY
Regulation of circadian rhythmicity A82-43303
USSR report. Life sciences: Biomedical and behavioral sciences, no. 19 [JPRS-81442] N82-30935
Diffusion mediated localization on membrane surfaces [NASA-CR-166386] N82-31888

PILOT PERFORMANCE
The role of the test pilot in flight tests A82-43329
Proceedings of the Sixteenth Annual Conference on Manual Control [NASA-CR-169243] N82-30833
Modelling of human operator dynamics in simple manual control utilizing time series analysis N82-30834
A gunner model for an AAA tracking task with interrupted observations N82-30835
Pursuit tracking and higher levels of skill development in the human pilot N82-30839
An experimental study of human pilot's scanning behavior N82-30841
Modeling lateral acceleration effects on pilot performance N82-30854
Pilot reaction to attitude gyro failure: A flight experiment N82-30858
Procru: A model for analyzing flight crew procedures in approach to landing N82-30863
Prediction of short term tracking tasks using an optimal pilot model [AD-A115543] N82-30940
FNP study of pilot workload. Qualification of workload via instrument scan [NASA-CR-169254] N82-30944
Dynamics of functional state of heavy transport helicopter pilots in the course of flight shift N82-31900

The airline pilot's view of flight deck workload: A preliminary study using a questionnaire
[RAE-TM-FS(B)-465] N82-31945

PILOT TRAINING
A command and control device for a man-machine system - Fabrication of a platform and trials --- French thesis
A82-41699
Aerial combat simulation in the U.S. Air Force
A82-42798

PITUITARY GLAND
The role of the hypophysis in early reaction of hemopoietic organs to stress
[NASA-TM-76865] N82-30924

PITUITARY HORMONES
Activation of the cerebral gba-ergic inhibiting system in stress
[NASA-TM-76867] N82-30881

PLANETARY ATMOSPHERES
Planetary atmospheres and the search for life
[IAF PAPER 82-268] A82-44708

PLANT STRESS
Polyamines and plant stress - Activation of putrescine biosynthesis by osmotic shock
A82-44450

POLARIZATION (CHARGE SEPARATION)
Psychophysical characteristics of perception and bioelectric activity of the brain during micropolarization of the occipital part of the hemispheres
A82-43235

POSITION (LOCATION)
Diffusion mediated localization on membrane surfaces
[NASA-CR-166386] N82-31888

POSTURE
Subjective response to whole-body vibration - The effects of posture
A82-42831
The effect of body position and the administration of a diuretic on the water-salt status and the activity of the kidneys
A82-43238
The relationship between postural components and voluntary movement
A82-43239
The first joint Franco-Soviet manned flight - The posture experiment
[IAF PAPER 82-183] A82-44689

PREDICTION ANALYSIS TECHNIQUES
A model based technique for predicting pilot opinion ratings for large commercial transports
N82-30846
An analytical prediction of pilot ratings utilizing human pilot model
N82-30847

PREDICTIONS
Preflight examination results used to forecast cosmonaut endurance of orthostatic tests after spaceflight
N82-31917

PRESSURE SUITS
Pulmonary function measures before and after exposure of human subjects to +G(z) and +G(x) acceleration loads
[AD-A114652] N82-30928

PROBABILITY THEORY
Probabilistic methodology for estimating radiation induced cancer risk
[DE82-001474] N82-31929

PROCEDURES
Improved procedures training through use of aids developed from learning guidelines
[AD-A113109] N82-30939
Overview of a procedure for human-reliability analysis
[DE81-030816] N82-30947

PROCEEDINGS
Some potential blood flow experiments for space
[UR-3490-1720] N82-32068

PRODUCT DEVELOPMENT
The role of the test pilot in flight tests
A82-43329

PRODUCTIVITY
Logistics support productivity improvement
A82-42196
Training and personnel impact on increased productivity
A82-42230

PROFILE METHOD (FORECASTING)
An analytic framework for allocating R and D resources at GRI
[PB82-168428] N82-30898

PROGRAMMED INSTRUCTION
Implantable, remotely-programmable insulin infusion system
[DE82-003084] N82-31927

PROPELLERS
Effect of synthesized propeller vibration on passenger annoyance in a turboprop interior noise environment
[NASA-TM-84515] N82-31944

PROSTAGLANDINS
The influence of prostaglandins and polyunsaturated fatty acids on the corticosteroid metabolism of normal and spontaneously hypertensive rats
A82-42178

PROTECTION
Aircrew windblast protection concepts, development and evaluation
[AD-A115424] N82-31947

PROTEIN METABOLISM
Circulation and energetics of forearm muscles in man
A82-42604
The effect of a physiological load on the exchange and phosphorylation of cell membrane proteins in the brain of rats
A82-43654
Protein kinase activity in liver of heat-acclimated hamsters
A82-44145
Deoxyribonucleoprotein and nucleic acid content of rat tissues after flight aboard Cosmos-936 biosatellite
N82-31921

PROTEINS
Diffusion mediated localization on membrane surfaces
[NASA-CR-166386] N82-31888

PROTON IRRADIATION
Cytogenetic effects of high-energy charged particles
N82-31911

PSYCHOLOGICAL EFFECTS
Evaluation of the heaviness of physical work with marked nervous-emotional stress
A82-43240
Variability in human response to whole-body vibration - The effects of instructions
A82-43675
Activation of the cerebral gba-ergic inhibiting system in stress
[NASA-TM-76867] N82-30881
USSR report: Space Biology and Aerospace Medicine, volume 16, no. 4, July - August 1982
[JPRS-81599] N82-31892
Main directions and principles of psychological expertise of cosmonauts
N82-31893

PSYCHOLOGICAL FACTORS
Subjective response to whole-body vibration - The effects of posture
A82-42831
Use of physiological information in man-machine systems
A82-43380
A comprehensive system model for motion/space sickness: Preliminary results
N82-30855
Reading text from visual display units
[FOA-C-53006-H2] N82-31951

PSYCHOLOGICAL TESTS
Subjective scaling of mental workload in a multi-task environment
N82-30844

PSYCHOLOGY
USSR report. Life sciences: Biomedical and behavioral sciences, no. 19
[JPRS-81442] N82-30935
New aspects of functional system theory
N82-30936
Plastic properties of motivation as prime component in systemic organization of purposeful behavioral acts
N82-30937

PSYCHOMETRICS
New aspects of functional system theory
N82-30936

PSYCHOMOTOR PERFORMANCE
A finite-state description of coordination in a two-handed target acquisition task
A82-44514
PSYCHOPHYSICS
Psychophysical characteristics of perception and bioelectric activity of the brain during micropolarization of the occipital part of the hemispheres
A82-43235
PSYCHOPHYSIOLOGY
The effects of the direction of attention on the transmission of cutaneous information --- French thesis
A82-42083
The dynamics of certain psychophysiological indicators under the cumulative effect of Coriolis accelerations
A82-42995
Threshold models of spatial vision
A82-43230
Dynamics of the process of the determination of orientation by man
A82-43231
Electrocardiographic correlates of emotional stress
A82-43236
Mental hygiene of sailors --- Russian book
A82-43602
Psychophysiological performance examination onboard the orbital complex Salyut-Soyuz
[IAF PAPER 82-171] A82-44686
Systemic mechanisms of human subconscious activity
N82-30938
PSYCHROPHILES
Study of the morphological and biological properties of obligate and facultative psychrophylic bacteria found in the Antarctic
A82-43671
PULMONARY CIRCULATION
The effectiveness of neurohumoral influences on pulmonary circulation
A82-42607
Hypoxic pulmonary vasoconstriction and the size of hypoxic compartment
A82-44138
PULMONARY FUNCTIONS
Pulmonary function measures before and after exposure of human subjects to +G(z) and +G(x) acceleration loads
[AD-A114652] N82-30928
Fluid distribution in progressive pulmonary edema: A low-temperature scanning electron microscopy study
[DE82-002554] N82-31928
PULMONARY LESIONS
The anatomy and topography of the human bronchopulmonary lymph nodes
A82-42624
Factors inducing periodic breathing in humans - A general model
A82-44140
PULSE AMPLITUDE
Electrocardiographic correlates of emotional stress
A82-43236
PULSE RATE
The contribution of cardiac mechanograms in the evaluation of pilots
N82-31936
PURSUIT TRACKING
Prediction of short term tracking tasks using an optimal pilot model
[AD-A115543] N82-30940
PYROELECTRICITY
Medical thermography with a pyroelectric vidicon camera
[ESRB-3365] N82-30921

R

RABBITS
Influence of hypokinesia on the content of electrolytes in animal organs
[NASA-TM-76899] N82-30874
Effect of immobilization on the development of experimental arteriosclerosis in rabbits
[NASA-TM-76901] N82-30876
RADIATION DOSAGE
Mechanism of biological effects of magnetic fields
N82-30903
Effect of single exposure to microwaves on quantity and functional properties of T and B lymphocytes of guinea pig and mouse spleen
N82-30913
Main directions of Soviet research on biological effects of microwave radiation
N82-30914
Aircrew ionizing doses from radioactive dust cloud generated by nuclear burst
[AD-A115541] N82-30929
RADIATION EFFECTS
The state of hemodynamics under the effect of laser radiation
A82-42613
Specificity of ultrastructural changes in rat cardiomyocytes after local gamma-irradiation and hypokinesia
[NASA-TM-76853] N82-30882
RADIATION HAZARDS
Aircrew ionizing doses from radioactive dust cloud generated by nuclear burst
[AD-A115541] N82-30929
RADIATION INJURIES
Comparative analysis of the biological effects of electromagnetic radiation. II - Eye damage. Cataractogenesis
A82-43222
RADIATION TOLERANCE
Effects of microwave radiation on mouse hemopoietic stem cells and on animal resistance to ionizing radiation
N82-30912
RADIOACTIVE ISOTOPES
A technique for long-term measurements of thyroid function in beagle dogs using iodine 125
[FOA-A-59003-H3] N82-31890
RADIOBIOLOGY
